APPENDIX  
CYCLOPEDIA OF BIOGRAPHY

PREPARED BY THE AMERICAN EDITOR

The purpose of this work is to provide a comprehensive and accurate record of the lives of the great men and women of the past and present. It is a work of reference, and it is hoped that it will be found useful to all who are interested in the history of our country and the lives of its great men and women.

ENTERED, according to Act of Congress, in the year 1856, by

D. APPLETON AND COMPANY,

in the Clerk's Office of the District Court of the United States for the Southern  
District of New York.

### PRELIMINARY NOTE BY THE AMERICAN EDITOR.

THE basis of the present work is the "Cyclopedia of Biography," edited by Rich, and published in London during the past year. The plan of that book will be found fully detailed in its preface, which is reprinted in the present volume.

Upon the appearance of the work above mentioned, an early copy having reached the hands of the publishers, whose names appear on our title-page, it occurred to them that a reprint of Rich, with the addition of American names (in which the English publication was almost entirely deficient), would be both acceptable and useful in our country; and at their request the present editor undertook the task of making the desired additions.

As in the case of the European original, the articles supplied in this edition are from different hands, though it has not been thought necessary, by initials, at the close of each, to indicate the authorship. Indeed some of the writers were unwilling to be thus designated.

A moment's reflection must satisfy any one, that of all books, a biographical dictionary is least likely to attain to perfection. Death postpones not his visits to suit the convenience of the compiler; and even while he works, as his labors pass through the press, some new and distinguished victim drops into the grave, and should be registered with the past, when the speed of the printing press has made it too late to record, in its appropriate place, the name of the departed. Nay, the very writers themselves of some of the American articles in this book, passed into eternity ere yet their labors had reached the hands of the compositor, and on the editor devolved the melancholy duty of adding to the long list of the dead here recorded, the names of some of his co-laborers. In such a book as this, therefore, there must be omissions that are unavoidable.

Again, a biographical dictionary is not a general obituary record; hence, designed omissions may to some imply imperfection, when they find little, perhaps no space allowed to names which they may think deserved honorable notice. And, indeed, one of the difficulties of the editor has been to discriminate. While he would gladly have allowed space for names not mentioned at all, or increased the limits allotted to those but briefly noticed, he could not

NOTE BY THE AMERICAN EDITOR.

lose sight of the great object of the work, which was to present, in portable form, the largest possible amount of biographical *memoranda* ; and thus furnish to the student, as a book of ready reference, a companion to his study table, which might serve readily to recall a leading fact or an unremembered date, that might otherwise cost the labor of much, and perhaps unavailing research.

The want of such a book has been so often felt by the editor himself, that he naturally supposed others must have shared the want with him ; and, in fact, his own necessities were in part the motive which prompted him to undertake the labors of the editor. Of the extent of those labors he has only to say that he has added some thousands to the names in the English publication. These are the names mostly of Americans ; but, as his wish was to bring up, as far as he could, the work to the end of 1855, European names, not contained in the English book, will be found here inserted.

His greatest fear is of inaccuracy in the matter of *dates*. Amid so many thousands of these, it would be idle to hope for escape from all error. He can only say, he has done what he could to avoid mistakes, and submits the work to his fellow students in the hope that it may sometimes meet a present want, or at least serve as a guide-book to the track that will lead to fuller information. It may perhaps be worth something as "a labor-saving machine," if it be no more.

December, 1855.

## PREFACE.

SEVERAL works, more or less resembling the present one, being already in circulation, it is necessary to state why the Publishers have ventured to expect a share of the public favor for a new Biographical Dictionary.

To many of these Dictionaries, considered as the production of individual writers, a degree of merit, far from slight, must, in fairness, be conceded ; but it would seem sufficiently evident, that no single scholar, however extensive his attainments, could ever be expected to catch, or even appreciate all the points of interest belonging to the numerous and varied classes of lives, which must be included in a General Biography. The necessity of seeking a combination of apt and effective talent, for the right production of any comprehensive Dictionary, has long been recognized in the case of our great 'Encyclopædias ;' and such a combination was obtained for the service of Biography, by the editors of the voluminous 'Biographie Universelle.' But the principle has not hitherto been applied in the construction of any work of the latter kind, which would be portable and adapted for general circulation.

The volume now issued aspires to be a first attempt in the important direction alluded to. The Publishers have desired to intrust the execution of the principal lives of each class of remarkable men, to practised writers, who have cultivated the corresponding departments of Learning ; and from whom they had therefore reason to expect biographical notices, really characteristic, and of assured value.

In the departments appertaining to History, Politics, Law, Military science and art, and Ecclesiastical affairs, valuable assistance has been obtained from Sir Archibald Alison, John Hill Burton, Professor Creasy, Professor Eadie, Professor Ferguson, and the Editor. The latter has also endeavored to delineate the peculiar character and services of the leading Mystics.

Classical authors are treated by Professor Ferguson. Theological and Religious literature was given in charge to Professor Eadie and Dr. Jamieson. Poets, Novelists, and other great Men of Letters, are described by Professor Spalding : a memoir of Shakspeare comes from the pen of Charles Knight ; and notices of the Bards of Scotland from James Hedderwick and Thomas Davidson.

The principal names in the department of the Mathematical and Physical Sciences were intrusted to Sir David Brewster and Professor Nichol. In the Experimental Sciences, the department of Chemistry has been treated by Dr. R. D. Thomson ; that of Natural History by Dr. Baird ; and Applied Science by Professor Gordon. The distinguished names in Medical Science are treated

by Mr. M'Connechy. The eminent Geographers have been attended to by Mr. Bryce, who has endeavored, by considerable research, to give exact information on the discoveries made by great travellers.

In Mental Philosophy, our volume is chiefly indebted to Professor Nichol, who has furnished a *résumé* of the doctrines taught by many of the Founders of the great schools, under their respective names. To render this department more complete, the Editor has ventured to introduce the name of Sir William Hamilton, although, happily for science, that distinguished Metaphysician still labors amongst us.

The list of articles written by Professor Eadie in Theology and Church History, includes the Fathers and Reformers, besides many of the mediæval Divines and Schoolmen. Dr. Jamieson's catalogue is graced by the names of our modern Divines, Missionaries, and Philanthropists.

In the department of the Fine Arts, the great Painters, Engravers, Sculptors, and Architects, are characterized by Mr. Wornum, whose exact acquaintance with the literature of these subjects is well known. The same may be said regarding the Musicians, under charge of Mr. Manson ; and of the great Actors, whose lives have been written by the dramatic writer and critic, Mr. Heraud.

In a work so varied in its contents, so closely printed, and produced by so many hands, the Editor is conscious that there must be error ; and that to many readers, the space will appear unequally divided. Perfection in all respects is not pretended to ; but it is certainly hoped, that the design of the work and its general execution, entitle it to be regarded as a step of the right kind in furtherance of popular literature. It has been his aim to allot sufficient space for a satisfactory—however brief—memoir of all the leading or *representative* men in each department ; room being provided, by limiting those of lesser note to a chronological notice, or brief description. It will be found, that many thousand names are contained in this volume more than in any other portable Biography ; and among novelties, may be mentioned the names of sovereigns, and ancient families of importance, arranged in complete lists. The advantage of such lists to the reader of history, will be obvious : many of them have been collated with great pains, in order to the removal of current discrepancies.

The volume is further enlivened by numerous illustrations of the birth-places, monuments, or other memorials of departed greatness ; all copied from the most authentic sources.

LONDON, 10th May, 1854.

ABBADIE, VINCENT, a French surgeon, translator of MacBride's Essays, 1766.

ABBAS, an uncle and zealous partisan of Mahomet, died 653.

ABBAS, EBU ABBAS ABDALLAH, surnamed *Rabbhani*, was a son of the foregoing, and chief of the Sahabuh or companions of the prophet, d. 687.

ABBAS I., the seventh shah or king of Persia, by whom the ancient seat of empire was transferred to Ispahan. This prince is celebrated for his victories over the Ottomans. Many acts of domestic cruelty tarnish the successes of a long reign of 41 years: died 1628, aged 70.

ABBAS II., the son and successor of Sephy, became shah of Persia, 1642, at the age of 13; died 1699 from the effects of his debaucheries. The most remarkable event of his reign was the conquest of Candahar.

ABBAS III. succeeded to the throne of Persia when only eight months old, and died in 1736, after a merely nominal reign, under the usurpation of Nadir Shah.

ABBAS, ALI, a Persian physician and astronomer of the 10th century.

ABBAS, IBU ABD-L-MUTALIB, paternal uncle of Mahomet. His great grandson founded the dynasty of the Abassides.

ABBAS, HALY. See ALI BEN-ABBAS.

ABBAS, MIRZA, prince royal of Persia; distinguished by his efforts to introduce the culture of Europe among his countrymen, 1785-1833.

ABBAS, PACHA, viceroy of Egypt, grandson of Mehemet Ali, whom he succeeded in 1849, d. 1854. His successor is Said Pacha.

ABBASAH, 1558-1634, a pasha of the Turkish empire. Distinguished as a military leader in two successive revolts.

ABBATUCCI, JA. P., a native of Corsica, distinguished in its wars with the Genoese and the French, afterwards opposed to Paoli, 1726-1812.

ABBATUCCI, CHARLES, son of the foregoing, became general of brigade in the French army, and was killed at the early age of 26, 1796.

ABBATISSA, a poet of Sicily, 1570.

ABBE, H., a painter, lived at Antwerp, 1670.

ABBE, LOUISE, called La Belle Cardonniere, celebrated for her personal attractions and poetical talents, lived at Lyons in the 17th century.

ABBEVILLE, CLAUDE D', a Capuchin father, one of a mission to Marignou, the history of which he wrote, 1614.

ABBIATI, FILIPPO, an historical painter in oil and fresco, born at Milan 1640, died 1715.

ABBO, FLORIACENSIS, a learned abbot and historian of the 10th century, who was employed in an important mission to the pope, killed in a tumult, 1004.

ABBON, or ABBO, CERNUUS, a Norman monk

who was at the siege of Paris in 886, of which he left an account in Latin verse; died about 923.

ABBOT, ABIEL, D. D., a congregational minister, born at Andover, Mass., in 1770. He was a good scholar, having taken his degree with high honor at Harvard, in 1787. His first pastoral charge was at Haverhill, on the duties of which he entered in 1794: after continuing in this situation eight years, he removed to Beverly, where he spent the residue of his ministerial life—about 24 years. In the winter of 1827–1828 he spent three months in Cuba; he embarked at Havana, seemingly with restored health, but died just as the ship reached the quarantine ground at New York, on the 7th of June, 1828; and was buried on Staten Island. He had imbibed the contagion of the yellow fever at Havana before his embarkation. He possessed a refined literary taste, and was deemed an eloquent preacher.

ABBOT, CHARLES. See TENTERDEN.

ABBOT, CHARLES, created Baron Colchester 1817, on retiring from the speakership of the H. of Commons, was distinguished as a practical statesman, 1757–1829.

ABBOT, CHARLES, author of a work on the flora of Bedfordshire, was vicar of Oakley and Goddington in that county; died 1817.

ABBOT, GEORGE, archbishop of Canterbury in the reigns of James I. and Charles I., was a clothworker, and early remarkable for his polemical skill. He was an influential man at court until Laud came into favor: he lost ground from his attachment to Calvinism, 1562–1633.

ABBOT, ROBERT, bp. of Salisbury, and eldest brother of the foregoing, is esteemed for his profound and extensive learning, 1516–1617.

ABBOT, MAURICE, youngest brother of the foregoing, was an eminent merchant, and one of the first directors of the East India Company. Served in the office of sheriff and lord mayor, and was knighted by Charles I.; died 1640.

ABBOT, GEORGE, son of Sir Maurice, took up arms in favor of Parliament, was author of several religious works, 1600–1648.

ABBOT, SAMUEL, an English painter, born 1762, became insane and died 1803.

ABBOT, SAMUEL, a merchant of Boston, and a liberal benefactor to the Theological seminary of Andover, Mass., of which town he was a native. He accumulated a large fortune in trade, and retired from Boston to his native place, where he died in 1812, at the age of 80. In the establishment of the seminary in 1807, his donation was \$20,000, and by his will he left it more than \$100,000. He was a man of great prudence and piety, remarkable for his methodical exactness. Never wasteful of his means, he was still very liberal, and gave many thousands for the promotion of benevolent objects. He had adopted for himself certain rules or maxims for his own government in the several relations of life, and conformed his conduct to them. One was “never to praise one in his presence, or dispraise him in his absence.” He died in great tranquillity, saying, he desired to live only if God had any thing more for him to *do* or *suffer*. He died childless, but left a widow, to whom he had been married fifty years and more, and who possessed such business talents that she assisted her husband in trade, and aided him much in the accumulation of his fortune.

ABBT, THOMAS, a German moralist, professor of philosophy and mathematics, 1738–1766.

ABDALCADER, a Persian sheik of distinguished piety and wisdom.

ABDALLAH, the father of Mahomet, is renowned

in the traditions of his country, both for his personal beauty and the purity of his manners. He was originally a camel driver.

ABDALLAH, a pretender to the caliphate after the death of his nephew, the first of the Abassides; slain by the troops of his rival, 755.

ABDALLAH, a caliph of the Saracens, who conquered Jerusalem in the eighth century.

ABDALLAH, governor of Badajos, and chief of the Moors and Arabs in Portugal, 11th century.

ABDALLAH, the Arabian king of Spain at the close of the 9th century, when the sovereignty was entire, but in a declining state; died 901, after a troubled reign of four years.

ABDALLAH, king of Grenada on the close of the 10th century. At this period the governors of the chief cities had assumed the regal title.

ABDALLAH, BEN YUSSIM, founder of the powerful but short-lived dynasty of the Almoravides, which flourished from 1094 till 1148, and included the Arabian empire of Spain with that of Africa.

ABDALLAH, fourth and last sheik of the Wahabees, defeated by Ibrahim Pasha, and beheaded at Constantinople, 1818.

ADALLATIF, a celebrated historian of Bagdad, 1161–1231.

ABDALMALEK, fifth caliph of the race of the Omniades, distinguished for his military conquests. Commenced a prosperous reign of 21 years in 684.

ABDALONYMUS, a descendant of the kings of Sidon, restored by Alexander.

ABDALRAHMAN, an Arabian author, born at Cairo in the middle of the 18th century.

ABDAL WAHAB, the founder of the Wahabees, a political and religious sect, who began their opposition to the sultan about the middle of the last century.

ABDAS, a Persian bp. the cause of the persecution under Theodosius, in which he himself perished, 430.

ABDEL-ASIS, chief of the Wahabees, murdered while at his devotions, 1803.

ABDEL-MELEK, caliph of Damascus, 685.

ABDEL-MUMEN, founder of the dynasty of the Almoades (which succeeded that of the Almoravides), under the title of the Great Mehedi, or forerunner of the Messiah, died 1163.

ABDIAS, the supposed author of an apocryphal history of the apostles; about the 5th or 6th cent.

ABDOA, a Persian martyr, 250.

ABDOLMAMEN, or ABDOLMUMEM. See ABDEL-MUMEN.

ABDON, a judge of Israel, B. C. 1148.

ABEEL, JOHN NELSON, D. D., a minister of the Reformed Dutch Church who died in 1812, at the age of 43, much and deservedly lamented. He was a graduate in the class of 1787 at Princeton, and was licensed to preach in April, 1793. In 1795, he was one of the clergy of the Dutch church in New York, where he continued until his death. Singularly amiable and unassuming, with a well stored and discriminating mind, a remarkably melodious voice, and great zeal and sincerity, he possessed the qualities to make him effective in the pulpit; and therefore deservedly stood very high in his day as an eloquent preacher.

ABEILLE, GASPARD, a French wit and dramatist, born at Riez in 1648, died at Paris 1718.

ABEILLE, SCAPIO, brother of the above, author of a work on surgery, died 1697.

[Peter Abelard.]

ABELARD, PETER, (ABAILARD, PIERRE,) one of the most illustrious of the mediæval schoolmen, was born 1079 of a noble family, at Palais, near Nantes in Brittany. The stirring incidents of his chequered life, and especially his renowned attachment to Heloise, and its melancholy fruits, have thrown a peculiar and romantic charm round the name of Abelard. From his youth he devoted himself to study, and throughout his whole career he was at no pains to conceal his conscious possession of superior ability. His first teacher was Roseline. Coming to Paris at the age of twenty, and having soon rivalled and eclipsed his tutor, Guillaume de Champeaux, he removed in two years from Paris to Melun, thence to Corbeil, and thence to Palais, his birthplace, teaching philosophy all the while with great success. The attractions of Paris soon drew him again to the metropolis, where he attacked the Realism of his old master with such a dialectic dexterity and vigor, that Champeaux's school was speedily extinguished. By and by his antagonist was made bishop of Châlon-sur-Marne, and Abelard commenced to study theology under Anselm at Laon. Having, by his transcendent talent, made the seminary at Laon his envious enemy, he returned to Paris, and opened a School of Divinity with unrivalled popularity. In that school were trained many men, from various countries, who afterwards arrived at high ecclesiastical honors—one pope, nineteen cardinals, and above fifty bishops. In this zenith of his fame, when, according to his own confession, pride and luxury had seduced him, he fell in love with, and seduced his pupil, Heloise, a young and fatherless lady, not over twenty years of age, and a niece of canon Fulbert, one of the Parisian ecclesiastics. Heloise was conveyed to Brittany, and bore a son in the house of Abelard's sister. The canon insisted upon a marriage, which accordingly took place, a union which Heloise openly denied, to her uncle's great vexation. Abelard next placed her in the convent of Argenteuil; but her uncle took a terrible revenge for the abduction of his niece, by means of some hired ruffians, who broke into Abelard's chamber, and

inflicted on his person a disgraceful mutilation. Heloise, on this, took the veil and became a nun, and Abelard retired as a monk into the Abbey of St. Denis. At length he resumed his prelections, but had the misfortune of being suspected of heresy, and was condemned in 1121, by a council which met at Soissons. Disgusted with the persecuting and exasperated monks of St. Denis, for he had denied their St. Denis to be "Dionysius the Areopagite," he retired to Troyes, and selected a retreat which his subdued and chastened spirit named the Paraclete, or Comforter, and in this convent Heloise was at length established as superior. But the unfortunate recluse next provoked the ire of his neighbor, Bernard of Clairvaux, and again, for suspected heresy, did the council of Sens put its brand upon him. He appealed to Rome, but did not follow out his appeal. Worn out with fatigue, persecution, and infirmity, he at length took refuge in the priory of St. Marcel, where he died 21st of April, 1142, at the age of 63. His body, first interred at Cluni, was soon removed to the Paraclete; and twenty years afterward Heloise was buried beside him at her own request. Their ashes lay undisturbed for 300 years; but in 1497 they were transferred to the church of the abbey; then in 1800 removed to the garden of the Musée Français, in Paris; and lastly, in 1817, they were deposited beneath a Gothic shrine in the cemetery of Pere la Chaise. The brilliant talents and oratory of Abelard are beyond dispute. As a subtle and accomplished dialectician he had no rival. His "Conceptualism" forms an epoch in the history of mind, and gave a salutary impulse to the age in which he lived. In his "Theologia" we discover a vigorous and original mind, often hampered by its position and ecclesiastical subordination, but often asserting its native freedom and untrammelled right, as, for example, in his illustration of the mutual provinces of reason and faith. In his book on Ethics, which he quaintly called "Scito te Ipsum," he opposes the Romish doctors on many points of morality; and in his other Treatise, "Sic et Non"—"Yes and No," he exposed their boasted uniformity of doctrine, and produced in a series of 157 rubrics, the contradictory opinions of the older teachers of the church. His works were published at Paris in 1614; and at the same place in 1836, Cousin published 'Ouvrages inédits d'Abailard.'

ABERCROMBIE, JOHN, M.D., the eminent author of 'Enquiries concerning the Intellectual Powers,' published 1830, and the 'Philosophy of the Moral Feelings,' published 1833, was born at Aberdeen, Nov. 11, 1781, and attained the highest rank as a practical and consulting physician at Edinburgh; died Nov. 14, 1844.

ABERCROMBIE, JAMES, a British Major General, who, during our colonial history, was, in 1758, placed, by Mr. Pitt, in command of 50,000 troops to capture Louisburg, and secure Fort William Henry and other places which had been taken by the French, and thereby gave them the command of the lakes. At the head of 15,000 men Abercrombie proceeded against Ticonderoga. His assault was injudiciously and unsuccessfully made, and he lost 2000 in killed, wounded, and missing; after which he retired to his entrenched camp, on the south side of Lake George. He was soon after superseded by Sir Jeffrey Amherst, who speedily recovered Ticonderoga and Crown Point, and captured Quebec.

ABERCROMBY, SIR JOHN ROBT., lieut.-gen., second son of Sir Ralph, took the Isle of France while governor of Madras in 1810; died 1817.

ABERCROMBY, PATRICK, a Scotch historian, physician to James II., died 1726.

ABERCROMBY, SIR RALPH. This gallant and skilful soldier, and upright and humane man, was born at Menstrie, in the county of Clackmannan in Scotland, in October, 1734. He entered the army at the age of eighteen, and saw some service during the last part of the seven years' war in Germany. He was not employed in the American war; and it was not until the war against revolutionary France broke out, that the important part of Abercromby's career commenced.—He acted as lieutenant-general to the Duke of York in the campaigns in Holland, from 1793-5. Abercromby's promptitude and courage, and also his good sense and humanity, were greatly signalized during these unfortunate operations of the British troops; and both foreigners and fellow-countrymen noted the contrast which his skill presented to the incompetency of the other leaders of the army at that period. At the end of 1795 Sir Ralph was appointed commander-in-chief in the West Indies, and conquered several islands from the French. He was sent to Ireland as commander of the forces, during one part of the Irish rebellion, but his disgust at the system sanctioned there by the government caused him

to make indignant remonstrances, which were answered by his recall. He served again in Holland as second in command to the Duke of York, in the disastrous expedition to the Helder in 1799; and he again acquired the respect both of friends and foes, by his good conduct amid the imbecile blunders of those who were associated with him in command. But it is from the expedition to reconquer Egypt in 1801, when he was placed in unfettered authority at the head of a British army destined for a worthy object, that the lustre of his fame is dated. Sir Ralph reached the Egyptian coast in March, with a force of about 12,000 effective men. The French army that occupied Egypt, under General Menou, was much stronger; but Menou, though aware of the approach of the English expedition, detached only part of his force under General Friant to oppose the landing of Abercromby's army. Abercromby placed his men in boats on the 8th of March, and made good his landing, though he was met by Friant's troops with a heavy cannonade; and the English, as they reached the beach, were fiercely and repeatedly charged both by the cavalry and the infantry of the French. Abercromby then moved upon Alexandria, where the chief force of the French was posted. A slight action took place on the 13th, in which the English had the advantage; but it was on the 21st that the decisive battle was fought which liberated Egypt. On that day General Menou attacked the British with the whole disposable force that he could concentrate upon their position. He had from 12 to 14,000 troops in the field, a large proportion of whom were cavalry; and his artillery was also numerous. Abercromby had about 10,000 foot, and only 300 horse. He was also far inferior in guns. The battle (which the English call the battle of Alexandria, and which is termed by French historians the battle of Canopus,) began about an hour before daybreak, and raged with unusual obstinacy till a little before 10 A. M. The French troops were all veterans of Napoleon's army of Italy; they attacked with impetuosity; and the English, who had the fullest confidence in their chief, resisted with their national stubbornness. The British right wing rested on the ruins of some old Roman buildings; and this point was the key of the position, and the especial object of the French assaults. Abercromby rode to this spot, and encouraged his men by voice, gesture, and example. On the other side, Lanusse, the best of the French generals, led on the assailing columns. Lanusse was shot dead, and his columns driven back, but they soon rallied and returned to the charge; and a splendid division of French cavalry, under General Roize, galloped forward upon the English infantry that was posted near the Roman walls. Sir Ralph was attacked in person by some of these daring cavaliers, and the brave old general, though he disarmed his first antagonist, received a sabre wound in the chest from another French trooper, who was instantly shot down by a Highlander of the 42d. Soon after this Sir Ralph received a musket shot in the thigh; but he refused to quit the field until the enemy were thoroughly repulsed, and he saw them flying from the field, which was strewn with 1,700 of their killed and wounded, and also with nearly 1,400 of the victorious English. When the excitement of the battle was over, Sir Ralph fainted and was carried off the field in a hammock, amid the blessings and tears of the soldiery, who loved him as a father. He was immediately carried on board Lord Keith's flag ship, where he died of the gunshot wound in his thigh, on the evening of 28th March, 1801, in the 63d year of his pure and honorable life. **ABERNETHY, JOHN**, (1763-1831,) a celebrated surgeon. A native of the north of Ireland, he was educated in London, where his parents are said to have resided. He became a pupil of John Hunter, by whom he was thoroughly imbued with the determination to devote his remarkable energies to the reform of the mode of practising the profession to which he was devoted. By his master he was admirably instructed in the organization of the human body, and his career is a brilliant example of the successful application of his early knowledge to the legitimate treatment of disease. It was in combating the empirical tendencies of his predecessors that he perhaps became rather dogmatical in his manner, which, although it rendered him a favorite with his pupils from its eccentricity, produced enmity by its brusqueness. To a celebrated friend of the writer of this, who was familiar with him, he said, upon taking a patient to him, and commencing to explain the symptoms of the complaint, "Hold your tongue, sir, what have you to do with it?" He became, at an early age, surgeon to St. Bartholomew's Hospital, and lecturer in its medical school. His most important works were on Physiology, on Surgery, and on the treatment of local diseases. His great merit was in pointing out the legitimate road on which to practise the profession, and in carrying out the principles of his great master, John Hunter, with amazing energy and determination. **ABIMELECH**, a k. of Israel, killed B.C. 1206.

**ABINGER, JAMES SCARLETT**, Lord, an eminent English practising barrister and judge, was born in Jamaica about the year 1769. His family was eminent and influential in the West Indies, and his younger brother, Sir William Anglin Scarlett, became chief justice of Jamaica. He studied at Trinity College, Cambridge, entered at the Middle Temple, and was called to the bar on the 8th July, 1791, taking his degree of A.M. three years later. His practical sagacity, aided by a full, handsome person, which gave him, even in youth, an appearance of sedate importance, procured for him a rapid and lucrative business. His temper, discretion, and industry, were al-

ways to be relied on; and few English barristers while yet junior counsel, have been intrusted with the sole management of so many important cases. There was nothing striking or inspiring in his eloquence, nor was he remarkable for original or profound legal views; but he had the most lucrative of all characters attached to his professional fame, that of getting many verdicts. A writer in the public press, signing himself 'Lorgnette,' who seems to have intimately studied his career, summed up his characteristics as a practical lawyer by saying:—"Watchfulness, prudence in the management of a case, great moral courage in the choice or rejection of the means to be used on behalf of a client, experience of human nature, and great self-denial in the exhibition of that experience; these were the chief agencies by which he acquired his ascendancy over juries; while it is not surprising that he should also have acquired great influence over the bench, when he added intimate knowledge of the intricacies of law to an unusual personal preference for judges, and the prestige which almost unvarying success gave him." He received a silk gown in 1816. He had before that date made unsuccessful attempts to get into parliament, where he first sat in 1818 for Peterborough, a nomination seat. He was one of the many eminent lawyers whose peculiar forensic powers have failed to please the House of Commons, and he was not much heard there except on professional matters. He had been an advocate of Romilly's law reforms, and was generally counted in the Whig ranks, but he took a distinct step in a gradual change, by becoming attorney-general under Canning in 1827. When Sir Charles Wetherall was dismissed in 1829, for opposition to Catholic emancipation, Scarlett took a farther step by becoming again attorney-general under the Wellington administration, and he followed up his accession by severe prosecutions of the opposition papers. In 1834 he was made chief baron of the Exchequer, and raised to the peerage by the title of Baron Abinger. He died on 7th April, 1844, of paralysis, which attacked him when on circuit at Bury St. Edmunds. His first wife, married in 1792, died in 1829, and he was married a second time, a few months before his death. [J.H.B.]

[J. Adams.]

ADAMS, JOHN, a celebrated American statesman, the second President of the United States, was born at Braintree, Massachusetts, on 19th October, 1735. His fame is not associated with brilliant oratorical displays, or with critical triumphs in party conflict. His qualities were those of the accomplished man of business, but they came forth at a time, and under conditions that made business capacities of the most momentous importance to his own countrymen and to mankind at large. The United States are the sole great exception to the saying of Burke, that 'constitutions are not made, they grow.' That a constitution was framed for the States, on principles which have attested their soundness for the place and occasion by their durability, is mainly to be attributed to the sagacity of Adams, and especially to his thoroughly English capacity to turn existing institutions

and habits to the new conditions of the people, instead of inventing untried novelties. Hence his friend and rival Jefferson, called him 'The column of Congress, the pillar of support to the Declaration of Independence, and its ablest advocate and defender.'—Having studied at Cambridge, Massachusetts, he joined the Suffolk bar in 1759, and practised in Quincy. He married, in 1764, Abigail Smith, a woman of great ability and high patriotic aspirations, who brought to him the influential local connection of the Quincy family, to which she was related. Adams dated his expectation of the coming revolution, and his preparation to participate in the reorganization of government in British America, to what he observed in 1761, when the question of the legality of writs of assistance, under the English exchequer system against the Boston merchants, was tried. His first open advocacy of colonial independence was in the support of the application of the Boston citizens to have the courts of law reopened, when they had been closed, on the ground that their proceedings were informal without the use of that cargo of stamps which had been forcibly detained by the citizens. He showed his thorough independence, and brought on himself considerable odium by becoming counsel for the soldiers charged with murder for shooting citizens of Boston. In 1774, when Gage dissolved the Assembly of Massachusetts, he was one of the five who, before separation, were appointed to meet with other committees of Washington, and he was thus instrumental in the construction of Congress. On the 6th of May, 1776, he took the first step in the declaration of independence, by a prominent motion 'to adopt such a government as would, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents and of America.' He was one of the committee for preparing the celebrated Declaration. He had, in the mean time, organized the system which gave its war-service to the United States, and had been chiefly instrumental in putting the army into the hands of Washington. By his management of the committee of correspondence, he organized another great branch of service, that of the foreign department. He was one of the commissioners appointed to treat with France and Holland, and afterwards was sent to negotiate the treaty with Britain. In 1789, he became Vice-President, and on the retirement of Washington, in 1797, he was chosen President of the United States, remaining in office for one period of four years. He was all his life, more or less, concerned in public business, and lived to a good old age. The juncture of his death was remarkable: it occurred in 1826, on the 4th of July, the anniversary of the Declaration of Independence. Before berathing his last he made the remark, 'Jefferson survives;' but it was not so—Jefferson had died at an earlier hour on the same day. [J.H.B.]

ADAMS, JOHN QUINCY, an American statesman, the son of John Adams, was born at Braintree, Massachusetts, on the 11th July, 1767. He received his name of Quincy from his maternal grandfather, an influential citizen of the colony, who died just as his celebrated grandchild was born. Adams was cradled in the revolution, and when but nine years old heard the first reading of the Declaration of Independence from the old state house in Boston. He accompanied his father in his missions to France and Holland, and there acquired the knowledge of foreign languages and countries, and the wide systematic views which made him invaluable to a country in which such qualifications were necessarily rare. He took a degree at Harvard with high distinction in 1787. In 1791, under the signature of 'Publicola,' he suggested

[J. Q. Adams]

some grave doubts about the soundness of the principles actuating the French revolutionists, very remarkable as the production of a republican pen. In 1803, he was sent from the state of Massachusetts as representative to the Senate in Congress, and sat until 1808. He had been for a short time professor of rhetoric in Harvard, when, in 1809, he was appointed representative of the U. States at the court of Russia, and began his brilliant and multifarious diplomatic career. In London he completed the negotiations for the conclusion of the second British American war. He was called home in 1817, to serve in the cabinet of President Monroe. On the election of a President in 1825, the name of Adams was returned with those of Jackson, Crawford and Clay; but as there was not for any one candidate the majority of electoral votes required by the Constitution, the selection fell into the hands of the representatives who chose Adams. He retired in 1829, declining the party advocacy, which it was said might insure his reelection, and he has been looked back on with regret as the last of those who occupied the chair without being borne into it by a victorious faction. In 1831 he began a career of valuable services as a member of the House of Representatives. He made many enemies by his sympathy with the cause of negro emancipation. He was an active pamphleteer, wrote various works and contributed to periodical literature. He died full of years and honors, on the 23d of February, 1848, and it has been cus-

tomary to speak of him as the last of the old and higher class of American statesmen. [J.H.B.]

ADAMS, JOHN, Rev., the only son of Hon. John Adams of Nova Scotia. He took his degree at Harvard in 1721, and in 1728 was an associate in the ministry with the Rev. Mr. Clap, at Newport, Rhode Island. He remained there but two years, and died in Cambridge in 1740, at the age of 36. He left behind him a small volume of poems more valuable from its rarity than for its literary merits.

ADAMS, JOS., an em. medical au., 1758-1818.

ADAMS, LOUISA C., the wife of John Quincy Adams, d. 1852.

ADAMS, MATTHEW, a mechanic of Boston, who cultivated letters, and was possessed of a good library, to which he allowed Dr. Franklin, when a youth, free access. The Doctor speaks of him with respect, and acknowledges his kindness. He was one of the writers in the New England Journal, and his essays were highly esteemed. He died poor, in 1753, but left behind him a reputation for intelligence and probity, more valuable than wealth.

ADAMS, SAMUEL, an American revolutionist and patriot, was born in Boston in 1722. He was early an advocate of the republican cause, and sustained it by his pen, as well as by his personal support. In 1765 he was chosen a member of the Mass. Assembly, and became remarkable for his vigorous defence of republican principles. During the period of political agitation which preceded the revolution, Samuel Adams warmly advocated the cause of the people against the tyranny of Great Britain, and was among the most active in exciting open resistance to the mother country. In 1774 he was elected a member of the provincial council, at the period when kingly government was denounced; and when Gen. Gage sent his secretary to dissolve the Assembly, the door of the legislative chamber was found closed, the key being in the pocket of Adams. In 1774 he was sent as a delegate to the Continental Congress, and became at once a highly serviceable member. When the resolution that declared the colonies "free and independent states" was offered, Samuel Adams boldly sustained it, and sternly exclaimed, "I should advise persisting in our struggle for liberty, though it were revealed from Heaven that nine hundred and ninety-nine were to perish, and only one of a thousand were to survive and retain his liberty! One such freeman must possess more virtue and enjoy more happiness than a thousand slaves; and let him propagate his like, and transmit to them what he hath so nobly preserved!" His conduct was in character with this declaration, and he was accordingly found among the foremost and boldest defenders of the popular cause. To him was due the origination of a Colonial Congress in 1776. He was one of the signers of the Declaration of Independence, and he continued to serve in Congress until 1781. He was subsequently a member of the Mass. Convention to draw up a State Constitution; in 1789 he was elected Lieutenant-Governor of his state, and in 1794 Governor, which office he held with distinguished honor until 1797, when he retired in consequence of his age. He died in 1803, at the age of 82.

ADAMS, SIR TH., lord mayor of London, 1645, distinguished as a royalist, 1586-1667.

ADAMS, WM., an English divine, a friend of Dr. Johnson, and author of an answer to Hume on Miracles, 1707-1789.

ADAMS, ZABDIEL, a clergyman, having in charge a congregation at Lunenburg, Mass. He was born in Quincy, (then called Braintree,) in 1739, and was a cousin of President John Adams. He was gradu-

ated at Harvard in 1759, ordained in 1764, and died in 1801, in his 62d year. His mind was naturally vigorous, and he improved it much by diligent cultivation.

ADAMSON, PAT., abp. of St. Andrews, equally noted for his talents and misfortunes, 1536-1599.

ADAMSON, HY., nephew of the preceding, and author of a curious poem, died 1639.

ADAMUS SCOTUS, a cel. author of the 12th century, best known for his curious 'Dialogue between the Reason and the Soul.'

ADAMUS DORENSUS, a writer on music, 13th century.

ADANSON, MICHEL, a celebrated botanist, was born at Aix, in Provence, in 1727, died in 1806. He was educated at Plessis, studied in Paris under Reaumur and Bernard de Jussieu at the Garden of Plants, and afterwards made a voyage to Senegal. He remained in Africa five years, and during his sojourn there collected an immense number of plants and animals. Upon his return to France, he found that Linnæus had already promulgated his artificial System of Nature to the scientific world. To Adanson this arrangement, and the arbitrary nomenclature of Linnæus, were particularly distasteful. His grand aim was to produce a classification of the objects of nature, based upon the natural relations which these have one with another. The first work in which he proposed this method was his 'Voyage to Senegal,' in which he made an attempt to classify the mollusca according to the structure of the animal, and not the shells which they inhabit. The next was his 'Families of Plants,' in which he strove to carry out the same principles in botany as he had commenced in conchology. He has not been very successful in this attempt, as a comparison between his system and that of Linnæus will show; but still, along with his teacher, Bernard de Jussieu, he has the merit of indicating a method of arrangement of plants by their natural affinities, in opposition to the artificial system then in vogue. He possessed a great knowledge of botany, and was an accurate observer. He is the author of a very interesting account of the immense tree called by the natives of Africa the Baobab, since named after him *Adansonia*. He wrote also an account of the trees which produce the gums of commerce. At the revolution, Adanson was reduced to great poverty, but afterwards received a small pension from government. His will directed that a garland of flowers, selected from the 58 families of plants which he had established, should be the only decoration of his coffin. [W.B.]

ADAUST, a Provençal poet, died 1819.

ADASHEV, ALEXIS, cel. in Russian history as the minister of Ivan the terrible, and disting. by his virtues and talents, died in prison, 1561.

ADASHEV, DAN., a younger brother of the pre., disting. himself against the Tartars, and was executed, together with his little son, and all the near relations of Alexis, soon after the death of that minister.

ADDA, one of the kings of Northumbria.

ADDA, a disting. artist and soldier of Italy.

ADDINGTON, ANTH., a physician and politician, father of Lord Sidmouth, 1713-1790.

ADDINGTON, ISAAC, Secretary of the province of Massachusetts, died in 1715, at the age of 70. He sustained a high character for intelligence and integrity, and was one of those who opposed the tyrannical administration of Sir Edmund Andross in Mass. He held the office of Secretary for more than 20 years, was a member of the council and an efficient magistrate, and left behind him an excellent reputation.

ADDINGTON, S., DR., a dis. minis. 1729-1796.

ADDISON, G. HY., author of 'Indian Reminiscences,' born 1793.

ADDISON, LAUNCELOT, father of the celebrated writer, and dean of Litchfield, was early distinguished by his attachment to the Stuarts. He is the author of several works, 1632-1703.

ADDISON, JOSEPH, was the eldest son of a clergyman, able and learned, but not wealthy. He was born in 1672, at the rectory of Milston in Wiltshire. He was educated chiefly at the Charter House and at Oxford, and distinguished himself as a writer of Latin verses, a good many of which were afterwards published. He first appeared in print by contributing English verses, some of which were original, and others translations from the classics, to Dryden's collections of miscellaneous poems. Another of his poetical efforts was a poem complimenting king William on the campaign in which he took Namur. It was

[Birthplace of Addison.]

written after he had been introduced to the notice of leading statesmen of the Whig party; whose patronage of him, prompted by their expectation of his usefulness in political life, appears to have been the cause of his abandoning the intention he once had of entering the church. A pension, procured for him by the interest of Lord Somers, enabled him, in 1699, to visit the continent, where he resided for three years. The best of his poems, a 'Letter from Italy,' addressed to Lord Halifax, his earliest patron, was written in 1701, while he was still abroad; and his 'Travels in Italy,' the first large work which he attempted in prose, exhibited very promisingly both his classical and miscellaneous knowledge, and his skill and liveliness in composition. Not very long after his return to England, he wrote on the suggestion of the prime minister Godolphin, 'The Campaign,' a poem celebrating Marlborough's victory at Blenheim. He immediately received an appointment as one of the commissioners of excise, the place having become vacant by the death of the celebrated Locke; he was speedily promoted to be an under secretary of state; and he was secretary to the lord-lieutenant of Ireland in 1710, when the ministry which he served was dismissed from office. The time of his steadiest and most successful activity in literature embraced the four years extending from this loss of place to the end of Queen Anne's reign. The Tories being in power, he was excluded from public employment. But, a short while before this, he had begun to produce those periodical essays by which his fame has been longest and most securely preserved. In 1709 he began to furnish papers to the *Tatler*, which was conducted by his schoolfellow and friend, Richard Steele. Early in 1711, these two writers commenced the *Spectator*, which was continued every week-day till the close of the following year. It was then

dropped, after having made up the 555 numbers commonly printed in its first seven volumes; Addison and Steele contributing almost equally, and together writing all the essays except sixty or seventy. In the course of 1713 the *Guardian* received a large number of essays from Addison; and then also appeared his celebrated tragedy of 'Cato.' The immense popularity which, partly through political considerations, this stately drama gained, both among readers and among playgoers, raised the reputation of the author to its highest point. During the latter half of the year 1714 he contributed a good many papers to the new series of the *Spectator*, making up its eighth volume. The accession of George I., occurring a little before the publication of the *Spectator* was closed, restored the Whigs to power, and thus again diverted Addison from literature to politics. And having acted as secretary to the regency, he was appointed one of the lords of trade. Down to this point in his history, there seems to have been really no good ground for the allegations commonly made of his inefficiency as a man of business. He had, indeed, failed in parliament, having either not spoken at all, or broken down in the only attempt he made. His literary celebrity, however, and his modesty and urbanity of manners, though they might have procured him a reception into the society of persons of rank, could not have obtained and preserved the confidence of successive statesmen if he had not been quite competent to the practical details of office. But it cannot well be doubted that he was unfit, though it had been only through his inefficiency as a debater, for the last step which he ventured to take on the ladder of ambition. In 1717, a dissension having occurred in the ministry, Townsend and Walpole, the ablest members of the cabinet, passed over to the opposition; and in the administration which was formed by the other Whigs, Addison became a principal secretary of state, having Lord Sunderland, Marlborough's son-in-law, as his colleague. His acceptance of this office is commonly attributed to the influence of his wife, the Countess-Dowager of Warwick, whom he had married a few months before, and who is said to have, by her haughtiness and violence, made her husband unhappy, and to have driven him to dissipation as a means of escape from domestic discomfort. That Addison did become sottish in the last years of his life has not been clearly proved; and one is glad to catch at any reasons for disbelieving it. At all events, his health was now giving way; and the state of it was made the excuse for his resignation of office, which he tendered in April, 1718, after having held it for less than a year. His only subsequent efforts in literature that are worth noticing were, an angry controversy with his old friend Steele, who had joined the opposition section of the Whigs, and his uncompleted treatise on the 'Evidences of Christianity.' He died at Holland House, in Kensington, in June, 1719, a few weeks after having completed his forty-seventh year. Addison's poetry is of very small account. His minor compositions in verse hold but a low rank even in that didactic and half-prosaic school to which they belong. 'Cato' itself owed its fame, in a great measure, to extrinsic circumstances: and it could not have been successful at all had not dramatic art been then in a state of decay. It is a series of dialogues rather than a drama: its speeches, often eloquent, and almost always morally noble, are seldom truly poetical, and never passionate or pathetic; and there is an equal feebleness in the incidents and in the characters. It must be allowed, likewise, that no very great value belongs to any of his prose writings, except his contributions to the *Spectator* and

other periodical papers. These, however, make up a large mass of literary compositions, and possess distinguished merit and importance. In the history of English style, a marked epoch is constituted by the appearance of the writers who are oftenest described as the Wits of Queen Anne's time; and among these there were none who exerted, on the manner of later authors, so strong an influence as Addison. His grace and refinement, accompanied by an admirable command of familiar idioms, gave him a charm that was wanting in the bare and stern writings of Swift: and he was superior to Steele, not only in these points, but also in his comparative freedom from looseness and inaccuracy, and in his power of rising to dignity without losing ease or freedom. In respect to matters higher than style, the merit of the Periodical Essays is chiefly shared between Steele the projector, and Addison, the only other steady and active contributor. In those sketches of character and manners, and those fragments of invented stories, which were the most popular things in the *Tatler* and its successors, Steele showed more decisive originality, and greater breadth and force of humor; but his coadjutor excelled him by far both in delicacy of sentiment, and in the skill, ingenuity, and consistency with which he worked up his materials into finished pictures. To Addison the *Spectator* owed, with hardly any exception, its papers of a more elevated and solid cast, those which made it an instrument of enlightenment to its contemporaries, and entitle it to the grateful attention of posterity. Such were its critical dissertations, always abounding in good taste and eloquent expression, the best of these being the criticisms which did so much for recalling notice to Milton: such were the papers on the 'Pleasures of the Imagination,' (efforts highly meritorious in the circumstances,) towards ascertaining the principles on which philosophical criticism must be founded: and such, also, were many meditative and religious papers, some of them purely didactic in form, and others allegorical, and all of them excellent alike for their high ethical tone, and for their natural and fine reflectiveness. If Addison's prose writings were once overvalued, the neglect and depreciation with which it has lately been fashionable to treat them, involve an error which goes at least as far the opposite way. [W.S.]

ADDISON, ALEXANDER, a distinguished lawyer of Pennsylvania, born in 1759, died in 1807, at Pittsburgh. For 12 years he held the office of Judge, and it is said there never was an appeal from any judgment he rendered. He was deservedly eminent for his learning, compact reasoning, and purity of style. In 1800 he published Reports of cases decided in Pennsylvania.

ÆSCHYLUS, a cel. Greek dramatic writer, was

born of a noble family at Eleusis in Attica, B.C. 525, and died at Gela in Sicily, B.C. 456. From an anecdote which is related of him by Pausanias, it appears that his youthful fancy was early captivated by the exhibitions of the drama; and he accordingly devoted his life to the service of the tragic muse. At the age of twenty-five B.C. 499, he first presented himself at the festival of Bacchus as a competitor for the public prize; and fifteen years afterwards, B.C. 484, gained his first victory. The pre-eminence which he thus acquired was successfully maintained till B.C. 468, when he was defeated in a similar contest by his younger rival, Sophocles; an event which exercised a strong influence over the rest of his life. Mortified at the indignity which, as he thought, had thus been put upon him, he quitted Athens and went to the court of Hiero, king of Syracuse. Of the remaining portion of his life but little is known, except that he continued to prosecute his favorite pursuit; and that his residence in Sicily was of some duration, may be inferred from the fact that it was sufficient to affect the purity of his language. His thirteenth and last victory was gained B.C. 458. On the manner of his death, which was singular, the ancient writers are unanimous. While sitting motionless in the fields, his bald head was mistaken for a stone by an eagle which happened to be flying over him with a tortoise in her bill. The bird dropped the tortoise to break the shell, and the poet was killed by the blow. Æschylus is said to have been the author of 70 tragedies, of which only seven are now extant. The improvements which he introduced in the economy of the drama, were so important as to gain for him the distinction of the Father of Greek Tragedy. To the single actor of Thespis he added a second, and thus presented the regular dialogue. He abridged the length of the choral odes and made them subservient to the main interest of the plot; substituted a regular stage for the movable wain of his predecessor; provided appropriate scenic decorations, and dresses for the actors; and removed all deeds of murder and bloodshed from public view. His style is bold, lofty, and sublime, full of gorgeous imagery and magnificent expressions, suitable to the elevated characters of his dramas. His plays have little or no plot; and have therefore been blamed as deficient in dramatic interest. But Æschylus was illustrious not merely as a poet. Along with his brother Cynaegirus he distinguished himself so highly in the battle of Marathon, B.C. 490, that his exploits were commemorated by a descriptive painting in the theatre of Athens; and it is probable that he took part in the subsequent battles of Artemisium, Salamis, and Plateæe. His warlike spirit is vividly portrayed in his tragedies, the 'Persians' and the 'Seven against Thebes.' [G.F.]

ÆSOP, generally known for the Fables attributed to him, lived in the 6th century B.C. His history is not well authenticated, but it is understood that he was born in Phrygia, and acquired his Greek education as a slave in Athens. He is regarded as the inventor of the apologue, of which his own compositions are also the purest models. They have been trans. into all modern languages.

**AKENSIDE, MARK**, was born in 1721, at New-castle-upon-Tyne, where his father was a butcher. Designing in his youth to become a Presbyterian preacher, he received from a fund of the English dissenters the means of studying in the university of Edinburgh, which afterwards he honorably paid back. He speedily turned to medical studies, which he com-

pleted at Leyden, graduating there in 1744. In the same year appeared his well-known poem, 'The Pleasures of the Imagination.' This work not only has the unavoidable faults of all didactic poetry, but hovers in a middle sphere between fancy and philosophy, in a manner which makes it obscure and unsatisfactory, even to readers who are both poetical and metaphysical. But it contains some noble pictures, many trains of finely reflective sentiment, and not a few nice felicities of diction. His subsequent effusions in verse comprehended only a few very poor odes, some classically-conceived inscriptions, and a 'Hymn to the Naiads.' After having unsuccessfully attempted medical practice in the country, he removed to London, being aided by a pension from a wealthy and generous friend. He now busied himself chiefly in professional pursuits, attaining some scientific eminence, but no large share of employment. He was a man of high respectability and integrity, but dogmatic and irascible; and his brother-physician, Smollett, ridiculed his pedantry in his description of the 'feast in the manner of the ancients.' He died in 1770. [W.S.]

**ALARIC**, a Saxon king, middle of the 6th cent.

**ALARIC I.**, king of the West Goths, and conqueror of the Roman empire at the commencement of the 5th century, is one of the most remarkable characters in the history of those times. Before the appearance of this distinguished military leader, some three centuries of despotism and corrupt administration had reduced the one time mistress of the world to a deplorable state of baseness and effeminacy; while the warlike Goths, engaged in the border warfare with the Roman troops, and sometimes ravaging the provinces of the empire in return for the insults heaped upon them, and the suspicion with which they were regarded, were daily growing more formidable. The defeat of the emperor Valens had long since discovered to the 'barbarians' their superiority over the masters of the fertile provinces which spread so temptingly before them; yet their chiefs were kept in a willing obedience to Theodosius the Great, and their ambition was a long time satisfied by serving in the Roman armies. At length, A.D. 395, the death of Theodosius, and the division of the empire between his sons Honorius and Arcadius, renewed the disgraceful intrigues which had been kept in suspense by his able administration. The public immorality and political baseness of the period were only equalled by the private vices of the degenerate Romans; and the conviction became general that nothing could avert the disorganization by which society was threatened. At this juncture the Gothic hordes were set in motion by a party inimical to the government of Arcadius in the east, and Alaric, whose wild ambition had been flattered by these overtures, commenced his famous march from the Danube. It is possible that his fortunes had been rising since the death of the Gothic king Athanaric, A.D. 381, but nothing certain is known of his early history save that he belonged to the princely family of the Balti, descended from the Asæ or demigods of Scandinavia. The course of Alaric at the head of his victorious troops was

through Thrace, Dacia, Macedonia, and Thessaly, into Achaia, and everywhere the officers of Arcadius betrayed their trust, or refused to fight; while the most glorious monuments of Grecian art fell a sacrifice to these martial iconoclasts, whose name is still synonymous with that of destroyer. The emperor of the west, taking alarm at his unexampled successes, sent an army to the aid of his brother, under the command of Stilicho, by whom Alaric was kept in check, and prepared for terms of accommodation with a foe for whom he had no other feeling than that of contempt, 398. By the terms of the armistice—for it was really only an armed truce which ensued—the Gothic chief was acknowledged master of the Eastern Illyricum by the emperor of the east, who also declined the further assistance of Stilicho; and by his own followers proclaimed king of the West Goths, and of all the tribes who acknowledged their kindred or allegiance. Situated between the two empires, and subject to the continued hostility of the Romans, Alaric employed himself in perfecting the equipment and discipline of his troops, and after two years of preparation suddenly forced the passage of the Alps. His usual success attending him in a succession of battles and sieges, he was on the point of capturing Honorius, when, at the critical moment, Stilicho arrived with a levy of troops collected from Germany and the other barbarian provinces of the empire. The result was the final retreat of Alaric to his own government; but he had now measured his strength against the legions of Rome in the sunny plains of Italy, and had also come to a good understanding with Stilicho, a man of splendid abilities, and of a kindred origin with himself, though he was now the sword and buckler of the western empire. After the retirement of Alaric, Italy was invaded by a host of the Gothic tribes, commanded by Radagaisus, who were defeated by Stilicho, and distributed over the face of the country. Alaric was rewarded for the strict neutrality which he observed on this occasion by a rich present from the Roman Senate; but he demanded a more fertile province for the settlement of his own people. While this demand was in agitation, Stilicho was basely murdered at the instigation of Honorius, whose tottering throne his arms and diplomacy had so long upheld, and who had grown jealous of his popularity—perhaps, also, of his affinity with the powerful king of the Goths, and of the friendly understanding between the two leaders. The threatening attitude now assumed by Alaric, as the avenger of his friend, attracted the discontented of all Italy to his standard, and invitations from the court of Honorius were not wanting to excite him to the enterprise. He commenced his second march towards Rome in the year 405, and after a victorious progress entered the eternal city, its first conqueror in six centuries. On this occasion his extreme moderation, and perfect command of his troops, have won for him the applause of the most cautious historians—his exactions only amounting to a few thousand pounds' weight of gold and silver, and certain costly robes of silk and pieces of scarlet cloth. Retiring from the city to negotiate, he pitched his camp in the plains of Tuscany, but was drawn into Rome a second time by the perfidy of Honorius. He now deposed a sovereign with whom it was manifest no faith could be kept, and made Attilus, a much esteemed Roman præfect, emperor. The friends of Honorius, however, on the departure of Alaric, endeavored to rally again; the new emperor was deposed; and the negotiations which Alaric set on foot at a distance from the seat of empire, proved fruitless. These events, in fine, brought the

now angry conqueror of Rome for the third time into the midst of its doomed palaces and temples, and the city was given up to pillage. In all probability the nameless horrors of such a scene, infamous as the sack of Rome is represented, were not greater in degree than similar disasters which have occurred within the memory of man, and under the eye of more enlightened commanders. The fall of Rome was followed by the desolating march of Alaric and his troops towards the coast, where he was preparing to embark for Sicily; but was surprised by a short illness, which terminated in his death, A.D. 410. His faithful followers prepared his grave in the bed of the river Busentinus, which they diverted from its channel for the purpose; and when the waters once more rolled in their accustomed course, the workmen were put to death, that no tongue might tell where the hero lay buried, with the choicest spoils of Rome to do him honor. [E.R.]

ALARIC II., was the ninth king in descent from Alaric the Great, and succeeded his father Euric, who had really added the Gothic monarchy of Spain to that of Gaul, A.D. 484. Alaric had the misfortune to ascend the throne at the critical period when the Franks, under the celebrated Clovis, were extending their dominions at the expense of the neighboring potentates, and was weak enough to surrender Syagrius, the prince of Soissons, who had been defeated, and had taken refuge at his court, to the Frank king. The affronts to which he submitted seemed to have chafed the proud spirits of his high-minded and chivalrous subjects, and the general discontent which it occasioned was aggravated by religious differences arising from the constantly increasing opposition of his bishops to the tenets of Arianism, always held by the Gothic kings. Under these circumstances his kingdom was invaded by Clovis, with the avowed design of extirpating the Arian heresy, and a battle being fought at Vouëlle, in which the two princes met in personal conflict, Alaric fell worthily by the hand of his rival, A.D. 507. The body of laws which is known as the code of Alaric, was digested by order of this prince from those of Theodosius, and applied to the exigencies of his own people. After his fall, the arrival of his brother-in-law Theodoric, king of the East Goths, redeemed the honor of his kindred in the battle-field, and Clovis was compelled to accept terms of peace. ALBERTUS MAGNUS, or ALBERTUS GROTUS, was born at Lauingen, in Suabia, according to some in 1193, and according to others in 1205. It is said that in early youth he was singularly obtuse. But he soon displayed prodigious capacity, so that his immense and varied acquirements rapidly raised him to eminence. He studied at Paris, Padua, and Bologna; in 1222 he became a Dominican friar, in 1224 was installed provincial of the order, and was raised to the bishopric of Ratisbon in 1260. Cologne was the chief scene of his popularity and usefulness, though other cities had been at an earlier period privileged with his learned visits. But he had little relish for church preferment, and resigned his episcopal honors in 1263, into the hands of Pope Urban IV. Thomas Aquinas was a favorite pupil of his, and the Albertists were a noted sect after their master's death, in 1280. The fame of Albert rests not on his genius, but on his multifarious erudition. He seems to have embraced the entire circle of knowledge. Not only did he lecture on Aristotle and his Arab commentators, Avicenna, and Averhoes, with mediæval acuteness and profusion, but his works comprise dissertations on Theology, Alchymy, Physical Science, Natural History, and Astronomy. His voracious mind had stored itself so vastly with the encyclopædic knowledge of his age, that his books are rendered comparatively useless by an incredible farrago of references, quotations, and digressions. Still, his ardent pursuit of knowledge, and his patient attempt to present it in a connected and systematic form, must ever cause him to be regarded with peculiar veneration. His works, collected and published at Cologne, in 1621, fill 41 folio volumes, three of which are taken up with an explication of the 'Sentences' of Peter Lombard. [J. E.]

ALCIBIADES, a Christian martyr, 2d cent.

[Alcibiades—From an Ancient Bust.]

ALCIBIADES, the son of Cleinias, one of the most remarkable men of antiquity, was born at Athens about B.C. 449. He inherited from his parents the highest rank, with almost boundless wealth, and was endowed with a person unusually handsome, with manners the most fascinating, and with talents which

would have raised him to the highest distinction, independently of the advantages which fortune had bestowed upon him. Left an orphan at an early age, he was placed under the wardship of his relative Pericles; and became the favorite pupil and companion of Socrates. But his great qualities were marred by inordinate vanity and love of notoriety, which led him into wanton and offensive excesses; evil tendencies which the lessons of the philosopher failed to counteract. The stirring events of the Peloponnesian war, B.C. 431-404, could not fail to call into active operation the energies of a mind so ambitious and so unscrupulous; and accordingly, from his first appearance in public life, B.C. 421, when he prevented the truce between Sparta and Athens from being carried into effect, he made the interests of his country and his own reputation alike subservient to his schemes of ambition. In B.C. 419 he was chosen general, and during the next three years he took a prominent part in the complicated struggle of intrigue and war which was carried on in the Peloponnesus. In B.C. 415 he was the leader in advocating the Sicilian expedition, and shared the command with Nicias and Lamachus. Soon after the fleet set sail, an agitation was revived against him on the ground that he was implicated in the mutilation of the busts of Hermes, and his enemies succeeded in procuring his recall. The proud spirit of Alcibiades could not brook this indignity; and, therefore, instead of returning to Athens, he proceeded to Sparta, and becoming the avowed enemy of his country, disclosed the plans of the Athenians, and suggested the operations by which their measures in Sicily were defeated. Sentence of death was consequently passed upon him, his property was confiscated, and a curse pronounced upon him by the ministers of religion. Through his instrumentality an alliance was formed between the Spartans and Tissaphernes, satrap of Lydia, which led to the revolt of many of the Asiatic allies of Athens. But his influence at Sparta was not long maintained; in B.C. 412 he took refuge with Tissaphernes, and by his unrivalled talents soon gained his favor; and induced him to withdraw from his Spartan allies. Being again the open enemy of Sparta, Alcibiades now wished to effect a reconciliation with his countrymen; and entering into a correspondence with the leading men in the Athenian fleet at Samos, was pardoned and recalled by the soldiers, and appointed one of their generals. For the next four years he remained abroad, rendering important services to his country; and having, by the victories which he gained, re-established himself in public favor, he returned to Athens, B.C. 407, where he was received with great enthusiasm. His property was restored to him, the priests were ordered to revoke their curse; and as the crowning honor he was appointed commander-in-chief of all the forces by land and sea. But the fickleness of the Athenian character again displayed itself. In consequence of the defeat of the Athenian fleet at Notium B.C. 406, he was superseded in the command, and went into voluntary exile in the Thracian Chersonesus. After the establishment of the tyranny of the Thirty in B.C. 404, he was condemned to banishment. Upon this he took refuge with Pharnabazus, satrap of Bithynia, intending to proceed to the court of Artaxerxes, when one night his house was surrounded by armed men and set on fire. He rushed out sword in hand, but fell overwhelmed with missiles, B.C. 404, in the forty-fifth year of his age. [G.F.]

 ALCUIN, or as he Latinized his name, FLACCUS ALBINUS ALCUINUS, was in all likelihood born at York about the year 735. Educated in the monastic school at York, under Egbert and Aelbert, both of whom afterwards held the see of York, he was promoted subsequently to be master of the same school, and taught in it till 780. Archbishop Eanbald sent him, in 781, to Rome, to get for him the pallium, and Alcuin, on his return, visited Charlemagne, at Parma. The emperor at once became deeply attached to him, brought him to his court, and heaped upon him honors and emoluments. At the court of Charlemagne, Alcuin was a general preceptor, and counsellor. Ultimately he retired to Tours, where he died 19th May, 804. Alcuin was not only a distinguished scholar, polemic, and poet himself, but aided and directed his imperial master in patriotically diffusing through the empire the means of literary and theological education. He assisted at the councils of Frankfurt and Aix-la-Chapelle, at which the errors of Felix and Elipandus on the person of Christ were condemned. Altogether he was the most distinguished man of his age. [J.E.]

Miles Standish employed him to court, in his name, Priscilla Mullins, but the Puritan beauty preferred the messenger to the suitor, and met his proposals on behalf of his friend with the characteristic question, "Prithee John, why do you not speak for yourself?" Standish was compelled to seek a wife elsewhere, and John and Priscilla were united. He died Sept. 12, 1687, in his 89th year.

ALEXANDER I., succeeded his father as king of Macedon, B.C. 501, d. B.C. 451.

ALEXANDER II., the elder brother of Philip, the father of Alexander the Great, succeeded as k. of Macedon, B.C. 369. Assassinated B.C. 367.

[Alexander—from an Antique Gem.]

ALEXANDER III., surnamed the Great, son of Philip, king of Macedonia, was born at Pella in the autumn of B.C. 356. In the short space to which we are necessarily restricted, it is impossible to do more than enumerate a few of the leading events in the life of this extraordinary man. In his fourteenth year, B.C. 342, Alexander was placed under the immediate tuition of Aristotle, and continued to receive his instructions till he was unexpectedly called to the throne. Under the superintendence of such a master the powerful mind of Alexander was rapidly developed and enriched with stores of practical and useful knowledge. His physical education also was carefully attended to; he was trained to expertness in all manly exercises; and in horsemanship is said to have excelled all his contemporaries. When sixteen years old, B.C. 340, Philip, setting out on an expedition against Byzantium, delegated to him the government during his absence. Alexander's first essay in arms was made two years later, B.C. 338, at the battle of Charonea, by which his father established the Macedonian supremacy in Greece. The murder of Philip in B.C. 336, when about to march into Asia at the head of the combined forces of Greece, raised Alexander to the throne at the age of twenty, and involved him in difficulties from which the promptest energy could alone have saved him. Several of the Grecian states, still fretting under the effects of the battle of Charonea, concerted measures for throwing off the galling yoke, but the vigorous promptitude of the youthful sovereign frustrated their plans, and awed them into submission. The assembled Greeks at the Isthmus of Corinth, with the single exception

of the Lacedæmonians, elected him as successor to his father in the command against Persia, thus virtually acknowledging him as their sovereign. Having now quelled opposition in the south, he turned his attention to the barbarians in the north, B.C. 335, and west, who had renounced their allegiance, and established his dominion from the northern limits of Scythia to the shores of the Hadriatic. Alexander now devoted himself to preparations for his Persian expedition; and, crossing the Hellespont in the spring of B.C. 334, gained his first victory over the Persian army on the banks of the Granicus, a small stream which falls into the Sea of Marmora. After reducing the towns on the western coast of Asia Minor, he marched to Gordium in Galatia, where he untied with his sword the famous Gordian knot, and thereby established his claim as the conqueror of Asia. Having been joined here by reinforcements from Macedonia, he proceeded through the centre of Asia Minor to Cilicia, where he nearly lost his life by bathing when overheated in the waters of the Cydnus. His second engagement with the Persians took place on the plain of Issus, on the shores of the Gulf of Scanderoon, B.C. 333, and ended in the total defeat of Darius, who fled to the eastern bank of the Euphrates, leaving his mother, wife and children in the hands of the conqueror. The magnanimity of Alexander was honorably displayed in the delicacy and respect which he showed to his helpless prisoners. The battle of Issus decided the fate of the Persian empire; but before advancing in pursuit of Darius, Alexander judged it prudent to make himself master of Phœnicia, and especially of the towns on the coast. Tyre, after a siege of seven months, was taken, B.C. 332, and the inhabitants massacred or sold as slaves. Proceeding next into Egypt, he received the ready submission of the inhabitants, and founded the city of Alexandria at the mouth of the western branch of the Nile. In the spring of the same year, B.C. 331, he set out in quest of Darius; and proceeding through Phœnicia, Syria, and Mesopotamia, at length, in October, met with the immense host, said to have amounted to more than a million of men, on the plains of Guagamela, a village of Assyria, about fifty miles from Arbela. Darius, who was irretrievably defeated, fled to Ecbatana (Hamadan) in Media. Alexander, as the conqueror of Asia, now assumed the pomp and splendor of an Eastern despot; and proceeding to Babylon, Susa, and Persepolis, was received by the inhabitants as their undoubted sovereign. In the beginning of B.C. 330, he marched into Medir in pursuit of Darius, who had there collected a new force, and, following him through the deserts of Parthia, had nearly reached him, when the unfortunate king was murdered by Bessus, satrap of Bactria. The magnanimous conqueror caused the body of his fallen enemy to be buried in the tombs of the Persian kings at Persepolis, and spent the remainder of the year in consolidating the conquests which he had already made. But uninterrupted success produced its usual effects upon the mind even of Alexander. Hitherto sober and moderate, he now became the slave of his passions; gave himself up to arrogance and cruelty; and in the arms of pleasure shed the blood of his bravest and most faithful generals. The next two years was spent in reducing under his sway the remaining countries of Central Asia; and in the spring of B.C. 327, he crossed the Indus, and entered into the country of the Punjab, where he met with no resistance till he reached the Hydaspes (Jelum.) On the eastern bank of this river he was vigorously opposed, but in vain, by Porus the native king. Still

pressing forward, he crossed the Acesines (Chinab) and the Hydraotes (Ravee), and was preparing to cross the Hyphasis (Garra) when the Macedonians, at last worn out by fatigue, refused to proceed; and Alexander, after using every effort to induce them, was obliged to lead them back. Returning to the Hydaspes, he there built a fleet and sailed down the river, receiving as he proceeded the submission of the inhabitants on either side. On reaching the confluence, he despatched a portion of his army into Carmania, and continued his voyage down the Indus, the mouth of which he reached about the middle of B.C. 326. He here committed his fleet to the care of Nearchus, and commenced his return by land to Persia, reaching Susa in the beginning of B.C. 325. In the spring of B.C. 324 he arrived at Babylon, which he intended to make the capital of his empire. But his boundless ambition was not yet satisfied. He commenced preparations for the invasion of Arabia; but, while cherishing this and other gigantic schemes of conquest, was attacked by a fever in May or June B.C. 323, and died after an illness of eleven days.—‘The history of Alexander forms an important epoch in the history of mankind. Unlike other Asiatic conquerors, his progress was marked by something more than devastation and ruin; at every step of his course the Greek language and civilization took root and flourished; and after his death, Greek kingdoms were formed in all parts of Asia, which continued to exist for centuries. By his conquests the knowledge of mankind was increased; the sciences of geography, natural history, and others, received vast additions; and it was through him that a road was opened to India, and that Europeans became acquainted with the products of the remote East.’ [G.F.]

ALFIERI, a Roman architect, died 1767.

ALFIERI, COUNT VITTORIO, descended of a family both noble and rich, was born in 1749, at Asti, in Piedmont. Left an orphan in childhood, he early displayed his self-willed obstinacy of character; and his education left him nearly as ignorant as it found him. At the age of sixteen he became the uncontrolled master of his fortune and his conduct; and

[Alfieri.]

for several years his career was one of restless wandering and dissipation. A love of horsemanship and horses was one of his two strongest passions: the other involved him in a sea of profligate amours, of which the most scandalous had its scene in London. A love-affair, not at all more creditable, in which he engaged on returning to Turin in 1772, had the effect of awakening for the first time his poetical susceptibility and his ambition of literary fame. His qualifications for success were as unpromising as possible. He appears to have added, during his travels, little or nothing to the very small stock of knowledge with which he left school; and he never showed any aptitude for observation, either of men or of other objects external to him. In point of language, he was even whimsically deficient. He had learned no Latin; the Italian dialect of his native province is hopelessly corrupt: and, while he was totally unpractised in writing, he spoke but indifferently even French, the language of the Piedmontese nobility and court. The young poet, inspired by the thirst for glory yet more than by his newly-awakened love of letters, set himself determinedly to vanquish all difficulties, by now educating himself. He learned Latin enough to put some of the classical writers at his command; and he studied assiduously both the Tuscan or literary dialect of Italy, and the principles of the drama, the kind of composition by which his fancy had been attracted. After bringing a play on the stage at Turin, in 1775, he took up his residence at Florence, for the study of the Italian tongue in a region where it is purely spoken.—In 1783, he published his first series of tragedies, the *Filippo*, *Polinice*, *Antigone*, and *Virginia*. A second series of six tragedies, appearing afterwards, contained, among others, the *Timoleone* and the *Rosmunda*. In the third and last series, which embraced nine, were the two *Brutuses*, the *Maria Stuarda*, the *Conspiracy of the Pazzi*, and the *Saul*, which contests with his *Filippo* the honor of being his best work. In the meantime, however, his studies suffered many interruptions; and he travelled much, chiefly that he might be near a lady to whom he had become attached in Florence. This was the Countess Stolberg, who derived the title of Countess of Albany from being the wife (ill-used and neglected) of the Chevalier Charles Edward Stuart. After the death of this unfortunate prince, in 1788, his widow and Alfieri lived together, and were understood to have been privately married. They were in Paris during the massacre of 1792, and, escaping with difficulty, resided thenceforth at Florence. Alfieri's literary employments were now prosecuted with increasing ardor; in his forty-eighth year he began to learn Greek, for the purpose of studying the Attic drama; and he wrote a large number of pieces, embracing satires in verse, a strange kind of political comedies, and his *Memoirs of his own Life*. He died in 1803, and was buried

in the famous Florentine church of Santa Croce. His character was exceedingly peculiar, and notwithstanding some fine and elevated points, cannot but be pronounced unamiable. Its most prominent features were an indomitable energy of will, which was shown by the whole of his literary career, a ceaseless craving for celebrity, and a boundless self-esteem, which exhibited itself in a reserved haughtiness of manner, and made him really a bigoted aristocrat at heart, while professing and supposing himself a violent democrat. Not less singular are his tragedies, the works on which his literary fame depends. In their structure, they carry to the farthest possible extreme the unity and simplicity of the French drama of the seventeenth century. Their representation of character is monotonous and deficient in individuality, but sometimes very powerful, as in the portrait of Philip II.; and, in respect of sentiment, their strength lies in the gloomy and deeply tragic. The diction has, perhaps, more of vigor than any other works in the same language, though this excellence is gained at the cost of adopting a conciseness which is always rugged, and sometimes obscure; and the versification is as unmelodious as any combination of Italian words could be made. Altogether these are remarkable works, which cannot soon be forgotten, but whose literary merit will always be differently estimated by different critics. [W. S.]

ALFRED, the 'Philosopher,' a writer greatly esteemed at Rome in the 13th century.

ALFRED, a king of Northumberland, 7th cent.

ALFRED, the bastard, brother and successor of the preceding, noted for his love of letters.

ALFRED, a Saxon prince, brother of Edward the Confessor, who met with a cruel death in an attempt to gain the crown, early in the 11th cent.

ALFRED, AELFRED, or ALURED, a celebrated Saxon monarch, is commonly called The Great, and has better merited that title, by eminent services to the world, than perhaps any other of the celebrated monarchs who have borne it. He is one of the men whose life forms an era, and thus, like Lycurgus and Charlemagne, his name is associated not only with the legislative improvements actually accomplished by him, but with many others which had an earlier origin, and came to maturity near the time of his reign. From the propensity to attribute to him every early and beneficent feature in the English constitution, it is sometimes difficult to discover his actual achievements; while annalists and historians, anxious to provide an ample account of one so famous, have endeavored to give particulars of so many events in his life which could not be ascertained, that it is difficult to separate the truth from the falsehood, and tell what is really known of him. It seems well ascertained that he was born in the middle of the 9th century; the year is stated as 849. He was the youngest son of Ethelwolf, king of the West Saxons. Giving promise of great capacity, his father gave him in his early youth opportunities of instruction by travelling twice to Rome, and living for some time in France; and there is no doubt that the knowledge thus acquired by him of a higher civilization, prepared him for the exercise of that beneficent influence of his people which enabled him to accomplish so many social improvements among them. While his elder brother, Ethelred, was king, they were both called on by the king of Mercia to assist him and his people against the Danish hordes overrunning the country, and oppressing the Saxon people. They conducted a long contest with varied success; but though conduct and leadership seem to have been on the side of the Saxon princes, the Danes had numbers and ferocity. At a battle near Reading, Ethelred received a mortal wound, in the year 871, and when he died Alfred succeeded him. He derived but gloomy prospects from the state of the country, deeming the triumph of the Danes inevitable, but with an energy and courage, which in spite of painful disorders never left him, he resolved to defend, step by step, the territories committed to his charge. A confused history follows, in the course of which it is said that nine great battles were fought in one year. The Danes, receiving ever fresh recruits from the continent, pressed him by degrees, until he ceased to command an army, or even a guard, and, wandering alone, found safety in a pea-

sant's hut at Athelney, in Somersetshire. The old chroniclers tell a story so characteristic, that it has secured general belief, about his being set by the peasant's wife to watch the baking of some cakes, and when—his mind far away devising projects for

[Alfred's Jewel.]

relieving his country from the invaders—he allowed the cakes to burn, the honest woman scolding him sarcastically as one ready enough to attend to the function of eating them, though he could not be at pains enough to watch them. After he had been a few months in this retreat, he found means to gather some of his most trusty followers, and to make at last a small army, which harassed the conquerors, and gradually increased. There is a well-known legend of his preparing at last for a pitched battle with the leader of the Northmen, Guthrun or Gorm, and ascertaining beforehand the state and number of the forces, by penetrating the camp in the disguise of a harper. The battle which followed crowned a series of successes, and in the year 898 restored him to his throne. It was his policy not to attempt the extirpation of the marauders, but to christianize and civilize them, mixing them up with the other inhabitants of the country. The Danish chiefs, from fellow-kings, sunk to tributaries, and in the year 894, Alfred might be said to be king of England. He had not been long at rest, ere the Danes reinforced from the continent, and headed by a powerful leader, Hastings, drove him into a new and arduous conflict, which terminated in his favor in the year 897. In the meantime he built vessels, and trained men so effectively in maritime warfare, that he has been deemed the founder of the British navy. He confirmed and consolidated the Saxon institutions, which divided the country into grades of municipalities, making the several communities of citizens checks on each other's conduct, by being responsible for the offences committed within their respective communities. Thence he has been called the inventor of the arrangement of the country into shires, hundreds, and tithings, though he probably only regulated and confirmed what had been previously in existence. He has been called the author of trial by jury, but in our present understanding of the system, it was not in practice until long after his day. He was a great scholar and author, and translated Boethius on the Consolations of Philosophy, with other works, into Saxon. He died either in 899 or 900. The memoir of him, which bears the name of his contemporary Asser, was long deemed a genuine life, but its authenticity has of late been doubted. [J.H.B.]

[Ali Pacha.]

**ALI, PACHA**, of Jannina, was born about the year 1750, at the little fortified village of Tepelenë, in Albania, in European Turkey. Ali's family belonged to one of the Albanian tribes that had long embraced Mahometanism; and his ancestors for some generations had been chieftains of Tepelenë. Ali's father had been stripped of the greater part of his possessions by a confederacy of the neighboring chiefs; and when the old man died of a broken heart. Ali was a boy of about fourteen years. But Ali's mother, Khamko, survived, and was a woman of remarkable energy. She successfully defended Tepelenë, the last remnant of her son's heritage, against his father's foes; and to her example and influence, much both of the vigor and of the ferocity which characterized Ali in after years, may be attributed. As the lad grew up, the mother trained him to make glory and revenge the sole objects of his existence. He collected a small band of armed followers, and made repeated forays into the lands of his hostile neighbors. Sometimes he sought adventures and booty alone, as a common freebooter, or Klephtis, according to the modern Greek title. Ali's early youth

was passed in this adventurous manner; and many of the vicissitudes that he encountered are far more romantic than any novelist ever invented. By the time that he was twenty-four, he had recovered the greater part of the hereditary territories of his family; his wealth and his retainers were increasing rapidly, and his fame as a military chief was spread throughout Albania, and the neighboring provinces. He now began to intrigue for promotion and influence at the sultan's court; and lavished his treasures for that purpose in bribes among the leading members of the divan at Constantinople. Partly by these arts, and partly on the strength of the more creditable claims which he acquired by doing good service at the head of a body of Albanians in the war of 1787, against Austria and Russia, Ali obtained official rank and favor from the sultan. He was made pacha of Trikala, in Thessaly, and soon held other appointments; but his great object was to obtain the pachalic of Jannina, in southern Albania, and by audacious craft and bribery, he succeeded in this in 1788. Jannina thenceforth was the capital of his dominions. Ali proved almost invariably an overmatch for the other pachas who entered into rivalry with him. He sometimes put them down by open force, but he more frequently rid himself of such adversaries by secret assassination, or by sowing calumnies against them at the sultan's divan. The suppression of the little local chiefs, and the subjugation of the independent towns and tribes in Albania, was a task of more difficulty. In particular, the tribe of the Suliotes resisted him with the noblest courage; and called into activity against them that fiendish vindictiveness which was a leading feature in his character. Many years passed away before it was gratified; and Ali sustained from the Suliotes more than one humiliating defeat. By degrees this heroic race was overpowered, and in 1802, the garrison of their last stronghold was massacred, after a war in which Ali sullied himself by the meanest perfidy, as well as by the most bloodthirsty barbarity.—Ali extirpated the robber-chiefs who (as he himself had done in his youth) infested the mountain passes of Albania. He crushed the local independence of the chiefs, and made his authority practically as well as nominally supreme over their hereditary jurisdiction. His dominions were made as orderly, and as secure for the merchant and the traveller, as those of any European potentate. He enriched Jannina and his other cities with stately buildings, and secured them with fortifications. He encouraged and protected foreign merchants. He sternly enforced a complete equality of the members of all religious creeds. Swift to discover, and merciless to punish all crimes save his own, he gave Albania a degree of tranquillity and prosperity, such as the country had never enjoyed since the days of its ancient Epirote princes.—Ali Pacha watched with eager interest the wars that raged through European Christendom, after the breaking out of the French revolution. His great object was to make himself master of an ample and compact dominion, which was to include Albania, the Ionian isles, Macedonia, Thessaly, and the whole of Greece.—He obtained possession of the city of Prevesa, and other towns on the mainland, but he could not gain the Ionian islands, though he entered into a long series of intrigues, alliances, and hostilities with the French and their enemies, in succession. But though unable to realize the magnificent scheme which he had formed, Ali was for many years a prince of high power and renown, whose favor was courted by the statesmen of European as well as of Asiatic courts. Had the late sultan Mahmud been

as imbecile as were his immediate predecessors, Ali Pacha would, in all human probability, have closed his career in prosperity and peace. But sultan Mahmud was resolute to reform the anarchy of his kingdom; and his proud spirit chafed at the idea of permitting his authority to be bearded by a vassal like Ali, whose insubordination was so imperious, and so notorious throughout the world. A pretext was soon found for assailing him, and the sultan proclaimed Ali a rebel, and all faithful Mahometans were ordered to destroy him. The war between the pachas who marched at the sultan's bidding, and the old pacha of Jannina, commenced in 1820. At first Ali had the advantage; but sultan Mahmud inspired his lieutenants with some of his own spirit. Many of Ali's strongholds were wrested from him—the greater part of his troops deserted him—his sons made terms with the enemy, or were slain; and before the end of 1820, Ali was closely besieged in Jannina. It was in vain that he bribed the sultan's ministers: Mahmud declared that any person who spoke in behalf of Ali should be put to death. Other sums of money were sent from Jannina to Greece, with the view of raising an insurrection and drawing away the besieging army to suppress it. The Greek war of independence was thus fomented, and some of the Greek chiefs endeavored to assist Ali in Albania, but the Turkish troops steadily pressed the siege of Jannina. At last Ali treated for a surrender: and, by a piece of retributive justice, he who had destroyed so many by first granting, and then violating treaties of capitulation, now became the victim of a similar fraud. Khurshid Pacha, who commanded the besiegers, by giving a solemn pledge that the sultan's pardon for Ali had been granted, induced Ali to surrender, and then had him put to death, though not till after the old man had defended himself desperately, and shot three of the soldiers who were sent to slay him. The gray head was cut off, and sent to Constantinople, where sultan Mahmud received it with his own hands, and exhibited it in grim triumph to the members of his divan.—Ali Pacha was killed on 22d February, 1822. ALLEN, ETHAN, an officer of some distinction, and great eccentricity, in the American army during the Revolution. He was a native of Roxbury, Conn. His early education was much neglected, which may account for and partly excuse some of his speculative errors on religious subjects. As early as 1770 he was outlawed in Vermont, to which he had emigrated, for siding with the 'Green Mountain Boys,' in opposition to the government of New York. The first exploit which brought him favorably to notice, was the capture, by surprise, of Ticonderoga, May 10, 1775, which made the Americans complete masters of Lake Champlain. Though the scheme did not originate with him, but with Capts. Mott and Phelps of Hartford, it owed its success to his courage, coolness, and presence of mind. At the head of 83 men he crossed the lake opposite Ticonderoga on the evening of the 9th, expecting to be followed by a much larger force before daylight; but the rest of the party not arriving, he determined to seize the fort with his handful of followers. He informed his men of his desperate resolution, and called upon those who were willing to accompany him. Without leaving them time to reflect, he moved towards the gate, put the sentry to flight, and following him through the covered way, entered the parade ground, and arranged his men in lines opposite the barracks in which the British troops were sleeping. Capt. de la Plau, the commander of the post, roused from his slumbers by the cheers of the assailants, found at the same instant Allen standing over him with a drawn sword, demanding the surrender of the place. 'By what authority do you demand it?' he inquired. 'In the name of the Great Jehovah and the Continental Congress,' was the characteristic reply. There was no alternative but death, and Ticonderoga, its garrison, ammunition and stores fell into the hands of the Americans. This success was followed by others; the capture of a sloop of war, and St. John's fort, but the latter was soon retaken. In this daring enterprise, Arnold acted as the assistant of Allen. In the autumn of the same year, he was twice sent into Canada to excite rebellion against the English government; and in the last of these expeditions, having formed a plan to reduce Montreal, in concert with Col. Brown, he crossed the St. Lawrence at the head of 110 men, but before Brown could join him, was compelled, after a desperate resistance, to surrender to a superior force. During his captivity he endured many hardships, and especially on his passage to England, when, with thirty-four others, he was confined in a room a little more than twenty feet square. After being detained a month in the neighborhood of Fal-

mouth, he was sent back to America; and on the passage from Halifax to New York, had an opportunity of evincing his gratitude to the captain, who treated him kindly, by refusing to join in a project to kill him and obtain possession of the vessel. He was exchanged in 1778 for Col. Campbell, and was kindly received at head-quarters by Washington. On his return to Vermont, he was made commander of the State militia. He died in 1789, having honorably resisted many efforts to bribe him into disloyalty to his country. He was the author of several small works, the best known of which is an autobiographical sketch. His assault on the Christian religion in a book entitled 'Allen's Theology, or the Oracles of Reason,' has, fortunately for his reputation, sunk into obscurity. He adopted the notion of transmigration,—whether in jest or earnest it is difficult to understand. That his infidelity was assumed from ostentation, rather than conviction, is evident from his memorable reply to his dying daughter, who asked him which she should believe, what he or what her mother, who was a sincere believer in Christianity, had taught her. After an interval of deep agitation, he said, 'Believe what your mother has taught you.'

[Grave of Ethan Allen.]

ALLEN, HENRY, a religious enthusiast, born in Newport, R. I., 1748, who propagated in Nova Scotia, about the year 1778, certain wild speculations, similar to those of the ancient heretics, concerning the emanation of the soul from God, in which he denied that human nature was corporeal before the fall, that the body will rise from the grave, and that there is any obligation to observe the ordinances of the Gospel. He died 1784.

ALLEN, IRA, brother of Ethan Allen, and sharer in many of his exploits, was born at Cornwall, Conn., 1752. He aided in forming the constitution of Vermont, of which State he became surveyor-general and treasurer. In 1780-81 he was sent as commissioner to Congress. He drew up the memorial in 1789 for the establishment of Burlington College. While major-general of militia, he entered into a private speculation to supply the State with arms, and for this purpose sold his lands in Vermont and proceeded to France, and purchased 24 cannon and 20,000 muskets, in hopes of obtaining for them double what he paid; but on his way from Ostend, being made prisoner by the English, was accused of a design to supply the Irish rebels with arms. Eight years elapsed before a decision of the courts was obtained in his favor. After a short captivity in France, he returned to America in 1801. The remainder of his life was spent in quiet, principally at Colchester, Vermont. He was the author of the *Natural and Polit-*

*ical History of Vermont.* His death occurred at Philadelphia in 1814.

ALLEN, JAMES, an eccentric poet of Boston, born 1739, died 1808.

ALLEN, JEREMIAH, treasurer of the province of Massachusetts in 1715; son of James Allen, a graduate of New College, Oxford, who settled in New England and became pastor of a church in Boston.

ALLEN, JOHN, secretary of the colony of Connecticut in 1664.

ALLEN, JOHN, author of several obscure works in defence of New England theology; born in England 1596, emigrated to America with the Puritans, and died at Dedham, 1671.

ALLEN, JOHN, chancellor of Ireland, murdered by the Earl of Kildare, 1534.

ALLEN, JOHN, M. D., a distinguished historian and political writer, a frequenter of Holland House, friend of Mackintosh, Romilly, Horner, and Sidney Smith; an early contributor to the *Edinburgh Review*; 1771-1843.

ALLEN, MATTHEW, one of the first settlers of Connecticut, to which he emigrated with Hooker in 1632.

ALLEN, MOSES, a Presbyterian minister, born in Northampton, Massachusetts, in 1748. He was chaplain to the Georgia brigade when Savannah was taken by the British in 1778, and being captured and denied liberty on parole, was drowned in attempting to escape from a prison-ship, February 8, 1779. He was noted for his patriotic exhortations to the troops, and for the bravery with which he exposed his person during action.

ALLEN, PAUL, a poetical writer and legislator of Rhode Island, who was the author of various contributions to the *Port Folio* and *United States Gazette*. Born 1775, died 1826.

ALLEN, SAMUEL, a London merchant, who purchased in 1691 a large portion of New Hampshire, extending sixty miles from the sea, and including Portsmouth and Dover. His claim being resisted by the settlers on the ground of an Indian title, which too late proved a forgery, a tedious litigation ensued, which was carried on after his death by his son, and finally determined in favor of the settlers. The Allen family became extinct before the fraud was discovered.

ALLEN, SOLOMON METCALF, an American scholar of promise, and professor in Middlebury College, Vermont, accidentally killed by falling from a roof in 1817, aged 28 years.

ALLEN, SOL. The Allen family was prolific in preachers and patriotism. Solomon, commenced life as a soldier and ended it as a missionary. At the time of Andre's capture he was acting as lieut. and adjt., under Col. Jameson, by whose command he accompanied the unfortunate prisoner with a guard of nine men for the purpose of delivering him to General Arnold, but on the road received a counter order, to the effect that he was to deliver Andre to Captain Hooglin at Lower Salem, send back 8 men, and proceed with the remaining one to West Point. His prompt compliance with the order, in opposition to the wishes both of the escort and of Andre, deprived the latter of his last hope of escape. Allen delivered the letters to Arnold, who immediately fled, and on the arrival of General Washington, the treason being discovered, Andre was brought to head-quarters. lieutenant Allen dined that day with Washington and Knox, and to him we are indebted for the anecdote so characteristic of the commander-in-chief.—Knox remarked, it was "a fortunate discovery." "I call it," said Washington, "a remarkable Providence."

In the suppression of Shay's rebellion after the conclusion of the war, Solomon rendered as good service as his brother Thomas, but in a military capacity. At the age of fifty he began to study for the ministry, and for nearly twenty years acted as a missionary in the western part of the State of New York. After a most laborious and self-denying career, he died in New York, in 1821, aged 70 years.

ALLEN, THOMAS, a Presbyterian minister, brother of the preceding, who was, likewise, distinguished during the Revolution as a volunteer chaplain, in which capacity he acted with the army at White Plains in 1776, and at Ticonderoga in 1777. He was present at the action at Bennington in company with a volunteer regiment from Pittsfield, and was among the foremost to enter a breastwork. During Shay's rebellion, he was of eminent service to the government of Massachusetts. He visited England in 1799, where he formed the acquaintance of Newton, Hawlis, and Rowland Hill. He died February 11, 1810, in his 68th year.

ALLEN, THOMAS, a native of Norwich, in England, and graduate of the University of Cambridge, who refusing to read the book of field sports, was silenced by Bishop Wren, and emigrated to New England in 1638. He was minister of Charlestown, Mass., and died in 1673. He was the author of several works characteristic of the period, which are preserved in the New England library.

ALLEN, TH., a mathematician, 1542-1632.

ALLEN, T., antiquarian, 1803-1833.

ALLEN, WM. HENRY, a United States naval officer, who was killed in an action between the *Argus* and the *Pelican* in the British Channel, during the war of 1812. Born 1784, died 1813.

ALLERTON, ISAAC, arrived in America in the *Mayflower*, as one of the first settlers of Plymouth. He was an active and enterprising trader. Point Allerton near Boston is supposed to be named after him.

ALLESTREE, R., a celebrated divine, 17th cent.

ALET, J. C., a French engraver, 17th century.

ALLEY, W., an English reformer, died 1570.

ALLEY, REV. JEROME, LL.D., a theological and political writer, 1778-1826.

ALLEYN, EDWARD, a celebrated actor of the 16th century, the companion of Shakspeare, and a benefactor to learning and his country, as the founder of Dulwich College, was born in London, 1st September, 1566. It is probable that he was introduced to the stage through his mother's second marriage with a haberdasher and player, named Brown, and it is certain that he had a joint share with him and one

manager, Philip Henslowe, and in conjunction with his new relative, undertook the management of the Rose Theatre, Bankside, for a short season. After their separation, Alleyn appears to have visited the provinces by himself; but in 1600 they united again to build a new theatre, called 'The Fortune,' situated in Cripplegate; and were also joint patentees in 'the mastership of his majesty's games of bears, bulls, and dogs,' exhibited at Paris Garden, which they rebuilt in 1606. In the same year, Alleyn purchased the manor of Dulwich from Sir Francis Calton, and ten years afterwards, the death of Henslowe left him sole proprietor of their various speculations, to which he had already added a share in the Blackfriars Theatre, supposed to have been Shakspeare's interest in it, purchased in 1612. A career like this betokens a prosperous and clever man, and accordingly he was known by his contemporaries as 'famous Ned Alleyn.' In Ben Jonson's estimate, he was equal to the great actors of Rome, and seems most to have excelled in majestic parts. Green's 'Orlando Furioso,' and Marlowe's 'Jew of Malta,' are mentioned as characters of his. The burning down of the Globe and Fortune Theatres, turned the current of his fortunes; but before this reverse he had delighted in acts of benevolence, and sequestered all his lands to the college, designed for the support of one master, one warden, and four fellows, three of whom were to be ecclesiastics, and one a skilful organist, and also of six poor men, six women, and twelve boys to be educated in good literature. After some legal difficulties the patent passed the Great Seal on the 21st June, 1619, and on the 13th September following, Alleyn having formally and publicly dispossessed himself of all property in the foundation, entered it with his wife as inmates of the establishment and equals of those for whose comfort and elevation it was intended. He still, however, continued master of the king's games; and his diary represents him as occasionally baiting before the king at Greenwich. It was during his residence in the college, indeed, that the Fortune Theatre was burned down, which he forthwith rebuilt. Having lost his wife in 1624, Alleyn married again, and expired himself, on the 25th November, 1626; by his will endowing twenty almshouses, ten in the parish of St. Botolph, and ten in St. Saviour's, Southwark, besides leaving considerable legacies to his widow and relatives.—The motive to these various acts of munificence has been superstitiously ascribed to the circumstances of Alleyn having been surprised by the apparition of the devil in one of his performances; but no intelligent reader will pay the slightest regard to so absurd a story. There may have been some vanity—the player's peculiar fault—in the transaction; since Alleyn manifested a partiality for people bearing his own appellation, and directed that the master of the college should always be of the name of Allen or Alleyn. This situation is now of great value; the revenues of the foundation being large. The college is also rich in works of art, Alleyn himself having left a considerable number of pictures, and Sir Francis Bourgeois in 1810 having bequeathed to it his valuable collection. Papers in the handwriting of Alleyn and Henslowe are also among its treasures. Alleyn's diary, which has been published by the Shakspeare Society, is particularly instructive touching the condition of the dramatists of the time. For the most part, they were exceedingly poor, and the remuneration paid for their works was very small. Those who, like Shakspeare and Alleyn, had the theatres in their possession, profited largely by the prevailing taste; but the workers in the mines

of the drama labored hard in obscurity for the precarious means of subsistence; and some of the details of their difficulties may be gathered from this most interesting document. From these difficulties Shakspeare was exempt; a fact which sheds a light on his character and condition to which sufficient attention has not been paid. The greatness of the poet was in fact doubtless due to his favorable position as an actor and manager; how this was attained is a point on which some explanation is yet desirable. [J.A.H.]

[Residence and Studio of Washington Allston.]

ALLSTON, WASHINGTON, universally acknowledged as of the first eminence among American painters, was born in Charleston, S. Carolina, November 5th, 1779. In his early youth he was sent to the North for his education, and at the same time to invigorate his delicate constitution, and placed at the school of Mr. Robert Rogers, in Newport, Rhode Island. This selection must have been made both on account of the salubrity of climate and the celebrity of the teacher, whose school at that time had deservedly acquired a high reputation. All his schoolboy years were spent under Mr. Rogers's instruction until 1796, when he entered upon a higher academic course at Harvard College in Cambridge, Massachusetts. From this institution he received his Baccalaureate degree in 1800. Proud as it may well be, of the *clarum et venerabile nomen*, which has been acquired by many on its long list of Alumni, not one among them has reflected higher honor upon it than that of Washington Allston. It is not possible in a biographical sketch of this kind, which is necessarily limited, to give any thing more than the leading incidents of his after life; a full biography with

copious selections from his correspondence, prepared by a writer every way competent to do justice to the subject, has long been expected, and it is hoped will soon be laid before the public. In the meanwhile 'Dunlap's History of the Rise and Progress of the Arts of Design in the United States' may be referred to for many interesting particulars of his artistic career.

After leaving college, he did not long hesitate in choosing his vocation, and as our country at that period furnished very few facilities for the study of the Fine Arts, it became necessary for him to seek them abroad. Fortunately he had inherited a sufficient patrimony to enable him to do this without availing himself of the generous offers of many friends who would have furnished him with whatever means he might require. Determined to make himself a painter he embarked for London in 1801, on his own independent resources, and on his arrival lost no time in entering the Royal Academy as a student. Benjamin West, the distinguished American painter, had succeeded Sir Joshua Reynolds as President of the Academy, and his reception of our young aspirant was most kind and encouraging. 'I shall never forget,' writes Allston, 'his benevolent smile, when he took me by the hand; it is still fresh in my memory, linked with the last of like kind, which accompanied the last shake of his hand when I took a final leave of him in 1818.'

At the annual exhibition at Somerset House in 1802, Mr. Allston adventured before the public for the first time. In this exhibition he had three pictures—a French soldier, telling a story—a rocky coast, with banditti and a landscape with horsemen, the last of which he painted while at college. For the French soldier he had two immediate applications, and soon after other similar proofs that his early attempts had been favorably judged of by the connoisseurs in painting. Still he continued as a student at the academy for two years more, until 1804, when he accompanied Vanderlyn to Paris. The Louvre, the great museum of art in the French capital, had then recently been enriched by spoiliations from Italy and the Netherlands of many of the finest works of the greatest artists, and with those before belonging to it now possessed the richest collection ever formed. The study of such a collection naturally gave a new impulse to Allston's pencil, which in the course of the few months he remained in Paris, produced four original paintings and one copy from Rubens. But like all true devotees to the art, he regarded Rome as the only Mecca, and was impatient to make the pilgrimage; his steps were, therefore, now turned in that direction. The majestic nature of Swiss scenery, which he had an opportunity of seeing on his way, appears to have filled his whole soul with delight and admiration, and he stopped for a while to contemplate its grandeurs before he passed the sublime portals, which here open upon the fairy land of art. Soon after this we find him settled in Rome, where he remained about four years. Here it was that he first formed the acquaintance of Cole-ridge, which soon matured into intimate friendship, and from him perhaps he acquired some of that fascinating power of conversation for which both were alike remarkable. From a passage in 'Platner & Bunsen, Beschreibung der Stadt Rome,' it may be inferred that he was held in high estimation by his brother artists then resident there. In speaking of Schick in their Chapter on the Modern Art, he is thus introduced: 'It was a young American named Allston who first taught him the way of preparing certain difficult colors for the first coat of a picture,

in order to receive the varnish properly afterwards,' to which they add, 'the skill of this highly talented artist was shown particularly in landscapes, which were distinguished from others of that time, by a strength and clearness of coloring closely approaching that of the early masters. It was this peculiar excellence in Allston's painting, which first fixed Schick's attention upon him.' When he had spent eight years abroad in the diligent and faithful study of the first works of art, by which he had now become a distinguished master, he deemed it his duty to offer the benefits of his knowledge to his own country, and determined to return to it for that purpose. When he reached America in 1809, he found the public mind too much occupied with the great political events, which then threatened to destroy the commercial prosperity of the country, to be interested in art. But for this, an artist of his genius and skill could not have failed to command the deserved encouragement at home, without being compelled to seek it in a foreign land, as after a two years' experiment he found it necessary to do. He knew he had a right to make his profession remunerative, beside which he was now bound to do it, by new obligations. He had become a married man, and his household must be provided for. These considerations sent him once more abroad, and London, being the place in which he was best known, was chosen for his residence. And here also he had many trials to encounter, as the relations between America and England were daily becoming less and less friendly. He felt the unfavorable influence of this national quarrel upon him as an artist, and became disheartened. A long and serious illness soon followed, which required him to remove temporarily to the country; and not long after came the heaviest of all his calamities, the death of his lovely and most amiable and estimable wife. He now needed a consolation the world could not give; it was by that aid alone he was enabled to support his affliction.

As soon as he had in some degree recovered from this shock, Mr. Allston resumed his pencil, and found that as he became more widely known the demand for his paintings increased. Like encouragement attended him during the remaining four years of his residence in England; his pictures were sought for to ornament many of their finest galleries, and among his patrons he numbered their first connoisseurs in the art. He was also no less beloved for the qualities of his heart than admired for his genius. Still success of every kind abroad had not alienated his affections from home; kind friends and generous encouragement had made England deservedly dear to him, but his own Argos was still more dear. In 1818 he bade adieu to London for the last time, and returned without delay to America. Boston and its immediate vicinity now became his permanent residence. Here he found a wide circle of friends to greet him with a cordial welcome, and a patronage which was limited only by his power of producing. During the remaining twenty-five years of his life there was no abatement in the ardor of their attachment to him—founded on their esteem for his pure and exalted character and admiration for his talent. Had he been less severe as a critic of his own works, and less conscientious in performing his whole duty to his patrons, he could easily have increased the productions of his pencil to many times their present number. It was a proud distinction to be the possessor of one of his paintings.

When Mr. Allston found that he required a larger atelier than he could well command in Boston, he had one built of the requisite size in the adjoining village

of Cambridgeport, commanding just such light as he needed, and to its near vicinity he removed his residence about the time of his second marriage. It was here that many of the best of his smaller pieces were begun and finished; and here that his great historical painting, *Belshazzar's Feast*, was brought forward to the state in which he left it, which even as a fragment furnishes decisive proof that in the very highest branch of the art he has had no equal in the present century. It was his last work, and bears so touching a relation to his last hours that we can in no way so well bring this sketch to a close as by an account of this event, adopting the beautiful language of his relation, Mr. Dana, in his Preface to Mr. Allston's *Lectures on Art*: 'His death occurred at his own house, in Cambridge, a little past midnight, on the morning of Sunday, the 9th of July, 1843. He had finished a day and week of labor in his studio, upon his great picture of *Belshazzar's Feast*; the fresh paint denoting that the last touches of his pencil were given to that glorious but melancholy monument of the best years of his later life. Having conversed with his retiring family with peculiar solemnity and earnestness upon the obligation and beauty of a pure spiritual life, and on the realities of the world to come, he had seated himself at his nightly employment of reading and writing, which he usually carried into the early hours of the morning. In the silence and solitude of this occupation, in a moment, 'with touch as gentle as the morning light,' which was even then approaching, his spirit was called away to its proper home.' Allston was an author as well as an artist, and published a volume of poems and several works of fiction.

ALVA, FERDINAND, duke of Alva, (or Alba, as it is commonly called,) stands unenviably prominent in the history of the 16th century as the sternest instrument of the sternest crowned bigot of that age.—Alva was born in 1508, of one of the most noble

families in Castile; he entered the army in early youth, and served with distinction in the greater part of the wars of the emperor Charles V., both in Europe and Africa. He was looked on as the first in ability and honor among the emperor's generals; and when Philip II. succeeded to the throne of Spain on Charles's abdication, Alva continued to be the great military duke of the council and the armies of Spain. He acted as Philip's plenipotentiary in concluding the treaty of Chateau Cambres in 1558, which was not a mere pacification between France and Spain, but a league of the Roman Catholic powers for the extermination of Protestantism. Alva was henceforth the frequent and most confidential adviser of the most violent Romanists in France; and there is little doubt but that it was in pursuance of his exhortations at the interview between him and Catherine of Medici in 1565, that the hideous massacre of St. Bartholomew was planned and perpetrated.—The Netherlands, (including both modern Holland and modern Belgium,) formed a valuable part of the vast dominions which Philip had inherited. The Reformed doctrine had made great progress there, and Alva urged on his sovereign the duty of extirpating heresy in every part of his kingdom, by the same system of merciless persecution which had been employed with seeming success in Spain itself. In 1567 Philip determined on this fatal policy, and ordered Alva to lead a veteran army into the Netherlands, giving him powers which superseded all the ordinary governors and magistrates of the provinces. At the head of 20,000 chosen troops Alva now commenced his reign of terror at Brussels. He formed a council of 12 of his most unscrupulous and merciless officers, which he called the Council of Troubles, but which soon acquired, and deserved, the name of the Council of Blood. The council had unlimited power over the properties and the lives of the Netherlanders. Every one who was charged with heresy or disloyalty, was dragged before this tribunal, which dealt out confiscation, torture, and death, throughout the unhappy country. Tumults soon followed, which gave a pretext for letting loose the ferocious soldiery on the wretched inhabitants; and the Spanish troops were permitted, and even encouraged by their commanders, to practise an amount of licentious brutality and fiendish cruelty, such as cannot be read of without shuddering, and which excited general horror even in that age of religious wars. Alva's avowed maxim was that the king would rather see the whole country a desert, than permit a single heretic to live in it. By treacherously pretending great favor and respect towards the counts of Egmont and Horn, two of the principal chiefs of the Netherlanders, he succeeded in getting these noblemen into his power, and then arrested them and put them to death after a mock trial. The other national leader of the provinces, Prince William of Orange, more wisely distrustful of Alva, kept away from his court; and when the maddened population of the northern provinces took up arms against the intolerable tyranny of Spain, the Prince of Orange became their chief, and levied an army in Germany, with which he sought to rescue his country from Alva. This was the commencement of the glorious Dutch war of independence, which was maintained for 68 years, and ended in the separation of the seven united provinces from the dominion of Spain. In the first five years of that war, which passed before Alva's recall from his command, he fully displayed the high nature of his military talents in battle and in siege, and still more in the cautious skill of his manœuvres. But the spirit of resistance which he had aroused was uncon-

querable. He was ill seconded by the Spanish court; and his troops, ill paid and ill supplied, grew insubordinate and mutinous. Alva was recalled in December, 1573, after a command of six years, during which he boasted that he had brought 18,000 persons to the scaffold, besides the almost countless numbers that had been massacred at Haarlaem, and other revolted cities which his troops took by storm, and those also who perished under the unrecorded acts of wanton cruelty which the soldiery were allowed to practise throughout the unhappy country. In 1582 Alva was once more employed by his sovereign, and led the expedition against Portugal.—The aged general completely conquered that country in ten weeks, and placed its crown on Philip's head; an acquisition which might seem to counterbalance the calamitous war in the Netherlands. This was the last act of Alva's long and active life, for he died in the same year, at the age of 74. [E.S.C.]

AMBROSE, ST., son of the prætorian præfect of Gaul, was probably born at Treves about 340. His father died when Ambrose was but a boy, but he was well educated, and being possessed of great rhetorical powers, he soon rose to high eminence as a forensic pleader at Milan. At the death of bishop Auxentius, in 374, there was intense struggle and conflict between the Catholics and Arians about a successor, and Ambrose, as *Consular*, happened to deliver a peaceful oration to the people, when an admiring and forward child cried from a corner of the crowd, *Ambrosius Episcopus*—'Ambrose Bishop.' The people hailed this as an omen from heaven, and in spite of every attempt on the part of Ambrose to elude the honor, he was baptized, and eight days after his baptism installed as bishop. The first literary work of bishop Ambrose was to patronize and advocate celibacy. But his principal efforts were directed against Arianism, which enjoyed imperial patronage, especially that of Justina, mother of Valentinian II. The city of Milan was embroiled in the conflict, but the bishop, backed by the population, was more than a match for the empress-mother and her Gothic troops. He put his episcopal power and prerogative to the test when he kept the emperor Theodosius for eight months under excommunication on account of a massacre in Thessalonica in which he had been concerned, and made him do public penance ere he was admitted into the great church at Milan. He also, in 384, successfully resisted the re-introduction of pagan worship. The affairs of his diocese occupied the remainder of his life, and he died in 397. The theology of Ambrose was chiefly borrowed from the fathers of the Greek church, and

his eloquence, though great, is often tainted with an affected imitation of Ciceronian periods. His life was so occupied with the political relations of his high position, that he could not bestow upon theology a calm, prolonged, and successful study. He introduced into his cathedral the antiphonal chants of the Eastern church, but the magnificent 'TE DEUM LAUDAMUS, which bears his name, was a composition somewhat later than his busy period. His works were published by the Benedictines of France in two folios, in 1686-90, and Cardinal Angelo Mai has also discovered and edited two others of his literary productions. [J.E.]

AMERIGO VESPUCCI, a distinguished navigator of the fifteenth century, to whom the discovery of America, which takes its name from him, has been improperly ascribed. The true discoverer of this continent was Sebastian Cabot, an Englishman by birth, but of Venetian parentage, who sailing from London, reached the Coast of Labrador fourteen months before Columbus came in sight of Paria. It is now impossible to change established nomenclature, but whatever glory may attach to the word America itself, as the title of the New World, it must ever recall the falsehood of Vespucci, and the perversity of mankind. In 1499, a year after Columbus had set out upon his third voyage, and while he was struggling against insurrection in Hispaniola, several private expeditions were fitted out from Spain, and among them one by Alonzo de Ojeda, a former officer of Columbus, during his second voyage. He was accompanied by Amerigo Vespucci, an accomplished scholar and able writer, born in Florence, but Italian in perfidy as well as talent, who until 1495 had consigned himself to mercantile life, when he was employed by Ferdinand as a pilot in the Spanish navy. Without any recognized rank in the expedition, his scientific knowledge and skill gave him an informal authority. Having spent five months in following with ease, under the guidance of Ojeda, the track of Columbus, whom they visited in Hispaniola, he returned to Spain. After this he made two voyages of discovery by command of Emanuel, king of Portugal, and sailed along the coast of South America from Brazil to Patagonia, returning finally to Portugal June 14, 1504. Columbus died in May, 1506, and in the following year Vespucci published a narrative of his voyages without fear of contradic-

tion from the departed captain, whose laurels he attempted to appropriate to himself. His book was written with eloquence, and composed with art, but as respects truth a large portion of it should be ranked in literature with the travels of Crusoe and Gulliver. He claimed to have discovered the coast of Paria prior to Columbus. To substantiate the assertion, he described a fabulous voyage said to have occurred between May, 1497, and October, 1498. This fiction was appropriately followed by another in which he figures as the commander, instead of the companion of the expedition of Ojeda, and the four vessels of that officer were increased to six. Captivated by the charms of a stirring and romantic narrative, the world, in an uncritical age, acceded too hastily to his proposition, that the new continent should be called by his name. Though his fraud was made apparent in a judicial inquiry, instituted by royal authority, in which Ojeda testified against him, the word was already on the four winds. At that time the discovery of Cabot was not generally known, and the question was simply between Columbus and Amerigo. The whole story of the latter concerning his pretended first voyage is easily disproved. Not only do both the Spanish and Italian writers of the period combine in attributing the first discovery of Paria and the Gulf of Mexico to Columbus, but at the very moment in which Amerigo pretends that he set out by royal authority from Spain, Columbus was himself at the Spanish court preparing for his expedition, and colonial affairs were under the direction of Antonio Torres, a friend of Columbus, who would not, at such a crisis, have furnished another with the means of forestalling him in the grand discovery of the age. Amerigo died at Terceira, but it is uncertain whether 1512 or 1514.

[Fisher Ames.]

AMES, FISHER, an American statesman, was born in Dedham, Mass., on the 9th of April, 1756. His father was a physician, and combined the uncongenial occupation of innkeeper with that of a country Esculapius. His son was of a delicate constitution in infancy, but of remarkable mental precocity. He began the study of the classics at the early age of six years, and such was his rapid proficiency that he was enabled to enter Harvard University when he was only twelve years old. His mother at that period being a widow, and poor, her son was forced to keep school in order to eke out a scanty support while pursuing his collegiate studies. On leaving college he studied law and commenced its practice in his native town, in 1781. With remarkable nat-

ural powers of eloquence, strengthened by study and diligent exercise, he soon became renowned at the bar as an orator. He sought a wider field for his eloquence in political life, and becoming a member of the convention in 1788 for ratifying the Federal Constitution, he took the lead, and evinced a rare oratorical power. He was a member of the State Legislature, and in 1789 the first representative of his district in Congress, where he at once was acknowledged as the most eloquent debater in the House. Ames was as ready with his pen as he was eloquent with his tongue, and was the acknowledged author of the 'Address of the House of Representatives' to Washington on his retirement from the Chief Magistracy. On withdrawing from political life, he was elected President of Harvard University in 1805, but refused to accept the office. He died on the 4th of July, 1808, at the age of 52, leaving behind him the reputation of one of the most eloquent of American orators.

AMES, NATHANIEL, an American physician, eminent for his knowledge of astronomy, born 1702, d. at Dedham, Mass., 1765. He was author of an almanac published for forty years. His son, Fisher, occupies a distinguished place among the orators and patriots of America.

AMHERST, JEFFREY, Lord, a general officer of distinction in the British service, born in Kent 1717. He entered the army as an ensign at the age of 14. In 1741 he served in Flanders as aid-de-camp to General Ligonier, in which capacity he was present at the battles of Dettingen and Fontenoy. He was also on the staff of the Duke of Cumberland at Laffield and Hartenbeck. He was made Colonel in 1756, and soon after Major General. On 16th March, 1758, he embarked from Portsmouth, and commanded at the capture of Cape Breton. In conjunction with Generals Wolfe and Prideaux, he reduced all the French strong-holds in Canada, the entire conquest of which was completed on the 8th September, 1760, by the capitulation of M. de Vaudreuil, and the surrender of Montreal, upon which he received the thanks of the House of Commons and the order of the Bath. His military command in America ended in 1763, when he was appointed Governor of Virginia. In 1770 he was appointed Governor of the Island of Jersey, and was elected to the peerage 1776, with the title of Baron Amherst of Honesdale. He was appointed Commander-in-Chief in 1782, and in 1787 he received a patent as Baron Amherst of Montreal. In 1793 the command of the army was again intrusted to him. Two years afterwards he was deprived of this merited honor, which was conferred on the Duke of York, and it was with difficulty that his irritation permitted him to accept the office of Field Marshal. He died, without issue, though twice married, in 1797, at the age of 81. His success as an officer was due more to a clear and collected mind, than to brilliant genius.

AMMONIUS, a philosopher of the eclectic school, flourished in the 6th century.

AMMONIUS, called SACCAS, or SACK-CARRIER, from his first occupation at the port of Alexandria, is the reputed founder of the New Platonic school. He was born in the second century, and some affirm that he was born of Christian parents, but that in riper years he apostatized. Porphyry affirms it, while Eusebius and Jerome as stoutly deny it. Possessed of a creative genius, and conversant with the prevalent philosophies, he strove hard to form a species of eclecticism, in which Christianity and all systems of philosophy should be harmonized. In his attempt to accomplish this, he, as might be anticipated, robbed Christianity of its prime peculiarities, and did great violence to the current philosophies in accommodating them to the new religion. The works ascribed to him are numerous. Died 243, about 80 years of age. Longinus, Origen, and Plotinus are usually reckoned among his disciples. [J.E.]

 ANAXAGORAS, the most illustrious philosopher of the Ionian school; celebrated in history as the friend of Pericles, and because of his trial and condemnation at Athens for alleged impiety. He was born at Clazomene, in Ionia, in the seventeenth Olympiad; when twenty-four years of age he removed to Athens, then the centre of civilization and of Grecian nationality. Saved from death by the intercession and influence of Pericles, he was banished from the adopted home where he had resided for thirty years; he passed the remainder of his life at Lampsacus, and died there at the age of seventy-two, surrounded by respect and honor. Anaxagoras belongs in philosophy to the *Ionian* school,—that school whose researches were confined to the nature and laws of *physical* phenomena. Nevertheless, he differs in important respects from his predecessors; and certainly he was the last Inquirer in Athens who ought to have been subjected to the accusation of impiety. The earlier Ionians, in their imperfect efforts to comprehend the changes of the external universe, generally imagined it possible to reduce all things to varieties of one single element; for instance, it was a favorite speculation that *water* is the principle or substance of whatever exists; a dogma founded, perhaps, on a rude observation of the changes of form or *mode*, through which water may pass. Anaxagoras had the merit of discerning the necessary futility of all such generalizations,—declaring that the elements, first principles, or *atoms* of things, must be very numerous, or even infinite; elements so far resembling each other as to be capable of combining together, and forming, by their various unions, those varied properties or qualities which we recognize in things. But, beyond this step—in itself highly important—Anaxagoras adventured on another, of still greater consequence. Accepting, like all the Ionians, the dogma that matter is eternal—that nothing can really be either created or annihilated—he saw, nevertheless, that the simple properties of an eternal and inert matter could not explain the *activity* and *harmony* characterizing the material universe. Hence,

said he, the necessity of another power—the power of *Intelligence*. ‘All things were in chaos; then came Intelligence, which introduced Order.’ The functions of Intelligence, as he conceived them, were indeed limited—merely supplementary, as Aristotle alleged, to those of the physical forces; but the formal recognition of the necessity of such an energy, was surely a movement in philosophy as momentous as new. It must be recorded, in fairness, and in palliation of the condemnation of Anaxagoras, that to the charge of impiety, that of a political crime was added—the greatest, certainly, of which a Greek citizen could be suspected—the crime of *Medism*, or of favoring the interests of Persia. ANDRE, JOHN. This unfortunate officer was born in England 1749. His father was a native of Geneva. In 1774, three years after entering the British army, he joined his regiment, the Royal English Fusileers, in Canada. The next year he was taken prisoner at St. Johns by Montgomery. After his exchange he was rapidly promoted, and in 1780 was appointed Adjutant-General, with the rank of Major. His prospects were of the most flattering kind when the treason of Arnold led to his death. The temporary absence of Washington having been chosen by the traitor as the most proper season for carrying into effect his design of delivering to Sir Henry Clinton, the fortification at West Point, then under his command, and refusing to confide to any but Major Andre the maps and information required by the British General, an interview became necessary, and on the 19th September, 1780, Andre left New York in the sloop-of-war *Vulture*, and on the next day arrived at Fort Montgomery, five miles below West Point, in company with Beverley Robinson, an American residing at the lines, through whom the communications had been carried on. The vessel was observed by Washington when crossing the river to go to Hartford, but without any suspicion of the intended treason. Furnished with passports from Arnold, Robinson and Andre the next day landed and were received by the traitor at the water's edge. Andre retained his regimentals, though he had taken the precaution to put on a gray overcoat. Having arranged all the details of the proposed treason, Arnold delivered to Andre, draughts of the works at West Point and memoranda of the forces under his command, and the latter returned to the beach in hopes of being immediately conveyed to the *Vulture*.

[Beverley Robinson's House where Arnold's treason was concocted.]

But the ferrymen, who were Americans, having observed with suspicion the motions of the vessel, which having been fired upon by Colonel Livingston from Verplank's Point, had retired some distance down the stream, refused to carry him, and as Arnold would not interpose his authority he was compelled to change his uniform for a less suspicious dress and return by land. Unfortunately for him he persisted, against the advice of Arnold, in retaining the papers, which he concealed in his boot. Accompanied by Smith, an emissary of Arnold, and provided with a passport under his assumed name of Ander-

son, he set out and reached in safety a spot from which they could see the ground occupied by the English videttes, when Smith exclaiming "you are safe—good bye," turned and galloped back. At the entrance of Tarrytown, when a few more bounds of his horse would have placed him beyond reach of danger, an armed man started from a thicket and seized his bridle, asking—"Where are you bound?" Two more men came up, and Andre, instead of answering the question and presenting his passport, inquired to which party they belonged. "To below," was the reply. Thrown completely off his guard, and confirmed in the idea that he was safe on English ground, he said, "and so do I. I am an English officer on urgent business and do not wish to be detained." "You belong to our enemies, was the rejoinder, "and we arrest you." Too late Andre presented his passport, and finding this did not allay suspicion, offered them his money, horse, and a large reward, but without avail. They examined his person, and, in his boots, found the fatal papers. He was then conveyed to Col. Jameson, commander of the American outposts, who sent him under charge of Lieut. Allen back to Arnold, but after the party had set out, countermanded the order, through fear that the prisoner might fall into the hands of British scouts, and directed Allen to intrust him to the care of Capt. Hooglin at Lower Salem. By this change Andre was deprived of the hope of escape which dawned upon him, and Arnold, learning his capture, absconded. On the arrival of Washington, Andre was conveyed to Tappan and tried by a board of General officers, among whom were General Greene the President, Lafayette and Knox. With the latter Andre had some time before formed a personal acquaintance at a wayside inn where they accidentally met when travelling on public service. They had chatted, supped and slept together, and parted with mutual expressions of regard, little dreaming of the nature of their next meeting. On his trial, Andre behaved with the frank heroism natural to him, and though delicately advised that he need say nothing to criminate himself, confessed the whole, and without the examination of a single witness was, in consequence of his own admissions, condemned to death as a spy. Alexander Hamilton, who became acquainted with Andre at this crisis, has left perhaps, the most affecting account extant of his last hours. Every effort was made by Sir Henry Clinton to save him, and as there was a strong disposition on the American side to do so, if compatible with duty and the public interests, his execution originally appointed for the 30th September did not take place till the 2d October. If possession could have been obtained of the traitor, the life of Andre would have been spared. But under the circumstances, Washington did not deem it expedient to change even the mode of his punishment, the disgrace of which principally affected his mind. "Must I die in this manner?" was his sad question when brought to the gallows—but he immediately recovered himself, and calmly looking round upon the scene, he bowed to the spectators and resigned himself with a smile to his fate. His remains, which were buried on the spot, have since been removed to England and now repose in Westminster Abbey. It is to the honor of America that to the present day the death of none of her own heroes is more regretted than that of the gallant foe-man whose success would have been fatal to her liberties. Andre is pitied as much as Arnold is execrated.

 ANDROS, SIR EDMUND, Governor of New York from 1674 to 1682, of New England from 1686 to 1689, and of Virginia from 1692 to 1698. His tyrannical administration of New England forms the most remarkable feature in his history. From interfering with the freedom of the press, levying enormous taxes without competent authority, and disturbing the titles to landed property, he proceeded in 1687 to the extremity of demanding the surrender of the charter of Connecticut. The story of the famous charter oak, in which the charter, snatched from the table of the assembly when the lights were extinguished, was deposited, is well known. An Indian war excited by his misconduct, but unattended with any important consequences, took place the next year. The memory of it is preserved in the name of Fort Androskoggin. On the 18th April, 1689, the people of Mass., unable any longer to endure his exactions, and stirred to frenzy by reports, probably unfounded, of an intended massacre, deposed and imprisoned Andros. As the abdication of king James occurred immediately after, the country was saved from the civil strife which might otherwise have ensued, and the Governor sent to England for trial. But the unwillingness of the authorities at home either to approve tyranny or sanction revolt, prevented any judicial decision. The subsequent career of Andros, as Governor of Virginia, was more wise and moderate. He died in England in 1714.

[Marquis of Anglesey.]

ANGLESEY, HENRY WM. PAGET, Marquis of, a distinguished officer of the British army, was born in England May 17, 1768. He was the eldest son of the Earl of Uxbridge. At an early age he entered the army, and his first active service was in Flanders under the Duke of York in 1794. In 1799 he served in the expedition to Holland. Toward the close of the year 1808, having been raised to the rank of a Major-General, he joined Sir John Moore, in the Peninsular campaign, and effected a brilliant success over the French, putting nine hundred of the enemy to a complete rout, and taking two hundred prisoners, with only four hundred men under his command. At Mayager and Benvento he repulsed the enemy, and covered the retreat of the British under Sir John Moore so effectively, that they were left unmolested until their arrival at Corunna; here, when the battle took place, he so gallantly supported the British that they were enabled to embark without molestation. On his return to England he entered parliament, and was a member of the House of Commons from 1806 to 1812. On the death of his father in the latter year, he took his seat by the right of inheritance in the House of Lords, as Lord Uxbridge. When Napoleon returned from Elba, Lord Uxbridge was given the command of the British cavalry in Flanders, and fought with great gallantry at Waterloo, where he lost a leg. Five days after the battle he was created Marquis of Anglesey, and received other honors from the British government and people. During the trial of Queen Caroline, the wife of George the 4th, he took the unpopular side in favor of the king, and on one occasion when he was surrounded by a crowd who insisted upon his hurraing for the queen, he, after a long resistance, cried out at last—"Well then the Queen! may all your wives be like her!" In April, 1827, he held office under Canning, and in 1828 was vice-regent of Ireland under Wellington. His administration of Irish affairs was conciliatory and judicious, and acquired for him great popularity. Having expressed a strong sympathy with Catholic emancipation, he was recalled from Ireland and

resumed his place in the House of Lords, where he continued to advocate the Irish cause. The bill of Catholic emancipation having passed, Lord Anglesey was restored to the vice-regency of Ireland, and continued at that post until his resignation in 1833. He was subsequently appointed Master-General of the Ordnance in 1846; d. 1854.

ANSELM, born in Piedmont in 1083, died in April 1109; the celebrated churchman and metaphysician—one of the greatest of those famous men who have held the see of Canterbury. On the death of Lanfranc in 1089, Anselm, then on a visit to England, and whose wisdom, gentleness, and solidity of character had gained for him European repute, was nominated to the primacy by William Rufus. It is not necessary to refer here to the political history of this celebrated prelate; nor can we glance otherwise than cursorily at those products of his genius—the *Monologium* and the *Prosologium*, by which he is known in philosophy. These two remarkable writings are dedicated to an exposition of two demonstrations of the Existence of God. The *Monologium* contains the usual *inductive* argument—inferring from the qualities of Nature, absolute qualities or divine attributes; and resolving these into a divine and absolute Being. Anselm's original work is the *Prosologium*; and certainly he has stated there, in every fulness, the peculiar argument afterwards expounded by Des Cartes. Briefly, the argument is this, expressed nearly in his own words:—‘The madman who denies the reality of God, *conceives*, nevertheless, of a Being more elevated than all others that exist, or rather so perfect, that nothing—no form of being—can be called superior to him. But he affirms that there is no *real existence* corresponding to this *mental conception* or *idea*. In making such an affirmation, however, he contradicts himself. Denying the attribute of *existence* to this very Being, to whom, nevertheless, he attributes all *perfection*, he virtually says, that the most perfect is inferior to many other things which are not perfect, but which enjoy the supreme attribute of existence.’ We shall speak more fully of this peculiar form of argument, by which the *being* of God is attempted to be inferred from the *idea* of God, in our notice of Des Cartes. Anselm's metaphysical writings have recently been republished by Bouchitté, under the title, *Rationalisme Cretien*: and Remusat has just completed a valuable volume on the prelate's life and character. ANSON, GEORGE, Lord, was born at Colwich, near Rugeley in Staffordshire, on the 23d April, 1697. His father was William Anson, Esq., of Shugborough, a property in the same county, purchased in the reign of James I. by William Anson of Lincoln's Inn, an eminent barrister, the founder of the family, and great-grandfather of the subject of the present notice. Little is known of Anson's early history; he entered the navy as a volunteer without patronage, and at the age of 19 or 20 was serving in the Baltic fleet under Sir John Norris. In 1717 he obtained a lieutenant's commission; 19th June, 1772, was made commander; and as captain of the Scarborough was sent in March, 1723–24, to S. Carolina,

[Lord Anson.]

to protect British trade. On the breaking out of the Spanish war in the end of the year 1739, he was appointed to the command of a squadron, destined for the west coast of S. America, to attack the colonies of Spain, and cut off supplies by intercepting the treasure ships. This was the origin of the voyage round the world for which Anson's name is best known. It proved one of the most disastrous on record; not by any fault of the commander, but owing to the ignorance and imbecility which prevailed at head-quarters. Several of the ships were ill-conditioned; he was obliged to receive on board 260 infirm old men, out-pensioners of Chelsea College, most of whom were above 70, and none under 60 years of age; and the sailing of the squadron was delayed till the worst season. It did not leave St. Helen's till 18th September, 1740, and soon after passing Madeira, scurvy, fever, and dysentery, broke out among the crews. Tremendous gales, encountered in rounding Cape Horn, dispersed the squadron; two ships were driven back along the coast of Brazil, and never rejoined; one was wrecked on the coast south of Chiloe; the commodore's ship the Centurion, 60 guns, and the Tryal sloop, 8 guns, reached Juan Fernandez on the 9th June; the Gloucester, 50 guns, not till 23d July, having been under sail for five months in a stormy ocean, ‘a circumstance unparalleled in the history of navigation.’ The health of the crew was completely restored in this delightful island; but out of the original complement for the three ships of 800 men, there now remained only 335. A cruise of eight months on the coasts of Peru and Mexico secured some rich prizes, but added very little in the way of geographical discovery, if we except some coast and port surveys. The two other ships being disabled were destroyed, and with the Centurion only, containing all the useful stores and the surviving men, whose ranks had been again fearfully reduced by disease, Anson crossed the Pacific to China, having remained some time at Tinian, one of the Ladrões, ‘an earthly paradise,’ to recruit. Leaving the Canton River after a stay of five months, refitting and provisioning, he lay in wait, on the coast of Luzon, for the Acapulco galleon, which annually brought an immense treasure from Mexico in return for goods from Manilla. This rich prize he captured, after a smart engagement with a force more than three times his own, and thus possessed himself of nearly a million and a half of dollars and 35,682 oz. of pure silver. Returning to Canton he sold the galleon, and soon after sailed for England. Touching at the Cape, passing in sight of St. Helena, and running in a fog through the middle of a French fleet cruising in the channel, he reached Portsmouth in safety, on 15th June, 1744, after an absence of three years and nine months. Not one of the 260 veterans returned. The treasure was welcome; the only

other advantage was the familiarizing British seamen with the dreaded 'southern ocean.' In 1748 an account of the voyage in a thick 4to. vol. was published by subscription, ostensibly drawn up by Rev. Richard Walter, A. M., chaplain in the Centurion, but really, as Sir J. Barrow has shown in his life of Anson, by Col. Robins, an engineer officer who went with him. Several editions were called for. A second volume, to contain the nautical observations, was promised, but never appeared, owing to Robins being hurried off to India. Even from the account we have, however, we can see that many errors in seamanship were committed; but the chronometer was not then invented, and the lunar method, though known to astronomers, was not yet practised at sea. Not long after his return we find Anson at the head of the Admiralty Board as first lord. In this capacity he rendered great service to the nation; he improved the ships, promoted the most deserving officers in defiance of etiquette, and did much in laying the foundation of that pre-eminence which the navy of Britain has long maintained. In 1747, on occasion of a victory which he gained over the French, he was created baron Anson of Soberton in the county of Hants. In 1748 he married the lady Elizabeth, daughter of the lord chancellor, earl Hardwicke. His ordinary residence was Moore Park, Hertfordshire. He died without issue, 6th June, 1762, having outlived his wife two years. His elder and only brother, Thomas, died also without issue in 1771. The bulk of the property of both was inherited by George Adams, Esq., of Sambrooke, Staffordshire, son of their only sister, who assumed the name and arms of Anson; but the title became extinct. A new creation took place, however, in 1806, and in 1831, the third viscount Anson was created earl of Litchfield. [J.B.]

APEL, or APELLES, JOHN, a German reformer, 1486-1536.

APELLES, founder of a heresy, 2d century.

APELLES, the most celebrated painter of antiquity, was born about 365 B.C. at Cos, or at Colophon in Ionia. When already an accomplished master, apparently, he entered as a pupil in the celebrated school of Pamphilus, at Sicyon, and paid the enormous fee of this school, a talent, (about £220 sterling,) purely for the sake of the reputation enjoyed by its pupils. Apelles seems to have earned his unrivalled reputation partly by his unintermittent industry, which became proverbial, even among the Romans—'*nulla dies sine linea*' is a saying, according to report, which originated with this great Greek painter. Painting itself is sometimes termed by the Romans the Apellean art.—An examination of the particular services of Apelles does not seem to justify his extraordinary reputation, for he appears to have been little more than a portrait painter, though doubtless one of the very highest class. In every respect, save one, however, he was surpassed by some one of his rivals, but in the management of the whole, in that peculiar quality which the Greeks called *Charis*, grace or beauty, he was unrivalled. A list of his known works will convey the most accurate notion of his style. Perhaps the most celebrated was the *Venus Anadyomene*, or Venus rising out of the ocean, which became in after years such a favorite picture among the Romans, that Ovid (*Art. Amat.* iii. 401,) paid it the extraordinary compliment of saying, that but for this picture, Venus would still have remained buried beneath the waves of the sea. The picture was painted for the people of Cos, where it remained until removed three centuries afterwards by the emperor Augustus to Rome, who took it in lieu of 100 talents tribute; an enor-

mous price, and yet less by some thousands than was recently paid for the *Soult Murillo* by the French government. The picture was, unfortunately, much damaged on the voyage, and was, within a century from the time of its dedication in the Temple of Julius Cæsar, dictator at Rome, replaced by a copy, by order of Nero. The history of this picture is worthy of note, as it is the prototype of so many similar stories of later ages. Other celebrated works were, King Antigonus on horseback; a portrait of Campaspe, a beautiful slave and favorite of Alexander the Great, who presented her to the painter in reward for the picture which he had made of her; several portraits of Philip of Macedon, and of Alexander himself, who is said to have given Apelles the exclusive right of painting him; for one of these, representing the king as Jupiter hurling his thunderbolts, Alexander is said to have presented Apelles with 20 talents of gold, about £50,000 sterling, twice the largest sum ever recorded otherwise, as the price of a picture. Further, are mentioned a figure of Fortune, seated; a naked hero; a back view of a Hercules; a clothed figure of one of the Graces; Clitus preparing for battle, mounted on his charger, and receiving his helmet from his arm-bearer; Antigonus in armor walking by the side of his horse; Archelaus with his wife and daughter; and the two following works, the only two pictures by Apelles recorded, which appear to have contained a considerable number of figures—Diana surrounded by her nymphs, in which he was allowed to have surpassed the lines of Homer, from which he took his subject; and the pomp or procession of the high priest of Diana at Ephesus. The pictures of Apelles were probably mostly painted upon panels of larch, (he used to boast that he never painted upon a wall,) and executed in distemper: the impasto was doubtless very similar to that of the Italian quattrocento masters before the introduction of oil painting. The Greeks had abundant resources in colors, and there is every reason to suppose that they were in every respect as great in painting as in sculpture. Apelles himself, among other distinctions, is renowned for having introduced a very effective mode of glazing, or toning his pictures, which Sir Joshua Reynolds assumed to be the same process adopted by the Venetians of the sixteenth century. [See PROTOGENES.]—Many anecdotes are recorded showing the intimacy between Alexander the Great and Apelles, and others of still more value, showing his own liberality of disposition, and great skill and judgment in his art. One anecdote, related by Pliny, as illustrating a peculiar feature of Greek customs, may be recorded here:—Apelles had put in at Alexandria, driven there by contrary winds; Ptolemy I. was then, at the close of the 4th century B.C., king of Egypt, with whom, while he was general, Apelles had been on bad terms. Some of the painter's rivals at the court of Ptolemy, taking advantage of this circumstance, endeavored to do him an injury; they persuaded the royal fool to invite Apelles to sup with the king. Apelles attended accordingly, but Ptolemy indignant at the intrusion, demanded by whom he had been invited; when the painter seizing an extinguished coal from the hearth, drew upon the wall the features of the man who had invited him with such mastery, that Ptolemy in the very first lines recognized the portrait of his buffoon, and through this trifling incident became reconciled to the painter and received him into his favor.—Apelles survived Alexander many years; he does not appear to have accompanied him as far as Babylon; the date of his death is unknown. He left writings on the arts, which he dedicated to his pupil Perseus; they have not been preserved. He was celebrated

for the beauty of the horses in his pictures.—There was another Apelles, of Ephesus, mentioned by Lucian, who lived at the court of Ptolemy Philopater, about B.C. 220.—(Pliny, *Hist. Nat.* xxxv. 36; Plutarch, *Arat.* 12, *Alexander* 4, *Fort. Alex. Mag.* 2, 3; Junius, *Catalogus Artificum*, &c. &c.—Wornum, *Epochs of Painting*, vol. i.) [R.N.W.]

APOLLODORUS OF DAMASCUS, one of the most celebrated architects of antiquity. He built the forum and column of Trajan at Rome, of which there are still magnificent remains, in the year 113 A.D. and was much employed by Trajan in Rome and elsewhere. His most remarkable work, however, was the great bridge over the Danube in Bulgaria, where the Alt runs into that river; it stood on 20 piers, 150 feet high above the foundations, 60 feet wide, and 170 feet apart. It was built for the emperor Trajan; the bridge was of wood, but the piers were of stone. The wood-work was afterwards destroyed by Hadrian, as it gave the barbarians too great facilities for crossing the Danube. Remains of the piers are still standing. Apollodorus is said to have fallen a victim to the jealousy of Hadrian, who dabbled in architecture as well as other arts.—(Dion Cassius, lxxviii. 13, lxxix. 4; Procopius *de Edif. APPIANO, P. A., a disting. Jesuit, 17th cent.

APPLETON, DANIEL, born in Haverhill, Mass., in the year 1791; a bookseller and the founder of the publishing house of Appleton & Co.; died in 1849.

APPLETON, JESSE, D. D., born at Ipswich, New Hampshire, 1772, graduated at Dartmouth, 1792, ordained at Hampton, N. H. 1797. Elected President of Bowdoin College in 1807, and died 12th Nov., 1819. He was a man of respectable talents.

APPLETON, NATHANIEL, D. D., an eminent New England clergyman, born at Ipswich in 1693, graduated at Harvard in 1712, ordained at Cambridge in 1717, in which year he was also elected a fellow of Harvard, which 54 years afterwards conferred upon him the second degree it had ever granted of Doctor of Divinity, Increase Mather, 80 years before, being the first admitted to that honor. He died in 1784 in the sixty-sixth year of his ministry and the 91st of his age.

APREECE, or RHESE, JOHN, an antiq., 16th c.

APRIES, or HOPHRA, king of Egypt, 595 B.C.; dethroned by Amasis, 570 B.C.

APROSIO, A., a monastic writer, 1607–1681.

APTHORP, EAST, a clergyman of the church of England, born in Boston 1733, went to England for education and graduated at Cambridge. After his ordination he was appointed a missionary of the Society for the Propagation of the Gospel in Foreign parts. He was sent in 1761 to Cambridge, Mass. During his residence there he engaged in a controversy with Dr. Mayhew, a congregational minister, in defence of the venerable society, in which he highly distinguished himself. He returned to England, and was afterwards vicar of Croydon, and rector of Bow church, London. He lost his sight in 1790, exchanged his living for the prebend of Finsbury and retired to Cambridge, in England, where he died in 1816, aged 63. Besides his publications concerning the Propagation Society he was author of an answer to Gibbon and a discourse concerning prophecy. As a writer he was learned, terse and logical.

APULEIUS, a botanist, 4th century.

APULEIUS, LUCIUS, the cel. author of a philo. romance, entitled the 'Metamorphoses, or Golden Ass,' a Roman Platonist of the 2d century.

AQUARIUS, a scholastic philosopher, 16th c.

AQUAVIVA, ANDR. MATT., duke of, a celebrated scholar and soldier, 1456–1528.

AQUAVIVA, CLAUDE, a Jesuit, 1542–1615.

AQUAVIVA, OCTAVIO, abp. of Naples, 1612.

AQUILA, an architect and *savant* of the 2d cent., who was excom. for practising astrology.

AQUILA, CASPAR, (the Latinized form of his proper name Adler,) a friend and fellow-worker of Luther in the Reformation of Germ., 1488–1560.

AQUILANO, an Italian poet, 1466–1500.

AQUILANUS, a physician of Padua, d. 1543.

AQUINAS, THOMAS, usually called the Angelic Doctor, was a younger son of the count of Aquino, and was born at the castle of Rocca Sicca in 1227. This place was situated on the border line between the states of the church and the territory of Naples. From his earliest years he was smitten with the love of solitary study, and when a very young man he entered the Dominican order. Force was employed to prevent his becoming a monk, but in vain. So much was the youthful scholar wrapt up in his own cogitations, that when he studied at Cologne, under Albertus Magnus, his fellow-pupils gave him the name of *Bos Mutus*, 'mute ox,' on account of his taciturnity and apparent stupidity. In 1255 the university of Paris gave him the title of Doctor in Theolo-

gy. He lectured with brilliant success in Paris, in several of the Italian universities, and ultimately at Naples. Being summoned by the pope to attend a general council at Lyons in 1274, he commenced his journey, and had reached Merracina, where he died, at the age of forty-eight. He was canonized by pope John XXII. in 1323. The Parisian edition of his works is in twenty-three folio volumes. But the amazing industry of Thomas during his brief life, is wholly eclipsed by his prodigious mental wealth, as displayed in his 'Summa Theologiæ' and 'Commentary on the Sentences of Peter Lombard.' In concise and earnest simplicity of style, in subtle and daring speculation, in purity and loftiness of aim, in orthodoxy of religious sentiment, in acuteness and vigor, in breadth and depth of view, in intellect and heart, in piety and temper, Thomas Aquinas is the acknowledged prince of the mediæval schoolmen and divines.

AQUINO, CH., a Jesuit, 1654-1740.

AQUINO, L., CL., an organist, died 1772.

AQUINO, PH., a learned rabbin, died 1650.

ARABCHAH, a Mahomed. historian, d. 1450.

ARABELLA STUART, a first cousin of James I., and, from her near affinity to the crown, an object of suspicion, both to that prince and his predecessor, Elizabeth. Died in the Tower, where her long and melancholy confinement deprived her of reason, 1615.

ARAGO, FRANCOIS DOMINIQUE, a celebrated French astronomer, was born in Estagel, in the south of France, Feb. 26, 1786. The early evidence he gave of talent induced his father, who had originally

[M. Arago.]

intended him in accordance with his humble position for a simple agricultural life, to send him to an excellent school at Toulouse. The taste and aptitude he here evinced for a study of the natural sciences were such, that it was resolved to give him every opportunity of developing his peculiar talent, and he was accordingly presented for admission into the Polytechnic school of Paris. His examiner was so struck by his answer to the first question that he declined to propose another, and sent him to the institution, with high compliments of his ability and attainments. He distinguished himself by the ardor of his pursuit of science, and the success of his studies while a student of the Polytechnic, and after having completed the curriculum there, was attached to the Observatory of Paris. Such was the rapid acknowledgment of his ability, that he soon after received the appointment of assistant to M. Biot, in the scientific commission for the measurement of an arc of

the meridian in Spain. While Arago was at Galazo in Majorca, engaged in the scientific duty to which he had been appointed by his country, war broke out between France and Spain, and the fires which he made to aid his observations excited the suspicion of the ignorant populace, who fancying them beacons to guide the French in their march, made an attempt to seize upon the young philosopher. He however succeeded in escaping to the coast in disguise, and fled for refuge to the French vessel the *Mystique*, but was refused protection, notwithstanding that the captain had been previously obedient to his orders. In this emergency he returned to land, and sought security for his life by placing himself under the protection of the authorities at the prison. On his way he was surrounded by a furious crowd, and was stabbed by one of them. He however succeeded in reaching the prison, where he remained for a short time, until through the connivance of the Spanish captain-general he succeeded in making his escape. He reached the coast, where a boat attended him, and having embarked, made his way through the British squadron which blockaded the coast and arrived in safety at Algiers. He now took passage on board an Algerine vessel bound to Marseilles, and arrived within sight of that port when his vessel was captured by a Spanish privateer and he taken prisoner to Rosas. An attempt was made to frighten Arago, by the show of preparation for an execution, into the confession that he was a renegade Spaniard, that the government might be justified in confiscating the vessel. In the meantime he was imprisoned in a loathsome dungeon, overrun with vermin, and almost starved to death. Arago now hit upon an expedient for relief. Two lions had been sent by the Dey of Algiers as a present to the emperor Napoleon, and placed in the vessel in which Arago had taken passage and which had been captured. One of these animals had died, and Arago bethought himself of writing word to the Dey that it had been starved to death by the Spaniards. He succeeded in sending off a letter to that purport, which was received by the Dey, who, much enraged at the treatment of his beast, called the Spanish government to account, and demanding compensation for the seizure of the vessel, threatened war if the demand was not instantly complied with. Arago was now permitted to set sail for Marseilles, but being under the guidance of an ignorant pilot, his vessel was kept drifting about the Mediterranean for several days, until by hazard the coast of Africa was made, when Arago landed at Bougie. The vessel had been so much damaged that it was deemed unseaworthy, and it was determined to abandon her. Arago now resolved to make his way to Algiers by land, and accordingly disguising himself as an Arab he succeeded in reaching that place with safety. On his arrival he found that the Dey had just died, and a revolution had broken out which resulted in the death of the legitimate successor. The usurper made a demand upon France for the payment of a pretended debt, and as the French government positively refused compliance, the names of the French residents—among whom was Arago—were placed on the list of slaves, and the galleys threatened as the destiny of the philosopher. After much suffering and anxiety, Arago, in 1809, obtained permission to leave Algiers with a convoy of Algerine vessels and a corsair of that nation in which he himself embarked. The convoy had not sailed out of sight of Algiers when they were pounced upon by a brace of English frigates. The corsair, on board of which Arago had taken passage, succeeded in eluding the English, though several times chased, and landed him in safety on the French coast.

On his arrival at Paris he was welcomed with great enthusiasm and elected with acclamation a member of the institute. Within the compass of a brief biography it would be impossible to enumerate all the brilliant discoveries with which Arago has illuminated natural science. The determination of the diameters of the planets, the discovery of colored polarization of light, and of magnetism by rotation, are among the most remarkable. The 'Transactions of the Academy of Sciences,' of which he was secretary, are enriched by his scientific contributions; and various published memoirs testify to his industry and philosophical genius. In politics Arago always advocated the cause of progress, and in the revolution of 1830 he boldly presented himself as a champion of democracy. During the reign of Louis Philippe he was a member of the chamber of deputies and sat on the extreme left. His interest in politics was never allowed to interfere with his philosophic pursuits. He was appointed head of the Paris Observatory, and directed with undiminished ardor its astronomical observations. In the provisional government of 1848 he held the office of minister of marine, and fulfilled its duties to the manifest advantage of the republic, of which he was an ardent supporter. On the violent accession of Louis Napoleon to the imperial throne, Arago refused to take the oath of allegiance to the usurper, but in consequence of his fame and the glory he had shed over his country, he was left undisturbed in his position at the head of the observatory, and continued to devote himself with exclusive ardor to his scientific pursuits until his death in the year 1853.

[Archimedes—Rossi, Gemme Antiche.]

ARCHIMEDES, the most celebrated of the ancient geometers, was born at Syracuse, about 291 B.C. He was related, on his father's side, to Hiero king of Syracuse, who deemed it an honor to have so distinguished a philosopher as his relative. Having acquired at an early age all the knowledge which could be obtained in his native city, he visited Egypt, which had long been regarded as the great seat of science, and he remained there for several years, enjoying the society of its distinguished men, and storing his mind with the knowledge which they imparted. With a partiality which cannot be too severely condemned, one of the biographers of our philosopher has asserted that he conveyed to the Egyptians more knowledge than he received; but even if we had not been assured by Abulpharagus that he derived all his knowledge of mechanics from the Egyptians, we might have deduced the same truth from the well-known practice of the Greek philosophers, who, in the infancy of their science, went in quest of it to Egypt. Upon his return to Syracuse, laden with the intellectual spoils of the East, he devoted the whole of his time to the cultivation of the mathematical and physical sciences,

and it was only when his country was in danger that he abandoned his studies, and directed all the energies of his mind against the enemies of Syracuse.—In the war which was carried on by the Romans against Hiero, about the year 212 B.C. they had obtained some signal advantages in Sicily, and were thus emboldened to lay siege to Syracuse itself. Inspired with terror at the naval and military preparations of the Roman general, the inhabitants were disposed to offer an ignominious capitulation. Archimedes, however, removed their fears, and inspired them with courage. He is said to have erected vast machines, under the protection of the walls of the city, which baffled the attempts of the Roman engineers, and carried terror into the camp of the enemy. The machines by which he resisted the assaults of the Romans have not been described, and we can easily conceive that he erected works of defence which disconcerted and alarmed his enemies; but when we are told that he sunk the ships of the besiegers when they approached the city, by means of long beams of wood, and that, with grappling hooks at the end of levers, he raised the vessels into the air, and dashed them against the rocks or the walls, we feel that we are in the region of fable and romance, and must regard all such assertions as among the impossibilities of practical science. The inventions by which he is said to have destroyed the Roman fleet when at a distance are less incredible. We may well believe that he had so improved the ballistæ of the ancients as to throw stones or missiles to a greater distance, and with a greater force, than had been done before; and we may even admit that, by a number of plane mirrors throwing the reflected image of the sun upon one point, he could burn a ship at a distance; but we cannot believe that the Roman fleet was thus destroyed, unless we had it in evidence that the crew were asleep. We have in the present day better mirrors than Archimedes could command, and better machinery for uniting their reflections upon one point, but we venture to say that a British or a French admiral would laugh at any such attempt to annoy him. Buffon, it is true, has endeavored to attach a degree of probability to the story of burning a ship optically. He combined 168 plane mirrors so that he could direct the light of the sun which they reflected to one spot, and he found that he could burn wood with them at the distance of 200 or 300 feet.—This curious subject has been more recently discussed by M. Peyrard. Assuming the accuracy of Buffon's experiments that *five* times the heat of the sun is sufficient to inflame planks smeared with tar, M. Peyrard supposes that *eight* times the sun's heat will set fire to all kinds of wood; and upon this supposition he found that, at the distance of about *a mile and a half*, it would require 2,267 mirrors to burn wood, and at the distance of *three quarters of a mile* 590. This calculation proceeds upon the supposition that their reflections are all coincident, and that the mirrors have their two surfaces perfectly plane and parallel. But it is well known that these conditions are impossible, and that the most perfect mirror that the most skilful optician could grind and polish, would, at the distance of three quarters of a mile, and much less, scatter the light which it reflects over a surface ten times greater than its own, and would have very little power in the combustion of wood. But there are other conditions necessary before these mirrors, even if mathematically perfect, could set fire to ships. The ships must be absolutely at rest before the combined reflectors could inflame the wood upon which they fell, and, as has been already stated, the crew must be asleep in the daytime when the sun is shining.

We regard, therefore, the story of the burning of the Roman fleet to belong as much to romance as the fishing for ships with hooks at the end of levers, the sinking of them by long beams, and the whirling of them in the air by ropes and grappling hooks. It is no slight presumption in favor of these opinions that the gigantic mechanism which the Syracusan philosopher is said to have wielded against the Roman power was of little avail in the defence of the capital. The siege was converted into a blockade. During the celebration of the festival of Diana, when the Syracusans had indulged in a fatal security, the Romans attacked and obtained possession of the city. Marcellus had issued an order that Archimedes and his house should be spared; but, either from ignorance of the order on the part of a Roman soldier, or from the obstinacy of Archimedes in refusing submission, he was run through the body while drawing a geometrical diagram on the sand. Marcellus was deeply afflicted when he heard of the event. He took the relatives of the philosopher under his special protection, and in erecting a monument to his memory, he fulfilled the wish that Archimedes had expressed in his lifetime, that a sphere inscribed in a cylinder should be engraved on his tomb. The death of Archimedes took place B.C. 212, and 140 years afterwards, Cicero, while questor in Sicily, went with a party of Syracusan nobles in search of the tomb of the great philosopher, which his countrymen had allowed to go into decay. 'Remembering,' says Cicero, 'some verses, said to have been inscribed on his tomb, which mentioned that on the top of it there was placed a sphere in a cylinder, I looked around me upon every object at the Agrigentine Gate, the common receptacle of the dead. At length I observed a small column rising above the thorns, upon which was placed the representation of a sphere in a cylinder. This, said I to the nobles, must be what I am seeking. Several persons were immediately got to clear away the weeds and lay open the spot. As soon as a passage was made, we found on the opposite base the inscription, with nearly the latter half of the verses obliterated.'—The reputation of Archimedes did not require to be sustained by the fables with which the vanity of his countrymen has surrounded his name. His discoveries in geometry, mechanics, and hydrodynamics would have immortalized him, had posterity never heard of his magical artillery against the Roman fleet. He discovered that the surface as well as the solidity of any sphere is equal to two thirds of its circumscribing cylinder; and that the ratio of the diameter of a circle to its circumference is nearly as 7 to 22. It is to him that we owe the demonstration of the fundamental property of the lever, and the method of finding the centre of gravity of plane surfaces. He discovered the *quaquaversus* pressure of fluids, and pointed out the condition under which a solid body is in equilibrio when floating in a fluid. He invented the screw for raising water which bears his name; and we owe to him the process of detecting the adulteration of the precious metals, which he so successfully applied in proving the impurity of the gold in king Hiero's crown.—A splendid edition of the works of Archimedes was printed at the Clarendon Press at Oxford, in 1792, edited by the Rev. Abraham Robertson. [D.B.]

 ARGALL, R., an English poet, 16th cent.  
 ARGALL, SAMUEL, Sir, an adventurer who at the beginning of the seventeenth century attained wealth and eminence by his bold unscrupulous conduct. For several years he was engaged in contraband traffic with Virginia. By the bribe of a copper kettle he obtained possession of Pocahontas, whom he carried to Jamestown, in 1612. The next year he was the means of creating hostilities between the English and French colonists by attacking a French settlement in Maine. On the plea that the discovery of Cabot had given to England the dominion of the Western world, he fitted out

an expedition from Virginia and destroyed Port Royal and St. Croix. The Dutch on the Hudson next fell under his power. By these high-handed exploits he obtained influence both in England and the colonies, and in 1617 was appointed Deputy Governor of Virginia. His administration was vigorous but tyrannical, and he at once plundered the colony and restored it to order and prosperity. His regulations, almost equal to the blue laws in severity, were rigidly enforced. The attention of government was at length called to his rapacity, but, by the death of Lord Delaware, the instructions sent to that nobleman for his recall fell into his hands, and he used the interval before the arrival of a new governor in increasing his exactions and transporting his property to Europe. He still continued active, engaged in the Algerine expedition, was knighted for his services in 1623, and took part in the hostilities with Spain. His character is written in his actions, but the impunity he enjoyed was in a great measure owing to his partnership with the Earl of Warwick, by whose aid he was able to baffle the colonial company.

 ARICI, CÆSAR, an Italian poet, born 1785.  
 ARION, a Greek poet, 7th century, B.C.  
 ARIOSTI, ATTILIO, a composer 17th century.  
 ARIOSTO, LODOVICO, the son of a gentleman in the service of the dukes of Ferrara, was born in 1474, at Reggio, near Modena. His life, though not prosperous, was far from being uneventful: during the whole of it he was employed, in various capacities, by the ducal house of Este, who, niggardly and careless in the treatment of this great poet, behaved even worse in the next generation to the unfortunate Tasso. From the schools of Ferrara he passed to Padua, where he was compelled to study law for five years, busying himself also with the classics, and being at length allowed by his father to abandon the legal profession. About 1503 he was received into the retinue of cardinal D'Este, a younger son of the

[Ariosto.]

reigning duke of Ferrara. As he grew older, he was repeatedly employed on confidential public missions by Alfonso, the next duke, the cardinal's elder brother; and when, in 1517, he lost the cardinal's favor by declining to attend him into Hungary, duke Alfonso took him into his own service. He received some trifling ecclesiastical appointments, capable of being held by a person not in orders; and for three years, from 1522, he was busied in organizing and governing the mountainous district of Garfagnana, which had just been re-acquired by the house of Este. He continued to be a needy man, though there is no reason for supposing that he lived extravagantly or irregularly; and, even if there was insufficient ground for his complaints of the parsimony of his patrons, it seems to be quite certain that they were blind to his literary merit. His last few years were spent in Ferrara, where he died in 1533.—Ariosto would hold a place in the history of Italian literature, although he had contributed to it nothing but his minor works. His *Rime*, or short pieces of familiar verse, such as sonnets and other lyrics, are excellent in their class; his seven poetical *Satires*, gay, good-humored, and wittily observant, stand in the first rank among Italian compositions of the kind; and there is much of felicitous wit, not without great indecency, in his five versified *Comedies*. But it is the '*Orlando Furioso*' that makes him immortal, as one of the greatest of modern European poets. This celebrated work stands in an odd relation to similar poems that preceded it. In the course of the fifteenth century, metrical romances of chivalry appeared in Italy; and towards the close of that century Pulci and Boiardo, borrowing from the romances the fabulous history of Charlemagne and his paladins, and imitating much of that union of the serious and the comic which marked the effusions of the minstrels, worked up these materials into chivalrous poems. Boiardo's '*Orlando Innamorato*' takes its name from the love of its hero, the knightly Orlando or Roland, for the Eastern princess Angelica. Of this poem, Ariosto's (first published incomplete in 1516, and then in its present shape in 1532) is just a continuation. Orlando's madness, caused by jealousy, furnishes its title, and a considerable part of its incidents. But Charlemagne's war with the Saracens is fully related: isolated adventures of many of his champions are continually introduced; and a prominence, which increases as the work proceeds, is bestowed on the knight Ruggiero and the beautiful amazon Bradamante. The poem

closes with events which remove obstacles to the marriage of these personages, who are represented as the ancestors of the family of Este; and their history is regarded as the leading story of the Orlando, by those critics who are unwilling to allow that it is nothing more than a collection of episodes. If unity of design was really attempted by the poet, he has certainly failed in the execution: no one series of adventures is so decisively prominent as to fix the attention of the reader; and the several stories are interwoven, and alternately dropped and resumed, with a caprice and complexity which make it no easy task to follow the windings. The mixture of gayety with seriousness is continual; yet these dissimilar elements are harmonized with much skill and delicacy: and the airy sportiveness of fancy which is prevalent throughout, and the extraordinary animation with which the chivalrous perils and acts of heroism are depicted, concur in shedding over the poem a charm which is irresistible. In point of poetic adornment, the Orlando is at once rich and original: Ariosto is as much superior to Tasso in native genius, as he is inferior to him in skill of constructive art. [W.S.]

ARISTÆNATUS, an elegant Greek wr., 4th c.

ARISTARCHUS, a grammarian and critic of noted severity, 2d century B.C.

ARISTARCHUS, a Greek philosopher of the 3d century B.C. whose works on astronomy show that he was acquainted with the rotation of the earth upon its own axis.

ARISTEAS, a Jewish chronicler, 1st cent. B.C.

ARISTIDES, a Greek painter, 3d cent. B.C.

ARISTIDES, ÆLIUS, a Gr. orator, 2d ct. B.C.

ARISTIDES, QUINTILLIAN, a didactic writer, author of a work on music, 2d century.

ARISTIDES, a philosopher, 2d century.

ARISTIDES OF THEBES, a painter, contemporary with Apelles, was, according to Pliny, the greatest master of expression among the Greeks. The same writer relates that when Alexander the Great stormed Thebes, he was so struck with a picture by him of a dying mother with a child at her bosom, that he ordered it to be sent to his palace at Pella. The works of Aristides were in great repute even during his lifetime. Mnason, tyrant of Elatea, paid him £3,600 for a single easel picture of a battle of the Persians, containing one hundred figures only. After the siege of Corinth, 146 B.C., Attalus III., king of Pergamus, offered £5,300 for a picture of Bacchus and Ariadne by Aristides, but the Roman general Mummius, thinking the picture had some hidden value in it, sent it to Rome, where it was dedicated in the temple of Ceres. A celebrated picture by this painter, preserved in the temple of Apollo at Rome, was destroyed by a picture restorer, to whom the prætor, M. Junius, had given it to be cleaned before the celebration of the Apollinaria; another of the incidents which show how similar are the stories of ancient and modern art. Aristides painted in encaustic, that is with wax colors, the picture being afterwards burnt in.—(Pliny, *Hist. Nat.* vii. 39, xxxv. 4, 8, 10, 36, 11, 39, 40.)

ARISTIDES, surnamed the Just, an Athenian general and statesman, whose intrepidity greatly contributed to the victory of Marathon. Being banished through the intrigues of Themistocles, B.C. 483, he was recalled by his countrymen to oppose Xerxes

and distinguished himself at the battle of Salamis. After serving in the highest offices of the state, he died a poor man, 467 B.C.

ARISTIPPUS, king of Argus, killed 242 B.C.

ARISTIPPUS, a pupil of Socrates, and founder of a school of philosophy at Cyrene, 4th cent. B.C.

ARISTO, an Aristotelian, 3d century B.C.

ARISTO, TITUS, a Stoic, time of Trajan.

ARISTOBULUS I., a Jewish prince, succeeded his father Hyrcanus as high priest, and took the title of king 107 B.C.; died 108.

ARISTOBULUS II., usurped the throne 70 B.C.; deposed by Pompey 63 B.C.

ARISTOBULUS, brother of Mariamne, wife of Herod the Great, killed 35.

ARISTOGITON, an Athenian, executed B.C. 516, for conspiring against the Pisistratides.

ARISTOMENES, a Greek general, representative of the royal house of Messene, 7th cent. B.C.

ARISTOPHANES, a celeb. name in the Greek drama, author of numerous comedies, equally remarkable for the beauty of their composition, and their pungent satire, flourished in the 5th ct. B.C. His life and works have given occasion to a vast amount of learned writing and critical inquiry, but the facts known concerning him are few in number. Out of 44 compositions of his, only 11 are extant.

ARISTOTLE. This distinguished philosopher, founder of the celebrated Peripatetic school, was born at Stagira, a city of Thrace, in the year 384 before Christ. His father, Nicomachus, was the physician of Amyntas, king of Macedon, and his mother, Phæstis, as well as his father, believed to have been descended from Esculapius. Having lost both his parents in early life, he was placed under the guardianship of Proxenus, an eminent citizen of Atarneus, a city in Mysia, and after completing his seventeenth year, he repaired to Athens, to study in the school of Plato. Here he remained for twenty years, imbibing the noble spirit of his master, devoting himself to the acquisition of every species of knowledge, and honored in the estimation of his teacher and of his companions, as 'the intellect of the school.' Upon the death of Plato, 348 B.C., Aristotle took up his residence at Atarneus, on the invitation of his friend Hermias, who though originally the domestic slave of an Athenian banker, who had permitted him to attend the school of Plato, was now independent sovereign of Atarneus and Assos. At the small but interesting court of his friend, and

surrounded by the scenes of his early studies, Aristotle spent three happy years, enjoying the society of intellectual friends, and devoting himself with unremitting assiduity to the study of nature. Here, too, he had formed ties warmer than those of friendship. Pythia, the niece of the king, had gained his affection, and when the unfortunate sovereign had been betrayed by some worthless individuals who had enjoyed his hospitality, and had forfeited his life as a rebel against the king of Persia, Aristotle fled to Lesbos with the family of his friend, and was soon afterwards married to his niece, who did not long survive her uncle. During his residence at Mytelene, in Lesbos, which was continued for two years, Aristotle seems to have received from Philip, king of Macedon, the flattering invitation to superintend the education of Alexander his son. The compliment thus paid to his talents and character was too high to be rejected; and though the duties which such an office demanded might have interfered with the progress of his studies, he cheerfully accepted of it, and took up his residence at Pella, when Alexander had reached his fourteenth year. The king received him with the most marked attention, and science and learning have in no future age been more highly honored than they were at the court of Macedon in the person of the distinguished Stagyrte, and through the liberality of the most powerful of sovereigns. The Macedonian prince was instructed during five or six years in grammar, rhetoric, poetry, logic, ethics, and politics, and in those branches of physics which had even at that time made some considerable progress. Aristotle made a new collection of the Iliad for the use of his pupil, and composed a treatise 'On a Kingdom,' which has not descended to our times. Upon the death of Philip, in 336 B.C., Alexander succeeded to the throne, when in the twentieth year of his age, and Aristotle continued to live with him as his friend and counsellor till he set out on his Asiatic campaign in 334 B.C. The delicate constitution and intellectual habits

[Aristotle—From an Antique Bust.]

of the philosopher prevented him, at the age of fifty, from following his pupil in his martial career, and he accordingly returned to Athens, where, in the charming retreat of the Lyceum, he delivered his lectures to crowded audiences, while walking in the shade, amid the trees and fountains with which it was adorned. While thus instructing his pupils, and enjoying the popularity and reputation to which he had attained, he became, like all illustrious teachers of philosophy, the object of envy and persecution. His rivals in learning directed against him the usual calumnies which genius is ever destined to endure from the ignorance and malice of its enemies; and the heathen priests, dreading the progress of truth as the greatest enemy of their faith, charged the philosopher with impiety and sedition. The friendship of Alexander had hitherto shielded him from open

persecution, but upon the death of that monarch, in B.C. 323, he was charged before the Areopagus as an enemy to the religion of his country, and avoided the fate of Socrates, which he knew awaited him, by making his escape to Chalcis, a city of Eubœa. In this city of refuge he spent the remainder of his life. Exhausted with mental labor, and broken in spirit by his misfortunes, his feeble constitution gave way, and he died in 332 B.C., in the sixty-third year of his age, about a year after his retreat to Chalcis. His remains were carried to Stagira by his fellow-citizens, and an altar and shrine erected over his grave. The festival of *Aristotelia* was instituted in gratitude for his services, and even in Plutarch's time, the garden of the philosopher, with its walks and bowers, was exhibited to the public. In his personal appearance, Aristotle was defective. He is described as having little eyes and slender limbs, with a feeble voice and an imperfect utterance; and he is said to have improved the symmetry of his person by great attention to dress, and the use of elegant ornaments. The writings of Aristotle were carried to Rome among the other spoils of Athens, when it was captured by Scylla, and they were edited by Andronicus the Rhodian, about three hundred years after they were composed. In our narrow limits we can neither record the number nor estimate the value of his writings. He divided philosophy into three departments—*theoretic*, embracing physics, mathematics, theology and metaphysics; *efficient*, including logic, rhetoric, and poetry; and *practical*, including ethics and politics. See Dr. Gillie's *Ethics and Politics of Aristotle, with an account of his Life*, 2 vols. 4to. 1797. [D.B.]

ARISTOXENUS, one of the most celebrated disciples of Aristotle, 4th century B.C.

ARIUS, the noted heretic, was born about the middle of the third century. His entire life was embroiled with disputes, principally with bishop Alexander and with Athanasius on the divinity of Christ. Arius held that God created his Son, that the Son had not existed from all eternity, and was not in dignity and essence equal with the Father. This fatal heresy was solemnly condemned by the great council which met at Nice in 325. After numerous vicissitudes, strifes, and intrigues, Arius was in the act of celebrating a triumph in Constantinople, when he retired from the crowd to satisfy a call of nature, and then and there suddenly died at a very advanced age. His enemies rudely reckoned his manner of death a judgment from Heaven. Arius was a man of bustle and ambition, soured by disappointment, and irritated by defiant opposition, and his errors, if not prompted, were at least shaped to some extent by the exciting circumstances in which he was placed. [J.E.]

ARKWRIGHT, SIR RICHARD, an extraordinary man, whose genius has created a permanent influence on the constitution of civilized society. Born in Preston in 1732, of humble parents, the youngest of thirteen children, he was brought up as a barber. About 1760 he quitted this precarious business, and dealt in *hair*, which he collected about the country, and discovered how to dye it and prepare it for wig makers. From 1767, not till he was 35 years of age, Arkwright gave himself up exclusively to the subject of inventions for spinning cotton. In 1768, he was in Preston constructing his first machine. At this time his poverty was such, that 'being a burgess of Preston he could not appear to vote till the party with whom he voted gave him a decent suit of clothes!' Apprehensive of meeting with the same hostile treatment from the operative weavers

of the district as Hargreaves had met with, Arkwright removed to Nottingham, where he became a partner with Mr. Jedediah Strutt, the ingenious improver and patentee of the stocking frame, and who rendered essential assistance in perfecting the inven-

[Sir R. Arkwright.]

tion for which Arkwright obtained his first patent in 1769. The improvement for which the patent was obtained, consisted mainly in the use of two pairs of rollers, the first pair, between which the carded cotton in the form of a 'spule,' or soft cord, passed, revolving slowly; and the second pair revolving two, three, or ten times as fast, so as to *draw out* the spule to one-half, one-third, or one-tenth of its thickness when between the first rollers. This invention was followed up by various improvements and combinations of machinery, and mills for spinning cotton by this method were erected in Nottingham first, and then at Cromford in Derbyshire. The system has since been universally adopted, and in all its main features remains unaltered to the present time. Out of this invention have grown up the largest manufacture, the largest trade, some of the largest cities, the largest revenue, and the largest national prosperity in the world. Arkwright did not escape the system of robbery and persecution, the fate of most patentees of successful inventions then as now. By aid of false witnesses a combination of the persons in the spinning trade succeeded in 1781 in depriving Arkwright of his patent right. The evidence upon which the patent was annulled, and upon which it has been much the fashion to depreciate Arkwright's talents, was that of persons in a low station of life, who spoke of circumstances which had occurred 18 years before! Arkwright's genius was not that of a mechanic alone. Although the details of manufacturing or commercial business were altogether new to him, and although it was five years before the works at Cromford returned any profit, yet by indomitable energy he turned the tide of prosperity and wealth to his own advantage, and for several years regulated the cotton market. He left great wealth to his heirs, who in their generation increased their patrimony to the most colossal fortune, perhaps, that has been realized in Britain. [L.D.B.G.]

ARMINIUS, or HERMANN, a German chief, who maintained his ground for years against Varus and Germanicus, and was at last slain by the treachery of one of his countrymen, 21.

ARMINIUS, (VAN HARMINE,) was born at Oudewater, South Holland, in 1560. After studying at Leyden he went to Geneva, and enjoyed the prelections of Beza. His mind seems to have had an early love of innovation, an early itching to oppose established forms of thought and belief, and he became a romantic supporter of the philosophy of Peter Ramus. At the age of twenty-six he was ordained minister of one of the churches in Amsterdam, and preached with great acceptance. His views soon became unsettled, and he was entangled in controversy. In 1603 he succeeded Junius in the chair of theology at Leyden. Next session he attacked the doctrine of predestination, and based it upon foreknowledge of faith and merit. Gomar became his resolute antagonist. The warfare waxed hotter and hotter, and the States-general interfered, but to no purpose. Arminius died in 1609. The candor and honesty of Arminius are unimpeached, and his ability is undoubted, but the system which now bears his name was elaborated after his death by Episcopius and Limborch, several of its distinctive tenets not being held by its name-father. ARMSTRONG, JOHN, a cel. phys. au. of many valuable works on medical science, 1784-1829.

ARMSTRONG, JOHN, M.D., a Scotch physician, better known as a poet, was born at Castleton, on the banks of the Liddal, in Roxburghshire, 1709, and graduated at Edinburgh, 1732. He was already distinguished by his love of literature and the arts, but more especially for his classical attainments and taste in poetry. After one or two professional essays, he published, 1735, a poetical brochure, entitled, an 'Essay for Abridging the Study of Medicine,' a pleasant attack on the orthodox faculty, in the dialogue of which he is said to have caught the very spirit of Lucian. This was followed in 1737 by a professional work on a subject requiring great delicacy in its treatment, and two years afterwards by 'The Economy of Love,' a poem which passed through several editions, 'more to the profit of the publisher than the reader.' His reputation, clouded by this unfortunate sally of humor, was fully established in 1744 by the 'Art of Preserving Health,' which is still regarded as one of the best didactic poems in the English language, and has placed its author in the same rank as Akenside. From this period to 1758, Dr. Armstrong published several fugitive pieces, more or less correct in taste, and in the last named year a volume of sketches, remarkable for their ill-humor, under the pseudonyme of Launcelot Temple, Esq. In 1760, his poetical epistle entitled 'The Day' was published, as the preface declares, without the knowledge or consent of the author, and procured for him the enmity of Churchill, who retorted its reflections in severe, and it may be unjustifiable, terms. Armstrong was evidently dissatisfied with his place in public esteem, and in all probability had cherished a morbid sensibility on this subject, which was ill concealed by the affectation of a good-natured cynicism, described by the poet Thomson, who was also his intimate friend, as 'both humane and agreeable, like that of Jacques in the play.' This quality, whether agreeable

or the contrary, was abundantly manifest in a volume of medical essays, published 1771, in which, however, some advanced views in physiology are put forth. The professional career of Dr. Armstrong brought him little distinction. In 1741, we find him soliciting the appointment of physician to the West Indian fleet. In 1746 he was appointed to the hospital for lame and sick soldiers behind Buckingham House, and in 1760 accompanied the German army as physician. His collected poetical works were published in 2 vols. 8vo. 1770, and along with them his tragedy of the 'Forced Marriage,' which had been rejected by Garrick. Dr. Armstrong died in consequence of a fall when stepping from his carriage, in 1779, and surprised his friends by leaving a saving of three thousand pounds out of his moderate income. [E.R.]

[Dr. Arne.]

ARNE, THOMAS AUGUSTINE, Mus. Doc., the son of an upholsterer, was born in King-Street, Covent Garden, London, in the year 1710. Arne, who was by his father intended for the legal profession, was educated at Eton, and served a regular term to an attorney; but his love of music prevailed over all obstacles, and contrary to his father's wishes, he forsook the subtleties of law for the then less lucrative study of music. His ungovernable taste led him to have recourse to strange and eccentric methods for its gratification, of which the following incident furnishes an example:—While engaged in the attorney's office his means were limited, and his musical appetite insatiable, but that he might have an opportunity of gratifying it, he often, as we find on the authority of Dr. Burney, 'used to avail himself of the privilege of a servant, by borrowing a livery and going into the gallery of the opera, which was then appropriated to domestics.' While an apprentice with the lawyer, the young enthusiast received some lessons on the violin from Michael Christian Festing, a German violinist then in much repute, and in a short time made so much progress upon that instrument that he quitted his legal master and adopted music as a profession. The first notice his father had of this circumstance, was when on one occasion happening accidentally to call at the house of a neighboring gentleman, he found to his surprise and consternation the young Thomas Augustine playing leading violin with a party of musicians. This incident decided the fate of Arne. The world gained a musician of much taste and delicacy of feeling, and lost perhaps a discontented pettifogger. Soon after this, Arne discovering that his sister, who afterwards became Mrs. Cibber, had not only a fine taste in music, but a 'sweet-toned and touching' voice, he gave her a course of instructions, and qualified her to appear in Lampe's opera of *Amelia*. Her voice and manner took so well with the public, that Arne, then only eighteen

years of age, set to music for her Addison's *Rosamond*, in which she personated the heroine, his younger brother supporting the character of the *Page*. Arne's success in his first opera induced him to compose music for Fielding's *Tom Thumb*, which was brought out in 1731. In 1738 he produced the music to *Comus*, which established his reputation as a lyrical composer. In 1740 he married Miss Cecilia Young, a pupil of Geminiani, and went with her professionally to Ireland, where both were well received, he as composer and she as singer. In 1742 he returned to England, and produced two masques, *Britannia* and *The Judgment of Paris*; also *Eliza*, an opera, and *Thomas and Sally*, a humorous afterpiece. In 1745 Arne and his wife were engaged by the proprietor of Vauxhall, and here he composed his charming songs, which are now so rarely to be seen, and so greedily sought after by amateurs and collectors in all parts of Great Britain. It was not long after this that he composed his two oratorios, *Abel* and *Judith*, but they met with no success. His *Artaxerxes*, a free translation by himself from the Artaxerxes of Metastasio, upon which his fame as an operatic composer now rests, was composed in 1762, and it met with the most triumphant success. In 1769 the University of Oxford conferred upon Arne the degree of Doctor in Music. After this he composed his opera *The Fairies*, the music for Mason's *Elfrida* and *Caractacus*, additions to Purcell's *King Arthur*, several of Shakspeare's songs, and the *Stratford Jubilee*, besides many glees, catches, and canons. For his excellence as a writer of glees the Catch Club awarded him no fewer than seven gold medals. His song and chorus, *Rule Britannia*, which will live for ever, 'may be said to have wafted his name over the greater half of the habitable world.' Dr. Arne was seized with spasms of the lungs, and died on the 5th of March, 1778. On his death-bed, having been educated a Roman Catholic, he sought consolation from the rites of that church, and his last moments were cheered by a hallelujah sung by himself. Mrs. Arne died about the year 1795. Dr. Arne left an only son, Michael, who evinced a precocious taste for music, but never attained the same eminence as his father. He in conjunction with Mr. Battishill produced the opera of *Alcmena* at Drury Lane in 1764, and afterwards *Ozymon* at the King's Theatre, from which he derived both honor and fame. He died without issue, but in what year we have been unable to discover. [J.M.]

ARNOLD, BENEDICT, a general officer in the service of the United States, and afterwards in that of Great Britain, began life as a horse-dealer in New England. He was also for a time a druggist and bookseller in New Haven. At the beginning of the war of the Revolution he placed himself at the head of a volunteer company, and soon distinguished himself; was associated with Gen. Montgomery in the expedition against Quebec. In this disastrous affair, undertaken in severe weather, his illustrious colleague lost his life, and Arnold, who was se-

[Benedict Arnold.]

verely wounded in the leg, displayed the highest abilities as a commander, and the greatest gallantry as a soldier. But licentious and rapacious as he was brave and intelligent, he plundered Montreal in his retreat, and by his misconduct exasperated the minds of the Canadians, who previously were not hostile to the Revolution. After exhibiting great courage and skill on Lake Champlain, at Fort Schuyler, and the battle of Stillwater, his leg was shattered by a ball on the 7th October, 1777, in a daring assault on the English lines, which he penetrated, and but for his wound would have carried. Being unfitted for active service, he was appointed commander of the garrison at Philadelphia, but his dissipation, extortion and peculation, subjected him to a trial by court martial, and to a reprimand from Washington at the beginning of 1779. Embarrassed in his circumstances, disappointed in his expectations, and exasperated by disgrace, he formed the design of retrieving his misfortunes, and crowning his dishonor, by betraying his country, and having intimated his dispositions to the British officers, and established communication with them by means of Charles Beverley Robinson, a captain in the English service, whose property lay within the American lines, he solicited and obtained the command of West Point, for the purpose of surrendering it to Sir Henry Clinton, as the most effectual way of destroying the defence of the Continental army. The price for which this political Judas consented to betray his country, was £30,000, and the retention in the English service of the rank of Brigadier-General. The failure of his project is chronicled in the fate of Andre. Learning the capture of that officer, he escaped from West Point to the Vulture sloop of war, and was carried to New York, leaving his wife behind him, who, however, on the arrival of Washington, was sent after him, together with his effects. He fought with equal gallantry against his country as for her, first in Virginia, and then in Connecticut, and his name is appropriately associated with the murder of Colonel Ledyard at Fort Trumbull, by Col. Eyre, an officer under his command. As much despised by the English as by the Americans, and subject to a thousand personal indignities, the more galling to a proud spirit from the impossibility of resenting them, he dragged out a miserable life, in unenvied opulence and rank, lonely and self-abhorred, a monument of the worthlessness of talents without honesty, and died, unlamented, in London, in June, 1801.

ARNOLD, RICHARD, a chronicler, 15th cent.

ARNOLD, SAMUEL, Mus. Doc., was born in London, in the year 1740, and received his musical education at the Chapel Royal, St. James's, from Mr. Bernard Gates and Dr. Nares, who discovered in him the most promising talents. In the year 1760 he became composer to the Covent Garden Theatre, and in 1766 he undertook the duties of the same office at the Haymarket. Dr. Arnold produced four oratorios, eight odes, three serenades, forty-seven operas, three burlettas, besides many overtures, concertos, songs, and smaller pieces, the number of which is not on record. The most popular of his works, several of which still keep their place in public estimation, were *The Maid of the Mill*, *The Son-in-Law*, *The Castle of Andalusia*, *Inkle and Yarico*, *The Battle of Hexham*, *The Surrender of Calais*, *The Children in the Wood*, *The Mountaineers*, *The Cure of Saul*, *Abimelech*, *The Resurrection*, and *The Prodigal Son*. The University of Oxford conferred upon him their degree of Doctor in Music about the year 1773. In 1783, on the death of Dr. Nares, he was appointed organist at the Chapel Royal and composer to the king; and at the commemoration of Handel, which took place in the year following, Dr. Arnold was nominated one of the directors. He succeeded Dr. Cooke as Conductor of the Academy of Ancient Music in 1783, and was appointed organist of Westminster Abbey in 1793. Dr. Arnold, who is described as having possessed those personal manners and social virtues which secure esteem, died on the 2d of October, 1802, and was buried in Westminster Abbey. Dr. Arnold married a lineal descendant of the Baron of Merchiston, and left one son and two daughters.

ARNOLD, THOS., a physician, 1742-1816.

ARNOLD, THOMAS, D.D., was born at West Cowes, in the Isle of Wight, on 13th June, 1795. He belonged to a respectable family, his father being collector of the customs in that place, and having been destined for the ministry in the Church of England, was in due time entered a student in the university of Oxford. On completing his college studies in 1819, he obtained deacon's orders, and immediately after took up his residence at Laleham, near Staines, where for the nine following years he kept a private boarding establishment, intended chiefly as a school of preparation for the universities. In the superintendence of this seminary, the character of Arnold rapidly developed itself, and was marked by an indefatigable activity, a manly decision, and definiteness of purpose, above all, by a settled religious faith, little to be expected from the indolent and dreamy habits of his youth. He was an eminent Christian, as well as a ripe scholar; and the principles on which he acted with the utmost earnestness himself he infused into the minds of his pupils, by leading them to unite a high standard of intellectual accomplishments with a Christian culture of the heart and affections. The success of this system extended his fame far beyond the obscure and limited locality of Laleham; and in 1827 he became head master of Rugby school, having been nomina-

ted to that influential office by a unanimous vote of the trustees, who were told, on high authority, that 'he would change the face of education all through the public schools of England.' That expectation was not long in being realized; for having also obtained the appointment of chaplain to the school at Rugby, in which capacity he preached discourses which have long been admired as models of sermons for educated youth, he succeeded, while fully sustaining the ancient celebrity of the institution as a classical seminary, in imparting to it a new and Christian tone. The great principle of his educational system was to make his pupils good men as well as good scholars; and accordingly, while laboring to store their minds with useful and elegant literature, he taught them to make religion the daily rule of their life—not to confine it to Sabbath and the church, but to carry it into the school-room, the play-ground, the secular duties and familiar intercourse of every day. The beneficial effects of the method pursued at Rugby led to its general adoption in the other great English schools, and produced a marked improvement on the religious tone of sentiment and feeling among the young gentlemen who thenceforth repaired to the universities.—The principle of combining religion with secular education, which Dr. Arnold had successfully adopted in his school, he endeavored to carry out in all that he undertook. Thus he maintained the identity of church and state, realizing a condition of society in which all the laws, institutions, and measures of a Christian country should be based on purely Christian principles. With the same view, he accepted a place in the directory of the London university, which he zealously encouraged, from a liberal desire to extend the benefits of a literary and scientific education to all classes, irrespective of sectarian tests; but he wished to give it a religious character, and failing in his efforts to make examination in the Scriptures necessary for obtaining a degree, he resigned his connection with that institution. In like manner, having attempted in vain to infuse a Christian spirit into the *Penny Magazine*, he established, at his own risk, *The Englishman's Register*—a periodical to which his name and character would probably have gained a wide circulation; but finding that the publication demanded more time than he could spare, he was obliged, after the issue of a few numbers, to relinquish the undertaking.—Dr. Arnold is known as an author by several volumes of discourses, by his *History of Rome*, composed on the principles of Niebuhr, and by various pamphlets on matters of contemporary interest in religion and politics. The government of Lord Melbourne rewarded his public services by appointing him to the chair of modern history in Oxford: but he had only given his inaugural lecture, when a spasmodic affection of the heart suddenly cut him off at Rugby, on 12th June, 1842, in the forty-seventh year of his age.

ATHANASIUS, the great champion of orthodoxy in the fourth century, was born perhaps about 296. His first appearance was in support of his patron, bishop Alexander, against the Arians, and he was not only present, though simply a deacon, at the council of Nice, but was an active and intrepid member of that assembly. His rising fame led to his elevation to the see of Alexandria when Alexander died. Bishop Athanasius was immediately involved in contests, which ended only with his life. Deposed most

unjustly in 335, he was reinstated in 338. Deposed again in 340, he was reinstated in 342. His enemies prepared the most unscrupulous charges against him, all of which he refuted with an overwhelming force of proof and eloquence. Again in 355 was he sentenced to be banished, when he retired to the Egyptian deserts, and again was he welcomed back to the Egyptian capital. Once more Julian the apostate exiled him, and once more he was restored. A fifth time was he banished by the emperor Valens, who, however, soon recalled him, and Athanasius, after holding the primacy for the long space of forty-six years, died at length in 373. He was a man of holy life, a bold and noble defender of the Godhead of the Saviour, an orator of ready and commanding eloquence, and a prelate of heroic and indefatigable activity. The prejudices even of Gibbon were softened toward him, and he has pronounced upon him a splendid eulogy—*History*, chap. xxi. The monks of St. Maur published the works of this illustrious father in three folios, Paris, 1698. [J.E.]

ATTILA. This distinguished leader was of Mongol-Tartar origin, and succeeded his uncle as king of the Huns, A.D. 434. At first the sovereign author-

[Attila.]

ity was divided between Attila and his brother Bleda, who together invaded Thrace, and compelled the emperor of the East to purchase their forbearance by a heavy fine and annual tribute of gold, A.D. 412. Some three years later Bleda was deposed and put to death, and Attila acknowledged as only and sovereign lord of the nomadic hordes of Hungary and Scythia. This event is only obscurely related, but it was either precipitated, or shortly afterwards followed by the discovery of a sword, the possessor of which acquired a sacred character in the eyes of the Scythian barbarians, who worshipped the god of war under that emblem; in short, it was believed that the divine right to universal empire was bestowed on Attila when this old weapon, which had long been buried in the earth, was placed in his hands; and it was in this faith, added to the love of adventure and the hope of gain, that he succeeded in rallying to his standard nearly all the barbarians of Scythia and Germany. The war, in fact, to which Attila, soon at the head of 700,000 combatants, challenged the whole civilized world, was a struggle for the ascendancy between the free life of the desert and the luxurious settlements which had transferred the sovereign authority to some of the meanest and basest of mankind. The character of Theodosius the younger, emperor of the East at this time, contrasts unfavorably in nearly every point with that of Attila, who was remarkable for his simplicity and general moderation, though subject to gusts of passion, which, with his cruelty in war, well entitled him to be called the 'terror of the world' and the 'scourge of God.' The East, according to some accounts, as far as the plains of Armenia, resounded with the tramp of his armed hosts, and from the Euxine to the Adriatic some threescore and ten cities were given to fire and the sword; while Theodosius, who ought to have protected them with the terror of his arms, was wringing the disgraceful tribute and the means of supporting the equally disgraceful splendor of his court, from his unhappy subjects. Not daring to meet the enemy in the tented field, the emperor, by his splendid promises, engaged one of the members of an embassy from Attila to poison him on his return home, but the miserable man, overawed by the commanding presence of his chief, confessed the plot; and perhaps the most striking passage in his history is the barbaric scorn with which Attila denounces this attempt of Theodosius as the treachery

of a slave towards one whose fortune and virtues had made him master of the world! The death of Theodosius, A.D. 450, and the preparations of Marcian, who replied to the usual demand for tribute, 'that he had gold for his friends and iron for his enemies,' diverted the course of Attila from the East, and pointed to the Western empire. Other inducements to this famous expedition were not wanting. Honoria, the sister of the reigning emperor Valentinian III., had offered her hand to Attila as the means of escape from a cloister to which she had been consigned for incontinence, and Genseric, the king of the Vandals, had solicited his aid against Theodoric king of the West Goths, whose destruction was also a darling object of Attila's ambition. He commenced his march to Italy, A.D. 450, with an immense army of Huns, swelled by the numerous tributaries who owed him allegiance, and, crossing the Rhine, carried devastation through the greater part of Gaul and Burgundy, routing armies and destroying towns in his progress. Meantime the Roman army, under the command of Ætius, strengthened by an alliance with the West Goths, at whose head was Theodoric the Great, and with the gallant Franks, prepared to offer the last resistance of Italy to his advance. The armies met in the environs of Châlons-sur-Marne, when the approach of Attila had already threatened Orleans with destruction, and a bloody conflict ensued, at which the slain has been variously estimated at from one hundred and sixty to three hundred thousand men. Although not routed, Attila was compelled to retreat beyond the Rhine, and was hardly dissuaded from an act of self-destruction which he had contemplated rather than be taken captive. The morrow of the battle discovered to him that he could continue his retreat without molestation, and he returned home only to recruit his forces, and spread equal devastation the year following in the plains of Lombardy. Ravenna and Rome itself now trembled at his near approach, and his retirement, with a vast ransom, from the cities of Italy, has been attributed to a miracle. Between this period and the death of Attila, A.D. 453, a second invasion of Gaul is mentioned, which proved as destructive to human life as the preceding. The East also was again menaced with a reign of terror, and Italy feared that his threats to compel the surrender of Honoria would yet be executed. These, and the thousand wild apprehensions which prevailed from the east to the west of Europe, while he lived, were allayed by his sudden death, occasioned by the bursting of a blood-vessel, on the night of his marriage with the beautiful Ildico. His wide-spread sovereignty, and the dreaded power of the Huns, died with him; the confederacy of so many barbarous tribes, and the savage enthusiasm with which they ranged themselves under his banner, being alike due to his singular power of command and personal prowess.—It may be observed here, that the Hungarians so called at the present day are not descended from the Huns of Attila, but are chiefly a Majiar race, with a mixture of Roman, Turk, Mongol, Slavonic, and German elements. [E.R.]

ATTIRET, J. FR., a French Jesuit missionary and painter, 1702–1768.

ATTWATER, RUSSEL, an old revolutionary soldier, born in Cheshire, Conn., in 1762. He was descended on the maternal side from the Ducal family of Bedford. While a boy, he fought gallantly, at New Haven, when the British attacked that place, but was wounded in the right breast and left for dead upon the field. He, however, recovered, and served in the commissariat department during the war. He

was the first settler, in 1805, of the town of Russel, N. Y., which is named after him. He was elected to the Senate of New York, in 1812, and continued for four years a member of that body. After the battle of Waterloo, he was employed as a secret agent of Napoleon, to negotiate for the purchase of an immense tract of land in the Northern part of the State of New York, on which, it was the design of the emperor's friends, that he should reside with some of his generals, provided he could effect his escape, but after Mr. Attwater had obtained the consent of the proprietors to the sale of their estates, the news arrived of the surrender of Napoleon and defeated the project. During the latter years of his life, Judge Attwater resided at Norfolk, St. Lawrence Co., and died in 1851, aged 89.

ATTWOOD, THOMAS, an eminent composer, was born in the year 1765, and commenced his musical career as one of the children of the Chapel Royal, St. James's, under Dr. Nares and Dr. Ayrton. Happening on one occasion to perform at Buckingham Palace, he attracted the notice of George IV., then Prince of Wales, who took him under his patronage, and sent him at his own expense to Naples in 1783, where he studied for two years under Filippo Cinque and Gætaus Latilla. He afterwards visited Vienna, where he immediately became a pupil of Mozart, from whom he received instructions till the year 1786, when he returned to England, where he soon became one of the chamber musicians to his royal patron, and musical preceptor to the Duchess of York and the Princess of Wales, afterwards the unfortunate Queen Caroline. In 1795 Attwood succeeded Dr. Jones as organist of St. Paul's Cathedral, and in 1796 he was appointed composer to the king. About this period of his life he turned his attention to the composition of music for the stage, and produced several operas, the literary portion of the most of which may be regarded as dead, though the music of many of them is as much admired as it was when first performed. Amongst the most popular of his operas may be named *The Prisoner*, *The Mariners*, *The Adopted Child*, *The Castle of Sorrento*, and *The Smugglers*. The fantastic tricks, and petty vanities of leading performers, disgusted Attwood, and caused him to turn his attention to sacred music, in which he was very successful. For the coronation of George IV. he wrote his anthem *The King shall Rejoice*, and for that of King William IV., *O Lord, Grant the King a Long Life*, both of which hold the highest place amongst this class of musical compositions. In 1837 the Bishop of London appointed him without solicitation to the office of organist to the Chapel Royal. He died in 1837, and his remains were buried in St. Paul's Cathedral, beneath the great organ, with every honor that the church and his professional brethren could confer. Many of Attwood's works, and they are very numerous in all the classes, are destined to enjoy a lengthened popularity. His style was founded principally upon that of his great teacher, Mozart, who, according to Michael Kelly, once said, 'Attwood partakes more of my style than any pupil I ever had.' [J.M.]

AUDUBON, JOHN JAMES, a celebrated American ornithologist, was born in Louisiana in 1782. He died in 1851. From his earliest years he was devoted to the study of ornithology, roaming the wild woods of his native country, listening to the song of the singing birds, and picking up from his father all kinds of information about their habits, instincts, and migration. He commenced sketching his favorites while a mere boy; but a few years afterwards, when sent by his father to Paris, he enjoyed the opportunity of having lessons in painting from the celebrated David.—Intended for a commercial life, he entered into partnership with a young Frenchman, and returned to America to carry on their business there. While his partner was keeping the accounts, Audubon was

shooting birds in the woods or painting them in the counting-house. At last wearied of the drudgeries of business, he shook the trammels off, and, in spite of the entreaties of his friends, betook himself to a wandering life in the forest. Sleeping by night at the foot of a tree, subsisting on the game which he

[Residence of John James Audubon.]

shot, and which he cooked for himself; floating down the silent rivers for hundreds of miles in a frail canoe, and sketching from nature as he went along, he accumulated a large collection of faithful and accurate drawings of the feathered tribes of America. These were made the size of life in every case, and he added the details of feet, legs, talons, and beaks, all measured accurately by compass. Not being able to procure subscriptions in America to enable him to publish them, he visited England and Scotland. In Edinburgh he was received enthusiastically; his drawings were admired and highly praised, and there he commenced engraving the figures which have procured him such a high reputation. The publication of this extensive and gigantic work extended over thirteen years; during the intervals of which he continued his journeys to the vast prairies and forests of America, and neglected nothing which could add to its value. If Audubon be indebted to friendly assistance for his descriptions of his birds, his drawings are his own, and his highest claim to admiration is founded upon them, as they exhibited a perfection never before attempted. His work consists of 435 plates, containing 1,065 figures of the size of life, and has been pronounced by Cuvier 'as the most gigantic and most magnificent monument that had ever been erected to nature.' Besides his great work, 'The Birds of America,' Audubon is the author of another, entitled, 'Ornithological Biography.' A second edition of 'The Birds of America' was published in royal 8vo.; and before his death he had commenced the 'Quadrupeds of America.' This he has left to be finished by his sons, who continue to prosecute the science in which their father won such fame. [W.B.]

AUGEREAU. PIERRE FRANCOIS CHARLES AUGEREAU, was born 11th November, 1757, in one of the faubourgs of Paris. His father was a working mason, his mother sold fruit. Young Pierre had no education, except that of the Paris streets. He enlisted while a lad; and after some years of service as a private in the French army, he entered the Neapolitan, rose to the rank of sergeant, and was a fencing-master at Naples when the wars of the French revolution broke out. Augereau then returned to France, and joined one of the insurrection levies of 1792. He gained his successive steps of promotion on the battle-field; and in 1796, when Buonaparte took the command of the army of Italy, he found Augereau in high repute as a bold and skilful general of division. That reputation was augmented at Millesimo, at Ceva, at Lodi, at Castiglione, at Roveredo, and many more of the scenes of carnage that were so numerous at the close of the last, and at the commencement of the present century. In 1805, Augereau was a marshal of France, and Duc de Castiglione. It is from these facts that Augereau's military talents must be judged, and not from the terms in which Napoleon, and the writers of the Napoleonic school have spoken of him. Augereau was not only a furious, but a sincere republican of the revolutionary era, and he gave frequent and deep offence to Buonaparte by the coarse frankness of his language after the establishment of the empire. At last he reproached Napoleon on the battle-field of Preuss Eylau, for the useless butchery to which the French troops were exposed. For this he was sent into retirement, and except a short period of employment in the Peninsula, he was not again intrusted by the emperor with a command till after the disastrous reverses in Russia. Augereau acknowledged Louis XVIII., after Napoleon's abdication in 1814, and acknowledged Napoleon again as emperor in 1815. But he was not employed in the campaign of Waterloo. He was one of the court-martial that was first appointed to try Marshal Ney, and refused to sit in judgment on their comrade. Augereau died in 1816. [E.S.C.]

AUGUSTIN, or AUSTIN, Sr., called the apostle of England, died 610.

AUGUSTINE, bishop of Hippo, and most famous of the Latin church fathers, was born at Tagasta in Numidia, 13th November, 354. In early life he was loose, roving, and sensual, but at Milan the influence of his mother Monica, and the preaching of St. Ambrose, produced, about 386, a saving and permanent change on his heart and life. He had already left the Manichæan philosophy, and now he renounced the study of rhetoric, which he had taught with success at Carthage, Rome, and Milan. He was ordained a presbyter 391, and four years afterwards became coadjutor to Valerius in the diocese of Hippo, now Bona in Algiers, and he finally succeeded his colleague in 396. His life was spent in active literary opposition against Manichæans, Donatists, and Pelagians. When Hippo was menaced by the Vandal hosts, Augustine died, in the third month of the siege, at the good old age of seventy-six. The influence of Augustine's theology has been felt in all succeeding ages of the church. He compacted the truths of religion into a system, with a logic whose severity is relieved by the glow of his eloquence and the fervor of his piety. His autobiography is con-

tained in his famous 'Confessions;' and his 'Civitas Dei' is universally admired. But he wrote too much, and on too many subjects, to be at all times either lucid or self-consistent. His works are very numerous, and have been often edited and published. The Benedictine edition, Paris, 1679–1701, is in eleven handsome folios. [J.E.]

AUGUSTULUS, the name given in derision to Romulus, last Roman emp. of the West, dethroned and pensioned by Odoacer, 475.

[The Emperor Augustus.]

AUGUSTUS, the first Roman emperor, was born at Velitræ, a town of Latium, in the consulship of Cicero, B.C. 63. He was the son of Caius Octavius by Atia, the niece of the famous C. Julius Cæsar; and was consequently the grand-nephew of the dictator. His real name was Caius Octavius; but, in consequence of his adoption by the will of the dictator, he assumed that of Cæsar; and in B.C. 27, he received from the senate the title of Augustus, the name by which he is now best known. Having lost his father at the age of four years, he went to reside with his grandmother, Julia, who watched over his feeble boyhood with the most assiduous care. From his early years he showed a great capacity, and gave evidence of that prudence and foresight which characterized his subsequent career. On the death of his grandmother, in his twelfth year, he pronounced her funeral oration; and returned to the house of his mother, who, along with her husband, L. Marcius Philippus, henceforth superintended his education. At the age of sixteen he assumed the toga virilis, the symbol of legal maturity; and in the same year was made a member of the College of Pontiffs. The dictator, who had always showed great attention to his youthful relative, now took a more active part in training him for public life, and manifested his affection by the honors which he bestowed on himself, and on the family to which he belonged. Augustus seems to have been present in his camp at the battle of Munda, B.C. 45; and it was here that the dictator made him his heir, and adopted him into the family of the Cæsars. Soon after their return to Rome Augustus was sent to Apollonia in Epirus, for the purpose of advancing his military education, previous to accompanying the dictator in the expedition which he meditated against the Parthians; and it was while here that he was called upon to commence a contest the most arduous perhaps that was ever undertaken by a youth of eighteen. On the Ides (15th) of March, B.C. 44, the dictator was assassinated in the senate house; and Augustus, on receiving the news,

set out for Italy with a few attendants. As the adopted son of the dictator, he now assumed the name of Cæsar; and, encouraged by the support of the veteran soldiers, proclaimed his resolution to avenge the death of his father; in other words, to assert his claim to the sovereignty. Appearing before the prætor, he formally accepted the dangerous inheritance of the dictator's name and property; and in the complicated struggle which ensued, played his part with an art which baffled the prudence of the oldest statesmen of Rome. The contending parties first met under the walls of Mutina, when Antony was defeated, and fled to take refuge on the other side of the Alps. In B.C. 43 Augustus was raised to the consulship, notwithstanding the strenuous opposition of the aristocracy; and, finding that his position now rendered a reconciliation with Antony desirable, proceeded to Cisalpine Gaul; and here the celebrated interview took place between Antony, Lepidus, and himself, which resulted in the formation of the second triumvirate—a union which was cemented by the blood of many of the noblest citizens of Rome. About the close of B.C. 42 the decisive battle of Philippi was fought, which completely broke up the party of the senate. During the next nine years Augustus relieved himself of all his formidable opponents, with the exception of Antony, with whom he had long foreseen that the final contest lay. The last struggle took place at Actium, on the 2d of September, B.C. 31, when Antony was totally defeated, and Augustus placed in the undoubted supremacy of the Roman empire. After settling affairs in the East he returned to Rome, B.C. 29, and his arrival was celebrated by three triumphs on three successive days. In B.C. 27 he affected to propose to the senate to restore the old republican form of government; but at the request of his friends he consented to retain the administration of affairs for ten years; and soon after was invested with the highest military and civil authority, both in the city and throughout the provinces. The same pretended resignation and resumption of power was repeated at intervals till the end of his life. The

[Tomb of Augustus.]

great events of the period of Augustus belong to the history of Rome, and cannot even be referred to here. After a reign of almost uninterrupted prosperity, he died at Nola, on the 19th of August, 14, and was succeeded by his stepson, Tiberius Claudius Nero. Augustus was a man of middle stature, but well made; and the expression of his handsome face was that of unvarying tranquillity. Though naturally of a feeble constitution, he attained to a great age by a strict

observance of temperance in eating and drinking. His early education had imbedded him with a taste for literature, which he continued to cultivate throughout his long life; and his liberal patronage of learned men, especially in the persons of Virgil and Horace, has procured the name of the Augustan age for the brilliant period in which he lived. The principles he advocated were those of absolute equality, as the apostle of which, at the critical period when the power of Napoleon Buonaparte was just rising, he displayed a singular inflexibility of purpose and good faith. Before the appearance of the 'Tribune,' he had published a work entitled the 'Life and Crimes of Carrier,' which is considered the most impartial account of that inhuman monster. In his Journal, Babeuf took the surname of 'Caius Gracchus,' and it is to his denunciations of all terrorism, that we owe the well-known appellation of the system which he denounced. He was arrested in the month of May, 1796, and did not hesitate to make a daring avowal of his ambitious hopes as the chief of a great party. He endeavored to escape the ignominy of the guillotine by stabbing himself several

times with a poniard, secretly conveyed to him by his son, but was dragged bleeding to the scaffold twenty-four hours afterwards, with the instrument of death still rankling in the wound. His object, beyond all doubt, was to overthrow the present constitution of society, and this, perhaps, with the fallacy of his principles, is the worst that can be alleged against him. [E.R.]

BACH, J. A., a jurist, 1721-1759.

BACH, JOHANN SEBASTIAN, one of the most eminent masters of musical science, was born at Eisenach in Upper Saxony, on the 21st of March, 1685. The ancestor of the remarkable family, from which sprung the subject of the following memoir, was Veit Bach, a native of Presburg in Hungary, which city he was forced to leave during the religious struggles of the 16th century. He ultimately settled at Vechmar in Saxe Gotha, where he resumed his trade of miller and baker, and amused his leisure hours by practising on the guitar. He imparted a taste for music to his sons, and they again to their families, most of whom adopted music as a profession, until they filled all the offices, of musicians, organists, and chanters, in their native province. The greatest, however, of the name, and one of the greatest of his age, was John Sebastian, upon whom all writers of music, as well in England as in Germany, have bestowed the most unbounded laudations. Among many others who have left their written opinions of the excellence of this master, it is only necessary to mention the names of Forkel, his biographer, Marpurg, Handel, Matheson, Reichardt, Beethoven, Von Reaumar, Mendelssohn, and Friedeman. In 1695 the father of John Sebastian Bach died, and he was left to the care of an elderly brother, who does not seem to have possessed that kindly and affectionate nature which, like music, was hereditary in the family. This brother, instead of assisting him in his early studies, did all he could to prevent him from progressing as rapidly as he otherwise would have done. He even destroyed a collection of studies which the young Sebastian, being denied candles, had copied by moonlight. After the death of this brother, Sebastian at a very early period of his life commenced his professional career as a treble singer in the choir of St. Michael's school at Luneburg. In 1703, for reasons not now known, he quitted Luneburg and went to Weimar, where he was appointed court musician, and in 1708 court organist, and director of the concerts to the duke. It was not long after this that he received an invitation to visit Dresden, where Marchand, a celebrated French organist, then held office. A musical contest between this professor and Bach was arranged to take place, but the Frenchman left Dresden through fear of the German artist, whose fame had preceded him. On his return to Weimar, Prince Leopold of Anhalt-Cöthen gave him the situation of chapel master, and in 1723 he accepted the office of director of music at Leipzig, which appointment he held till his death. On one occasion he was invited by Frederick the Great to visit Potsdam, where he was most honorably entertained, and was received with the most marked condescension by that monarch, for whom he composed his world-renowned fugue, under the title of 'The Musical Offering.' This was Bach's last journey. Constant study, frequently for days and nights together, first weakened, then deprived him of his sight. He died of apoplexy, on the 30th of July, 1750. Bach composed a great number of works in almost every class of music, and all excellent; but it would occupy too much space to enumerate them here. He was great as a contrapuntist beyond all who went before him, and was no more than equalled by the greatest of his contemporaries. His 'Passionsmusik' and 'Chorales,' or psalm tunes, have always been held in the highest estimation of all his vocal compositions. The first time that any portion

of Bach's vocal music was publicly performed in Great Britain was at the London Institution, at the course of lectures delivered by Dr. Gauntlett in the spring of 1837. In the 'German Musical Gazette' for 1823, there was published a curious genealogical tree of the Bach family, which shows that from Veit there were, down to John Sebastian, who appears in the fifth generation, fifty-eight male descendants, all of whom, according to Forkel, made music their profession. Among the most famous of the relations of Sebastian Bach may be mentioned, JOHN PHILIPP EMANUEL, his son, born in 1714, known as Bach of Berlin, who was chapel master to the Princess Amelia of Prussia. He died at Hamburg in 1788. This composer left upwards of fifty different compositions, several of which were published after his death. JOHN CHRISTIAN, another son of Sebastian, the date of whose birth has not been published, was known as Bach of Milan, and afterwards as Bach of London. This composer came to London about the year 1769, and brought out his opera of 'Orione,' which was much admired for the richness of its harmony. He died in London, in the year 1782. JOHN CHRISTOPHER FRIEDRICH, the ninth of the eleven sons of Sebastian, was born at Weimar in 1732. He held the situation of master of the concerts at the court of Buckeburg. He is said to have been the ablest of performers upon the organ and clavichord of all his brothers. WILLIAM FRIEDEMANN, the eldest son of Sebastian, was born in 1710, approached in his compositions most nearly to the singular originality of his father. He died at Berlin in 1784. GEORGE CHRISTOPHER was a famous composer and singer at Schweinfurt about the end of the 17th century. JOHN BERNHARD, nephew of Sebastian, was organist at Ordnuff, where he died in 1742. JOHN AMBROSIO, the father of Sebastian, was musician to the town and court of Eisenach, and JOHN CHRISTOPHER, twin brother of the preceding, held a similar situation to the court and town of Armstadt. JOHN CHRISTOPH, organist to the court and town of Eisenach at the close of the 17th century, was considered one of the greatest masters of harmony and performers on the organ of his time. One of his works, which is still extant, a piece of church music, has twenty obligato parts, 'and yet,' says the biographer of the family of the Bachs, 'it is perfectly pure in respect of harmony.' JOHANN ERNST, chapel master to the duke of Weimar, was born in 1712, and died in 1781. JOHANN LUDWIG, chapel master to the duke of Saxe-Meiningen, and composer of church music, was born in 1677, and died in 1730. JOHANN MICHAEL, brother to Johann Christoph, who composed some good church music, was born at Armstadt in 1660. [J.M.]

 BACON, ANTHONY, elder brother of Sir Francis, known as a man of letters and political intriguer in the reign of Elizabeth, born 1558.  
 BACON, FRANCIS, Lord Verulam, Viscount St. Albans, Lord Chancellor of England under James I., author of the 'Instauratio Magna.' The attempt to describe or surround a mind like that of the immortal Englishman, is akin to the effort to survey some grand Power in Nature, whose manifestations are almost infinite in form, and the sphere of whose efficiency is wide as the universe. The industry of all vast minds is unwearied: nor is it ever safe to say of such, that any one department of labor, or species of activity, belongs to them peculiarly. From early manhood Bacon was immersed in public affairs, intrusted with very onerous functions; in the first rank as Jurisconsult, he moved in the work of reforming and arranging the laws of England; as statesman he labored effectively in promotion of the treaty of Union—that foundation stone of modern British greatness; in the capacity of Historian he produced the first work in English literature meriting the name of History, viz., his work on the reign of Henry VII.; as Orator and Writer he had no equal

in his age—joining to energy and *weight* of expression, a splendor of diction which sometimes may dazzle too much; and *besides* he renovated Philosophy. There are two features only, in a character so various and illustrious, to which we can refer in our brief sketch, viz.:—Bacon's achievements and value in philosophy, and his deserts as a *Man*.—I. The enterprise undertaken by this wonderful Intellect, indicates by its very elevation and comprehensiveness, the capacity of the genius that conceived it. Bacon resolved to rescue science from the deplorable uncertainties and obstructions which then surrounded it—to reconstruct the edifice of human knowledge from its very foundations. Of his projected 'Instauratio Magna,' the works he has left are only fragments; nor could they be otherwise, for the execution of the gigantic plan is one of the leading tasks delegated to humanity, which cannot be completed so long as the condition of humanity remains a progressive one. The 'Instauratio Magna' has six main parts:—*First*, Bacon felt it needful to challenge anew for inquiry the respect and dignity that belong to it, to detect the vices of the philosophy prevailing at his time, and to point out the deficiencies requiring to be filled up. Such is the aim of the treatise 'De Augmentis.' *Secondly*, the Remedy had to be discovered; the only certain cure for the evil signalized. This cure is the use of the *true Method*, in the adoption of *observation* and *experiment* instead of *hypothesis*, as instruments for the discovery of fact, and in the substitution in such inquiries, of *induction* for *deduction* or syllogistic reasoning. The principles and processes of the new *method* are elaborately exposed in the 'Novum Organum.' The *third* and *fourth* parts of the 'Instauratio' were planned as an exemplification or instruction in the use of the new Organon; the former, viz., the 'Historia Naturalis et Experimentalis,' being dedicated to the collecting, by aid of observation and experiment, of the greatest possible mass of *facts*; and the latter, the *Scala Intellectus*, to exemplification of discovery by *induction*, of general laws from these facts, and of the application of these general laws by the inverse process of *deduction*, to particular cases comprehended within them. To finish this memorable undertaking, it yet remained that the results of the method, or the truths of philosophy be collected and arranged; but rightly seeing that the discovery of these was not a task he had to accomplish, but a legacy he had to bequeath, Bacon was satisfied with drawing up other two books, the first, or the *fifth* of his plan, named by him 'Anticipations,' and the second or *sixth*, 'Philosophia Secunda Sive Activa,' having reference to applications—to action or practice.—Such the grandeur

of the intellectual Globe which the mind of this Englishman endeavored to span!—It is in the second division of his great work that Bacon's more positive achievements are unfolded. And it must not be conceived that he is here satisfied with a set of general precepts, or with general statements concerning the value and superiority of his *Organon*. The new Method of Inquiry, on the other hand, is examined under every light, and its right practice exposed in detail. In the first place, Bacon passes under review all the procedures of observation and every kind of experiment, showing with what special precaution facts must be sought for, and how we may estimate the value of the various sorts of facts bearing on any inquiry. With corresponding pains, and still greater success, he unfolds in the second book of the *Organon* in what way Induction enables one to detect from the collected facts, the true cause, or the true law of a phenomenon. Having collected by observation all the facts which precede or follow the phenomenon, it is necessary to *exclude* those in whose absence the phenomenon *can* be produced—to notice and separate those others in whose presence it always is produced; and lastly, to select from among the latter class, such facts as vary in intensity when the phenomenon varies, *i.e.*, which increase or diminish in proportion to an increase or decrease of intensity in the phenomenon. In this way, according to Lord Bacon, the true cause is found; and an application to this cause of a similar process, will evolve *its* cause, until in the end we reach supreme causes and universal laws.—In appreciation of these important and memorable labors, we have room for only three brief remarks. *First*, it cannot well be denied that in certain respects Lord Bacon too much decried, or perhaps too little understood the syllogism; and that its peculiar meaning and value, as the only legitimate instrument in Deduction, ought to have preserved it and Aristotle, its immortal author, from the unjust disparagement which one regrets to find upheld by the authority of so great a name. Nevertheless, this injustice to the Greeks, arising partly from defect of critical acquaintance with them, but more from his well-grounded revolt against the deplorable methods sustained in physical inquiry under shelter of their authority, in nowise impairs the edifice Bacon himself reared, or attaches to it any incompleteness. *Secondly*, it is not pretended, with some exclusive and enthusiastic partisans, that previous to the writings of Bacon, no philosopher had sought truths by Induction, or based his inquiries on observation and experiment. It is certainly far from being true that Galileo, for instance, in conducting his immortal researches, pursued an erroneous course, or that although he had studied the '*Novum Organum*,' his career of discovery would have been materially different; what is true is this—no one before Bacon had seen the full importance of the experimental and inductive method, had discovered the extent of the sphere of which it is the only legitimate occupant, had explored its principles, and from principles deduced rules for it as an Art. And it is equally true, that every inquiry of value, undertaken since the publication of his inductive code, has been conducted, with or without the consciousness of the Inquirer, according to laws laid down in that code. *Lastly*, since the publication of the inductive code, its laws have been enlarged and greatly particularized, so that—be it said, with perfect respect to the *Organon*—it is not to Bacon's writings alone that we would point now for full instruction in his own philosophy. The exigencies of the modern sciences, as well of observation as of experiment, have obliged

us to refine his processes and multiply his precautions. The doctrine of probabilities enables us to discern the relative values of different classes of facts, with a precision Bacon never dreamt of; and in the writings of modern authors—let us say of *Mr. Mill*—the methods of induction are unfolded with a superior comprehensiveness and effect. But although the advance of the *physical* sciences, caused by the impulse Lord Bacon communicated, has exacted for *them* processes more complete and perfect than his; when, as to the *moral* sciences—as to inquiry, political, ethical, and religious—shall the time arrive in which inquirers shall practically recognize the validity even of the most general precepts in the *Organon*? The ultimate application of these precepts is sure; but humanity has not yet acquired the strength to accomplish it.—II. The length to which our analysis of Bacon's philosophy has extended, prevents our dwelling much on the character of the Man. Nevertheless, one earnest, though brief word, in deprecation of the harshest treatment which, with one exception, has ever been applied to a mind so great. It is a canon we think which may be observed absolutely with far greater safety than it ever can be broken—that highest intellect and virtue are most closely allied; nay, notwithstanding appearances, their severance is impossible: certainly no mind like Bacon's, living through its duration amid great ideas, ought to be suspected of voluntary descent to utter meanness, unless on evidence which, concerning transactions of the kind charged against him, has not come down assuredly from that age. Dissimulation, indeed, — corruption, treachery to friendship, it matters not what the mind may be that is guilty of them; the acts are mean, and the mind foul. But the error in the popular judgment lies here—dissimulation and corruption are inferred on the strength of obscure circumstances, and without the necessary inquiry whether *taking the character of the mind into consideration*—the said acts could possibly signify *to it*, either dissimulation or corruption? At an *Old Bailey* indeed, or in *Banco Regis*, judgment must be summary; but the Muse of History holds in her hands scales of another order—her question is, *do I rightly understand this Man?* It is passing strange to find Lord Bacon in the guise of an ordinary criminal, and treated with no more than the ordinary courtesy, before Lord Campbell's judgment seat! The errors of Bacon, in so far as they are distinctly established, were mainly those of *compliance*; and it will probably be found that they must be classed among those *involuntary acts*, which connect the best and wisest, through sheer force of circumstances, with the times in which they live;—*involuntary*, inasmuch as they are done because they are usually done, and without rigid examination. Sad it were if through cause of conventional compliances, every eminent personage of our own day might justly be branded as unvaracious, and a hypocrite! Such as he was—since Bacon's time, England has seen no greater and seldom a better man.

'And be it said he had this excellence,  
That undesirous of a false renown,  
He ever wished to pass for what he was;  
One that swerved much and oft, but being still  
Deliberately bent upon the right,  
Had kept it in the main: one that much loved  
Whate'er in man is worthy high respect,  
And in his soul devoutly did aspire  
To be it all, yet felt from time to time  
The littleness that clings to what is human,  
And suffered from the shame of having felt it.'

—Lord Bacon was born in London on 22d Jan., 1560, d. 1626. There have been various editions of

his work—the last by *Basil Montague*; but an unexceptionable edition is still a desideratum. [J.P.N.]

[Statue of Bacon.]

BACON, JOHN, an eminent sculptor, the best of whose works are the statues of Dr. Johnson and John Howard in St. Paul's, and the funeral monument of Lord Chatham, 1740–1799.

BACON, NATHANIEL, played a prominent part in the political troubles, and Indian war in Virginia, in the time of Governor Berkeley. The course pursued by the latter, in repressing the incursions of the Indians by means of frontier forts, being unsuccessful, Bacon, a member of the council, who had received a legal education in England, and was possessed of much popular eloquence, was placed by the people, contrary to the will of Berkeley at the head of an expedition which was attended with better results, but led to civil strife. Bacon, proclaimed a rebel in May, 1676, taken prisoner, tried, acquitted, restored, and again outlawed, died suddenly in Oct. while engaged in hostilities against the governor whom he had defeated and driven from Jamestown, which he burnt. His death caused the destruction of his party, many of whom were executed, imprisoned and fined. Among the victims of this civil war, was Drummond, ex-governor of Carolina. Both parties were in the wrong—Bacon, in acting the part of a demagogue, and Berkeley in insisting upon a policy, not only unpopular, but which experience had proved to be fatal.

BACON, SIR NATH., half-brother of Sir Francis, known as a painter, died 1615.

BACON, SIR NICHOLAS, lord chancellor in the reign of Queen Elizabeth, and father of the celebrated philosopher, 1510–1579.

BACON, ANNE, wife of the preceding, known for her trans. from the Ital. and Latin, 1528–1600.

BACON, PH., D.D., a comic writer, d. 1783.

BACON, PH., a naval com., time of Charles II.

BACON, ROBERT, an English monk, influential as a preacher at the court of Henry III., 1233–1248.

BACON, ROGER, a Franciscan monk of the thirteenth century, born near Ilcester in Somerset. This remarkable person, most worthy of the name he bears, failed to be the restorer of philosophy, neither from defect of energy nor will, but because the times were not yet ripe. Living at an epoch of intellectual torpor and profound ignorance, and surrounded by men neither instructed nor caring to become so, Bacon, as with the Chancellor afterwards and the great Des Cartes, first grappled with the question, Why is this ignorance? Why is our human Reason a willing captive? The exposition of his reply occu-

pies a large portion of the 'Opus Majus;' and the reply itself is not different in kind from that which in all ages must, by every original thinker, be found to the same question. Irrational deference to Authority; slavish respect for Custom; subjection to popular prejudices, and that vulgar selfishness which induces men to reject as dangerous, or despise as puerile, all knowledge they do not themselves possess,—these are the causes of darkness in all ages: nor can they be overcome unless the independence and dignity of Reason be acknowledged, the influence of authority, custom, and prejudice discredited, and Truth sought through careful and systematic investigation of Nature. And in his quiet cloister near Oxford, the monk wrought out principles and modes of legitimate investigation, and successfully followed them. If not entitled to take rank as the founder of experimental philosophy, Roger Bacon was unquestionably the earliest philosophical Experimentalist in England. He recognized as fully as Francis, the importance of experiment as distinguished from deduction; and he had this immense advantage over the Chancellor—he joined example to precept, and put in use, before his contemporaries, his own counsels. It is interesting to reflect on the amount of actual discovery which rewarded so much laborious research. Bacon made signal advances in optics; he was an excellent chemist, and in all probability discovered gunpowder; nevertheless, it is on his clear discernment of true *Method* that his fame must rest. During his unswerving pursuit of knowledge he encountered the usual oppositions, and a share also of encouragement. Pope Clement IV. aided and cheered him; but after the death of this protector the smothered jealousy and dislike of the Franciscans broke forth,—the mean and the weak are of course ever the readiest and fiercest persecutors. It is at once unjust and unwise to consider errors and crimes of this sort as exclusive attributes of the Romish church; their root, on the contrary, lies deep in the heart of man. The domain of physical inquiry is now wholly safe from the disorders of intolerance; but there are large departments of knowledge within which Reason is still not free, where authority abides on its throne, and popular prejudice stores up its thunderbolts.

BAERSIUS, H., a mathematician, 16th cent.

BAERSTRAT, a Dutch painter, died 1687.

BAFFIN, WILLIAM, a skilful English navigator of the 17th century, deserving honorable mention as the first who applied observations of the heavenly bodies for the determination of the longitude at sea. Rules for the practice of the method which he employed are given in his account of the fourth voyage of James Hall, whom he accompanied to the coast of Greenland in 1612, probably in the capacity of pilot. Nothing is known of his history prior to this date. In 1613 he commanded a whaling ship in the sea of Spitzbergen. In 1615-1616 he went as mate with Robert Bylot, on two voyages, whose object was the discovery of a N. W. passage. In the second of these, the extensive bay named after him (which should now be termed a sea, since it is known to open northwards), was discovered, and in great part traced. He wrote an account of these voyages also. Many of his statements are important, and highly suggestive. He calculated the horizontal or maximum refraction at 26'; the present estimate is 32' or 33'. In 1618 we find him mate of a merchant vessel in the Arabian sea. In 1621 he was killed at the siege of Kismis, a fort near Ormuz, while engaged in an

English expedition co-operating with the Persians, in endeavoring to drive the Portuguese out of the Persian Gulf. [J.B.]

BAIER, J. W., a German divine, died 1694.

BAIF, LAZARUS, a French ambassador and author, time of Francis I., d. 1547.

BAIF, J. A., son of Lazarus, disting. as a poet, founder of an Academy, 1570.

BAIL, LOUIS, a French divine, 17th century.

BAILEY, NATHAN, a lexicographer, d. 1742.

BAILEY, PETER, a miscellaneous writer, d. 1823.

BAILEY, WALKER, a medical author, d. 1592.

BAILLE, LIEUT.-COL., distinguished for his gallantry in the last war, 1778-1836.

BAILLET, ADRIEN, a Fr. critic, 1649-1706.

BAILLIE, JOANNA, was born in 1762, at Bothwell, in Lanarkshire, of which place her father was the parish minister. Her mother was sister of John and William Hunter, the famous anatomists. Her life was spent in domestic privacy, and marked by no events more important than the appearance of her successive works. Her brother, who became Sir Matthew Baillie, having settled as a physician in London, Miss Baillie removed thither at an early

age. She resided in the metropolis, or its neighborhood, almost constantly, and died at Hampstead in February, 1841. Her first volume of dramas was published in 1798. Their design, as to which it is not too much to say that the works were good in spite of it, not by means of it, was indicated in the title: 'A Series of Plays, in which it is attempted to delineate the Stronger passions of the Mind, each Passion being the subject of a Tragedy and a Comedy.' A second volume of the 'Plays of the Passions' appeared in 1802, and a third in 1812. The tragedies are fine poems, noble in sentiment, and classical and vigorous in language. But they were not fit for the stage; and 'De Montfort' itself was with difficulty supported for a while by the acting of John Kemble and Mrs. Siddons. The tragedy of 'The Family Legend,' not contained in the series, was acted in Edinburgh in 1809, after a visit the poetess had paid to Sir Walter Scott. In 1836 she published another series of 'Plays of the Passions,' of which 'Henriques,' and 'The Separation,' the former a very striking piece, were attempted on the stage. Some of Miss Baillie's small poems were exceedingly good.

BAILLY, DAVID, a painter, 17th century.

[Bailly—From a Portrait by Duplessi.]

BAILLY, JEAN SYLVAIN, celebrated because of his attachment to science; still more through his eloquence as the Historian of Astronomy; most of all on account of his connection with the unfolding of the first or great French revolution, and his melancholy fate. Bailly was born in Paris in the year 1736; in 1790 he presided as Mayor of Paris at the *Champ de Mars*, over that vast assemblage when the united French people hailed the supposed commencement of the Reign of Liberty and Universal Brotherhood; in 1793 one of countless illustrious victims he perished on the scaffold. In his attachment to the cause of rational liberty Bailly was constant through all calamity: it was not desire of fame, nor the thirst to overthrow, that led him towards the front ranks of the Revolution; so, through abiding faith in humanity, he died without the shame of re-

linquishing his early principles and hopes, merely because the effort to realize them had brought evil to himself.—Bailly's History of Astronomy is still very fascinating: as a strictly philosophical work it does not answer the highest ends,—he was led astray by the then novel and false doctrine of the value of some ancient and forgotten knowledge. As a technical History it is supplanted by the laborious, but yet very insufficient history of *Delambre*. [J.P.N.]

BALZAC, JOHN LOUIS GUEZ DE, an elegant French author, 1594-1654.

BALZAC. This name, borne in the first half of the 17th century, by one of the classics of French prose, has again been made celebrated in our own day, by one of the most vigorous, original, and prolific of French novel writers. HONORE DE BALZAC was born at Tours, about 1799. He came to Paris when a very young man, and was thenceforth engaged constantly in the toils and excitements of authorship. For several years he was very obscure; and the only separate works which he then published, bore the assumed name of Horace de St. Aubin. In 1829 there appeared with his real name, his romance of 'La Peau de Chagrin,' which at once gained him a celebrity that never afterwards flagged. This striking story exhibits, not only Balzac's extraordinary power of impressive representation, but some of the most marked characteristics of the school to which he belongs, and in which, if he is not equal to Victor Hugo, he is much superior to Dumas, and still more to Sue and De Kock. They luxuriate in characters and incidents which are horrible, rather than genuinely tragic; and, when they condescend to profess a moral aim, they mar it by the gratuitous grossness which they throw into the details of the execution. The story of 'The Shagreen Skin' tells how a young ruined gamester, about to throw himself into the Seine, is rescued by a sorcerer, who gives him a talisman, consisting of a piece of shagreen. The possession of it insures him the gratification of every wish he chooses to form; but with every gratified wish the skin shrinks in size, and when it is quite wasted away the possessor dies. In another story, 'El Verdugo,' a young Spaniard, beheads his parents, and his brothers, and his sisters, by common consent; life being offered by a French general to any one of the family who will be the executioner of the rest. There is less of exaggeration, with very much of intense interest, and of sternly accurate dissection of social vices and evils, in several of the best of Balzac's other novels. They are far too numerous to be named. It may be enough to refer to 'La Femme de Trente Ans,' and 'Le Père Goriot.' Balzac attempted the drama likewise, but with little success; and he was an active contributor to the 'Revue Parisienne,' and other periodicals. After the revolution of 1848 he contemplated writing romances of military life, and travelled to collect materials. He died at Paris in Aug. 1850. [W.S.]

[Sir Joseph Banks.]

BANKS, SIR JOSEPH, Bart., a celebrated botanist and traveller, was born in London in 1743. He died in 1820. Inheriting at an early age an ample fortune, he resolved in order to gratify his love for botany, to visit foreign countries at that time little known to naturalists. For this purpose he made a voyage to Newfoundland and the coast of Labrador; he accompanied Captain Cook in his celebrated voyage of discovery to the South Seas; he visited the coasts of Scotland, and spent some time in Iceland. Banks never published any account of the vast collection of objects of natural history he had made; still they were not lost to science. Fabricius described his insects; Broussonet his fishes; Gaertner profited by his fruits and seeds; Robert Brown's *Prodromus* of the plants of New Holland was composed in the midst of his herbarium; and many other botanists owe him similar favors. English parks and gardens are indebted to Banks for many fine new trees and shrubs from New Holland; our colonies for a variety of the sugar cane from Tahiti, richer in sugar, and which admits of more frequent cropping; and the commerce for the flax of New Zealand, which promises to be of such importance to the British navy. In 1777 he was elected president of the Royal Society; soon afterwards created a bart., a K.B., and a member of the privy council. He was a great favorite with George III., who was fond of botany and agriculture. His wealth and position in society enabled him to become the patron of science in his native country, and during the long war which embroiled all Europe, he was ever ready to assist, both by his purse and advice, scientific men of all nations. Many a man of science has been indebted to his generous liberality, and ten different collections of objects of natural history made for the Garden of Plants, which had fallen into the hands of British cruisers, and brought to England, were saved by his interference, and in several instances, at his own expense, safely transmitted to Paris. His published memoirs are few in number, and not of any great importance, yet his name remains intimately connected with the history of science. He presided

for 41 years over the Royal Society; and at his death he bequeathed his herbarium and splendid library of books of natural history to the British Museum, where they remain monuments of his patriotism, talent, and assiduity. [W.B.]

BARBAULD, ANNE LÆTITIA, chiefly celebrated for her 'Prose Hymns' and 'Early Lessons' for children, was the daughter of the Rev. John Aikin, a dissenting minister resident in Leicestershire, where she was born on the 20th of June, 1743. While a child she was remarkable for quickness of intellect, no less than for the natural goodness of her disposition; and in later years for the elegance of her taste, the extent of her acquirements, and her skill in classi-

cal literature. For these advantages Miss Aikin was greatly indebted to the affectionate zeal with which her father cultivated her talents, and in some measure to the literary circle into which he was able to introduce her on removing to Warrington, where he took charge of the celebrated school in 1758. After fifteen years of quiet seclusion, passed in these academic shades, Miss Aikin was induced to publish a volume of miscellaneous poems, which appeared therefore in 1773, and met with the most flattering success. In the spring of the following year she became the wife of the Rev. Rochemond Barbauld, with whom she opened a school in the village of Palsgrave, Suffolk; and took an active and influential part in its management as teacher of composition, and the graceful exercises of reading and speaking. Here they continued to reside for the next eleven years; and it is to this period that we are indebted for the works first alluded to, and for some devotional compositions. Mr. and Mrs. Barbauld then visited the continent for a short time, and on their return home, the former became pastor of a small congregation at Hampstead, where the subject of our notice resumed her pen; first in the interest of the dissenters on the repeal of the Test and Corporation Acts, and next in a poetical address to Mr. Wilberforce, suggested by the rejection of the slave bill. These spirited appeals were followed by some religious essays, the most remarkable of which is a singular discourse for the Fast-day of 1793, entitled 'The Sins of the Government the Sins of the Nation.' In 1802 Mr. Barbauld became minister of a congregation at Newington Green, where he died in 1808, and in this neighborhood his widow resided till her death in 1825, enjoying the company of her brother, and literary friend, Dr. Aikin. The simplicity of Mrs. Barbauld's life and manners, the refinement of her imagination, and the purity of her soul, are well represented in the works which have rendered her name a household word in England, and to which the cause of education is so much indebted. The versatility of her talents is shown in the critical and biographical notices with which she amused herself in the early period of her residence at Stoke Newington, which include a selection of papers from the 'Spectator,' and similar classics, published in 1804, and an edition of the 'British Novelists' in 1810. Her last publication was a remarkable poem, named from the year preceding its appearance, 'Eighteen Hundred and Eleven.' Her collected works were published soon after her death, with a memoir by her niece, Miss Lucy Aikin; and the day is probably far off when her 'Early Lessons' will be superseded by any thing superior of the same class.

BARCLAY, N., an eminent Scotch civilian, rose to be a counsellor of Lorraine, 1543-1605.

BARCLAY, JOHN, son of the preceding, disting. as a satirist, 1582, 1621.

BARCLAY, ROBERT, the celebrated Apologist, was born in 1648, at Gordonstown, county of Moray, and descended from an ancient and honorable ancestry, who for centuries had flourished in the North of Scotland. The unsettled state of things at home induced his father, Colonel Barclay, to send him at an early age abroad, and accordingly he received the greater part of his education at Paris, under the superintendence of his uncle, who filled the office of rector in the Scots College. His parents being led from circumstances to apprehend that familiarity with continental manners might produce in their son a disposition favorable towards the Roman Catholic religion, recalled him to his native country, where he appeared an accomplished youth, and combining the advantages of a liberal education with great natural abilities, he rapidly rose to distinction. His family having embraced the principles of the Quakers, he was persuaded ere long to follow their example, and in conforming to the peculiarities of a sect which was held in great disrepute, particularly in Scotland, he felt himself laid under a necessity of vindicating that course by the publication of several treatises in their defence, characterized by great variety of learning, as well as power of argument. His first work, which was published in 1670, was entitled 'Truth Cleared of Calumnies,' and appeared in the form of a controversial pamphlet, in answer to an attack on Quakerism by the Rev. William Mitchel, a minister of the Church of Scotland. His next publication, which was issued in 1673, was a Catechism and Confession of Faith, containing an exposition of the principles of his religious communion; and to this he soon after added his 'Theses Theologicæ,' or Theological Propositions.—Becoming enthusiastically attached to the cause of Quakerism, which he identified with that of truth and the best interests of humanity, he

resolved on devoting his future life to its extension in the world; and with this view, he in 1676 accompanied William Penn in a tour of propagandism through England, Holland and Germany. It was while sojourning at Amsterdam, in the course of those peregrinations, that he published the great work which had long occupied him, and on which his fame chiefly rests—'An Apology for the True Christian Divinity, as the same is preached and held forth by the people in scorn called Quakers.' This treatise was originally published in Latin, but was speedily translated into most of the languages of Europe, and while it greatly extended the reputation of its author, the principles it advocated became the subject of keen and prolonged agitation. Barclay, on his return to his native country, suffered much from the severe edicts issued against the nonconformists of the period, being imprisoned five months in Aberdeen, besides other petty kinds of persecution in the form of obloquy and fines. His high character, however, for sincerity, as well as for talent and learning, carried him triumphantly over all opposition, and latterly he enjoyed much distinction, being honored with an introduction to the English court, and the partial regards both of Charles II. and his successor, James II. Through the royal favor he received a commission as governor of East Jersey for life, whence he several times returned to visit his native land, and it was in 1680, the last visit he paid, he was seized with fever, and died amongst his relatives, at Ury, in Aberdeenshire, in the forty-second year of his age. BARD, JOHN, an eminent American physician, who was born at Burlington, N. J., in 1716, and died at Poughkeepsie, in 1799. Together with Dr. Middleton he made, in 1750, the first dissection of which there is any record in America. He was several years president of the Medical Society of New York.

BARD, SAMUEL, M.D., the family physician of Washington, son of Dr. John Bard, was born in Philadelphia, 1742, and died in 1821. He was author of a *Treatise de viribus opii*, a compendium of midwifery, and other medical productions. The Medical School of New York, and also the hospital were established principally by his exertions. He was elected president of the College of Surgeons in 1813. He was no less eminent for piety than for professional skill and learning.

BARENTZ, WILLIAM, a skilful Dutch pilot, sent out by the United Provinces on three voyages, between the years 1594 and 1597, in search of a N.E. passage to China. He failed in the object, but made some important additions to geography. Bear, or Cherry island, and Spitzbergen were discovered by him; the latter, in 80°, was found to have good herbage and herds of deer, while Nova Zembla in 76°, was a barren waste. Suddenly enclosed by ice on the coast of Nova Zembla, on 26th August, 1596, Barentz was obliged to remain on this inhospitable shore till the following summer, and was thus the first navigator who wintered in the Arctic regions. He left the island on the 14th June, with a crew of fifteen persons, in two small boats, his ship being disabled. He died from fatigue on the 20th; but the adventurous survivors held on their perilous voyage—the most extraordinary on record—and traversing a stormy ocean filled with floating ice, exposed to the extreme of cold, famine, and sickness, and to frequent attacks from bears borne along upon the ice islands, or pursuing them through the water, they reached in six weeks the port of Kola, in North Lapland, a distance of 1,600 miles. Here they found three ships from their own country. [J.B.]

BARLOW, FRANCIS, an artist, died 1702.

BARLOW, JOEL, author of the *Columbiad*, was a native of Connecticut, and born at Reading, in Fairfield county, about the year 1757. He was graduated at Yale College, in 1778, and immediately entered upon active life. His subsequent career was one of great vicissitude. While a student at Yale he served during a vacation as a volunteer in the American army, and was present at the battle of White Plains. He also distinguished himself in early life by that facility of versification which never deserted him. On the termination of his collegiate course, after a brief study of the law, he embraced the design, somewhat singular for one who had no intention of addicting himself permanently to the ministry, of becoming a chaplain in the army, for which post he qualified himself in six weeks. His researches in theology were evidently not very profound. Perhaps he wished to gratify at once his

passion for adventure and his taste for literature. It is certain that poetry occupied as much of his time as preaching. But neither divinity nor letters engrossed his attention, for in 1781 he was married to Ruth Baldwin, the sister of Abraham Baldwin. While in the camp he began his poem the 'Vision of Columbus,' which under the title of the Columbiad, was afterwards expanded into an epic. After the conclusion of hostilities and the disbanding of the army, his life for some time consisted of a series of struggles to obtain a subsistence. He edited a newspaper, published his Poem, and a version of Hymns by Watts, opened a bookstore, practised law, and finally, in 1788, went to Europe as agent for a fraudulent enterprise, called the Scioto Land Company, of the nature of which he was unacquainted. For the next 17 years he was absent from his country. The business which took him to Europe proving abortive, he had recourse to his pen for a living, and published many pieces both in prose and verse on the republican side, among which were his 'Advice to the Privileged Orders,' 'The Conspiracy of Kings,' and 'Hasty Pudding.' The horrors of the French Revolution, however, gradually weaned him from politics, and finding mercantile life more profitable, he devoted himself to it with great industry, and amassed a large fortune. In 1795 he was appointed by Washington Consul at Algiers, and was instrumental in redeeming many American citizens from captivity. Having negotiated treaties with Algiers and Tripoli, he resigned his post and returned to Paris, where he lived in great splendor. During all this time the Columbiad, the cherished project of his youth, had been steadily advancing to completion, and his increased leisure enabled him now to labor more assiduously upon it. In 1805 he sold his property in France, returned to America, and fixed his residence at Georgetown, in the District of Columbia. In 1808 the Columbiad was published in a splendid form, and the typographical execution still entitles it to admiration. The engravings are deserving of especial praise. Of the poem itself it is difficult to speak in terms of commendation. It is heavy and cumbersome, devoid of any of the scintillations of genius, and few can be found in the present day who have waded through the monotonous melody of its many thousand lines. The residence of Barlow in France had not tended to increase his reverence for Christianity, and the Columbiad affords some evidence that the army chaplain of the Revolution was tinctured with the prevailing infidelity. He only survived the publication of his poem about four years, but his death occurred in the zenith of his political distinction. Appointed in 1811 as Plenipotentiary to France to obtain indemnification for injuries sustained by American commerce, he was invited to a conference with Napoleon at Wilna. But the sudden vicissitudes of climate in his rapid journey to meet the emperor, brought on inflammation of the lungs, and he expired on the 22d December, 1812, at a little village near Cracow, in Poland.

BARNABAS, St., the fellow-laborer of Paul, supposed to have been stoned to death about 60.

BARNARD, J., D.D., a biographer, died 1683.

BARNARD, SIR JOHN, lord mayor, and M.P. for London, the latter for 40 years, 1685-1764.

BARNARD, JOHN, an eminent congregational divine of New England, born in Boston 1681, was graduated at Harvard 1700. In 1707 he was appointed by Governor Dudley chaplain in the army, and was present at the siege of Port Royal. He shortly after visited London, and was there during the excitement concerning Dr. Sacheverel. In 1714, having returned to America, the North Church in Boston was built for him, but at the last moment he was supplanted by a more popular candidate. He was at last settled as minister at Marblehead in 1716, in which place he continued to officiate until his death, which happened in January, 1770. He published a great many discourses, and also a collection of hymns.

BARNARD, THEODORE, a Dutch painter.

BARNAUD, NICH., an alchemist, 16th century.

BARNAVE, A. P. J., MARIE, by profession an advocate, was born 1761, and distinguished in the parliament of Grenoble during the first ominous struggle against the despotic administration of Loménie-Brienne. Deputed to the states-general by the province of Dauphiné in 1789, his eloquence, and his almost wild enthusiasm in the popular cause, marked him out as the rival of Mirabeau, and when the latter favored the court, as his most dreaded adversary. One of a memorable trio, his characteristic talent is well expressed in the epigram pointed at them: 'Whatsoever these three have in hand, Dupont *thinks* it, Barnave *speaks* it, Lameth *does* it. His love of justice, in the abstract, was carried to a reckless extreme in his decrees, as a member of the diplomatic committee for the reorganization of the colonies, and their fatal effects led him to abandon the system, though Siyès and Robespierre denounced his inconsistency as a treason. A member of the famous Jacobin Club, he fought a duel with the royalist Cazelès, who had denounced the patriots as 'sheer brigands,' but neither of them received any serious injury. Like many others, his enthusiasm for the revolution was saddened and cooled down as he reflected upon the disasters which had accompanied it, and his return to moderate counsels was hastened by the situation into which he was momentarily thrown by the flight of the royal family, and their arrest at Varennes. Appointed with Péthion and Latour-Maubourg to secure the king's return, Barnave rode in the carriage with the Queen and Madame Elizabeth, and touched by their distress, his conversion to the principles of a constitutional monarchy was completed. He was now denounced by the journalists as a deserter of the popular cause, and at the close of the ses-

sion returned to private life, in his native town of Grenoble, where he married the daughter of an advocate. In August, 1792, he was arrested on a charge of conspiring with the royal family, with whom it was alleged he had held treasonable correspondence ever since the arrest at Varennes, and after a confinement of five months, conducted to Paris, and condemned by the revolutionary tribunal of Tinvillle. The effect of his eloquence on this occasion was such as to move even his sanguinary judges, and his friend Camille Desmoulins wept on hearing his last words. Arrived at the scaffold, he raised his eyes to Heaven: 'Behold, at length,' he exclaimed, 'the reward of all I have done for liberty!' He was executed in 1793, at the early age of thirty-two; and has left behind him a character remarkable indeed for indiscretion, but equally so for its honesty of purpose; and a name, as an orator, scarcely surpassed by any in the revolutionary annals. [E.R.]

[Christ's Hospital, or Blue Coat School.]

BARNES, JOSHUA, a friend of the famous Dr. Richard Bentley was a native of London, where he was born in the year 1654. His rudimentary education he received at Christ Church Hospital, whence he was removed to Emmanuel College, Cambridge. There he devoted himself to the study of classical literature with so great assiduity and success, that he rose to eminence as a Grecian;—his knowledge of the language of ancient Greece, however, being more minute and accurate than comprehensive, more limited to the niceties of the grammarian, than based on the enlarged and liberal views of the philologist. His reputation procured him the appointment of Regius Professor of Greek at Cambridge in the year 1695; in 1700 he changed his state by forming a matrimonial alliance with a Mrs. Mason of Hemingford, a wealthy widow, and by means of the fortune acquired by his marriage with this lady, he was enabled to bear the expenses of his edition of Homer. That work was published in 1710. The sale, however, was not such as to remunerate him, for in 1711 he applied, though unsuccessfully, to Lord Harley for preferment in the church, in a series of letters setting forth his claims, which are preserved in the Harleian collection. He died in 1712, and was buried in Hemingford churchyard, where his widow erected a monument to his memory. His works, which are now forgotten by all but a few scholars, were very voluminous. The following may be considered a correct list of them in the order of publication:—Sacred Poems, 1669; The Life of Oliver Cromwell; The Tyrant, an English poem, 1670; Xerxes, and other dramatic pieces in English and Latin; a Latin Poem on the Fire in London and the Plague; a Latin Elegy on the Beheading of John

the Baptist; *Estheræ Historia Poetica Paraphrasi*, 1679; *Select Discourses*, 1680; *The History of Edward the Third*, 1686; an edition of Euripides, 1694; a Discourse on Matthew ix. 9; an edition of Anacreon, 1705; an edition of Homer, 1711, 2 vols. [R.J.]

BARNES, DANIEL H., a distinguished American conchologist, and author of several admirable communications, chiefly on his favorite science, in *Silliman's Journal*. He was killed Oct. 27, 1818, near Troy, New York, in attempting to escape from a stage, the horses of which had run away. He was a Baptist minister, and the day before his death preached from the words, 'Ye know not what shall be on the morrow.' At the time of his decease he was esteemed the most learned conchologist in the United States.

BARNES, R., D.D., a protestant martyr, 1540.

BARNES, THOMAS, a political writer, late principal editor of the *Times*, 1786–1841.

BARNEVELDT, JOHN D'OLDEN, a Dutch statesman, executed on a charge of treason, 1619.

BARNEY, JOSHUA, commodore, distinguished as a naval commander in the service of the United States and of France. He was born at Baltimore in 1759, and early in life entered the merchant service, but on the commencement of hostilities with England was appointed master's mate on board the *Hornet*, from which post he was soon promoted. He was twice captured; the first time he was exchanged, and the second effected his escape from Plymouth in England. On his return to America he was appointed to the command of the *Hyder Ally* of 16 guns, and on the 28th April, 1782, captured the *General Monk* of 18 guns. In September of the same year he sailed in the latter vessel to France with dispatches to the American ambassador, and returned in safety with a large amount of specie as a loan from Louis XVI. On his next voyage to France in 1796, when he carried Mr. Monroe to that country, he accepted the command of a French squadron, which he retained for three years. On the breaking out of the war of 1812 he was placed in command of the flotilla for the defence of the Chesapeake, and in 1814 at the battle of Bladensburg was severely wounded in the thigh. His last employment in the service of his country was a mission to Europe in 1815. He died in 1818 at Pittsburg while on his journey to Kentucky.

BAROZZI, JAS., an Ital. architect, 1507–1577.

BAROZZI, F., a Venetian nobleman, the most learned mathematician of his time, died in the inquisition, being confined on a charge of magic, 16th ct.

BARRAL, LOUIS MATHIAS DE, a Fr. emigrant, archbishop of Tours under the empire, died 1816.

BARRAL, PETER, a Fr. antiquarian, d. 1772.

BARRAS, LOUIS, Count, a naval commander, died a short time previous to the revolution.

BARRAS, PAUL FRANCIS, Count De, was born of a noble French family of Provence, of whom it was proverbial to say, 'Noble as the Barrases, old as the rocks.' He was successively member of the convention and directory, and played an important part in the progress of the French revolution. As early as the year 1775, when twenty years of age, he sailed for the Isle of France with the rank of second lieutenant, and was shipwrecked on the Maldiv Islands. After this he is found at Pondi-

cherry, then invested by an English army, and peace being concluded, returns to France, ready to share in the political troubles of 1789. He is represented at this time as a man of reckless and dissipated habits; subject to fits of courageous impulse; tall and handsome of person, and of yellowish complexion: in regard to mental character, remarkable for the practical quickness of his apprehension, and singular presence of mind under emergencies. Fired with the prevailing enthusiasm in favor of reform, or seeing the means of repairing his shattered fortunes, and satisfying his restless spirit in the career it opened to him, he presently declared against the court, and was admitted a member of the famous Jacobin Club. From 1790 to 1792 we find him in the office of administrator for the department of the Var, and some other public employments, including that of commissary for the army of Italy. As a member of the convention in 1792, he voted for the king's death, and declared against the Girondins. In 1793 he was sent to the south of France, and commanded the left wing of the army besieging Toulon, where he became acquainted with Napoleon, then captain of artillery in the same operations. When the savage excesses committed by the commissioners and soldiers of the convention on this and similar occasions became the subject of remonstrance in Paris, Barras and Fréron were exempted from the general imputation, and it was only the popularity and audacious bearing of the former that deterred Robespierre from laying hands upon him. As the reign of terror drew near its close, and Henriot menaced the convention with his troops, Barras was intrusted with its defence, and it was he who seized Robespierre and conveyed him to the scaffold. The vigorous measures which he now adopted against the party of the Mountain, gained him the appointment of general-in-chief, decreed unanimously by the convention; and the merit belongs to him of engaging Buonaparte in the public service on the famous 13th Vendémiaire, (4th October, 1795,) when the revolt of Lepelletier was suppressed, and soon afterwards the government of the directory established, of which Barras was one. Residing in the Luxembourg palace, he affected almost royal pomp, and for a while exercised a marked ascendancy over his coadjutors; but their subsequent dissensions, and the intrigues of a formidable party, at the head of whom was the notorious Siéyès, gradually sunk them in public esteem, and prepared for the return of Buonaparte from Egypt, and his sudden elevation to the consulship. Barras is accused of

conspiring with the English government for the restoration of the Bourbons, and this for the vilest considerations, yet he hailed with apparent joy the advent of the illustrious soldier to whom he had first opened the path of preferment. Without recounting the petty intrigues of his later years, it is sufficient to say, that his public career—the mingled good and evil of his political life—closes with this epoch. For whatever reason, he obstinately refused the employments that were offered him through the agency of Talleyrand, and at last died in retirement on the 29th January, 1829. [E.R.]

BARRE, WILLIAM VINCENT, a French refugee, author of a history of the first consulate, committed suicide 1829.

BARRERE, P., a French naturalist, died 1755.

BARRERE DE VIEUZAC, BERTRAND, 'The Anacreon of the Guillotine,' as Burke styled him, is one of the most sinister and conspicuous characters of the French revolution, more especially as a member of the Committee of Public Safety during the reign of terror. He was born at Tarbes in Gascony, 1755, and being educated for the bar, met with considerable success as a youthful advocate at Toulouse, besides being admitted a member of the Academy of Sciences for his literary attainments. In 1785 he married a lady of fortune, and it may here be remarked, that his private virtues have been extolled in singular contrast with his perfidious conduct in public life; to which anomaly, perhaps, his moral weakness, and the brilliant talents which made him ashamed of it, and caused him to assume the airs of a bravo without the heart of one, among his more ferocious, or to say the least, less polished colleagues, may be in some measure the key. In 1789 he was sent to Paris, as the representative of his own province in the 'Third Estate' of the 'Etats Généraux,' and took his place with the more moderate reformers. At this period he published a journal entitled 'Le Point du Jour,' and acquired a high degree of popularity by his eloquence both as editor and representative. At first loyal to the king, he was gradually carried away by the rising tide of republicanism, and we find him, on the 17th June, in the ranks of those who provoked the revolution by which the commons of the third estate constituted themselves a national assembly. When this body at length separated, Barrère was appointed a judge in the High Court of Appeal, and in 1792 deputed to the National Convention for the department of the *Hautes Pyrénées*; acting as president, in fact, when the king was interrogated, whose situation in bygone times had excited his most compassionate feelings. From this time he became the mouthpiece of the Jacobins, and voted for the death of the king with the observation, so often since repeated, 'L'arbre de la liberté ne croît qu' arrosé par le sang des tyrans,' (the tree of liberty only grows when watered by the blood of tyrants.) On the 1st of April, 1793, he was elected on the Committee of Public Safety, and constantly acted as the reporter of its projects to the convention, in which employment his ingenious plausibility, and facile wit, were of essential service to those who had else stood grim and stark in the midst of their atrocious conceptions. It was Barrère who created the revolutionary army by the memorable decree,—'All France, and whatsoever it contains, of men or resources, is put under requisition;' and who gave for the motto on their banners, 'Le peuple Français debout contre les tyrans,' (The French people risen against tyrants!) It was he who denounced Danton on the one hand on a charge of too much moderation, and Hébert on the other for his anarchic doctrines; who stereo-

typed the scenes of greatest horror in a joke or an epigram, as when he said,—‘Il n’y a que les morts qui ne reviennent pas,’ (It is only the dead who do not come back again.) His fear of breaking with Robespierre made him the instrument of cruelties which he jested upon, and which he endeavored to hide under the conceits in which he clothed them, while his heart revolted; and if the absence of all principle is rendered more conspicuous in one circumstance than another of his public career, it is in the haste with which he moved the execution of the fallen dictator without trial on the 9th Thermidor; scarcely four-and-twenty hours after he had fawned upon him. The disgusting facility of his conversion did not prevent the reaction affecting himself, more especially as he proposed the continuation of Fouquier Tinville in his office of public accuser. The result was, his trial and condemnation at the bar of the convention, the fall of which, and the political complications of the period, favored his escape and concealment until the amnesty which followed the 18th Brumaire enabled him to return to Paris. He now presented himself to the senate as a candidate for admission into the legislative body, but Napoleon mistrusted him, and he disappeared till 1815, when he turned up as a member of the chamber of representatives during the hundred days. At the second restoration of the Bourbons, he was compelled to retire by the royal ordinance which expelled the regicides, and resided at Belgium till the revolution of 1830, when he once more returned to his country, and died 1841. He is the author of numerous political and historical works, besides the ‘Point du Jour,’ and an anti-British journal, entitled the ‘Argus,’ published under the imperial government. His own memoirs have been published by MM. Hipp, Carnot, and David, in 4 vols. 8vo.

He was sent at an early age to the Charterhouse School, where, however, his quarrelsome temper, pugnacious habits, and proverbial idleness, occasioned great annoyance to his teachers, as well as deep dissatisfaction and pain to his family. On his removal

[Charterhouse, where Dr. Barrow was educated.]

from that institution to Felsted in Essex, he began to show a better disposition; for applying himself to his studies with spirit and indefatigable industry, his progress was so rapid, and his attainments in various departments of learning so high, that his master appointed him tutor to Viscount Fairfax, of Emely in Ireland, who was at this school. His father, who had early destined him to a learned profession, entered him, in 1645, a student of Trinity College, Cambridge. But his fortune having been greatly injured through his attachment to the royal cause, young Barrow would have been destitute of the means to continue the expensive style of living at that university, had it not been for the liberality of the famous Dr. Hammond, who gave him the benefit of his valuable friendship, and through whose influence he, in 1649, obtained a fellowship in the college. Having finished his literary and philosophical course, he directed his studies with a view to the practice of medicine, and made great proficiency in the subsidiary sciences of anatomy, botany, and chemistry. But, by the counsel of his uncle, bishop of St. Asaph, and his own growing convictions of the duty imposed on him by his oath as a fellow, he withdrew from the further prosecution of those sciences, and devoted himself to the study of divinity, retaining, however, his strong predilection, and earnest pursuit of mathematics. Disappointed in his hopes of obtaining the Greek professorship, he resolved to dispel his chagrin by visiting the continent, but was so poor at the time, that to meet the expense of his travels he had to dispose of his books. In 1660, he was chosen to the Greek chair at Cambridge; and in July, 1662, he received another appointment more congenial to his tastes, that of geometry professor in Gresham college, London. In 1663, he received the high honor of being the first Fellow elected by the council of the Royal Society after they were incorporated by charter; and almost immediately after he was appointed first professor of a mathematical lectureship founded by Dr. Lucas, at Cambridge. This office he held for six years, and then resigned it to Sir Isaac Newton, having resolved to dedicate the rest of his life to divinity. Several small preferments he obtained in the church, till having by his pre-eminence as a preacher been marked out as capable of filling the most dignified stations, he was, in 1670, created Doctor in Divinity, preparatory to his being appointed Master of Trinity College, and chaplain to the king. Charles had conceived a strong partiality for him, and on bestowing these honorable preferments upon him, said ‘that he had given them to

the best man in England.' A further honor awaited him, in being elected, in 1675, to the Vice-Chancellorship of the university. But he was not destined to enjoy these honors long, for on the 4th May, 1677, he was seized with fever, which in a few days terminated his brief, though brilliant career.—His works in mathematics are still held in great esteem. His sermons, with the exception of two, were posthumous, though he had prepared them for the press. They are remarkable for abundance of matter, treasures of erudition, for splendor of description, and a spirit of glowing piety. Charles II. used to call him 'an unfair preacher, because he exhausted every subject, and left nothing for others to say after him.'

BARROW, SIR JOHN, Bart., F. R. S., secretary to the admiralty from 1804 to 1845; a distinguished biographical writer and promoter of discovery, 1764–1848.

BARRUEL, AUGUSTIN, a French abbé, chiefly kn. for his memorials of Jacobinism, 1741–1820.

BARRUEL DE BEAUVERT, COUNT ANTH. JOS., a partisan of the Bourbons, well known as a journalist and biographical writer, 1756–1817.

BARRY, GIRALD, or GIRALDUS CAMBRENSIS, an English prelate and historian of the 12th cent.

BARRY, J. T., an ar. and wr. on art, 1841–1806.

BARRY, JOHN, by birth an Irishman, was the first naval officer who held the rank of commodore, in the service of the United States. He arrived in America in 1760, at the age of 15, and adopting a seafaring life, acquired such high credit and esteem as a commander, that on the breaking out of the war, he was appointed by Congress, in 1776, to the command of the brig Lexington, and shortly after, to that of the frigate Edinburg. During the winter, he served on land as aid-de-camp to Gen. Cadwallader, in the neighborhood of Trenton. While the American fleet was detained at Whitehall, he gallantly executed a project conceived by himself of descending the river in boats to cut off the supplies of the English. He next commanded the Raleigh of 32 guns, which he was compelled to run on shore in Penobscot Bay. In 1781, he carried Col. Laurens in the frigate Alliance to France, and on his return, captured the British vessels Atlanta and Trepasa. In this action he was severely wounded. The frigate United States was built under his superintendence, and he retained the command of her until the accession of Jefferson. His death occurred at Philadelphia in 1803. As a naval officer, he had every quality requisite to ensure the obedience and gain the affection of those under his command, and was no less respected and beloved in private life. During the war, Gen. Howe is said to have offered him \$60,000, and the command of a British frigate, on condition of his deserting the American cause. It is needless to say, that the proposition was indignantly rejected.

BARRY, MARIE JEANNE DE VAUBERNIER, Countess Du, celebrated for her beauty and infamous licentiousness at the court of Louis XV., commenced her career in a millinery establishment, through which, she entered upon the life of a courtesan, and was taken under the protection of the Count du Barry. Presented at court 1759, when the place of Madame Pompadour was vacant, she became the king's mistress, and acquired the most unbounded influence over him. The dismissal and exile of the prime minister Choiseul was decided upon under her influence, guided by the 'corrupt D'Aiguillon,' and the time-serving Maupeou, who were the most implacable enemies of the parliament, which had now maintained a quarrel for nearly a quarter of a cen-

tury with the court. France, at this period, as the most vigorous and deep-sighted writer of the present age has described it, 'with a harlot's foot on her neck,' was preparing for the fearful struggle of the revolution, in which Du Barry, with so many others who were either the glory or the shame of their country, were doomed to perish. At the death of the king, in 1774, she was ordered by Louis XVI. into the convent of Pont-aux-Dames, near Meaux, but after some time permitted to reside in the chateau built for her by the old king. Here she lived some years in a creditable retirement, but coming to England to procure money for the use of the royal family by the sale of her diamonds, she fell under the displeasure of the revolutionary tribunal, and was condemned to the guillotine at the age of forty-nine. It is the common remark of historians, that France was indebted for much of its demoralization to this prostitute; rather, it might be said, she had the address to avail herself of the incredible corruption that prevailed at the very heart of society. She suffered at the close of the year 1793, uttering the most pitiable cries for mercy on her way to the scaffold. [E.R.]

BARRY, SPRANGER, a cel. actor, 1719–1777.

BARRY, WILLIAM T., born in 1785, was post-master-general during the administration of Jackson and afterwards ambassador to the court of Madrid. He died in 1835.

BARSELAI, sultan of Egypt, 1422–1438.

BARTAS, WM. DE SALUSTE DU, a French soldier and diplom., dist. also as a poet, 1544–1590.

BARTH, JOHN, a French privateer, 1651–1702.

BARTHELEMI, NICH., a religious wr., 15th ct.

BARTHELEMON, FRANCIS HIPPOLITE, a comp. and violinist, b. at Bordeaux 1741, d. 1808.

BARTHELEMY, JOHN JAMES, a Fr. *savant*, member of the Acad., and au. of the 'Voyage of the Younger Anarchasis in Greece,' &c., 1716–1795.

BARTHEZ, P. J., a Fr. medic. wr., 1734–1803.

BARTHOLDY, J. S., a Prus. diplom., d. 1826.

BARTLETT, JOSIAH, M.D., governor of New Hampshire in 1793, was born at Amesbury, Mass., in 1729. He began the practice of the medical profession in 1750, and though imperfectly educated, by talent, perseverance and good fortune attained great reputation. In 1775 he was elected a member of Congress, from which position he withdrew in 1778. The next year he was appointed justice of the Superior Court of New Hampshire, and chief justice in 1788. In 1790 he was made president of New Hampshire, and in 1793 was elected the first governor under the new constitution. He died of paralysis in 1795, leaving behind him the reputation of a true patriot, a good physician, and a politician of a sound and discriminating mind.

BARTLETT, JOSIAH, M.D., an eminent American physician, born in Charlestown, Massachusetts, in 1759. During the war of the Revolution he served as surgeon's mate in the military hospital and also as surgeon on board ships of war. On the cessation of hostilities he settled in his native place, and acquired a deserved reputation not only in his profession but as a speaker and writer. The chief productions of his pen were a discourse on the progress of medical science in Massachusetts, 1810, a history of Charlestown, 1814, and an oration on the death of Dr. John Warren, 1815. He served in Congress, and in the legislature of Mass. Misfortune clouded the last years of his life, and he died of apoplexy in 1820.

BARTLETT, W. H., an English artist, known as an illustrator of Oriental life and scenery, d. 1854.

BARTOLI, or BARTOLUS, a celebrated jurist, whose works occupy 10 folio vols., 1312–1356.

BARTOLI, COSMO, an Italian hist., 16th cent.

BARTOLI, D., hist. of the Jesuits, 1608-1685.

BARTOLO, an Ital. jurist, 14th century.

BARTOLOZZI, FR., an engraver, 1728-1815.

BARTON, BENJAMIN SMITH, M.D., was born at Lancaster, Penn., of which his father was Rector, in 1766. He studied medicine at Philadelphia, Edinburgh, London and Gottingen, at which latter place he graduated. In 1789, on his return to America, he became professor of natural history and botany in the University of Pennsylvania. In 1796, he published some remarks on fascination ascribed to rattlesnakes, and in the following year, a theory of the origin of the American tribes. In 1804, he commenced the Medical Physical Journal, which he edited with ability for several years. His *Elements of Botany*, the first work of the kind from an American author, appeared in 1804, and was re-published in 1812 with numerous engravings. Besides these, he was the author of numerous minor pieces on scientific subjects and Editor of Cullen's *Materia Medica*. He died in 1815 at the age of 49. His character was noble, his mind acute and comprehensive, and he contributed greatly to the advance of science and learning in America.

BARTON, BERNARD, dist. as the 'Quaker Poet,' by profession a banker's clerk, 1784-1849.

BARTON, ELIZABETH, a poor girl of Kent, the subject of religious ecstasies, which led to her execution, on a charge of high treason, 1534.

BARTON, THOMAS, a clergyman of the Protestant Episcopal church, was born in Ireland and graduated at Dublin University. He was ordained in England 1754 and the next year came to America as a missionary. In 1758 he served in the British army as chaplain in the expedition against fort Du Quesne. At this period, he formed the acquaintance of Washington. During the revolution, he adhered to the Royal cause, but continued to reside in America. He died in New York 1780. Among his published works is a sermon on Braddock's defeat.

BARTON, WILLIAM, Lieut. Col. in the American army during the revolution. The most brilliant achievement of his life led by a strange fatality to his greatest misfortunes. Learning that Major Gen. Prescott of the British army was to sleep at a house a few miles from Newport on the 10th July, 1777, he put himself at the head of forty men, and after a rapid journey by water and land arrived at midnight at the general's quarters. The head of a negro who accompanied the party was used without detriment to the owner, as a battering ram to dash in the chamber door, and Gen. Prescott was surprised in bed with his aid-de-camp, and carried safely off. Prince, the negro, lived till 1821 and attained the age of 78. Col. Barton was presented by Congress with a sword and a large grant of land in Vermont, for his skill and daring in this transaction. But some irregularity in the transfer of this land led to his imprisonment in Vermont for many years and he was not set at liberty till 1825. He died at Providence, in 1831.

BARTRAM, JOHN, a distinguished American botanist, who, without the advantages of scholastic training, attained by genius and perseverance the highest rank among the students of his favorite science. He was a native of Pennsylvania, and was born about the year 1701. By the death of his father, who was killed by Indians in North Carolina, he came into possession, at an early age, of a small estate near Philadelphia. Here, while cultivating the soil, he mastered the Latin and Greek languages and acquired the information necessary for the suc-

cessful pursuit of botanic researches. Purchasing a choice spot on the banks of the Schuylkill, he enriched it with a vast collection of plants not only from every portion of the North American continent then accessible, but also from Europe, the princely gardens of which were indebted to him, for their magnificent assortments of transatlantic productions. His travels on this continent were very extensive and afforded materials for many excellent communications to the *British Philosophical Transactions*, not confined to botany, but ranging over the field of general science. His attainments and enthusiasm attracted the attention of the learned in Europe, and he became the friend and correspondent of Linnaeus and Sir Hans Sloane, and was appointed American botanist to the king of England. He died in 1777, aged 75.

BARTRAM, WILLIAM, born in the botanic gardens of his father on the Schuylkill. William inherited the passionate love for plants, which characterised John Bartram. To gratify it, he abandoned mercantile life, and under the tuition of his father, whom he accompanied in his travels, devoted himself to the study of botany. Having spent some time in Florida, he began in 1771, at the age of 32, a scientific examination of Georgia, Florida and the Carolinas, the results of which were not published until 1791. An English edition of his travels was published the next year, and his work was also translated into French. He was also the author of the best book on American Ornithology then extant, and prepared the way for the more complete researches of Wilson, who derived much aid from him. He died in 1823, at the age of 85, pen in hand, and with the ink not dry with which he had written the description of a plant.

HENRY, brother to the last named, a journalist and historian, 1656-1710.

BASNET, EDWD., an Irish priest and soldier, died in the reign of Edward VI.

BASS, GEORGE, a surgeon in the English navy, who went out to New S. Wales, seven years after the formation of that colony, along with Governor Hunter, on board a ship in which the celebrated Flinders was midshipman. Soon after reaching Port Jackson, he and Flinders fitted out, at their own expense, a small

boat, eight feet long, which they called 'Tom Thumb;' and in this, with one boy for their companion, they made two surveying voyages in 1795 and 1796, along the coast southwards. Their report on the country led to the founding of new settlements. Sent out by the government in 1797, in a whale boat, with a crew of six men, and provisions for six weeks, Bass contrived to make these last eleven weeks, and performed a voyage of 600 miles. He traced a portion of the southern shores of the continent, and found that Van Diemens' Land, instead of being continuous with it, as Cook and others had asserted, was separated by a wide strait. The question was not, however, regarded as quite settled; and in 1798, on Flinders' return from Norfolk island, Bass and he were sent out in a vessel of 25 tons, with instructions to sail round Van Diemen's Land, and examine the capabilities of the coasts. Their successful voyage and favorable report soon led to further colonization. The strait received the name of its discoverer. No danger could check the ardor and daring of Bass. In 1796, he attempted to penetrate through the extraordinary rocky barrier which divides the maritime belt on the east from the interior plains, and during fifteen days encountered the greatest perils, ascending precipices by means of iron hooks fastened to his arms, and descending by ropes into the most frightful abysses. Like many previous attempts, this proved unsuccessful, and it was not till 1813 that a practicable pass was found, due west of Sydney. [J.B.]

BATTHYANY, COUNT CASIMER STRALTMAN, a Hungarian revolutionist, whose large estates were confiscated by the Austrian emperor, in consequence of his participation in the war of Hungary for liberty. He was hereditary governor of the county of Vas, in Hungary, and was of the great house of the Batthyany; died poor, an exile, at Paris, on 12th July, 1854.

[Louis Batthyanyi.]

BATTHYANYI, LOUIS, a Hungarian nobleman, distinguished for his connection with the Austrian conflicts of 1848, and his unhappy fate. He was born about the year 1809, of one of the most illustrious families of the proud aristocracy of Hungary. He was for many years the leader of the opposition to Austrian domination, in the upper house of Hungary, and by his talents and judgment increased the influence naturally awarded to his rank in that assembly. When the sweep of revolutionary events in 1848 rendered it necessary to form a Hungarian cabinet, Batthyanyi was intrusted with the function. It is said that at court he was encouraged to treat Jellachich, the Ban of Croatia, as a traitor, at the very time when that leader was encouraged to invade Hungary and subdue it for Austria. In September, as prime minister of Hungary, he went to Vienna to endeavor to make moderate stipulations for preserving the nationality of Hungary on the one hand, and on the other restraining it from violent outbreak; but he found influences at work which rendered this hopeless, and resigning, retired to his estates. An accident disabled him from joining in the warlike resistance to Jellachich had he desired it, but he took part in the Hungarian parliament. He went with a deputation to Prince Windischgraetz to accommodate terms, but was not received. He was arrested, and after some delay, by order of Marshal Haynau, tried by court-martial and condemned to death. The conviction was for vague offences, among others for resigning office; and it was said that the Austrian government took vengeance on a Hungarian nobleman for the disturbances of Vienna, and the murder of Latour. He was condemned to be hanged, but an attempt to commit suicide prevented the execution of the sentence, and he was shot on Oct. 6, 1848.

BATTIE WM., a wr. on insanity, 1708-1776.

BATTISHILL, JON., a composer, 1708-1801.

BATUTA, IBN, an Arab Moor of Tangiers, a celo-

brated traveller of the middle ages. He left his native town in 1324, and travelled for 28 years over the various countries of the East, chiefly for the purpose of seeing holy places, and returned through Central Africa to Fez, where he took up his abode in 1353. A pretty full account of his interesting journey is given by Mr. W. D. Cooley in his *Hist. of Intl. and Mar. Disc.* vol. i., from the only materials known to exist, 'an extract from an epitome.' BAWDWEEN, WM., an antiquary, died 1816.

BAXTER, AND., a Scotch philos., 1686-1750.

BAXTER, RICHARD, a divine of great note among the English nonconformists, was born 12th November, 1615, at Rowton, Shropshire. His father's conversation and example were the means of bringing him under early impressions of religion, and although he for a time contracted evil habits, such as lying, stealing fruit, &c., his juvenile piety was never wholly extinguished. Unfortunately, his education was committed to teachers whose incompetency or unfaithfulness were such, that he cannot be said to have enjoyed the advantages of regular instruction; and yet, by dint first of his father's counsels, and afterwards of his own genius and industry, he made attainments in knowledge superior to those of most of his contemporaries. His parents, who wished to procure him a place at court, engaged him to the master of the revels; but the bustle and pageantry of the daily scenes in which that situation brought him to mingle, were totally uncongenial to a mind like his, fond of contemplation and retirement. With redoubled zest he returned after a month's experiment to his studies, and resolving to devote his attention to divinity, prepared himself for the work in connection with the Church of England. Having at the age of twenty-three received ordination, he officiated, first, as assistant at Bridgnorth, where his reputation as a preacher procured him an earnest invitation to become pastor of the church and parish of Kidderminster. In that town his ministry commenced in 1640, and was distinguished by a zeal and success rarely equalled. The unsettled state of the times drove him from that post of usefulness, and obliged him to seek an asylum in various parts

of England. Though he espoused the cause of the parliament during the prevalence of the civil war, and became chaplain of a regiment, he was of decidedly moderate opinions, disapproved of revolutionary principles, especially of the violent measures adopted towards the late king, and did not disguise his disagreement in many respects, with the conduct of both parties, in conducting the affairs both of the church and the state. His integrity and honest independence procured him general respect, notwithstanding which, however, he was subjected to much harassing annoyance. Mr. Baxter, at the earnest solicitation of the people, returned to Kidderminster, and discharged the ministerial functions in that place with all his wonted assiduity for a period of fourteen years. Having begun to entertain conscientious scruples about the *et cætera* oath, he relinquished the Church of England, and repaired to London, where, arriving immediately before the deposition of Richard Cromwell, he preached to the parliament the day preceding their vote for the restoration of the king. Having obtained a license, he preached frequently in the metropolis, till, in 1676, a meeting-house was built for him; but after preaching there once, he was dispossessed, seized by a warrant from the Lord Chief Justice Jefferies, tried and condemned for some passages in his *Paraphrase on the New Testament*. Through powerful influence exerted in his behalf with King James II., he was pardoned, and on regaining his liberty he resumed his ministerial functions, preaching to large and attached congregations in various parts of London. Mr. Baxter was a most voluminous author, one hundred and forty-five distinct works having proceeded from his indefatigable pen. The chief of these are his own 'Life and Times,' his 'Dying Thoughts,' his 'Saints' Everlasting Rest,' and his 'Call to the Unconverted,' of which 20,000 copies were sold in England in a single year, besides translations of it into all the languages of Europe. His whole soul was absorbed by zeal for the glory of God, and the salvation of men; and in the discharge of his duty, he was fearless as much in reproving Cromwell and remonstrating with the profligate Charles, as in addressing a congregation of plain and ordinary people.

BAYARD, P. DU TERRAIL, Chevalier De, a French knight, celeb. for his valor and loyalty, killed in the Italian wars of Francis I., 1476-1524.

BAYARD, JAS. A., an em. Am. statesman, born at Philadelphia, in 1767. He was graduated at Princeton College in 1784. He entered Congress, as representative from Delaware in 1796, and sided with the federal government. He was transferred to the Senate in 1804, of which he was twice elected member for six years. In company with Gallatin he went, in 1813, to St. Petersburg, as commissioner to negotiate peace with Great Britain, which, with his assistance, was accomplished at Ghent, in 1814. From political reasons he declined the appointment of Envoy to Russia, and being compelled by sickness returned to the United States, and died in 1815, at Wilmington, in the 48th year of his age. He was one of the most eloquent, patriotic, and highminded men of his day.

BAYARD, JOHN, a native of Maryland, born 1738, who took an active part in the Revolution. He was present at the Battle of Trenton. He served in the Legislature of Pennsylvania, and in 1785 was a member of the Old Congress, at New York. He died at New Brunswick, N. J., of which place he had been mayor, in 1807, and the sixty-ninth year of his age. His character was noble and generous.

BAYARD, M., a French dramatist, died 1853, aged 58.

BAYER, JOHN, a Germ. astron., 17th cent.

BAYER, T. S., a philologist, 1694–1738.

BAYEUX, N., a French historian, killed 1792.

BAYLE, G. L., a French med. au., 1774–1816.

BAYLE, MOSES, a member of the Fr. convention and Com. of Safety, proscribed 1795, d. 1815.

BAYLE, PETER, born at Carlat, in the county of Foix, in 1647: the son of a Calvinist minister;—one of the most learned and laborious men of any age;—witness that grand monument he has left, the 'Dictionnaire Historique et Critique.' His own account of the cause of his extraordinary productive power is this—meriting well a prominent place among the *memoranda* of the ambitious student—'Amusements, pleasure-parties, games, collations, trips to the country, visiting, and other recreations necessary—according to what they say—to many literary men, have no place in my manner of life; I lose no time in them, neither do I spend any on domestic cares, or in interfering with any thing, soliciting any thing, or meddling at all with business. In this way, a writer may accomplish much.'—The events of Bayle's life are eminently characteristic of his habit of mind: at the one time a Calvinist; at the next a catholic; then Calvinist again; finally of no tangible creed or even profession, or care about any faith of any sort:—if his singular logical acuteness enabled him to cut in pieces the arguments then passing current for reasons, the defective force of his moral and intellectual instincts seemed to render him quite as happy and comfortable without a belief as with one. His writings, accordingly, are essentially *critical* and sceptical: he delights in showing how those important questions which philosophy would fain resolve are engirt by innumerable difficulties. Take as a specimen his treatment of the position '*There is a God.*' The usual proofs—apparently the soundest—on which one rests this position, that one, for instance, which would infer the *existence* of a perfect Being, from the existence in the human mind of a corresponding *idea*—are open to manifold objections. Touching the Divine *essence*, our ignorance seems insurmountable. Though all men might be said to agree as to the *being* of a God, where is their agreement regarding his *nature*; who can reconcile his immutability with his liberty, his immateriality and his immensity? His unity is not demonstrated. His prescience cannot easily be accommodated to the free-will of man; nor his goodness with the physical and moral evil prevailing in the world, or with the eternal punishment of the wicked. His decrees are impenetrable; his judgments incomprehensible. We can reach no higher than *negative* conceptions regarding his divine perfections. . . . Thus Bayle *doubts* rather than *reasons*;—nay, he concludes in the true spirit of the Pyrrhonist, that Reason is not a safe guide. Never was *style* better adapted to such a thesis: clear, polished, keen, and passionless. No good library should want the Dictionary; and there are few Inquirers who may not derive benefit from its singular pages. Besides this *Opus Majus*, he wrote several miscellaneous treatises, collected in his '*Œuvres Diverses*,' four vols. 8vo. He died 'pen in hand' at the age of fifty-nine, in December, 1706. [J.P.N.]

BAYLEY, ANSELM, a Hebrew schol., d. 1791.

BAYLEY, F. W. N., an English poet and miscell. author, died 1852, aged 45.

BAYLEY, THE RIGHT HON. SIR JOHN, justice of the King's Bench, member of the privy council, and author of a professional work, died 1841.

BAYLEY, LEWIS, bishop of Bangor, died 1632.

BAYLEY, MATTHIAS, attained the extraordinary

age of 136, preserving his faculties till death. He died at Jones' Creek, North Carolina, in 1789, two years prior to which event he was baptized.

BAYLEY, N., writer of a dictionary, 1753.

BAYLEY, RICHARD, a distinguished American physician, born at Fairfield, Connecticut, in 1745, to whom the public are indebted for its knowledge of the nature and best mode of treating the croup. The New York riot of 1788, in which Alexander Hamilton was severely wounded, was occasioned by the imprudence of some medical students in his apartments, who out of waggery exhibited a skeleton to a man as that of his mother who had been recently interred. In the popular outbreak which ensued his whole collection was destroyed. He was appointed Professor of Anatomy at Columbia College, in 1792, and of surgery in 1793. He was Health Officer in the port of New York from 1795 to August, 1801, when a single instant spent in the pestilential atmosphere of an emigrant vessel from Ireland, occasioned his death, which occurred, after a week of intense agony, on the seventeenth day of the month. Besides his publications respecting the croup, he was author of some valuable remarks on the yellow fever, published in 1797 and 8.

BAYLEY, THOMAS HAYNES, a lyrical poet, dramatic writer, and novelist, 1797–1839.

BAYLEY, WM., an astronomer, died 1810.

BAYNAM, WM., an eminent American surgeon and anatomist, born in Virginia, 1749, d. in 1814.

BAYON, J. DE, a French annalist, 14th cent.

BAZARAD, a Wallachian prince, 14th century.

BAZARD, AMAND, a Fr. carbonaro, afterwards a follower of St. Simon, 1792–1832.

BAZIRE, CL., a m. of the Fr. conven., 1764–94.

BEACH, ABRAHAM, D.D., a clergyman of the Protestant Episcopal Church, who for thirty years was assistant minister of Trinity Church, New York. He was born at Cheshire, Conn., 1740, graduated at Yale College 1757, ordained by the bishop of London 1767, and died Sept. 11, 1828.

BEACH, JOHN, a clergyman of the Episc. Church, who, having graduated at Yale College, in 1721, and for several years after served in the congregational ministry, conformed to the Church of England, and was ordained by the bishop of London in 1732. He was a man of strong understanding, and uncompromising adherence to what he deemed the truth, and acquired great distinction as a controversialist in favor of Episcopacy and against the Calvinistic theory. His principal work was a vindication of the members of the Church of England. At the Revolution he suffered much in consequence of his constancy to the royal cause. He died March 8, 1782.

BEACON, THOS., an Eng. reformer, d. 1570.

BEARDE DE L'ABBAYE, an econ., d. 1771.

BEASLEY, FRED., an Am. divine and author of various contributions to moral and metaphysical science; was president of the university of Pennsylvania, d. 1845, aged 68.

BEATON, CARD., abp. of St. Andrews, dis. for his persecuting spirit, assass. 1546.

BEATON, JAMES, neph. of the card., bp. of Glasgow, and au. of a history of Scotland, 1530–1603.

BEATRICE, a martyr and saint, 3d century.

BEATTIE, JAMES, the well known Scotch poet and moralist, was the son of a small farmer and shop-keeper, and was born at Laurencekirk in Kincardineshire, 5th December, 1735. After pursuing his studies with the most brilliant success at Marischal College, Aberdeen, he was appointed usher to the Grammar School of that city 1758, where he enjoyed the society of many distinguished men, especially of

Reid, the metaphysician, from whom he acquired the principles afterwards illustrated in his 'Essay on Truth.' In 1761, being then in his twenty-sixth year, Beattie made his *début* in the literary world as translator of the Eclogues of Virgil, and author of several small poems which had appeared anonymously at various times in the 'Scots Magazine.' In 1765 he published 'The Judgment of Paris,' and in 1766 a selection of his poems, with the addition of some which had not hitherto appeared. Between this period and 1770 he was preparing his famous essay, which he designed to counteract the baneful effects of materialism, by demonstrating the immutability of moral sentiment, which involves, in fact, the principle of *à priori* instruction and revelation. His personal history during this period acquires some interest from his marriage with Miss Dun, which took place in June, 1767, and the friendship of the poet Gray, soon to be terminated by the death of the latter. The 'Essay on Truth,' at once established the fame of its author, who received the flattering recognition of a degree as doctor of philosophy from the university of Oxford, and the offer of the professorship of moral philosophy in the university of Edinburgh, which for personal reasons, he declined to accept, as he did a handsome living in the Church of England proffered by Dr. Porteus. It was in the flush of his success that Beattie resumed his poetical studies, and gratified the English public with his 'Minstrel,' a poem written in the style and stanza of Spenser, and embodying, in the character of Edwin, a transcript of his own ideas and pursuits in his younger days. The first book of this celebrated poem appeared in 1771, the second in 1774, and a new edition of the whole in 1777, and it brought the author so prominently before the public that his merits were acknowledged in 1773 by an annual pension of £200 from the crown, graced, a little subsequently, by a private interview with the king and queen. In 1776 his essays 'On Poetry and Music,' 'On Laughter and Ludicrous Composition,' and 'On the Utility of Classical Learning,' appeared, forming one volume with a new edition of his 'Essay on Truth.' In 1790 and 1793 respectively, the two volumes of his 'Elements of Moral Science' were first published, and as a further proof of his industry, there is scarcely an interval between the publication of the 'Minstrel' and his retirement in 1796, in which literature was not more or less enriched by his pen. It is sad to record that the insanity of his wife some years past, and the death of his sons, the younger of whom was suddenly snatched from him at the period just mentioned, affected at last his well-regulated mind. Though he recovered this shock, it was only to pass the remainder of his days in his now solitary home, where he died of paralysis, 18th August, 1803. Beattie has been described by one who knew him as a man of middle size, robust in appearance, somewhat corpulent, and slouching in his gait. 'His features were very regular; his complexion somewhat dark. His eyes were black and brilliant, full of tender and melancholy expression, and in the course of conversation with his friends, became extremely animated.' His eldest son, JAMES HAY BEATTIE, 1768-1790, gave proof of his philosophical and poetical talents in some fragments which were edited by his father, 1794. [E.R.]

BEATTY, SIR WM., M.D., F.R.S., author of an 'Authentic Narrative' of the last moments of Nelson, with whom he was professionally present at the battle of Trafalgar, knighted 1831, d. 1842.

BEATTY, JOHN, M.D., general in the United States Army, captured by the English at Fort Wash-

ington when holding the rank of Lieut. Col. In 1779, after his release, he was made commissary general of prisoners. He was for eleven years Secretary of State in New Jersey, which office he assumed in 1795. He died at the age of 77 at Trenton in the year 1826.

BEAUCHAMP, ALPH. DE, a French historian, of the war in La Vendee, Suarow, &c., 1767-1832.

BEAUCHAMP, JOS., an astronomer, political agent of Buonaparte in the East, 1752-1802.

BEAUCHAMP, RICHARD, an Engl. architect, employed at Windsor and elsewhere, died 1481.

BEAUCHAMPS, P. F. G. DE, a dramatic poet and historical writer on the drama, 1689-1761.

BEAUCHATEAU, FR. MAT. CHASTELET DE, a linguist and poet, remarkable for the precocious development of his talents, 1645-1660.

BEAUMONT, C. DE, abp. of Paris, 1703-1781.

BEAUMONT, C. E. DE, a Fr. archi., 1757-1811.

BEAUMONT, E. DE, a Fr. advocate, 1732-1785.

BEAUMONT, FRANCIS, the celebrated dramatic poet and fellow-laborer with Fletcher, was born in Leicestershire about 1584, and died about 1616. The plays of these attached friends, who were singularly alike in genius and taste, are remarkable for their humor and delineation of character, and for some time contested the palm with Shakspeare, but they are disfigured by the gross indecency which disgraced the court of James I.

BEAUMONT, SIR J., a judge, 1582-1628.

BEAUMONT, JOSEPH, author of a religious allegory, professor of divinity, died 1689.

BEAUMONT, J. T. B., an accountant and man of letters, disting. for his public spirit as the originator of savings banks, &c., 1774-1841.

BECCARIA, G. B., an experi. phil. 1716-1781.

BECERRA, GASPARD, a Sp. artist, d. 1570.

BECK, GEORGE, an ingenious writer and painter, born in England, who came to America in 1795. He translated large portions of the Greek and Latin writers. He died in Kentucky in 1812 at the age of 63. In early life his reputation for mathematical ability caused his appointment as professor at the Royal Academy of Woolwich, in England.

BECK, JOHN BRODHEAD, an American physician, professor of Materia Medica in the N. Y. College of Physicians and Surgeons, and joint author with his brother of the well known 'Medical Jurisprudence.' Died 1851, aged 57.

BECK, LEWIS C., an American chemist and naturalist, was born in Schenectady, N. Y., 1790. He was educated at Union College and soon after graduation devoted himself especially to the study of the natural sciences. He was the author of the 'Report on the Mineralogy of New York' and of various works on chemistry and botany. He was professor of chemistry at Rutgers' College of New Jersey, and subsequently of chemistry in the Medical College of Albany; died 1853.

BECKET, THOMAS Å., the illustrious, high-

spirited, and ill-fated churchman, canonized 1173 by Alexander III., was the son of a London citizen, one time a crusader, and was born in London on the

[Thomas Å. Becket.]

festival of St. Thomas, 1117. He received a collegiate education at Oxford, completed by the study of the civil and canon law at Bologna, under the patronage of Theobald, archbishop of Canterbury, and was early carried to preferment by his undoubted abilities, aided by a handsome person and refined manners; but still more by the jealousy which divided the civil and ecclesiastical powers at that time. On his return from Italy, Becket was appointed archdeacon of Canterbury by his patron, and soon after the accession of Henry II. in 1154, was raised to the dignity of high chancellor; doubtless by the influence of the prelacy favoring his own ambition. At this time, it should be remarked, the power of the popes had risen to an arrogant height, and the dispute about investitures, the subjection of the clergy to lay jurisdiction in criminal matters, and various alleged abuses on either side, were subjects of continual and bitter strife between the church and the crowned heads of Europe. It is not likely that Becket was ever undecided in his own views on any of these subjects, or on the part he was destined to play in the politics of the period; but it is easy to imagine that each party would see the means of advancing its own pretensions in the splendid abilities, the acknowledged purity of life, and the courtly manners of the young churchman. On the death of Theobald, in 1162, the king and the chief prelates were equally urgent for his elevation to the see of Canterbury; but once consecrated, it devolved upon him whether he would serve the church or the state, and he declared for the former without hesitation. The king and his late minister were equally matched for their inflexibility, quickness of resolution, undaunted courage, and statesmanlike abilities; and both were influenced, further than their own consciences extended, by the spirit of the age. Three years of strife led to the council of Clarendon, convoked by Henry in 1164, when Becket yielded to the entreaties or menaces of the barons, and signed the famous 'Constitutions,' by which the differences between the church and state were regulated. These articles not only rendered the state supreme in all

that concerned the general government of the nation, but virtually separated the Church of England from Rome. The pope, therefore, refused to ratify them, and Becket, seeing his opportunity, and really repenting of the compliance that had been wrung from him, refused to perform his office in the church, and endeavored to leave the kingdom, in which, at last, he succeeded, only to draw down the vengeance of Henry upon his connections. The progress of the quarrel belongs rather to the history of the times than a single life. Becket remained in exile six years, and matters being in some measure accommodated, returned to England in 1170, shortly after the coronation of the king's son, which had been designed by Henry as a means of securing the succession. Becket's refusal to remove the censures with which the agents in this transaction had been visited, his haughty contempt of the crown, and the sentences of excommunication which he continued to fulminate from the altar of Canterbury cathedral, provoked anew the indignation of the king. It is idle to judge the actions of men in those iron times by the formulas of the present day. The question stripped of all disguise was simply this—whether Thomas à Becket or Henry Plantagenet was henceforth to be king in England. The Norman lords resolved the matter in their own rude way, when at length four of them left the royal presence in hot anger, after hearing of some fresh indignity, and determined on bringing the controversy to a bloody close. The tragedy then enacted forms one of the most dramatic incidents in English history, and the last cry of the dying martyr, 'To God, to the Blessed Mary, to the holy patrons of the church in which he had ministered, and to the blessed martyr St. Dyonisius,' must have sunk into every heart. Becket was murdered during the celebration of the vesper service on the 29th of December, 1170.

[William Beckford.]

BECKFORD, WILLIAM, was born in 1760. Ten years afterwards, by the death of his father, whose mayoralty of London was noted in the history of the times, he succeeded to a princely fortune. He was precocious, both in his love of literature and art, in his vigor of thought and expression, and in his retired eccentricity of disposition. After having lived much in France, and visited Italy and other continental countries, he married, in 1783, a daughter of the earl of Aboyne, who died young, leaving two daughters, one of whom became duchess of Hamilton. In 1784 he published in French his *Eastern*

romance of 'Vathek,' which has been admired so warmly by the literary men of our time. Though he sat in more parliaments than one, politics occupied very little of his attention; he soon retired to the continent; and his fondness for architectural construction and embellishment showed itself first in a house he built at Cintra, in Portugal. In the commencement of the present century he began to build on his Wiltshire estate his magnificent mansion of Fonthill Abbey, which became all the more famous for the difficulty of satisfying curiosity in regard to it. The cost exceeded a quarter of a million. The pile had not long been completed and fitted up, when, in 1822, it was abandoned and the estate sold. Mr. Beckford spent his latest years chiefly at Bath, indulging his refined taste and his turn for secluded study. In 1834 he published 'Italy, with Sketches of Spain and Portugal,' containing recollections of his early travels, and abounding alike in eloquence and satire; and afterwards there appeared a similar volume, commemorating two Portuguese monasteries. He died in 1844, in the eighty-fourth year of his age.

BECKINGHAM, CHAS., a dram. wr., d. 1730.

BECKMANN, J. A., an economist, 1739–1811.

BECLARD, P. A., a Fr. anatomist, 1785–1825.

BEDDOES, THOMAS, a distinguished physician and chemist, contemporary with Priestley, and in intimate friendship with Dr. Darwin. He is the author of numerous works, and is characterized by Sir Humphrey Davy, as 'a truly remarkable man, but more admirably fitted to promote inquiry than to conduct it.' 1760–1808.

BEDDOES, THOMAS LOVELL, an English poet, was born in 1803. His father was the celebrated physician and chemist, Dr. Thomas Beddoes, the friend of Sir Humphrey Davy. His mother was the sister of Miss Edgeworth. He showed at a very early age great promise of poetical genius and a peculiarly eccentric disposition. While at the university his precocious talent was manifested in a remarkable poetical work, the 'Bride's Tragedy.' Habits of intellectual self-indulgence and a naturally relaxed will interfered with the inclination, and an independent fortune relieved him from the necessity, of exercising his intellectual powers to their fullness, and he accordingly never produced in his mature life those fruits which the precocious budding of his youthful genius had promised. He passed his latter years in the German Universities as a student of anatomy and physiology, of which sciences he was devotedly fond. In 1848, while dissecting at Frankfort, he pricked his finger and his constitution never recovered from the effects of the wound. He died at Basle, Switzerland, January 1849.

BEDE, usually named the Venerable Bede, was born about 672, at Yarrow, near the mouth of the Tyne, in Northumberland. At the age of seven he was sent to the neighboring monastery of St. Peter to be educated, and in a short time he transferred himself to that of St. Paul, which was also in the vicinity. In his nineteenth year he was ordained deacon, and eleven years afterwards he entered into priest's orders. His subsequent life, which was spent principally in the two religious houses referred to, was one of monastic punctuality and discipline, and of constant literary labor. Pope Sergius even could not induce the English recluse to visit Rome. His commentaries on the larger portion of the Old and New Testament are to a great extent compilations from his Greek and Latin predecessors. His well-known 'Ecclesiastical History of the English Nation,' is replete with proofs of its author's industry, honesty,

[Bede's Chair.]

and credulity, and still maintains its place as a high authority. Bede died about the year 735, occupying his last hours with earnest devotional exercises, and affectionate counsels to his younger brethren. His learning, which was great, was equalled by his sanctity. His numerous works have been often printed: the best and last edition in 12 volumes, octavo: London, 1843-44. King Alfred translated into Saxon Bede's '*Historia Ecclesiastica*;' a rare honor for a book of church history.

[J.E.]

BEDELL, GREGORY T., D.D., rector of St. Andrew's Church, Philadelphia, a distinguished clergyman of the Protestant Episcopal Church, was born on Staten Island in 1793, and was graduated at Columbia College in 1811. He was ordained by Bishop Hobart in 1814; was stationed on the North River from 1815 to 1818, when he removed to Fayetteville, North Carolina, and from there to Philadelphia some years afterwards. He will be long remembered for his winning and persuasive eloquence. He died in 1834.

BEDFORD, ARTHUR, a theolo. wr., 1668-1745.

BEDFORD, HILKIAH, an English theologian, the reputed author of a work in the Jacobin interest, written by George Harbin, died 1724.

BEDFORD, JOHN PLANTAGENET, duke of, third son of Henry IV., and regent of France after the death of Henry V., 1422; died 1435, after a glorious administration of thirteen years.

BEDFORD, GUNNING, played a distinguished part in the American Revolution, was elected governor of Delaware in 1796, and died at Wilmington 1812.

BEDFORD, JOHN RUSSELL, sixth duke of, a Whig nobleman and patron of letters, 1766-1839.

BEDLOE, WM., Capt., a notorious informer, known in the case of Sir E. Godfrey, &c., d. 1680.

BEECHHEY, SIR W., R.A., a distinguished artist, best known for his portraits, 1759-1839.

BEETHOVEN, LUDWIG VAN, was born at Bonn, on the 17th of December, 1770. His father, Johann Van Beethoven, was a tenor singer in the electoral chapel of Cologne, died in 1792. His grandfather, who died in 1773, was music director and bass singer at Bonn, and performed operas of his own composition during the life of the elector Clemens Augustus. The musical education of Beethoven began under his father when he was only five years old. His next tutor was M. Pfeiffer, for whom the great composer always retained a warm regard, and to whom he felt himself more indebted than all his other teachers. Beethoven acquired his knowledge of the organ from M. Von Der Eden, after whose death the young mu-

sician studied under M. Niefe, who made him acquainted with the works of Sebastian Bach. In 1787 Beethoven met Mozart, who, when he heard the youth extemporize upon a theme given him, predicted his future success. In the year 1792 he was sent, by the elector of Cologne, to Vienna, that he might receive instructions in the theory of music from Joseph Haydn. He soon made the acquaintance of many of the nobility, of the artists, and literati in Vienna. Beethoven was the pupil of Haydn until the latter went to London, when he then took lessons in composition and harmony from Albrechtsberger. At this period of his life, Beethoven was more admired as a performer, than as a composer; and it was thought by the best German critics, that his power principally consisted in extempory performance, and in the art of varying any given theme without premeditation. About this time he finally took up his residence at Vienna, and composed his first quartettes. In 1800, Beethoven was engaged in the composition of his oratorio—'*Christ on the Mount of Olives*,' which was first performed on the 5th of April, 1803. In 1804 he finished his '*Sinfonia Eroica*,' and in 1805 he wrote his opera of '*Leonora*,' known in England as '*Fidelio*,' about which time he was first attacked with that deafness which, with other matters, made him distrustful and taciturn, and became the master-malady of his life. It began gradually, but was soon beyond the power of remedy, until at last he could only communicate with the outer world by writing. A decided enemy to flattery, and disdaining to court the favor of any one, Beethoven lived in Vienna depending solely upon the means which his compositions might produce, and was frequently reduced to straits little compatible with the greatness of his genius. The taste of the court had changed, and Italian music had almost banished the grander music of the German masters. In these circumstances he, in 1809, resolved to accept the office of chapel-master at the court of Jerome Buonaparte, then king of Westphalia, with a salary of 600 ducats; and it was only after the archduke Rudolph of Austria and the princess Lob-

[Birth-place of Beethoven.]

kowitz and Kinsky settled upon him an annuity of 4,000 florins, that he changed his mind. About this time also he resolved to accept an invitation from the Philharmonic Society to come to England, but his almost total deafness prevented him. In 1810 Beethoven brought out his first mass. In the same year he made the acquaintance of Bettino Brentano of Frankfort, whose correspondence with Goethe has

made the reading world acquainted with the private manners of the great composer, though her narrations are sometimes less full of character than of caricature. Through Bettino, Beethoven was introduced to Goethe in the year 1812, a friendship which reflected quite as much honor upon the rich and courtly poet and minister, as it did upon the poor, but independent and high-souled musician. On the 8th, and again on the 12th of December, in the year 1813, the first performances of 'The Battle of Vittoria,' and his symphony in A major, took place in the hall of the university, for the benefit of the Austrian and Bavarian soldiers disabled in the battle of Hanau. In 1815 Beethoven was exclusively employed in writing harmonies to Scotch songs for George Thompson of Edinburgh. From this period till the end of his life, Beethoven was harassed from various causes, chiefly of a domestic nature, and which ought never to have fallen upon him. These, together with his loss of hearing, begat a habit of gloomy thought, and a violent desire for solitude, till, by slow degrees, his frame, which was naturally robust and healthy, yielded to maladies which were induced by the constant and long-continued mental irritation to which he had been subjected. Forgotten by the Viennese, hardly appreciated by the rest of the world, Beethoven was seized with his last sickness; and the unnatural thoughtlessness and greed of his relatives continued till the period of his death, which took place on the 26th day of March, 1827. Beethoven died unmarried. His portraits, of which there are several, are all like him. He did not receive much education in his early youth, but when he became a man he read a great deal, and was well acquainted with the literature of Germany, and particularly admired the writings of Goethe and Schiller. With Shakspeare's works he was well acquainted, and admired them with the relish of a true artist. He was usually reserved, but when he entered into conversation he became animated, and original in the turn of his thoughts and expression. Beethoven left upwards of 120 works in all styles. His melodies are beautiful and new; and his instrumental music bears the unmistakable evidences of the grandeur and sublimity of his unrivalled genius. In 1845 a grand statue of Beethoven was erected in his native town amid great rejoicings, and in presence of the queen of England. [J.M.]

BEHRING, VIRUS, by birth a Dane, after having performed several voyages to the E. and W. Indies, entered the service of Russia while still young. Having risen by the usual steps in the service, he became captain-commander in 1722, and was sent by the empress Catharine in charge of an expedition (planned by Peter the Great before his death), whose object was to determine whether Asia and America were united. Crossing Siberia he sailed from the river of Kamtschatka in July, 1728; and reached lat. 67° 18' N., having passed through the strait since called after him, without knowing it. Discovering that the land trended greatly westward, he concluded that the continents were not united, and returned; without, however, seeing America. In another voyage, in 1741, he touched upon the American coast, in lat. 58° 28' N.; and gave name to Mount St. Elias. In returning, his ship was cast

upon an island, since named after him, an outlier of the Aleutian group, and here himself and many of his crew perished. On his discoveries is founded the claim of Russia to that part of America lying west of the meridian of Mount St. Elias, 141° W. [J.B.]

BEL, MATHIAS, hist. of Hungary, 1684-1749.

BELA, the name of four kings of Hungary. The *first* reigned 1059-1062; the *second*, 1131-1141; the *third*, 1173-1193; the *fourth*, 1235-1270.

BELCHER, JONATHAN, born in Massachusetts, 1681, graduated at Harvard in 1699, sent as agent by the Province to the court of England in 1729, appointed by George II. governor of Massachusetts and New Hampshire in 1730, and afterwards removed from office principally in consequence of accusations founded by his enemies upon forged papers. Having vindicated his character and become restored to royal favor, he was in 1747 appointed governor of New Jersey. He died at Elizabethtown, N. J., in 1757. He was a man of great ability, firmness and integrity, dignified, learned and accomplished; but the eminence which he attained is to be attributed not so much to his personal qualifications as to the friendship which he formed in early life with the princess Sophia and her son, afterwards George II., with whom he became acquainted while on a visit to Europe shortly after he left college. His grandfather kept a little tavern in Cambridge, Massachusetts.

BELCHER, JONATHAN, the second son of Governor Belcher, having graduated at Harvard College, and entered the bar in London, was appointed in 1760 senior counsellor at Halifax, N. S., and the next year chief-justice and commander-in-chief. Two years afterwards he was appointed lieutenant-governor of the province. He died in 1776 at Halifax, in the 65th year of his age.

BELDEN, JOSHUA, an American physician of eminence, was born in Wethersfield, Conn., and was graduated at Yale College in 1787. He died in 1818 of spotted fever, at the age of 50.

BELESIS, a governor of ancient Babylon.

BELGRANO, MANUEL, a commander in the South American war of independence, died 1820.

BELIDOR, BERNARD FOREST DE, a French engineer, author of a dict. of his art, 1695-1761.

BELING, RICHARD, an Irish rebel, 1613-1677.

BELISARIUS. 'One of those heroic names which are familiar to every age, and to every nation.' Thus does Gibbon justly characterize the emperor Justinian's victorious general. Belisarius first distinguished himself in the wars between the Byzantine empire and the kings of Persia. In 533, he was placed by Justinian at the head of the army by which that emperor sought to recover the old Roman province of North Africa from the Vandals, who had been in possession of it for seventy years. Belisarius was completely successful in his enterprise, and led the last Vandal king, Gelimer, as a captive to Constantinople. He was then sent on a similar expedition to conquer Italy from the Goths, who held dominion there. He thoroughly effected this purpose, capturing Rome, Ravenna, and other cities, inflicting

severe defeats on the Goths in the field, and signaling his own courage and prowess as a soldier, as well as his skill as a commander. The Goths offered to make him their king, but his loyalty was proof against all temptation, and when recalled by Justinian, he promptly returned in submission to the will of a capricious and thankless master. After his departure from Italy, the Goths recovered the greater part of that country, and Belisarius, who in the interval had been defending the south-eastern frontiers of the empire against the Persians, was sent a second time to Italy in 540. Being ill supplied with money and troops, he could effect but little against the numerous and well-appointed armies of the Goths, and Justinian angrily deprived him of the command with every mark of disgrace. The old general was once more summoned into activity and glory before his death, and saved Constantinople in 559 from a host of Bulgarians, who had suddenly advanced against it. When this signal service was effected, Belisarius was again dismissed with ignominy by his ungrateful sovereign, and ended his days in poverty and neglect; though the story of his having begged his bread in blindness and utter destitution is a mere fiction of later ages. Belisarius died in 561, a few months before the death of the emperor whom he had served so well, and by whom he had been so ill requited. [E.S.C.]

BELKNAP, JEREMY, D.D., a Presbyterian clergyman of Boston, at which place he was born in 1744. He was graduated at Harvard in 1762, and ordained at Dover, N. H., 1767. During his residence there, he wrote a history of the colony. In 1787, he removed to Boston and took charge of the Presbyterian church there. Devoted to historical pursuits he became one of the founders of the Massachusetts Historical Society. He did much towards the preservation of the monuments and records of the past. His most popular work was entitled 'The Foresters,' in which he gave a humorous delineation of American society. He died at the age of 54, of paralysis, in 1798. He was a very voluminous writer, and besides a great number of essays, sermons, historical discourses, tales, &c., published a valuable American Biography in two vols.

BELKNAP, WM. G., an American army officer, first distinguished himself in the attack of the British on Fort Erie in 1814. Was in command as major in the Florida war, and was brevetted Brigadier-General for his gallantry under General Taylor, at Buena Vista in Mexico; died 1851, aged 56.

BELL, ANDREW, DR., the celebrated projector and founder of the national school system, 1753-1832.

BELL, BEAUPRE, an Eng. antiquarian, 18th ct.

BELL, BENJ., a writer on surgery, 1749-1806.

BELL, SIR CHAS., an eminent physiologist, born at Edinburgh, 1774; died at Edinburgh, 1842. The subject of our memoir was the son of a clergyman of the Scottish Episcopal communion, in Edinburgh, who had other two sons, likewise distinguished—JOHN, as a surgeon, and GEO. JOSEPH, as a lawyer, being professor of law in the University of Edinburgh. Sir Charles Bell early settled in London as a lecturer and surgeon, and in the first capacity proved highly successful; but his scientific tendencies could ill brook the commercial asperities often attendant on surgical practice, and he appears never to have attained the position in his profession, lucratively speaking, which his great talents and acquirements deserved. He was lecturer at the Windmill-Street School, afterwards at University College, and the Middlesex hospital, and latterly in the University of Edinburgh. The main labor of his life

consisted in perfecting his great discovery respecting the nervous system, that mysterious portion of the animal frame. This discovery, second perhaps only to that of the circulation of the blood by Harvey, required an extensive series of experiments upon living animals, which long deterred him from carrying them into execution. But ultimately, by discovering humane methods of procedure, his exertions were crowned with success, and demonstrated that the nerves given off by the spinal cord, the great nerve deposited in the backbone, are destined for one of two purposes; those which leave the spinal cord in front bestow the power of muscular motion, while the posterior roots supply sensibility. When the anterior roots of the nerves of the leg are cut, in experiment, the animal loses all power over the leg, although the limb still continues sensible. But if, on the other hand, the posterior roots are cut, the power of motion continues, although the sensibility is destroyed. His subsequent researches showed that every muscle in the body has two nerves appropriated to it, one for sensation, and the other for motion; the first to carry the influence of the will resident in the brain towards the muscle, and the second to connect the muscle with the brain. It may be truly said that such men as Watt and Bell require no sepulchral monuments, since locomotives, railways, and steamboats contribute an ever augmenting immortal tribute to the one, and every student in medical science is an hereditary guardian of the genius of the other. [R.D.T.]

BELL, HENRY, an ingenious engineer, the first in Britain who successfully applied the steam engine to propelling vessels, though Millar's experiments were long prior, and Fulton had launched his first steamboat on the Hudson four or five years previously to Bell's successful application of steam to the purposes of navigation. In 1811 Bell launched his boat, called the Comet, in reference to the appearance of a large comet that year. He constructed the steam engine himself, and in January, 1812, the first trial of the Comet took place on the Clyde. After various experiments the Comet was at length propelled on the Clyde by an engine of three horse power, which was subsequently increased to six. This engine is still in the museum of Glasgow College. Thus to Henry Bell is due the honor of having first done in his own country, what others who had attempted it—the great Watt himself—had failed in doing, notwithstanding superior advantages of capital. Bell's perseverance and skill were not rewarded with the outward test of success. Had it not been for the liberality of the magistrates of Glasgow, who settled upon him a small annuity, he must have spent the latter years of his life in poverty. He was born in Linlithgowshire 1767, and died at Helensburgh on the Clyde in 1830. A monumental stone to his memory is erected on a rock in the Clyde near Bowling. [L.D.B.G.]

BELL, JAMES, a geographical writer and gazetteer, originally a weaver, 1769-1833.

BELL, JOHN, an em. Scotch surgeon, 1762-1820.

BELL, JOHN, au. of various travels, 1691-1780.

BELL, JOHN, an enterprising publisher, founder of the 'Weekly Messenger,' 1746-1831.

BELL, JOHN, one of the leading members of the Senate in New Hampshire during the revolutionary war, and eminent for his integrity, firmness and sound judgment. He died in 1825 aged 95. His sons SAMUEL and JOHN have both been governors of New Hampshire; the former was for many years a Senator of the United States.

BELLAMONT, RICHARD, EARL OF. This noble-

man was appointed governor of New York, Massachusetts and New Hampshire by William III. in 1695. He arrived at New York in 1698, visited Boston in 1699, returned to New York in 1700, and died there on the 5th of March, 1701. While he was in the colonies, they were greatly disturbed by pirates, and the famous Captain Kidd was captured. Lord Bellamont was exceedingly popular, which was owing not only to his energetic government, but to his zeal, real or pretended, in behalf of religion, and his deference to the New England ministers.

BELLAMY, JAMES, a Dutch poet, 1757-1786.

BELLAMY, JOSEPH, D.D., an eminent Congregational minister, was born in Conn., 1719, was graduated at Yale 1735, and ordained at Bethlehem in 1740. He died in 1790, at the age of 71. His religious works and sermons were published in three volumes in 1811.

BELLAMY, SAMUEL, a notorious pirate, whose vessel, the *Whidah*, bearing 23 guns, was lost at Cape Cod in 1817, after he had captured several ships on the New England coast.

BELLANGE, TH., a Fr. paint., 16th and 17th c.

BELLARMIN, CARDINAL ROBERT, was born at Monte Pulciano in Tuscany, in 1542. Entering the order of the Jesuits in 1560, he was ordained priest in 1569. He filled the chair of theology at Louvain for seven years from that period. Going to Rome in 1576, he distinguished himself by shrewd, bold, and popular polemical prelections, and was, as the great champion of the church, elevated to the rank of cardinal in 1599. His latter days were spent in Rome, where he died in 1621. His 'Opus Controversiarum' fills three folio volumes. He has also left a Commentary on the Psalms, several smaller pieces, some of them devotional, and a treatise 'De Potestate Summi Pontificis.' Bellarmine was a man of no mean powers and mental resources; and unequalled as a skilled controversialist among the numerous defenders of the Church of Rome. [J.E.]

BELLAY, JOACHIM DU, a Fr. poet, 1524-1560.

BELLAY, JOHN DU, a Fr. cardinal, 1492-1560.

BELLEFOREST, F. DE, a Fr. hist., 1530-1583.

BELLEISLE, CH. LOUIS, Count De, a French marshal, time of Louis XV., 1684-1761.

BELLENDEN, WILLIAM, a Latin au., 17th c.

BELLIARD, AUG. DANIEL, Count, one of the best of Napoleon's generals, distinguished also as an ambassador, and most lately in the establishment of the Belgian kingdom, 1773-1832.

BELLIEVRE, POMPONIUS DE, a Fr. diplomatist, distinguished in the reigns of Charles IX., Henry III., and Henry IV., 1529-1607.

BELLINGHAM, RICH'D., presided over the colony of Massachusetts as deputy governor and governor for 23 years. He came to America in 1634, and died in 1672 aged 80. He was a man of good understanding but few words. For his second wife, he married a lady engaged to another, performing the ceremony himself without license, for which he was called to trial, but escaped without censure.

BELLINI, GENTILE, an Italian painter, of the same school as his brother Giovanni, 1421-1501.

BELLINI, GIOVANNI, a celebrated Italian painter, was born at Venice about 1426. He belongs to the school of painters known as the *quattrocento*, in Italy, literally the fifteenth century masters, but distinguished as much by their style as their period. This style, lately here designated, very inappropriately, the *preraphaelite*, is well illustrated in Bellini's portrait of the Doge Loredano, in the National Gallery—hard and dry, but exact in detail, and high and positive in coloring. Giovanni Bellini was one of

the first of the Venetian artists to adopt the new method of oil painting in lieu of the old process with *tempera* vehicles, that is, with saps and gums. His best works are in oil; they consist chiefly of madonnas and portraits. He died at the advanced age of ninety, November 29, 1516. Titian and Giorgione were two of Bellini's many eminent scholars. (Vasari, *Lives of the Painters*, &c.; Ridolfi, *Maraviglie dell'Arte*, &c.; Cadorin, *Tiziano Vecellio*.) [R.N.W.]

BELLINI, L., a celeb. anatomist, 1643-1702.

[Bellini.]

BELLINI, VINCENZIO, was born at Catania in Sicily, in the year 1806. Bellini received his musical education from Zingarelli, in the Conservatorio of Naples, and produced, at the theatre San Carlo of the same city, his opera 'Bianco e Ferdinando,' before he was twenty years old. In 1827 he composed 'Il Pirata' for the Scala at Milan, and soon after 'La Straniera' for the same establishment. These operas were succeeded by 'La Sonnambula' (which has perhaps been performed a greater number of times in Great Britain than any other foreign opera) at Naples, 'I Capuletti ed i Montecchi' at Venice, 'Norma' at Milan, 'I Puritani' for the Theatre Italien at Paris, &c. The life of Bellini was unmarked by incidents. He was pure in morals, and his manners, like his compositions, were gentle, mellifluous, and elegant. Subject to pulmonic disease, he was unequal to violent effort of any kind, so he never attempted the lofty or sublime in music. He died of consumption in 1835. A writer (L. W. Tinnelli) in the 'Musical World' says of Bellini—'The enthusiasm excited by this astonishing production (Norma) is beyond all description. In a few months the "Norma" became the favorite performance of all the Italian and foreign stages, and crossed the immense distance of the ocean to delight the ears of the transatlantic inhabitants. Soon after this new triumph, he was called to Paris, where he wrote, in his greatest style, "I Puritani." It was the last song of the swan! One morning in the month of October, 1835, the inhabitants of Paris hastened to the streets of that immense capital to contemplate the numerous and select crowd which was following a funeral procession. Some of the most celebrated men were amongst the crowd. Sadness and sorrow were in the countenance of every one. A plaintive and moving music added to the melancholy scene. Death had reaped one of the finest flowers of nature. The funeral concourse stopped at the cemetery of Père la Chaise, where the coffin was deposited, and,

one hour after, a modest cross was raised on the ground, with the following inscription: "Pray for the peace of Vincent Bellini." Bellini was only twenty-nine years of age when he died. His disposition was good, though exceedingly passionate. His appearance was noble and expressive. His genius was vast as creation, and his soul innocent and gentle as the first sigh of love.' This is the eulogium of a friend and admirer; let it live in the memory of all musicians. [J.M.]

BELLMAN, CH. M., a Swed. poet, 1741-1795.

BELLONI, JEROME, a commercial wr., d. 1760.

BELLORI, J. P., an Italian antiquary and connoisseur, au. of 'Lives of Modern Painters,' d. 1696.

BELLOSTE, A., a Fr. army surgeon, 1654-1730.

BELLOT, Lieut., a French naval officer, a volunteer in the English Arctic expedition sent out in search of Sir John Franklin; he had already distinguished himself as a young officer of promise in the French navy, when he volunteered to serve on board the *Prince Albert*, dispatched by Lady Franklin in 1851. During this expedition he was foremost in braving the dangers of the Northern Sea and in extending the perilous investigations into those unknown and inhospitable regions. A strait discovered by him has been placed on the map with the name of *Bellot's Strait* as a memorial of his courageous enterprise. On his return from the first expedition, he readily availed himself of the occasion of joining another, and obtained permission to sail as a volunteer on board the *Phoenix*, under the command of Capt. Englefield, R.N. During this expedition, he exhibited the same traits of generous devotion to the cause he had so enthusiastically embraced, and was a noble example of a good officer and heroic man. Bellot met with a tragic death on the 21st day of August, 1852, in the execution of the perilous service he had volunteered to perform of communicating with Capt. Englefield, who was absent from his ship, making an attempt to join Sir Edward Belcher by a journey across the ice. The young French hero was overtaken by a storm, and the piece of ice on which he and his four companions were, was severed by the gale from the land. Lt. Bellot sent two of the men in the canoe to the land, and in the mean time, he was drifted rapidly away with his remaining companions. The snow beginning to fall rapidly, Bellot, while he expressed his joy at the safety of the two men he had sent away, busied himself in providing for the security of those who were left, by teaching them how to shelter themselves, by means of accumulating the snow into temporary huts; he then went abroad to make his observations. He had gone twice to observe which way the floe was drifting, when he started out the third time and never returned. A strong gale of wind had driven the adventurous hero into a crack in the ice and he was drowned. His two companions succeeded subsequently in reaching the ship.

BELYN, a British commander under Caractacus.

BELZONI, GIOVANNI, celebrated for his discoveries in Egypt, was a native of Padua. His early

[Belzoni.]

studies, which had a view to the monastic life, were prosecuted at Rome, from which his family had originally come. The French invasion of 1798 caused a change in his plans; and in 1800 he left Italy, and visited several parts of Europe. He came to England in 1803, where he soon after married. He was tall and robust in person, of uncommon strength, and commanding mien; qualities which, united to great intelligence and sagacity, perseverance and a love of enterprise, gave him immense influence among the wild people with whom he so long associated. His remittances from home were scanty; and he seems to have turned to profitable account a knowledge of hydraulics which he had acquired at Rome. Often, however, he was obliged to obtain a livelihood by exhibiting feats of strength. Leaving England in 1812, he visited Spain, Portugal, and Malta, and in 1815 went to Egypt, where he was for a short time employed by Mehemet Ali in erecting hydraulic machinery at Cairo. Driven thence by the prejudice of the natives against his improved plans, he visited many parts of Egypt and Nubia, and the shores of the Red Sea, discovering buried cities, rock temples, &c., and displaying the greatest skill in the removal and shipment of such gigantic works as the bust of Memnon, and other remains now in the British Museum. The pecuniary means, besides a personal remuneration, were supplied chiefly by Mr. Salt, the English consul, but partly also by Burckhardt the traveller. In September, 1819, Belzoni left Egypt, and on his way to England visited his native town, where he was received with honor. His 'Narrative of Operations,' &c., was published at London in 1820, in a 4to vol. with atlas. In 1823, accompanied by his wife, he left England for Morocco, with the view of penetrating to Timbuctoo. He had neither commission nor assistance from government, or any society, and except £200 supplied by the Messrs. Briggs of Alexandria, depended solely on his own resources. Failing to obtain permission from the emperor, he sailed to the Bight of Benin, and was forwarded on his journey by the king of that country. Not long after, however, he was seized with dysentery, and died at Gato, in Dec., 1823. Directions concerning his property, and his last regards to his wife, had been the day before sent by letter to his friend Mr. Hodgson, then on the coast with the brig Swinger. [J.B.]

BEMBO, BEN., a Venet. ambassador, d. 1519.

BEMBO, J., a Venetian doge, died 1618.

BEMBO, PETER, a Ven. poet and historian, secretary to Leo X., and cardinal bishop of Bergamo under Paul III., 1470-1547.

BENAVIDES, a Chilian bandit and pirate, who for several years committed unexampled atrocities on the coast and southern boundary of Chili, murdering every one he captured, without regard to sex or age, and devastating the country with fire. He was born in the province of Concepcion, and was for some time a soldier in the patriot army, which he deserted. He was twice made prisoner, and sentenced to death, but escaped, although the last time riddled with shot, and left on the ground for dead. On recovering from the effects of his wounds, he again entered the Spanish service, and from revenge began his career of blood. Among his boldest exploits was the attempt to form a navy by the capture of foreign vessels on the coast of Chili. He had his head-quarters at the town of Aranco, which was at length captured by the forces of the republic; and falling himself into their hands while attempting to escape, he was shot in February, 1822.

BENBOW, JOHN, a gallant English admiral, dist. in action with the pirates of Barbary, and afterwards with the French under the command of Du Casse, died of his wounds, 1702.

BENCIO, FRANCIS, an Italian poet, died 1594.

BENEDETTO, C., an Ital. painter, 1616-1670.

BENEDICT, ST., reputed founder of the monastic life in the West, which he commenced in the ruins of a temple near Naples, b. at Spoleto 480, d. 543.

[Benedictine Monk.]

BENEDICT, ST., an English prelate, 600-690.

BENEDICT I., pope, 574-578. BENEDICT II., 684-685. BENEDICT III., 855-858. BENEDICT IV., 900-904. BENEDICT V., 964-965. BENEDICT VI., 972-974. BENEDICT VII., 975-983. BENEDICT VIII., succeeded 1012. BENEDICT IX., 1033-1048. BENEDICT X., 1058-1059. BENEDICT XI., 1303-1304. BENEDICT XII., 1334-1342. BENEDICT XIII., 1724-1750. BENEDICT XIV., distinguished as one of the greatest popes who has governed the church, 1740-1758. An anti-pope, under the title of BENEDICT XIII., was elected 1394.

BENEDICT, an English abbot, died 1703.

BENEVUTI, CH., a Jesuit, 1716-1789.

BENEZET, ANTHONY, a native of France, born in 1713, who left his country on account of the persecution to which Protestants were subjected, and after living in England for 16 years, removed in 1731 to Philadelphia, where embracing the principles of the Quakers, he, in 1742, took charge of their academy,

in which position he continued until 1782, when he resigned his office, for the purpose of devoting himself to the instruction of the negroes. He died, at the age of 71, in the year 1784. He was well known, both in America and Europe, for his generous and unremitting exertions to suppress the slave trade, and wrote many tracts upon the subject, and also a history of the slave traffic in Guinea. His disinterested benevolence caused him to be universally respected, but like many of his class he carried his notions to excess, even relinquishing the use of animal food, from unwillingness to cause pain.

BENGENHIELM, J., Baron De, a Swedish statesman, poet and professor of history, 1628-1704.

BENTHAM, JEREMY, born in London in 1748, where he lived during most part of his long life of eighty-four years; one of the most remarkable thinkers and writers England has recently produced—equally estimable as a citizen and a man. Bentham's labors must be divided into two grand parts,—the first by far the least important, although the one through which he is popularly known. As a writer on the Science of Morals, properly so called, he has contributed little that will be permanent in philosophy. Great as a jurist and reformer, especially in Criminal Laws, he naturally sought to weigh the value of actions by their external effects; and unhappily he transported this conception—correct in its relation to Public Law—into the domain of Scientific Morals, taking as the root of his system, that good and bad, just and unjust, must be synonymous with the *utility* or *inutility* of an action. Reserving discussion of this peculiar theory for the article *Epicurus*, we hasten here to the agreeable task of pointing out Bentham's rare, original, and incontestable merits. He may be said to have been the first thinker who gained clear ideas of the cumbrousness and iniquity of the artificial English Laws; and although questions may well be started as to the practicability of his sweeping codification, it cannot be doubted that from his mind most of the statesmen who have since effectively labored to simplify these laws, drew their best inspirations. On many special doctrines or theories of Law, his speculations threw abundant and important light—for instance, the Doctrine of Punishments and the Theory of Evidence. Discerning the value of education as a preventive means, he threw himself into that subject with great eagerness—producing his curious *Chrestomathy*. On kindred moral subjects, he also wrote much,—often perhaps not very considerably, always with fearlessness and power. His labors, in fact, attach to every great question of reform which later

[Jeremy Bentham.]

times have cast up; and there were few men of eminence in his time who did not court a friendship, ever open to the deserving. Mr. Bentham's most distinguished associates were probably *Sir Samuel Romilly* and *James Mill*. His works were first published in a collected form in the French language, under the care of *M. Dumont*; an English edition has since appeared, edited, according to the philosopher's own request, by Dr. Bowring. [J.P.N.]

BENTHAM, THOS., bp. of Litchfield, d. 1578.

BENTINCK, WILLIAM, the intimate friend of William III., created earl of Portland, died 1709.

BENTINCK, W. H. CAVENDISH, third duke of Portland, born 1738; lord-lieutenant of Ireland, 1782; chancellor of Oxford, 1792; home secretary, 1794-1801; first lord of the treasury, 1807; d. 1808.

BENTINCK, LORD GEORGE, a British parliamentary leader, was born on 27th February, 1802. He was the third son of the fourth duke of Portland, and thus descended from the distinguished Dutchman who enjoyed the friendship of William III. He was by his mother, a daughter of Major Scott of Balcomie, connected with Canning, who married her sister, and he made such early acquaintance with political business as he possessed, in the capacity of private secretary to his uncle-in-law. He entered the army, and rose to the rank of major, but that profession in time of peace had not sufficient attraction for his stirring temperament, and he took with laborious ardor to field sports and the turf. Though a younger son, the fortunes of the family enabled him to indulge in horse racing without mercenary views, and yet it is generally said that he realized a large sum of money on the turf. His success and general high character in the sporting world arose from a high-handed integrity, which gave him the position of a bold, earnest, honest enthusiast, in occupations pursued by so many through momentary excitement, dissipation, or a base design to profit by the follies of others. In 1826 he entered parliament as member for Lynn Regis, and continued to represent that constituency till his death. He was a very steady attendant, almost always in his seat awake or asleep. But his attendance was not of a character to give him the knowledge of a statesman, since the benches in the House of Commons were his place of rest between unremitting labors in the hunting field and other congenial arenas. Before 1846 he was generally set down as a moderate Whig, but it is evident that his political partisanship rested more on personal alliances than constitutional views. When Sir Robert Peel dealt his final blow at the corn laws

and commercial restrictions, the country gentlemen, who thought it was not the necessary progress of sound political economy, but the want of leadership and combination which threatened what they counted their ruin, looked to Lord George as a leader, on account of the energy and skill he had shown in his favorite pursuits. He accepted of the proposal, and became the leader of the opposition, transferring to the interior of St. Stephen's the methods which gave him success in his more congenial occupations out of doors. He made it his twofold occupation to hunt the enemy, and to manipulate statistics into startling momentary results, as in the calculations of the betting book. He knew to the last little or nothing about politics, but his chivalrous bearing and utter unconsciousness of defeat, gave him popularity even with his opponents. The energetic zeal with which he followed his new pursuits broke his constitution, and, seized with an attack of the heart, he dropped suddenly dead on the 28th September, 1848, and was found lying on the road where he had been walking. BERCHTOLD, LEOPOLD, Count, a disting. philanthropist of Austria, 1758-1809.

BERENGER, or BERENGARIUS, was born at Tours, about the beginning of the eleventh century. His earliest education was received under Fulbert at Chartres, a teacher of affectionate wisdom and piety. Berenger showed from the first a liberal spirit of inquiry. For some time he taught in his native city, and gained there the office of Scholasticus, that is, superintendent of the school attached to the cathedral or monastery of St. Martin. Afterwards he was archdeacon at Anger. The name of Berenger is associated principally with the famous mediæval controversy on the doctrine of transubstantiation. He had revived the doctrine of Scotus, that the bread and wine still remain symbols after the consecration, and are not changed in substance; but his doctrine was condemned by several councils, such as that of Rome in 1050. The strife raged for thirty years, and Berenger sometimes wavered, and even formally recanted in 1079, under the terrorism of his ecclesiastical superiors. But he soon retracted, and by Lanfranc and others, under Gregory VII., the controversy was prolonged till his death in 1088. The theological influence of Berenger was lost by his vacillation, but he was one of the revivers of metaphysical study and dialectics, and as has been remarked, 'he continued Scotus Erigena, and prepared the way for Abelard.' His book 'De Sacra Coena,' was pub-

lished at Berlin in 1834; the manuscript of it having been found by Lessing in 1770 in the ducal library of Brunswick. [J.E.]

BERINGER, J. B., a Germ. mineralogist, 18th c.

BERINGTON, JOSEPH, a Roman Catholic historian and biographical writer, died 1827.

BERKELEY, GEORGE, earl of, author of 'Historical Applications,' and member of the privy council to Charles II., died 1698.

BERKELEY, GEORGE, bishop of Cloyne, born in Ireland in 1684; died at Oxford in 1753. The interest connected with this rather remarkable man is measured by that of his system of philosophy, which we shall shortly characterize. It is necessary to a right understanding of Berkeley's speculations, that one recall the false conceptions certainly prevailing at this time regarding the mode or manner in which we know;—we allude to the Theory of the *Idea*. It was thought that the idea through which we know, and the thing that we know through it, are perfectly distinct. The *idea* of an object was fancied a sort of image of the object capable of being perceived by the mind; just as the mind, in seeing, discerns not the object but the image of the retina. Adopting this to the fullest extent in respect of all that knowledge which we call the knowledge of external thing, Berkeley yet held that knowledge of the *mind* itself and of its operations, comes *at once* and without the interposition of any medium—through a simple act of internal perception: from which foundation, his strict logic led to the following singular superstructure. What are termed external objects, being seen not in themselves but through or by *ideas*, what right have we to imagine the existence of these objects at all? Supposing them real, they are confessedly not discernible by the human mind; why then assume their existence? True knowledge, on the other hand, comes to us *directly* respecting the *mind*: is not mind and its phenomena therefore—spiritual entities—the sole reality in the universe? Like

Malebranche after him, the good Bishop of Cloyne reached this singular conclusion the more readily, because of the fervency of his religious principles. 'If the principles I entertain,' he alleged, 'come to be admitted among men, the consequences that I think will follow immediately are these—atheism and scepticism must utterly fall.' He assuredly had weighed with little care the consequences inseparable from the concession to logic of a supremacy over our primary intuitions. Scarcely was the ink dry with which he wrote, ere the remorseless dialectic of Hume attacked with equal vigor the existence of the spiritual world—reducing all possible knowledge to the bare fact—I *exist*! It certainly appears singular that even religious fervor could take so extravagant a turn in so acute a man: nevertheless, the moving principle of Berkeley's speculations was a spirit of revolt against the materialistic philosophy that issued from Locke's 'Essay on the Human Understanding,'—*Alciphron*, or the *Minute Philosopher*, being mainly a protest against the paradox of Mandeville, that virtue is only an artificial product of policy and vanity.—Berkeley's knowledge was extensive; he was fond of physical science, and he struck out a sound theory of vision. His heart was a noble one, and his life pure. He was valued and admired among the best writers of the day, numbering among his friends Swift and Stella, the Duke of Grafton, Lord Peterborough, and Pope. There is now a good edition of his works in 3 vols. 8vo. [J.P.N.]

BERKELEY, VICE-AD. SIR W., k. in ac. 1666.

BERKELEY, NORBONNE, Baron de Botetourt, appointed Governor of Virginia in 1768, and died at Williamsburg in 1770. During his brief administration he was highly beloved and respected, and labored earnestly to promote the interests of William and Mary College.

BERKELEY, WILLIAM, governor of Virginia under Charles I. and Charles II. He came to America in this capacity in 1641. He espoused the royal cause during the civil wars, and, by his influence, as well as by the disposition of the colony, Virginia was the last of the English possessions to submit to the Protector. He then retired to his plantation, but, on the death of Governor Matthews, who had been appointed by Cromwell in his stead, he was solicited by the people to resume the government of the colony, which he would only consent to do on condition that Charles II. should be proclaimed King. His popularity was so great that the people consented, and the consequences of this bold step might have been serious but for the opportune death of the Protector. He visited England upon the restoration. The latter portion of his career was clouded by the rebellion of Bacon, whom he refused, against the popular wish, to appoint general in the Indian war. The opposition he encountered soured his temper, and Charles II., who was no friend to extreme measures, complained that "the old fool shed more blood in that naked country than he had done for the murder of his father." Berkeley died in England in 1677, immediately after his arrival in that country, to which he had gone for the benefit of his health.

BERNARD, J. F., an antiquarian, last cent.

BERNARD, J. S., a medical au., 1718-1793.

BERNARD, P. J., a French poet, 1710-1775.

BERNARD, SIM., a milit. engineer, 1779-1839.

BERNARD, duke of Weimar, command. of the Swedish army after the death of Gustavus, 1604-1639.

BERNARD, FRANCIS, SIR, governor of New Jersey from 1758 to 1760, and of Massachusetts from 1760 to 1769. Bernard was a man of ability and integrity, but it was his misfortune to preside over the Province of Massachusetts at a time when the greatest wisdom and caution were required, and it was no longer possible by coercive measures to repress the spirit of liberty, which he, together with the ministry in England, seems to have mistaken for lawless insubordination. Devoted to the interests of the British government, without any true insight into the course of policy which those interests really required, he hoped, by increased taxation, the presence of the military in Boston, and modifications of the charter, to strengthen the authority of England in the colony. The popularity gained by his more moderate administration in New Jersey was consequently soon lost, and, though the home government manifested its approbation of his course by creating him a baronet, it was also under the necessity of recalling him. The most praiseworthy

feature in his conduct was his patronage of literature and his benefactions to Harvard College. He died in England in 1779.

BERNIS, FR. JOACHIN DE PIERRES DE, a cardinal and ambassador of France, distinguished also as a poet, 1715-1794.

BERNOUILLI. The family name of a cluster of famous mathematicians living at the period of the revival of science, when Newton evolved the law of the celestial motions, and he and Leibnitz invented and promulgated the higher calculus. All distinguished by eagerness in the pursuit of Analysis, and the two elder, especially, by much vivacity of temper—they mingled earnestly in the keen commerce and conflict of scientific writers, which so enlivens the history of those times, and renders the details of personal history part and parcel of the history of the progress of knowledge. Our limits confine us within a simple enumeration of these distinguished men, and a bare statement of their main achievements.—1. JAMES BERNOUILLI, probably the most original analyst of the group; born at Basle in 1654,—died in 1705. He had great powers of invention, and much taste for simplicity in method and composition. He greatly extended the theory of the quadrature of the parabola, and the geometry of curve lines, spirals, &c. His chief contributions, however, relate to the summation and doctrine of infinite series; and we owe him the first systematic work on the now very important theory of chances. His writings are collected in 3 vols. 4to.—2. JOHN BERNOUILLI, brother of James; born in 1667, died in 1748; also a very great analyst. Besides his essays on the management of ships and the elliptical figure of the planets, John Bernouilli wrote on almost every branch of the existing mathematics; and he touched nothing he did not expand and improve. The great age he attained was worthily bestowed on him; he died full of honors. His collected writings fill four 4to. volumes.—3. JOHN BERNOUILLI, son of the preceding; professor of mathematics in St. Petersburg, where he died in 1726; born in 1695.—4. NICOLAS BERNOUILLI, nephew of 1 and 2, born in 1687; died in 1759; professor of mathematics in Padua.—5. DANIEL BERNOUILLI, son of Nicolas, a very eminent philosopher, rivalling the glory of the elder brothers of the family. He was born in 1700, and died in 1782. His two great works are the 'Exercitationes Mathematicæ' and his 'Hydrodynamica:,' but besides writing occasional treatises and memoirs, he contested, and gained or divided with the greatest mathematicians in Europe, no fewer than ten prizes offered by the Academy of Sciences. No name of the time stands higher than that of Daniel Bernouilli.—6. JOHN BERNOUILLI, brother of Daniel, professor of mathematics at Basle, born 1720, died 1770.—7. JAMES BERNOUILLI, nephew of the two preceding, born in

Basle, 1759, died in 1789, too early for science. At this close of the family of the Bernouillis, its former glories seemed about to blaze out again. In the space of about five years, the younger James presented no less than eight memoirs to the Imperial Academy of Sciences, which have been printed in the 'Nova Acta;' and he was a correspondent of other academies besides. Every thing he wrote displayed singular acuteness.—It is not often that the historian of Science has to record concerning such a family. [J.P.N.]

BERNSTORFF, JOHN HARTWIG ERNEST, Count, a Danish statesman, disting. also as a patron of science and art, 1712–1772. His nephew, AND. PETER, cel. as a minister of state for the enfranchisement of the Dan. peasants, &c., 1735–1797.

BEROALDUS, PH., a rhetorician, 1453–1505. His nephew of the same name, a poet, died 1518.

BERODACH, son of Baladan, king of Babylon.

BEROSUS, a Chaldean priest and his., fragments of whose works exist in the writings of Eusebius: time of Alexander the Great.

BERRETINI, NICH., an It. paint., 1617–1682.

BERRI, JOHN, of France, Duke De, 1340–1416.

BERRI, CH. FERD. DE BOURBON, Duke De, second son of Ch. X., and father of the duke de Bordeaux, claimant of the Fr. crown, 1778–1820.

BERRIMAN, WM., au. of Sermons, 1688–1758.

BERRUYER, JOS. IS., a religious wr., d. 1758.

BERRUYER, J. F., a Fr. general, 1737–1804.

BERRY, REAR-ADMIRAL SIR EDW., K.C.B., distinguished at the Nile and Trafalgar, d. 1831.

BERRY, SIR JOHN, a naval command., d. 1691.

BERRY, MARY, an English woman of society and of literary accomplishments, died in 1854, at the advanced age of nearly ninety. She and her sister, whose death preceded hers by eighteen months, were known in the literary circles of London from the time of Dr. Johnson to Macaulay. For upwards of half a century they saw at their house in London two generations of literary men. They had read Miss Burney's *Evelina* when fresh from the press, and survived long enough to weep in sympathy with the world over Dickens' pathetic story of *Little Nell*. The two sisters were left, with their father, the literary executors of Horace Walpole. Both of them had received the offer of the hand of that male gossip, and both had rejected it. The elder published various miscellaneous works.

BERRYAT, F., first edit. of a collect. of observations from the memoirs of learned societies, d. 1754.

BERSMANN, GEO., a Ger. classic, 1538–1611.

BERTHIER. ALEXANDER BERTHIER, prince of Neufchatel and Wagram, was born in Paris in 1753, of higher parentage than that of most of the military chiefs of the French revolution and empire. He saw some service in Rochambeau's auxiliary corps in the American war, and continued in the French army after the fall of the monarchy. It is chiefly as Napoleon's favorite chief of the staff that he acquired distinction. His talents for independent command were slender, but he possessed the power of rapidly comprehending Napoleon's wishes and tactics, and he showed an alacrity and a skill in carrying the imperial orders into effect, that made him most valuable, and procured him high promotion and favor. On the downfall of Napoleon, in 1814, Berthier, like other marshals, professed allegiance to the Bourbons, and he is said to have shown more readiness and zeal in so doing, than became one who had been, like Berthier, the favored friend, as well as the highly rewarded servant of the ex-emperor. On Napoleon's return in 1815, Berthier quitted France with

the Bourbon princes; but he suffered deeply in spirits and in conscience, and at last, after watching a body of Russian troops who were marching through Bamberg against France, Berthier committed suicide.

BERTHIER, J. B., an architect, &c., 1721–1804.

BERTHOLLET, F., a Fr. historian, d. 1755.

BERTHOLLET, CLAUDE LOUIS, born at Talloire, near Annecy, in Savoy, 9th December, 1848, died at Paris, 6th November, 1822, aged seventy-four, affords one of the most illustrious examples of a genius for the practical application of science among the *savants* of the last century. Educated for the profession of medicine, in an obscure corner of the country, he came to Paris destitute of friends and acquaintances; but having learned that M. Tronchin, a distinguished practitioner in the metropolis, was a native of Geneva, he made bold to call upon his countryman, and, fortunately for science, was kindly received and patronized by him; and through his means Berthollet was made physician to the duke of Orleans. It was through this nobleman that he was placed in the position of superintendent of the government dyeworks, where he acquired the information contained in his valuable work on this art, and which led him to apply to practice in bleaching, the important fact, discovered by Scheele, of the decolorizing properties of chlorine gas. It would be difficult to estimate, in its true light, either morally or pecuniarily, the enormous benefits conferred on humanity by this application alone. James Watts introduced this application soon after from Paris to Glasgow. To the chemist Berthollet, too, is due the salvation of his country; for, when hemmed in by Austrian and Prussian troops, and the English navy, her commerce cut off, and the very instruments of self-defence denied her, Berthollet instituted native iron and saltpetre works, and supplied the cannon, swords, and gunpowder to withstand the ruthless invaders. Eminent for his love of art as well as of science, he was chosen by the Directory, in 1786, to proceed in company with his friend Monge to select such works as were best fitted to adorn the Louvre; and in 1798 he accompanied Bonaparte to Egypt on a similar errand. By the illustrious general he was courted as a friend, not only from his simple and unobtrusive manners, so becoming his profession, but also from his force and depth of character, which rendered him a valuable companion. How seldom does the man of science acquire credit for the benefits conferred on his fellows? In no instance is this affirmation more remarkably exemplified than in the discovery by Berthollet of the chlorate of potash, a salt which not only, as an indispensable ingredient in the lucifer match, administers to the convenience of every one, but enables many a poor shivering outcast to supply his daily wants. Berthollet, too, was the discoverer of detonating silver, the first of those compounds so valuable in their application to fire-arms—which are thus rendered independent of the seasons. He discovered, likewise, chlorocyanic, and first showed that the familiar volatile gas ammonia is a compound of 1 vol. of nitrogen and 3 vols. of hydrogen. Although the more modern views of chemical combinations have set aside his views on these subjects, it is impossible to read them without being struck with the ingenuity of his arguments, and the force of his reasoning powers. In one point he successfully combated the opinions of the celebrated Lavoisier, who believed that oxygen was the acidifying principle. Berthollet, on the other hand, showed that sulphuretted hydrogen and prussic acid are distinctly acid, and yet

contain no oxygen. Subsequent observations have only strengthened the views of Berthollet. Berthollet was endowed with the greatest liberality and benevolence of disposition, and was destitute of that narrow and contracted selfishness so often complained of in these days of competition, which is too apt to mar the lustre of the scientific character. In his latter years he removed to the village of Arcueil, three miles from Paris, near his friend La Place, for whom he entertained a warm affection. Here he fitted up a laboratory, and formed the Society of Arcueil, composed of a number of young chemists and friends, whom he encouraged by his example and kindness. Their names will show how happily was his friendship bestowed—La Place, Biot, Gay Lussac, Thenard, Collet-Descotils, Decandolle, Humboldt, and his son A. B. Berthollet. The society published three volumes of valuable memoirs. To a chemist, we know of no more sacred place than the hamlet of Arcueil. But the last days of the good old man were dimmed by the suicide, by means of the fumes of charcoal, of his only son, in whom his affections were concentrated. From this sad calamity he never recovered; and, to complete his misfortunes, his friend, the emperor, having been replaced by the Bourbons, science was again, as in so many other instances, sacrificed at the shrine of politics, and the eminent chemist was reduced from a state of affluence to comparative poverty. Death, in 1822, stepped in to his release, and posterity alone can yield some requital by revering the memory of the good Berthollet. [R.D.T.]

BERZELIUS, JOHN JACOB, b. 1779, d. 1848, the son of a parish schoolmaster at Vafersunde, in the south of Sweden, as is said. The subject of our memoir possessed the opportunity of acquiring the elements of a good education in a country where reading and writing are understood to be within the grasp of the poorest peasant. He was educated for the medical profession at the university of Upsala,

and obtained his first acquaintance with chemistry from Professor Afzelius, a nephew of Bergman, Ekeberg, and Ghan, to whom chemists are indebted for the establishment of the blowpipe as an indispensable instrument in chemical research. From the period of his first publication, his *Animal Chemistry*, in 1806, till his death, Berzelius's career was one of the most active and industrious of any chemist who ever existed. His mechanical powers of manipulation were of the highest order, and he set himself at an early period to make the most scrupulously accurate analyses. It was from this power of minute investigation that, in company with Hisinger, he was enabled to detect, at the outset of his career, the new earth oxide of cerium, and afterwards selenium and thorium. It was by his accurate investigations that he was enabled to follow up the foundation-stones of the atomic theory laid by Dalton, Thomson, and Wollaston, and assist in raising a valuable superstructure, and to demonstrate, in 1815, that the mineral world, as had been enunciated by Smithson, is a naturally existing exemplification of the beautiful doctrine of definite proportions. It would be difficult to over-estimate the value of the contributions made to the science by this indefatigable chemist, whose body and mind seem to have been in incessant action for the best part of half a century, whether we view them in his valuable investigations of the constituents of nature, in the various editions of his *System of Chemistry*, which contained a complete digest of the knowledge possessed by chemists at the time they appeared, of chemical substances, or in the annual reports which he published, in continuation of those of Thomson, of the progress of his favorite science. The part which he took, too, in modifying the system of symbols, introduced into the science by Thomson, so as to suit all nations, is highly deserving of commendation, since without symbols it is difficult to understand how chemical constitution could be rendered intelligible in its present complicated condition. The ingenious generalizations which he sometimes made, although generally ultimately found to be untenable, were productive of vast benefit in encouraging and stimulating inquiry. Among these views may be noticed his ideas of the compound nature of chlorine; his theory of electro-chemistry, of isomerism, of catalytism, &c. It is much to be regretted that the free inquiry and liberty of deduction which he claimed for himself he did not always allow to others, and that the closing years of his busy life should have been occupied in a coarse warfare with his contemporaries and the younger spirits of the age, and in an attempt, which ever must prove fruitless, to bind to the chariot-wheels of a past time the new discoveries which uniformly refuse to be attached to old-fashioned inventions. Much of this asperity of literary manner may undoubtedly be attributed to isolation during his earlier years, from the softening influences of life, and to deteriorating habits, which it is understood were too unsparingly encouraged. Berzelius contributed, in a remarkable degree, in disseminating the study of the science over the continent of Europe, by the able pupils who were educated under his eye, and who did not fail to communicate in their turn to their successors the accurate lessons which they themselves had so bountifully received. To have communicated the elements of the science to such men as Gmelin, Arfwedson, Rose, Mitscherlich, and Wöhler, is no small piece of good fortune. No department of the science has escaped the masterly touch of Berzelius; even organic chemistry, which he was desirous of confining under obsolete rules,

was indebted to him for many early elucidations, which paved the way for those which were to follow. In no portion of the science were his labors of more value than in that of analyses, the processes depending on an intimate acquaintance with the properties of the various kinds of matter, by which the chemist is enabled to tell, to the most minute fraction, how much of any element is present in a compound. Berzelius was for many years professor of chemistry in Stockholm. During the latter years of his life he retired to the country, and married, and was elevated to the rank of baron. But to the last he took a deep interest in his science, and even when paralysis had denied to him the power of locomotion, he continued to dictate to his amanuensis his annual report, striving, as it were, to bid against nature, and to lengthen out the space of terrestrial mental existence. BEZA, or THEODORE DE BEZE, was born of noble parents at Vezelai in 1518. His studies were begun at Orleans under Wolmar, a German, to whom may be traced his pupil's attainments in Greek. Here he studied law, and having at the age of twenty obtained a diploma, he spent the next nine years in Paris; living in the midst of such enjoyments as an ample fortune can at all times secure in the gay capital of France. Here he published his 'Juvenilia,' a collection of poems, many of which are just in character and gallantry, what might have been anticipated in the circumstances. His own conscience, his secret marriage, and a severe illness, combined in solemnizing his mind, so that at length he fled to Geneva, and publicly avowed his attachment to the protestant reformation. In a very short time he became professor of Greek at Lausanne, and after ten years' labor there he returned to Geneva. From the period of his return to Geneva in 1559, to his death there, October 13, 1605, Beza was identified with the Swiss reformation. He was the first rector of the new academy established there, and he succeeded Calvin in the chair of theology in 1564. After the great Reformer's death, Beza occupied the first place of influence and responsibility, not only in the church of Geneva, but in the neighboring cantons and in France. In 1571 he was moderator of the great protestant assembly at Rochelle, by which the French confession was emitted. Beza revisited France about 1560, and was introduced to, and favorably noticed by Catherine de Medici and the Cardinal Lorraine, and he occasionally preached in the suburbs of Paris. He was also on the battle-field with the great Condé in 1563. The Greek scholarship of Beza was consummate, and one of his early works at Lausanne was his famous translation of the New Testament into Latin, printed by Robert Stephens at Paris in 1557. In 1565 he published his first edition of the Greek New Testament, making use of a MS., containing the four Gospels and Acts, which usually goes by his name, and which in 1581 he gave to the university of Cambridge. This edition, which is almost the same as that of R. Stephens, was four times reprinted by him, and the last edition of 1598 was taken as the basis of the authorized English version of the New Testament. Beza wrote many other treatises, especially on the power of the magistrate in matters of religion. But it is as an editor, translator, and commentator in connection with the New Testament, that all subsequent scholars hold Beza in high esteem, not only for his own lofty acquirements, but also for the impulse which he gave by his example and his publications to biblical studies. BICKERSTETH, EDWARD, a highly popular writer of religious works, was born 19th March, 1786, at Kirby Lonsdale, in Westmoreland. After receiving the rudiments of learning at the grammar school of his native town, he obtained, at the age of fourteen, a situation in the General Post Office, London, and although that employment put an end for a time to his classical studies, it trained him to those business habits which qualified him pre-eminently for the peculiar work which Providence had in reserve for him. Disgusted with the monotonous routine of his duties in the post office, he turned his attention to the study of law, and obtained admission into the chambers of an eminent London attorney, to whom, after two years and a-half service, he became principal clerk. At a later period he settled in Norwich as partner to Mr. Bignold, a young and flourishing attorney, and connected himself still more closely with that gentleman by marrying Miss Bignold, his sister, on 5th May, 1812. For many years previously, Mr. Bickersteth had been under deep impressions of personal religion. Amid all the engrossing avocations of his legal business he attended to the one thing needful, never allowing a day to pass without devoting a portion of it to the regular study of the Scriptures, with private devotion, and adopting various other methods for promoting his personal improvement and his walk with God. The principles he regarded as so vital to the welfare of his own soul he longed to impart to others, and mourning over the multitudes in the town of his adoption who were growing up in ignorance and irreligion, he commenced a Sunday-school by collecting a few poor children for instruction in scriptural knowledge. This school, which gradually increased till it became a large and important institution, encouraged him to try other means of Christian usefulness, and accordingly he originated a benevolent visiting society, a church missionary society, a society for the conversion of the Jews, all of which, in spite of strong opposition from several quarters at first, continued to grow in numbers and influence. Having published his 'Help to the Study of the Scriptures,' which proved an eminently useful and acceptable work, he was earnestly pressed by several Christian friends to enter the ministry. The advice accorded with his own ardent aspirations, and at length a door having been opened by Providence, he was ordained deacon in the Church of England, and preached his first sermon in Norwich, 10th December, 1815. In the beginning of 1816, Mr. Bickersteth undertook a special mission for the purpose of inspecting the settlements of the London Missionary Society in Africa, and after having accomplished the important objects of his embassy, returned to the shores of Britain in the following August. For many years he acted as one of the secretaries of the Missionary Society, and in that capacity led a life of incessant activity, journeying in all parts of the country, and addressing public meetings in behalf of the institution. Resigning this laborious office, he became, in 1829, sole

pastor of Wheler Chapel, London; and on 23d October, 1830, he undertook the charge of the rural parish of Watton, Herts. After a life of such indefatigable labor as he had led, this situation was a comparative sinecure. But by multiplying the services, both on Sabbath and week-days, 'he worked,' to use his own phrase, 'as busily as a bee.' In all questions affecting the interests of religion he took a prominent part, for he was looked up to as the head of the evangelical party in the Church of England, and in private he was unwearied in advancing the cause of Christian truth with his pen. The 'Christian Hearer,' the 'Christian Student,' a treatise on 'Baptism,' the 'Testimony of the Reformers,' and many other works, well known in the religious world, attest his piety and zeal. Mr. Bickersteth, in February, 1850, was seized with a paralytic stroke, which soon after carried him off, in the sixty-third year of his age. [R.J.]

[Capture of the Penguin.]

BIDDLE, JAMES, an American commodore, was born in Philadelphia in 1783. He distinguished himself in the war of 1812 with the British, and participated in the victorious struggle of the Wasp when she captured the British brig the Frolic. On the 23d March, 1815, Biddle, while in command of the Hornet, met with the British brig of war the Penguin, off Tristan D'Acunha, and captured her after an action of only 22 minutes duration. He was employed as a diplomatist, and signed the commercial treaty with Turkey in 1832; in 1845 he represented the United States as *interim* Commissioner in the place of A. H. Everett, in China. Died in 1848.

BIDDLE, JOHN, a cele. Unitarian, 1615-1662.

[Captain Nicholas Biddle, in the Naval uniform of the Revolution—From an original portrait in the possession of the Biddle family.]

BIDDLE, NICHOLAS, captain in the American

Navy, born at Philadelphia in 1750. After many years of adventure as a British seaman, in which he acquired a complete knowledge of his profession, he entered the service of the United States, and was very successful in capturing the vessels of the English until 7th March, 1778, when, in action in the West Indies with the ship *Yarmouth* of sixty-four guns, the *Randolph*, which he commanded, blew up, and he and the crew, consisting of three hundred and fifteen men, except four, were destroyed.

BIDDLE, NICHOLAS, a noted American financier and President of the Bank of the United States, was born in Philadelphia, on the 8th of January, 1786. His father was a distinguished patriot during the days of the Revolution, and filled the prominent office of vice-president of the commonwealth of Pennsylvania while Benjamin Franklin was the chief-magistrate. The subject of our biography graduated at Princeton College, in New Jersey, in the year 1801, where he sustained a high character for classical acquirement. He then commenced the study of law, but before he was admitted to the bar, he was selected by General Armstrong as his private secretary, and accompanied that gentleman in his mission to France in 1804. While abroad he took advantage of his opportunities for travel, and visited various countries on the European continent. Before his return home he served also as secretary to Mr. Monroe, then United States minister to the court of St. James. When Mr. Biddle returned to the United States in 1807, he commenced the practice of the legal profession at Philadelphia, where he also engaged in literary occupations. He edited the *Portfolio*, in conjunction with Mr. Dennie, until that gentleman's death. Among his literary performances he has the credit of having prepared a history of Lewis and Clarke's expedition to the Pacific Ocean, from original documents submitted to him for editor-

[Andalusia, Country Residence of Nicholas Biddle, Esq.]

ship. The *Commercial Digest*, prepared at the request of Mr. Monroe and published by Congress, was written by Nicholas Biddle, and is esteemed a work of considerable value to the mercantile interests. He early embraced a political life, and was first elected to the legislature of Pennsylvania in 1810, and subsequently to the State senate in 1814. He was afterwards nominated two successive times as a candidate for Congress, but did not succeed in being elected. His first direct connection with the Bank of the United States, an institution of which he had been previously a political supporter, was in 1819, when he was elected a government director. In 1823 he was unanimously chosen president of that corpo-

ration, to fill the vacancy caused by the resignation of Langdon Cheves. He held this office for the period of sixteen years, during which time he was regarded as an able financier. The charter of the United States Bank having expired in 1836, Andrew Jackson, who was then President, vetoed its re-charter, and the Legislature of Pennsylvania adopted the bank and chartered it as a State institution, under the title of the United States Bank of the State of Pennsylvania. Mr. Biddle continued as its president, and strove to sustain it with all the energy and financial tact he could muster, but was unsuccessful in saving it from bankruptcy. In 1839 Mr. Biddle retired from the presidency of the bank to his estate of Andalusia, on the Delaware, near Philadelphia, where he died in 1844 at the age of 58.

BIDDLE, THOS., an Am. art. off., who fought under Gen. Scott at Fort George and Lundy's Lane, but was shot in a duel at St. Louis by his antagonist, Spencer Pettis. The result was inevitable, as they fought with overlapping pistols at the distance of five feet.

BILFINGER, G. B., a Ger. *savant*, 1693-1750.

BILLAUD-VARRENNES, JOHN NICHOLAS, was the son of an advocate, and like Fouché, was educated by the Jesuits, but compelled to leave the congregation of the oratory on account of his licentiousness. He remained in obscurity until the outbreak of the revolution, when the revolt and fearful sacrifice of life at Nanci in the month of August, 1790, gave him an opportunity of attacking the government, especially in a work of 3 vols. 8vo., entitled 'Despotisme des Ministres de France.' Between this period and the autumn of 1792 he published several political brochures, remarkable, it is understood, for their brutal vehemence rather than for any originality or show of argument; and it was only on the 10th of August in that year, when the death-struggle of the Swiss guard, followed by the sack of the Tuileries, and the imprisonment of the royal family took place, that he emerged from the obscurity of the Faubourgs as one of the hundred and forty-four who

turned out the old municipals, and declared themselves the magistrates of the people. In the horrible massacres of September he was seen standing in his official scarf, short brown coat, and black wig, with one foot on a corpse and the other in a pool of blood, urging the murderers at the Abbaye to continue the work of slaughter, of which, from mere physical exhaustion they were growing weary. He was remarkable on all occasions for his repugnance to any regular form in the administration of the people's wild vengeance, and had a principal share in the erection of the Revolutionary Tribunal, to which Marie Antoinette and many other victims were sent at his particular instance. On the 9th Thermidor he consulted his own safety by joining in the clamorous accusation of Robespierre, and a few days after his fall, was himself excluded from the committee which his cruel heart, and sometimes declamatory eloquence had so often served. The reaction having set in, he was condemned to transportation, and afterwards to death, by the convention, but the sailing of the ship saved his life, and he remained twenty years in Cayenne before he effected his escape. In 1816 he made his way to St. Domingo, where the mulatto Petion was in power as president of the newly-established republic, by whom he was allowed a small pension. On this pittance the 'resolute unrepentant man' contrived to subsist till the world was finally rid of him in 1819. [E.R.]

BIRD, or BIRDE, or BYRDE, WILLIAM, the admired musician, and great pupil of the celebrated Tallis, was born about the year 1540, and is supposed to have been the son of Thomas Bird, one of the gentlemen of the chapel of Edward VI., where Bird received his first instructions in music as one of

the singing boys. In 1563, he was made organist of Lincoln cathedral, which office he retained till 1569, when he was appointed gentleman of Queen Elizabeth's chapel, and in 1575 became organist to her majesty. Up to the period of his death, which happened in 1623, he composed a great amount of vocal music, chiefly sacred, and from the circumstance that the words he chose were, for the most part, portions of the Romish ritual, it is supposed that he was secretly a professor of that faith, though from the appointments he held, he must have conformed to the reformed religion. It is impossible now to name the number of his works, if we include his instrumental compositions, of which no fewer than seventy-three are to be found in Queen Elizabeth's celebrated Virginal book. Bird is, however, now chiefly known by his great canon 'Non Nobis Domine.' And though some persons have sought to deprive him of the fame of its authorship, and have attributed it to Palestrina, nevertheless, those best able to judge have never hesitated to regard it as the work of William Bird, and to all time it will be looked upon as an English national work and an enduring monument of his greatness as a musician. Bird was highly esteemed, both in his private and public capacity. [J.M.]

BLACK, JOSEPH, born near Bordeaux, 1728, died 1790. His father, a native of Belfast, resided for some years at Bordeaux, as a wine merchant. He was of Scottish origin, and had married Miss Gor-

don, of Hillhead, in Aberdeenshire. The young chemist was first at school in Belfast, and afterwards at the universities of Glasgow and Edinburgh. In 1756, he was appointed lecturer on chemistry and professor of anatomy, afterwards of medicine, in Glasgow. Here he remained until 1766, when he was chosen to the chemical chair in Edinburgh. During this period he made the important discovery of the cause of the difference between limestone and quicklime, and showed that quicklime is limestone deprived of a portion of its weight in the form of carbonic acid. It was by this experiment, while yet a student, that he drew attention to the importance of the use of weights, a precaution which had hitherto been neglected by chemists, and from which omission many erroneous theories had been propagated. His second important discovery was that when water changes into steam, 140° of heat enter into it which are not perceptible by the thermometer, and which he termed *latent*. It is obvious that on this fact depends some of the important circumstances with regard to the economy of the steam engine. These two capital discoveries of Black have been of greater service to science than perhaps any equal number of data ever pointed out by philosophers. Dr. Black was a man of elegance, modesty, and indolence. His active life in science terminated in his thirty-eighth year, for after his removal to Edinburgh he engaged in no inquiries, and contented himself with teaching the science. He was beloved as a friend, medical adviser, and teacher, and his name must long occupy a niche in the scientific temple of fame. [R.D.T.]

BLACKBURN, FR., a theologian, 1705-1787.

BLACK HAWK, whose Indian name was *Muck-ker-ta-me-shek-ker-kerk*, a celebrated chief and warrior, d. 1838.

BLACKLOCK, THOMAS, D.D., was the son of an English artisan settled at Annan, in the county of Dumfries, where he was born, 1721. At the age of six months he lost his sight from an attack of the small-pox, yet arrived at distinction as a classical scholar and poet; not, indeed, to very high rank in the latter respect, but to a degree of recognition exceedingly creditable to his taste and intelligence under the circumstances. For the early cultivation of his mind he was indebted to the kind friends who read, for his behoof, the works of Spenser, Milton, Prior, and Addison, and subsequently to the friendship of Dr. Stephenson, who procured his admission to the university of Edinburgh. His first attempts in poesy were made in his twelfth year, and a few years later gave proof of his passionate love for music. In 1759 he was licensed to preach in the Scotch kirk, and in 1762 was presented with the living of Kirkcudbright, by the earl of Selkirk; but after two years of strife, abandoned this field of labor, in consequence of objections both to his preaching and his blindness, urged by the parishioners. A small annuity was settled upon him at this time, with which he retired to Edinburgh, where he passed the remainder of his life in literary pursuits, partly employed as a teacher. The best of his poetical pieces is 'The Graham,' an heroic ballad. He married in 1762; and in 1767 the degree of D.D. was conferred upon him by the Marischal College, Aberdeen. The last edition of his works was published in 1796, with a life of the author, by Mr. Spense. Dr. Blacklock died at the age of seventy, July 7, 1791. [E.R.]

BLACKMAN, ADAM, an eminent Puritan minister, born in England, settled at Stratford in Connecticut, of which he was the first pastor in 1640, and d. 1665.

BLACKMORE, SIR RICHARD, a very indifferent

poet of the time of Dryden, in better repute as an honest man and a physician, died 1721.

BLACKSTONE, SIR WILLIAM, a judge and celebrated commentator on the law of England, was born in London on 10th July, 1722. He was the posthumous child of a silk mercer, and lost his mother in infancy. When about seven years old he was sent to the Charter House, where he was ultimately placed on the foundation. He studied at Pembroke College, Oxford, and in 1743 was made a fellow of All Saints. In 1746 he was called to the bar from the Middle Temple. He had written some popular fugitive pieces, chiefly poetical, one of them called 'The Lawyer's Farewell to his Muse.' His qualifications were not of the kind which bring business through the usual channels, and he retired on his fellowship. Finding, however, that his studies took naturally the direction of the law and constitution of England, he opened a course of lectures on the subject in 1753. Mr. Viner, struck by the importance of a foundation for teaching this important department of knowledge, founded the Vinerian professorship, which Blackstone was the first to occupy in 1758. The popularity of his lectures, and of some minor tracts on jurisprudential subjects, opened the way to practice, and he returned to the law courts, entering parliament in 1761. In 1762 he received a patent as king's counsel, and the honorary office of solicitor-general to the queen. About the same time he married Sarah Clithro, by whom he was the father of nine children. The first volume of the celebrated 'Commentaries on the Laws of England' was published in 1765. The other three volumes followed in rapid succession. No English law book has been at once so popular and so gravely censured. Both the praise and blame were elicited by the same features. In England, so much weight is attributed to the sentences and individual words in which the law is expressed, that its interpreters generally seek safety from responsibility in employing the exact terms in which it has been originally given forth, in statute, decision, or the opinion of some early sage of the law. This practice gives their works a hard, disjointed, piebald appearance, forbidding as a whole, however valuable the separate parts may be. Blackstone tried to convert the mass into a readable well-arranged book, and succeeded. He has made many people readers of the law, and more or less instructed in it, who otherwise would not have approached the forbidding science. But on the other hand, the deeper practical members of the profession have pronounced his work unsatisfactory and superficial. To make his book consistent and readable, he endeavored to give a reason for every thing, while other writers told it baldly as it stood. The tendency of his commentaries was thus to make whatever existed in the law appear to be exactly what it should be. Now that many of the things which he commended as the perfection of wisdom, have been abolished as tyrannical and absurd, his reasoning in their support sometimes appears sufficiently ludicrous. The disposition to justify things as they were, made his writings acceptable to government, and they were the more so that in accounts of the origin of national institutions, he ever kept out of sight the more violent revolutionary movements by which the constitution was created. Only in his celebrated passage against the game laws does he take a side contrary to what may be called conservative predilections. The 'Commentaries' are still in active use, and ever call for the services of fresh editors. Blackstone disliked political contention, and declined the opening to high promotion offered to him in the office of solicitor-general.

He was, in 1770, appointed one of the justices of the King's Bench, and in a few months transferred to the Common Pleas. He died on 14th February, 1780.

[J.H.B.]

BLACKSTONE, WM., the first inhabitant of Boston. He was a clergyman of the Church of England, and had built his cottage among the Indians five years before the arrival of Governor Winthrop in 1630. The company claimed all the land on the strength of the charter, but gave him fifty acres, which he sold to them in 1635, extending to the Pawtucket or Blackstone River, near Providence, where the remains of his house are still to be seen. He died in 1675, after a residence of fifty years in New England. His body, covered with a white stone, reposes near his house, and a little eminence, called Study Hill, marks the place where the patriarch of New England retired for meditation.

BLACKWALL, ANT., an Eng. critic, 1674-1730.

BLACKWELL, ALEX., a Scotch physician and economist; settled in Stockholm, and beheaded for conspiracy, 1747. His wife, ELIZABETH, disting. as the authoress of a 'Herbal,' with 500 plates, drawn, engraved, and colored by herself.

BLACKWOOD, A., a Scotch au., 1539-1613.

BLACKWOOD, SIR H., a nav. com., 1770-1832.

BLAEUW, WM., a Dutch geogr., 1571-1638.

BLAINVILLE, M. DE, an anatom., 1778-1850.

BLAIR, HUGH, D.D., a cel. Scotch divine, and miscellaneous writer, 1718-1800.

BLAIR, JOHN, a member of the convention which formed the Constitution of the United States, and colleague of Madison as deputy from Virginia. Washington appointed him, in 1789, an associate judge of the Supreme Court. He died in 1800, aged 68. He was one of the purest and most noble whom the Am. Revolution brought into public life.

BLAIR, JAS., a clergyman of the Episcopal Church, and first president of William and Mary College in Virginia, which was founded through his exertions. He was a native of Scotland, which he left at the end of the reign of Charles II. He went to Virginia as missionary in 1685, was appointed ecclesiastical commissary in 1689; visited England in 1691, to obtain the sanction of government for the erection of a college; entered on his duties as college president in 1729, which he continued to perform till 1742, and died after an arduous ministry of sixty years, in 1743. A volume of his discourses was published in London 1742.

BLAIR, J., a chronological author, died 1782.

BLAIR, ROBT., au. of 'The Grave,' 1700-1746.

BLAKE, WM., an artist and poet of singular genius and originality, remarkable also for his extraordinary visions, 1759-1827.

BLAKE. In all the long list of England's naval heroes, there is not a name more glorious than that of Admiral Blake. Perhaps he deserves to be ranked even highest of all, if we look not merely to the number and brilliancy of his victories, but to the originality of his genius, and to the high character of the commanders and the crews whom he encountered and vanquished. Blake tamed the pride of the Dutch navy when it was in the perfection of equipment, discipline, spirit, and skill. He triumphed over Van Tromp and De Ruyter, admirals who, until they coped with Blake, were reputed invincible. Nelson himself never signalized his genius and his bravery against such competitors as these. Robert Blake was the son of a merchant at Bridgewater in Somersetshire, and was born there in August, 1599. He was well educated, first at his native grammar school, and

then at Oxford, where he was distinguished for his strictness in religion, and for his liberal politics. At the age of twenty-seven, in consequence of his father's embarrassments and death, Blake was called on, as the eldest son, to take the management of the wreck of the family business, and to maintain his mother and several younger brothers and sisters. He did this duty in private life for many years: but on the outbreak of the civil war between Charles I. and the parliament, Blake came forward on the popular side, and raised a troop of dragoons, which he personally commanded. Blake's military career has been eclipsed by the superior lustre of his naval achievements; but he was one of the ablest commanders and bravest soldiers that fought for the Houses; and some of his exploits in the west of England showed genius of the highest order. It would be difficult to find parallels either in ancient or modern history, for Blake's defence of Lyme against Prince Maurice; or for his daring occupation of Taunton and successful defence of that place against Goring. When the war was over Blake was made a commissioner of the navy, and placed in command of the ships that were sent against Rupert's piratical squadron. Blake was at this time fifty years old. He may have had some acquaintance with a seafaring life when he was a Bridgewater merchant, but besides his natural courage, decision, and promptitude, he must have possessed remarkable quickness of apprehension and fertility of genius to enable him to adapt himself to his new command in naval war, and to inspire those whom he led, with his own daring alacrity, and indomitable resolution. He was equally active and sagacious as a reformer of the numerous abuses which he found prevalent in the admiralty, and in every department of the service; and Blake did for the British navy in the middle of the 17th century what Earl St. Vincent did afterwards for it at the close of the 18th. Blake's successes against Rupert and other enemies of the commonwealth, caused him to be raised to the chief command of the English fleet when war broke out between the English and Dutch republics in 1652. A series of naval battles ensued, which are unequalled in history for the skill and for the obstinate valor displayed on both sides. Once, and once only, the Dutch had the advantage, on the 29th of November, 1652, when Blake was obliged with less than forty ships to fight Van Tromp with 80 in the Downs. But the English Admiral more than redeemed his fame in the February following, when he completely defeated Van Tromp in their great three days' sea fight along the channel. At last, when after two years of desperate warfare, Blake had nearly destroyed the Dutch navy, Holland was compelled in 1654 to sue for peace. Cromwell had turned out the parliament and made himself protector of England during this period, but Blake declared that a sailor's duty was to serve his country against the foreigner, and he continued to guide the British fleets wherever the honor of England required. Cromwell sent him to the Mediterranean, where he made the English flag universally respected. He compelled the Maltese knights and the Tuscan government to pay for the seizure of some English merchant vessels, and made the pope pay also for having allowed them to be sold in his ports. He awed the dey of Algiers into the surrender of all his English captives; and when the dey of Tunis refused to do the same, Blake burnt the pirate fleet under the guns of the town, destroyed the forts, and compelled the haughty barbarians to obey his orders. He did good service in blockading the port of Cadiz, when the Spanish war began; and his last and most daring enterprise was the destruc-

tion of the Spanish Treasure fleet and the fortifications at Santa Cruz in Teneriffe in 1657. Even the royalist English called this achievement 'miraculous.' Blake has been censured for rashness in attempting it, but his last and best biographer, Mr. Hepworth Dixon, has proved that the enterprise was as ably planned as it was heroically executed. This was Blake's final service to his country. He sickened as his victorious fleet returned to England, and he died during the very entrance of his ship into Plymouth Sound. It would be difficult to find a character more purely bright than Blake's. He was sincerely religious, and he was as honest and as generous as he was brave. His morals were stainless. His friendships and his domestic affections were warm; but they never betrayed him into weakness; and he sternly cashiered his own favorite brother who showed want of courage in command of a ship at Santa Cruz. Cromwell caused the great admiral to be buried with the highest pomp at Westminster; but on the restoration of the Stuarts, they heaped eternal infamy on themselves by outraging the mortal remains of the hero before whom they and their despotic friends on the thrones of Europe for so many years had trembled. The great admiral was at the age of sixty when he died in his country's service.

BLAKE, JOSEPH, a large proprietor in South Carolina towards the end of the seventeenth century. He was nephew of the renowned admiral Blake, and was governor of South Carolina for about one year before his death, which occurred in 1700

[Capture of the Reindeer by the Wasp.]

BLAKELEY, JOHNSTON, captain in the United States navy. In the war of 1812 he was in command of the Wasp. He fought two actions, one with the Reindeer in 1814, which he captured and burnt, the other with the Avon, which was saved by the approach of some other English vessels after she had struck to him. The Wasp with all on board probably foundered at sea shortly after, as no tidings was ever heard of her.

BLANCHELANDE, P. F., governor of St. Domingo, executed as a counter-revolutionist 1793.

BLANDE, RICHARD, an eminent citizen of Virginia, renowned for his able political writings, and exalted patriotism. For many years prior to the Revolution he was a leader in the House of Burgesses of Virginia, and in 1774 was a delegate to Congress. His chief production was an inquiry into the rights of the British colonies, published in 1766. He did much to help forward the Revolution, but old age prevented him from taking any very active part in that event when it occurred. When elected a second time to Congress in 1775, he was compelled to decline. He died in 1778.

BLAND, THEODORIC, colonel, an officer in the United States army during the Revolution. He was placed in command of Albemarle barracks in Virginia in 1779. The next year he was elected to Congress. He was afterwards a member of the legislature of his native State, Virginia, and also of the first Congress under the new constitution. He died at New York, June 1, 1790.

BLOOD, THOMAS, originally a col. in the army, notorious for his attempt on the regalia, died 1680.

BLOOMFIELD, ROBERT, an amiable man, and a pleasing descriptive poet, is chiefly remarkable as an

instance of the triumph of literary inclinations over external difficulties. He was born in 1766, at a village near Bury St. Edmund's, where his father, a tailor, left him an orphan in infancy, and the widow taught a little school. He was a journeyman shoemaker in London, when he wrote his pastoral poem, 'The Farmer's Boy.' This, the work of his that is most likely to live, was published in 1800, and attained an extraordinary popularity, well deserved in itself, and natural in the barrenness which then reigned in poetry. Among his subsequent volumes were 'Good Tidings, or News from the Farm,' and a collection of 'Rural Tales' and other pieces. His feeble health impeded efforts made to provide for him by persons of rank who took an interest in the self-taught poet; and after much distress and sickness, which in the end affected the mind as well as the body, he died at Shefford in Bedfordshire in 1823.

**BLOW, JOHN**, a composer of music, d. 1708.

**BLUCHER. GEBHART LEBRECHT VON BLUCHER** was born at Rostock in Mecklenburg-Schwerin in 1742. His family was ancient but poor. Young Blucher enlisted in a regiment of Swedish hussars at the age of fifteen, but soon afterwards he entered the army of Prussia, the country which he was destined to serve so ably. He was present in some of the battles of the seven years' war; and acquired a high reputation as a daring and resolute soldier, though his coarse and violent temper brought him into frequent difficulties, and impeded the rate of his promotion. He retired from the service in 1770, in anger at a supposed slight, but returned to it again in 1786, and when the wars of the French revolution commenced, Blucher was colonel of a regiment of Black Hussars. He commanded the left wing of the Duke of Brunswick's army in 1793, with great credit for skill as well as courage; and in 1806, in the second war between France and Prussia,

[Blucher.]

he was commander of the Prussian cavalry. After the disasters of Jena and Auerstadt, Blucher signalized himself by the ability of his retreat, and by his desperate resistance before he capitulated to his pursuers. From 1806 to 1813 Blucher lived in retirement, watching eagerly for Prussia's opportunity for rising against her French oppressors. This came after Napoleon's Russian campaign of 1812. Blucher was now seventy years old, but his spirit was as fiery as ever, and there was no general in the war of German liberation whom his countrymen followed with more enthusiasm, or who did more for the rescue of the fatherland. He commanded an army formed partly of Prussians and partly of Russians, which was called the army of Silesia. On Aug. 26, 1812, he routed and nearly destroyed the French army under Marshal Macdonald, at the Katzbach, a victory that redeemed the reverses of Lutzen and Bautzen. Blucher was by Napoleon's own confession, the keenest, the most indomitable, and the most formidable of the foes, who now drove the French back across the Rhine. No reverses disheartened him, no difficulties appalled him; and it was only when held back by the more cautious policy of other chiefs of the allies, that the veteran was ever heard to express displeasure or anxiety about the progress of the war. In 1814, when the allies entered France, Blucher was again the first and the fiercest among Napoleon's assailants. He had the advantage over him at Brienne; he was surprised and severely punished by the emperor at Montereau; but he was soon pressing forward again upon Paris, fought desperately at Craon, was victorious at Laon, and finally joined in the attack upon Paris on the 30th March, 1814, which caused the surrender of the French capital, and the end of the war. When Napoleon returned from Elba in 1815, Blucher commanded the Prussian army in Belgium, which in conjunction with the British army under Wellington, fought the campaign of Waterloo. Blucher's army was the first that the French emperor attacked; on the 16th of June the obstinate battle of Ligny took place, in which, as Blucher himself remarked, the Prussians lost the day, but not their honor. Though forced to retreat in consequence of this defeat, Blucher had his army rallied and ready for action again before twenty-four hours were over; and on the 18th he marched according to promise to aid Wellington at Waterloo. Blucher came on the field in force towards the evening of that ever-memorable day. He led

his columns on Napoleon's right flank and rear, with the intention of not only succoring the English, but of utterly crushing the French. His success is well known. Often repulsed, and at last fiercely charged in front by the duke's army, the French were unable to hold back Blucher on their right, and were swept from the field in irretrievable ruin. After that decisive battle Blucher advanced into France in conjunction with the duke, and a second time was present at the surrender of Paris. Blucher's fierce animosity against the French made him wish to storm their capital, and he expressed a purpose of shooting Napoleon himself on the very spot, in the ditch at Vincennes, where the Duke D'Enghien had been murdered. He yielded, however, though sullenly and reluctantly, to the sage advice of his English colleague. Blucher died in extreme old age at Kricblowitz, in Silesia, September 12, 1819. He was almost idolized by the Prussian nation, who justly looked on him as the saviour of the country. Blucher knew little of strategy, but he had the good sense to be aware of his own deficiency, and to follow in military plans and manoeuvres the able advices of General Gneisenau, to whom he always frankly expressed his obligation. Old 'Marshal Forwards' (as the soldiers loved to call Blucher) exercised an animating influence over his men, which was invaluable, amid the general prostration of spirit which the successes of the French before 1812 had created; and except Wellington, no man did more than Blucher towards the liberation of Europe from Buonaparte's military oppression. BLUM, J. CHR., a German lyric, 1739-1790.

BLUM, ROBERT, one of those active spirits raised to eminence by the revolutionary events of 1848. He had spent his early life in so much obscurity that little is known of him. He is said to have been born at Cologne in 1807, to have been a working jeweller travelling about after the manner of the young German handicraftsmen, and to have settled in Cologne in 1830, as box opener of the theatre. Afterwards he excited attention among the friends of advancement in Germany by his contributions to the press, and especially by his exposures of the ultramontane religious party in the affair of the holy coat of Treves. When the parliament of Frankfort was embodied in 1848, he represented Cologne, and became distinguished as the leader of the extreme revolution party. He had a rapid denunciatory eloquence, whence he was called the German O'Connell. He mixed himself up with the revolutionary movements at Vienna, and on their suppression was condemned by a court-martial to be shot on the 9th of November, 1848. The act was significant, as the beginning of the stern measures pursued by Austria against the liberal party in Germany.

BLUMAUER, L., a Ger. sat. poet, 1755-1798.

BLUMBERG, C. G., an Orien. schol., 1664-1735.

BLUMENBACH, JEAN FREDERIC, a celebrated comparative anatomist, physiologist, and naturalist, was born at Gotha in 1752. He died at Gottingen in 1840. Whilst still a child, the young Blumenbach exhibited a strong inclination for those pursuits which in after years rendered him so distinguished. He studied first at the university of Jena, then at Gottingen. At this latter place he succeeded in persuading the university to purchase a large collection of objects of natural history, philology, and ethnology, belonging to one of the professors. He was appointed curator of this museum, which he soon rendered famous by the extensive additions he made to it. Shortly afterwards he was elected professor of medicine in the university; an appointment which he

held for sixty years. During all this time he devoted himself with uninterrupted assiduity to the study of comparative anatomy, physiology, and natural history, especially his grand study, the natural history of man. He was the first to establish the division of the human race into five varieties, the Caucasian, Mongolian, Ethiopian, American and Malay. But the grand idea predominant in Blumenbach's mind, was the subject of the unity of the human species. To establish this he proved from anatomy and physiology that a wide interval, without connection, without transition, separates man from every other species of animal. He shows that not only no species of animal approaches him, no genus does, no family even. The human species is one, and one alone. His numerous works upon this subject, upon natural history, physiology, and comparative anatomy, have obtained for Blumenbach a world-wide reputation. He held highly responsible offices connected with his university and the town in which he lived. He maintained a correspondence with the most eminent philosophers of all countries; received all scientific persons who visited Gottingen, and was justly esteemed the patriarch of the university. The town of Gottingen owed most of its prosperity to him. Seventy-eight learned societies reckoned him amongst their members. Medals were struck in his honor. Each anniversary of his professorship was celebrated by fetes, and prizes were established in his name. Beloved by his pupils and townsmen, revered by his country, he closed a calm and peaceful life at the advanced age of eighty-eight. [W.B.]

BOCCACCIO, GIOVANNI, is illustrious as one of the three founders of the literature which arose, in the Italian language, in the course of the fourteenth century. Dante's extraordinary poems led the way; Boccaccio and Petrarch were the restorers of Greek learning to Italy, and thus the prompters of a new literary spirit; and while the latter of the two elaborated the beautiful language of Tuscany in its metrical shape, the former was the earliest writer of symmetrical and polished Italian prose.—Boccaccio was the natural son of a Florentine merchant and a Frenchwoman. He was born either at Florence or at Paris in 1313, was educated at Florence till his tenth year, and was then for six years the ap-

prentice of a merchant at Paris. But his inclination, always averse to commerce, and not less so to law, soon led him, in spite of his father's wish, to devote himself wholly to literary pursuits. His authorship began at Naples, when he was not far from his thirtieth year. His first noted production was the 'Filocopo,' an indifferent prose romance, in which he celebrated under fictitious names, his attachment to a natural daughter of king Robert. Much more meritorious was the 'Teseide,' a poem in the Italian 'Ottava rima,' of which measure Boccaccio is commonly believed to have been the inventor. In costume this work is a chivalrous romance, Theseus and the sons of Oedipus being invested with feudal manners and characters, and made the heroes of adventures wearing a romantic, not a classical air; but in regularity of design and purity of language, it was a mighty step beyond the rude effusions of the mediæval minstrelsy. It has interest for us, as having probably prompted the 'Knight's Tale' of Chaucer; while the story was also used by the poet Lidgate, and in a fine drama with which Shakespeare has been supposed to have had some concern. At Naples, likewise, about 1350, and on the suggestion (it is said) of Queen Joanna, was composed 'The Decameron,' the work on which Boccaccio's celebrity is most securely founded. There was to be found already, among the literary stores of the earlier middle ages, a vast stock of invented stories, which had arisen in northern France sooner than in any other European country, but had lately begun to be related in the Italian tongue. From those older sources, especially the French familiar tales called 'Fabliaux,' Boccaccio borrowed freely. The same section of the popular literature suggested to him the idea of connecting a number of separate stories by one leading thread. He represents a party of gay ladies and gentlemen as retiring from Florence to a villa in the neighboring hamlet of Fiesole, during the plague of 1348, and as amusing their leisure by the recital of the stories which make up the greater part of the book. It derives its name from the ten days during which the diversion lasted; and, ten tales being told each day, the number in all is a hundred. In point of style, the 'Decameron' is admittedly one of the masterpieces of the language in which it is written; it is admirable also for its grace and liveliness in narration. These qualities are, in many of the tales, debased by a lamentable grossness; but some others, such as the 'Griselda,' are not only morally fine and elevated, but seriously and pathetically interesting. The story of 'Giletta of Narbonne' was, indirectly, the original of 'All's Well that Ends Well;' and other pieces of the collection were imitated by Chaucer and by Dryden.—Not long after the composition of the 'Decameron,' Boccaccio came into possession of a considerable patrimony; and thenceforth his favorite occupations were the study of the Greek tongue and its literature, (then hardly known at all in Western Europe,) and the collection of manuscripts of the classical authors. Residing chiefly at Florence, he was employed on several public missions, which gave him opportunities for prosecuting those researches; and one of these made him acquainted with Petrarch, who was ever afterwards one of his dearest friends. About his forty-eighth year the exhortations of a Carthusian monk, strengthened by an alleged supernatural vision, inspired him with thoughts so serious, that he meditated retiring into a convent. The remonstrances of Petrarch diverted him from this step; but the impression which had been made produced a beneficial amendment in his views and con-

duct, and awoke much sorrow both for the excesses of his earlier life and for the licentiousness of the 'Decameron.' To those later years belong chiefly his works in Latin prose, which, though they were valuable as aids in the infancy of classical studies, are now curious only as monuments of the past. Some of his smaller Italian compositions likewise are unimportant. His last undertaking was the delivering of public comments on the great poem of Dante, in a lectureship to which he was appointed by the Florentine magistracy. The zeal with which he prepared himself for this task was said to have hastened the decay of his health. He died in Tuscany in 1375. [W.S.]

 BOEHM, W. A., a German divine, 1673–1732.  
 BOEHM, or BÖHMEN, JACOB, surnamed 'Teutonicus,' was born at Old Seidenburgh, a short distance from Gorlitz in Upper Lusatia, 1575. His parents being poor, he was employed in tending cattle from a very early age, and afterwards apprenticed to a shoemaker, a business which he continued to follow after his marriage in 1594. He had the good fortune, for one in his station at that period, to learn reading and writing at the village school, and this was all the education he received, the terms from the dead languages introduced into his writings, and what knowledge he had of alchemy or the other sciences, being acquired in his own rude way subsequently; chiefly, perhaps, from conversation with men of learning, or a little reading in the works of Paracelsus and Fludd. Whilst he was a herd boy, as the legend runs, he once retired to a little stony crag, known as the Land's Crown, and there discovered an opening through which he penetrated into a rocky enclosure, where he saw a great wooden vessel full of money, but was too much alarmed to take any of it, and when he returned with his companions they sought often and with diligence, but never found the entrance again. This circumstance made a deep impression on Boehmen, the rather as a stranger arrived there some years later, who was skilled in the finding out such magic treasures, and taking it away, did indeed enrich himself, but perished by

an infamous death, the treasure, it is said, having laid there under a curse to him who should ever become possessed of it. Another legend, which relates that a stranger, of a severe but friendly countenance, came to his master's shop while he was yet an apprentice, and warned him of the great work to which God should appoint him, exhibits the singular faith of Boehmen in the Divine guidance; and the religious habits in which he was thus encouraged soon rendered him as conspicuous among his profane fellow-townsmen, as his humility and love of peace among the arrogant clergy, by whom he was afterwards persecuted. His study of the Sacred Scriptures had been constant and profound, but more especially, if we may judge from the spirit of his theological system, of the Apocalypse and the writings of Paul. His letters manifest the deep earnestness of his convictions, and the sincerity with which he represented himself as the subject of Divine inspiration. 'Art,' he says, 'hath not written here, neither was there any time to consider how to set it punctually down according to the right understanding of the words, but all was ordered according to the direction of the Spirit, which often went in haste; so that in many words letters may be wanting, and in some places a capital letter for a word; for the penman's hand, by reason he was not accustomed to it, did often shake; and though I could have written in a more accurate, fair, and plain manner, yet the reason was this, that the burning fire did often force forward with speed, and the hand and pen must hasten directly after it, for it cometh and goeth as a sudden shower.' 'I, indeed,' he continues, 'can write nothing of myself, but as a child which neither knoweth nor understandeth any thing, which neither hath ever been taught, but only that which the Lord vouchsafeth to know in me.' The genuineness of his humility, often expressed in this or similar language by Jacob Boehmen, and the simplicity of his faith, cannot be doubted by those who have examined his works, any more than the fine religious thoughts, and the depth of mystic wisdom contained in them. The first of these was called the 'Aurora,' or 'Morning Redness,' and was written after he had been for seven days together, as he expresses it, 'environed with the Divine light;' so that he discerned all things in their inward essences, as explained subsequently in his 'Signatura Rerum,' or corresponding forms of things. Experiences of this kind, indeed, were repeated over a period of twelve years, before he was driven to embody his apprehensions in external writing, and when he did so, his MS. was handed about among those who chose to borrow it, until the clergy and town council interfered, and finally, not only proscribed his writings and prophecies, but poor Boehmen himself, who was constrained to depart for Dresden; a catastrophe which will be better understood when it is known that many passages in his writings are as red thunderbolts launched against oppression and sham religion. The space to which we are limited renders it impossible to give even an outline of his system, but we may observe generally, that it contains the first principles of Oriental metaphysics, as delivered by the ancient sages, and contained in the fragments of their philosophy, and that its brilliant lights and definite outlines only fade away into vacuity, where they ought to be brought down into the physical nature of things. This defect prevented him from acquiring the world wide fame of Newton, who applied the principles demonstrably contained in the writings of Jacob Boehmen to the planetary system; and the same deficiency has

ever prevented the poor uninstructed seer of Gorlitz from ranking with the philosophers, or indeed with the no-philosophers of whom any thing intelligible can be reported, down to the present time. The key to all his works, perhaps, is contained in the right understanding of the seven universal properties, three of which are hidden under fire, and three manifested; the fire, or Spirit, being as the magnetic blaze which brings the first three into the last; next to which may be the study of fire in ten forms, beginning with the eternal liberty, or silent tranquillity of God without nature: and after this the three principles—darkness, light, and generation. The greatest master of Boehmen's philosophy was a German named Frere, some of whose manuscripts are in the British Museum, and through whom and his acquaintance with the family of Dr. Francis Lee, William Law derived his knowledge, as well as the diagrams by which the principles are in some measure illustrated. As an apostle of religion he has had followers in all parts of Europe, but as he never sought to establish a sect in his lifetime so all efforts of this kind have failed since, and we must look for the real proceeds of his influence in such movements as those of Primitive Wesleyanism and the Moravian Brethren; add to which the most intelligent of the later mystics, followers of Law and Boehmen, accepted the revelations of Swedenborg. Boehmen died happily on Sunday, November 18, 1624. Early in the morning he called his son and asked him if he heard that excellent music, and on his replying in the negative, directed him to open the door that he might hear it the better. Asking afterwards what the clock had struck, he was told 'two,' upon which he remarked that his time was yet 'three hours hence.' When it was near six he took leave of his wife and son, blessed them, and said, 'Now I go hence into paradise!' He then bade his son turn him, and with a deep peaceful sigh, his spirit departed. BOERHAAVE, HERMAN, physician, the pupil of Pitcairn. He was the son of the parish clergyman, and b. 1778, at Vorhout, near Leyden, d. 1738. Boerhaave presents a striking example of the successful results of the proper exercise of talent, integrity, and industry. Without friends, and left an orphan when a boy, he became one of the most popular physicians and teachers in Europe, and by the soundness of his views, and good sense, contributed to elevate the profession to which he belonged from the degraded and empirical condition in which it was previously involved. Living at a time when all natural studies together did not embrace so much as one science in the present day, it is not to be expected that any of his labors should now survive. But learned in the knowledge of the medicine, chemistry, and botany of his time, he must be viewed as one of the dispellers of mysticism, and founders of a great fabric which the revolutions of centuries cannot even perfect, while to his successors must be left the duty of recognizing the efforts of such true creators of science. His works were the 'Institutions of Medicine,' 'Diagnostic and Curative Aphorisms,' a 'System of Chemistry,' and a small work on *Materia Medica*. His memory is still ardently cherished in the university of Leyden, and in the Botanic Garden, where some relics of the great physician are still extant; while a portrait of him adorns one of the halls. Boerhaave was a successful practitioner, as he is said to have left upwards of £200,000.

**BOETHIUS, ANICIUS MANLIUS TORQUATUS SEVERINUS**, was born at Rome of a rich and noble family about 470. The first eighteen years of the orphan were spent in diligent study at Athens, and he returned to Rome a young man of unequalled intellectual accomplishment. Soon after he entered the senate as a member of the patrician order, and under Theodoric, king of the Goths, obtained high preferment. Boëthius had been consul in 487 under Odoacer, king of the Heruli, and in the eighteenth year of Theodoric he was elevated a second time to the same dignity. His domestic life was one of undisturbed felicity, and his prosperity had also been crowned by seeing his two sons advanced to consular rank. But a sudden and fatal reverse overtook him, and after more than twenty years of faithful service, he was, during the period of his third consulship, accused of treasonable correspondence, condemned and banished to Pavia, where after more than a year's imprisonment, he was by royal mandate beheaded in prison, October 23, 526. It is said to have been a vindication of the doctrine of the Trinity, that stirred the Arian prejudices of Theodoric and his courtiers against the orthodox philosopher and patriotic statesman. His most famous work, '*De Consolatione Philosophiæ*,' was composed during his last year's confinement at Pavia. It has both prosaic and poetical chapters, and dialogues in its five books; and philosophy personified adduces comfort to the prisoner, not from Scripture, but from Plato, Aristotle, and Zeno. His other works are numerous, and on a vast variety of subjects. He translated Plato and Euclid,—his special favorites,—commented on Aristotle, Cicero, and Porphyry, published versions of Ptolemy and Archimedes, and wrote on music, rhetoric, mathematics, metaphysics, and theology. It is hard to say whether Boëthius was a Christian at all in the proper sense of the term. His pure theism, his ideas of prayer, and his trust in a Divine Providence, appear to have been borrowed from those opinions with which Christianity was leavening indirectly so many classes of society, who did not formally enter the communion of the church. His works were published with notes at Basle, folio, 1570. [J.E.]

**BOILEAU-DESPREAUX, NICOLAS**, born in 1636, was the son of an officer of the parliament of Paris, and belonged by descent and connections to a family of lawyers. While his two elder brothers were precocious in youth, Nicolas was slow as well as sickly; and he, the future satirist, was described by his father as a good-natured boy, who would never speak

[Boileau's House at Auteuil.]

ill of any one. He was a diligent student, but showed little either of invention or of ambition; although, mistaking his vocation as others then mistook it, he wrote a boyish tragedy. At the age of twenty-one he was admitted as an advocate; but his neglect and dislike of professional pursuits scandalized his relations. He was allowed for a time to contemplate the clerical profession, and held for some years a sinecure benefice; which, however, on determining not to take orders, he resigned, refunding also all the profits.—He now betook himself wholly to letters; and, beginning in 1666 his series of *Satires* in verse, which at length amounted to twelve, he was at once hailed as a valuable contributor to a literature, in which Corneille, though in the full career of his genius, was as yet appreciated but by few, while Molière was only beginning to write. French versification, and French style, alike took a new and finer shape in his hands. The didactic kind of poetry to which he had devoted himself, was cultivated with a success still more brilliant in his series of *Epistles*. Even now, if his French admirers hesitate in asserting that the *Satires* come up to the nice perfection of their Horatian models, they extol the *Epistles* as decidedly superior to those of Horace. Boileau seemed to have determined on furnishing materials for completing the parallel. Besides a few odes and other small pieces, which are confessedly poor, he again measured lances with the Roman poet, by publishing in 1673 his '*Art Poétique*,' a poem in four cantos. In the course of that year appeared the first four cantos (increased afterwards by two indifferent ones) of '*Le Lutrin*,' a mock-heroic poem. It celebrates a contest as to the placing of a pulpit, which broke out among the canons of the Chapel of Saint Louis, attached to the Palais de Justice.—He was now high in favor at court, and received, with Racine, a joint appointment as historiographer of Louis XIV. He had, long since, been universally acknowledged by the public voice as one of the most distinguished among those men of genius whose writings adorned the Augustan age of France. He lived in cordial intimacy with most of those military men who belonged to the first rank, such as Racine, Molière, and La Fontaine; and he was really both a prudent and modest man, and a kindly one, and even exhibited frequently an honorable liberality and generosity. But he had been and was, merciless to the smaller citizens of the republic of letters; and many enemies were necessarily made by a man who often, by one epigrammatic couplet, was able to destroy the reputation and

the livelihood of a poor dramatist or romance-writer. Accordingly Boileau was not received into the Academy till 1684; and then only in obedience to a significant hint from the throne. The latter years of his life were embittered by much sickness and infirmity; and he died of dropsy in 1711, bequeathing almost all his property to the poor.—The principal works of Boileau have already been named. They place him as one of the members of a literary triumvirate, to which belong, with him, Horace and Pope. While none of the three is a poet of the highest class, the distinctive elements of poetry are very much more scanty in the French critic and versifier than in either of the others. Pope owed much to him, receiving many hints, and not unfrequently translating from him literally; and in the art of terse and striking expression, Pope, successful as he is, can scarcely be pronounced equal to his model. Pope's juvenile 'Essay on Criticism' is by no means so masterly as the 'Art Poétique;' but 'The Rape of the Lock,' if it wants that air of comic verisimilitude, which is so striking in the 'Lutrin,' rises far above it through its supernatural and other imaginative ornaments, to which nothing similar is presented by the French poet, or could have been invented by his timid and sluggish fancy. BOLEYN, ANNE, q. of Henry VIII., 1507–1536.

BOLINGBROKE, HENRY ST. JOHN, Lord, an orator, statesman, and philosophical essayist, was born at his father's seat at Battersea, on 1st Oct., 1678. His family was divided between the two great contending parties of the 17th century, and it so happened that the high tory statesman and sceptical philosopher was educated by a presbyterian grandmother, under the influence of Daniel Burgess, the dissenting divine. Little is known of his early education. In 1770 he married Frances, the daughter of Sir Henry Winchcomb, but there was little happiness in the match, or cordiality between them, for young St. John's habits called for more than the average amount of marital liberality. He made himself renowned for the extent

[Lord Bolingbroke.]

of his dissipation in a very dissipated age. Entering parliament in 1701, he began his political career. His model was Alcibiades, and he was ambitious of showing that the pursuit of pleasure and of political ambition might be united in the character of one possessed of his brilliant attainments. In an age when statesmen were liable to little responsibility, he in a great measure succeeded. With his friend Harley he joined the ranks of the Whigs, and changing with him became his colleague in the celebrated Tory ministry, which in 1710 owed its existence to the triumph of Abigail Hill over the duchess of Marlborough. His bold unscrupulous temper made him the ruling spirit in a government now condemned by all parties for its recklessness. Ere its extinction, however, by the death of Queen Anne, a rivalry between St. John and Harley had ripened to a deadly animosity and struggle for ascendancy. In 1712 St. John was raised to the peerage as Viscount Bolingbroke. It is remarkable that none of the speeches delivered by him in either House have been preserved. Their absence makes a gap in British senatorial oratory. They are reputed to have been very brilliant, and his published works have a full sententiousness much better adapted to oratory than to

[Dawley, Seat of Bolingbroke.]

literature. There has always been a great question whether Bolingbroke was one of those who were plotting for the restoration of the exiled house on the death of Queen Anne, and the light which has been thrown on the mystery in later times, leaves little

doubt of his guilt. He immediately felt, along with his colleagues, that he must count on the hostility of the new government. For some time he seemed to court and brave investigation, but on the 25th of March, 1715, following up well-laid arrangements he escaped secretly to France. He was attainted on impeachment, and justified the condemnation by entering the service of the Pretender. He was soon disgusted with this trifling narrow political arena, and showed extreme anxiety to be reinstated at home. He received permission to return, and by special statute his property was restored, but Walpole would not give so dangerous an enemy the means of attacking him in debate, and his attainder was not reversed so as to restore him to his seat in the Lords. He occupied himself in writing bitter pamphlets and other works against the government. He had taken for a second wife the Marquise de Vilette, whose social and religious views seem to have been adapted to his taste. He died on 15th December, 1751. His works on mental philosophy, and the foundations of belief, received with a cry of execration, but now little read, were published after his death. [J.H.B.]

**BOLIVAR.** SIMON BOLIVAR was born in 1783 at Caraccas in Venezuela in South America. He was educated in Europe, and returned to America in 1809; holding the rank of lieutenant-colonel in the Spanish service. When the revolutionary movements commenced, by which the Spanish provinces in America sought to establish their independence, Bolivar took an active part in them, and in 1813 he was at the head of the army which liberated the greater part of Venezuela from the government of Spain. He was driven out of Venezuela in the following year by the Spanish troops, but (after one unsuccessful attempt) he forced his way back in 1817, at the head of a force which he had collected at St. Domingo, and recommenced the war of liberation. In 1821 Venezuela and New Granada were freed from Spain, and these two provinces were united into a republic, called Colombia, of which Bolivar was president. Bolivar next took an active part in aiding in the liberation of Peru, and was made dictator of that country in 1822, an office which he resigned when Peru was completely liberated by the victory of Ayachrecho on 9th December, 1824. The inhabitants of Upper Peru formed their country into a separate republic, which they named Bolivia in honor of Bolivar. Bolivar's desire seems to have been to unite all the liberated provinces of South America in one federal republic, but his latter years were passed amid incessant tumults of faction, and frequent outbreaks of civil war, and he died at last broken in health and spirits on the 17th December, 1830. He had previously resigned his presidency of Colombia, and taken leave of the inhabitants of that state in an address, in which he solemnly asserted the purity of his motives throughout his career, and complained bitterly of calumny and ingratitude. Amid the conflicting and obscure accounts of the South American wars of independence, it is difficult to judge correctly on many points as to which the character of Bolivar has been called in question. But his bravery, his energy, and the services which he rendered against the Spaniards are undeniable. Nor should we lightly credit charges of selfish ambition, of cruelty, and perfidy against a man, who unquestionably devoted his own ample fortune, as well as his time and life, to his country; who more than once voluntarily laid down absolute power; who abhorred slavery, and set the example of emancipating the numerous slaves on his own estate; and who entertained the most liberal and enlightened views as

a lawgiver, and as an earnest promoter of national education. [E.S.C.]

**BOLLAN, WILLIAM**, was sent as agent from the Colony of Massachusetts to Great Britain, to obtain indemnity for the expenses incurred in the expedition against Cape Breton. He succeeded in his undertaking, and returned in 1748 with \$800,000. For three years' arduous service he received no remuneration, when the inadequate sum of \$6000 was voted him, for which he had to wait seven years. He was a second time sent to England, but becoming unpopular was superseded. His reputation in the colony was, however, soon restored by his sending home a large collection of the letters of Gov. Bernard revealing the policy and intentions of the British Government, which he was permitted to copy by Alderman Beckford. He was accused of disloyalty in the British parliament and lauded for patriotism in America. He was an able writer, and author of a great many political tracts, many of which may be found in the Massachusetts historical collections. He died in England in 1776, having vainly attempted to reconcile Great Britain and her Colonies.

 BOONE, DANIEL. This extraordinary man, whose adventures as a pioneer in the American wilderness have given him the world-wide reputation of a hero of romance, was born in Pennsylvania or Virginia about 1730, though brought up in N. Carolina. His passion for roaming in the forest was kindled by his early adventurous life as a huntsman, but it was not until he was nearly 40 years old, that he entered on the career of explorations which has rendered him celebrated. Leaving his family in North Carolina, he traversed, in company with his brother and a few other companions, the interior of Kentucky as far as the Cumberland River, between the years 1769 and 1771. In this expedition he was captured by the Indians, but escaped. An enthusiastic admirer of the beauties of nature, the wilderness had greater attractions for him than civilized life, and selling his farm, two years after his return, he took his family with him, and accompanied by a few others of kindred disposition, he struck into the wilderness. His life for many years was a long warfare with the Indians and French, in the course of which his two sons and his brother were killed, and he himself long detained in captivity. His escapes were many and hair-breadth. On one occasion he was hunted by dogs, on another with only fifty men he defended himself in a rude fort against upwards of 450 men under Capt. Dugnesne, who returned with the loss of 37 men, leaving, as Boone asserted, 125 pounds of bullets on the ground besides what lodged in the fort. Though himself ever contending with barbarism, civilization followed in his footsteps, and he endured his privations with the devotion of a fatalist, who regarded himself as an instrument in the hands of Providence. Worldly prudence was however not among his qualities, and others reaped the advantages of his exertions. After 17 years of hardship he discovered, too late, that he had not secured a legal title to his property in Kentucky, which he entered a wilderness and left with a population of half a million, and with execrations upon the dis-

honesty and ingratitude of his countrymen, but an unabated spirit of adventure, he betook himself to the yet unexplored regions of the Missouri. Highly respected for his integrity, honor, and amiability, admired for his ability and daring, and pitied for his misfortunes, Congress made him a grant in the latter years of his life. He died at the age of 90 in the year 1820—retaining his habits as a hunter almost to the last, and when his feeble limbs would no more serve him, still delighting to sit in the open air with his tried rifle in his hand and his faithful dog by his side, gazing on the forest.

 BOSCOVICH, ROGER JOSEPH, a learned and profound Jesuit; born at Ragusa in 1711; died at Milan in 1787. The writings of Boscovich are numerous

and important. His dissertations on 'Vires Vivæ,' on 'Light,' and on the 'Solar Spots,' gave their author highest rank amongst the physical philosophers and astronomers of the time. He grasped the great conceptions of Newton, and did much to hasten the general acceptance of the theory of gravitation; but his chief claim on the attention of posterity, rests on the speculations in his 'Theoria Philosophicæ Naturalis'—speculations which touch on one side, the afterwards celebrated hypothesis of *monads*, and seem to point towards a physical scheme of Idealism. According to Boscovich the ultimate elements of matter are atoms, or *points* indivisible and without extension. Each atom, or point, being surrounded by numerous concentric rings of influence—alternately of attraction and repulsion—one atom may exist towards any other in various relations, determined by their distance from each other. For instance, the two atoms may be within the sphere of each other's attraction—*then* is the body *solid*; or the two atoms may be within the sphere of mutual repulsion,—*then* is the body *gaseous* and *elastic*; or two atoms may be so placed that they neither repel nor attract, being on the line of indifference,—*then* is the body *liquid*. Gravitation or universal attraction, is, according to this view, the relation which atoms bear to each other after they have passed beyond the smaller or molecular distances; while the phenomena of physics and chemistry depend upon and rise out of their various and varying relations while they are within these infinitesimal or molecular distances. This singular and probably far from inaccurate conception, destroys the common notion that matter is *brute* and *inert*; and represents the phenomena of Nature as the immediate issue of Active Forces;—a view which the progress of modern science unquestionably favors.

BOSSUET, JAMES BENIGNE, a celebrated French divine, was born in 1627, at Dijon, the capital of Burgundy, now in the department of Cote D'Or. Having commenced his education at the college of Jesuits in his native place, he removed in 1642 to Paris, where being destined for the clerical profession, he prosecuted the requisite studies at the college of Navarre. He was distinguished by his attainments in classical and patristic lore—two branches of knowledge which are deemed of indispensable importance in the Roman Catholic church; but to these he added also an extensive and familiar acquaintance with the Sacred Writings, the perusal of which, in a stray copy which chanced to fall into his possession, made a deep and indelible impression on his juvenile mind. At the age of sixteen he began by occasional exhibitions, to evince his extraordinary powers of pulpit eloquence; and having, on his becoming duly qualified for the discharge of the sacred functions, been appointed to the church of Metz, first as canon, and successively as archdeacon and deacon, he there established his reputation as one of the most eminent preachers in France. An invitation to Paris was ere long the result of his high provincial fame; and having by his preaching before the court won the favor of Louis XIV., he was intrusted with the superintendence of the dauphin's education. It was for the benefit of his royal pupil that he composed his abridged view of 'Universal History,' one of the most

admired and valuable of his works. On the completion of the prince's studies, he was rewarded for his zeal and fidelity in the discharge of that responsible duty, by promotion to the see of Meaux, and soon after was appointed a counsellor of state, and almoner to the duchess of Burgundy. That elevated position he adorned by the splendor of his talents and the extent of his learning; nor was he less distinguished by his zeal for the diffusion of religion throughout his diocese, and his energetic defences of the catholic church. In fact, his life was divided between the performance of his proper duties as a bishop, and the composition of his controversial works. The strength and sincerity of his religious convictions have never been assailed, any more than his eminent talents and learning have been called in question. But the violence of his temper, and the cavalier treatment he gave to the amiable Fenelon, have exposed him to severe and merited censure. The latter years of his life were passed in retirement. He was a voluminous author. Amongst the numerous works he left behind him, his 'Funeral Orations' are held in high admiration, although it is to be regretted that he often prostituted his great powers of oratory in eulogizing unworthy characters. His efforts in the protestant controversy were met by the energetic opposition of Claude and other divines among the French protestants, as well as of Archbishop Wake in the Church of England. This great genius died at Paris on 12th April, 1704, in the seventy-sixth year of his age.

His signature is attached to the treaty of peace with England. He was again elected to Congress in 1789. From 1796 to 1805 he was director of the United States mint. In 1816 he gave \$10,000 to the American Bible Society of which he was elected first President. He was a great benefactor of Princeton College. At his death he bequeathed the bulk of his large property for religious, educational and charitable purposes. He employed his pen principally in the cause of religion. Regarding the Indians as the lost tribes, he wrote a treatise on the subject, 1816.

BOUFFLERS, LOUIS FR., Duc De, disting. as the defen. of Lille ag. Prince Eugene, 1644-1711.

BOUFFLERS, S., a French emigrant, d. 1815.

BOUGAINVILLE, LOUIS ANTOIN DE, was born at Paris, 11th November, 1729, and though educated for the profession of law, joined the army at an early age. Soon after his enlistment, he published a treatise on the Integral Calculus; and during a residence in London as secretary of legation, he was elected a fellow of the Royal Society. In the war which terminated in 1760 with the loss of Canada to the French, Bougainville gained great distinction. In 1763-64 he performed two voyages to the Falkland isles, where he founded a colony, himself being the first projector, and a large proprietor jointly with the merchants of St. Malo. In 1766 this colony was given up to Spain on payment of 500,000 crowns; and Bougainville was sent out, 15th November, to make the formal transfer, and with instructions thereafter to complete the circumnavigation of the globe. He had but two ships, the Boudouse, 26 guns, 214 men, and the Etoile, store ship. He safely accomplished the object, visiting many islands in the intertropical Pacific, some of which were till then unknown, but without making any remarkable discoveries, and reaching St. Malo on 16th March, 1769. He was accompanied by Prince Sieghen of Nassau, and the naturalist Commerçon. Bougainville published a pleasing account of his voyage, which was translated by Forster in 1772. He afterwards commanded one of the ships of war, sent to aid the Americans in their great struggle with Britain. He died at the age of eighty-two, 31st August, 1811. [J.B.]

BOUGAINVILLE, JEAN PIERRE DE, elder brother of the above, was a literary man of some note, and held several important offices in Paris. One of his poems is said to contain the germ of Pope's 'Universal Prayer.' He died in 1763, at the early age of forty-one. [J.B.]

BOULAYDE LA MEURTHE, A. C. J., Comte De, distinguished as a moderate republican, and also as a political writer and orator, was born 1761, appointed to the civil tribunal at Nanci, 1793, and to the council of 500 in the year 1795. He took an active part in the revolution of the 18th Brumaire, and was remarkable for his fidelity to Napoleon, whom he regarded as the representative of national independence, and of the principles of the revolution. He was proscribed by the Bourbons at the second restoration, and passed some years in exile, when he wrote his 'Tableau Politique des règnes de Charles II. et de Jacques II.,' containing his review of the causes which led to the establishment of the English republic in 1649. Buonaparte made honorable mention of him at St. Helen, as a fearless and honest man. The last years of his life were passed tranquilly in the midst of his family. [E.R.]

BOURBOTTE, N., one of those remarkable characters raised to an unenviable notoriety by the French revolution, whose intrepid bearing might be mistaken for heroism, if its fire were not darkened by savage cruelty and ambition without principle.

Little is known of his early life, but he was about twenty-seven years of age when deputed to the national convention, 1792, as a member of the Jacobin party. He now signalized himself by voting for the death of the king 'sans appel et sans sursis,' (without appeal and without delay,) and afterwards of the unhappy Marie Antoinette. Commissioned to La Vendée by the national convention, he gave evident proofs of his military courage and administrative talent, but committed excesses which led to his recall and accusation by the Committee of Public Safety. He had the good fortune to be acquitted, and was subsequently appointed to the army of the Rhine, where he again manifested his soldier-like qualities, tarnished by the same faults. In 1794 he commanded openly in the insurrection which overthrew the power of Robespierre, and was on the high road to the dictatorship when he and his colleagues were crushed by Legendre at the head of the sectional forces. Condemned by the revolutionary tribunal, he stabbed himself with a dagger, but survived to see his fellow-prisoners beheaded, and to undergo the same fate. He retained his courageous self-possession to the last moment, and manifested in his dying words the unconquerable spirit which animated him. [E.R.]

BOURDON, LEONARD JOHN JOSEPH, a member of the French convention in 1792, is chiefly memorable for the interest he took in national education, and for his part in the denunciation and arrest of Robespierre, on which occasion he shared the command of the national guard with Barras. He was also charged with the translation of the remains of Marat to the Pantheon, and directed the ceremonies of their entombment. When his party was defeated by Legendre, Bourbon was denounced as an assassin, and met the charge by heading a conspiracy which broke out 1st April, 1795, and led to his imprisonment at Ham. Restored to liberty by the amnesty of October in the same year, he afterwards appeared in the council of 500, only to hear the same accusation repeated, this time by Boissy D'Anglas. The charge was not pressed against him in legal form, and Bourdon was subsequently appointed agent for the directory at Hamburgh. Though a violent Jacobin, it is by no means clear that he was the sanguinary monster sometimes represented. He died a natural death as master of a primary school in Paris, some years after the re-establishment of authority by Buonaparte. [E.R.]

BOURDON, FRANCIS LOUIS, one of the most sanguinary members of the convention in 1792, obtained his seat, by favor of Leonard Bourdon, who had been elected for two departments, and allowed his namesake, though not related to him, to usurp one of them. He was notorious for the atrocity of his imprecations in the convention, always securing his own safety by attaching himself to the strongest side. He was among the fifty-three deputies condemned to transportation on the 19th Fructidor, (5th Sept., 1797,) and died soon after his arrival at Cayenne. [E.R.]

BOURDON, SEBASTIAN, a Fr. painter, d. 1671.

BOURDONNAISE, B. F. M. DE LA, a French naval officer, gov. of the Isle of France, 1699-1755.

BOURGEOIS, D., a Fr. mechanic, 1698-1781.

BOURGEOIS, SIR F., a painter, 1756-1811.

BOURGET, JOHN, a Fr. antiquary, 1724-1775.

BOURGOING, JOHN FR., Baron De, a French historian, ambassador of the republic, 1748-1811.

BOURIGNON, F. M., a Fr. antiq., 1755-1796.

BOURIGNON, ANTONIA, born at Lille, 1616, is remarkable for her claims to illumination, and her singular history, the former supported by a body of followers who were once numerous in France and Scotland. She was unhappy in her parentage and education, her mother having conceived an aversion for her, and treated her with severity, from her earliest years, chiefly, it is supposed, on account of her uncomely appearance, but at last, perhaps, in revenge of the perverse temper which she had herself excited. As the poor girl advanced in years with no one to love or care for her, she gave her mind to the study of mystic theology, and acquired a morbid conviction of the duty of self-mortification, which she carried to the utmost extreme that her frame was capable of sustaining; at the same time refusing to confess herself to the priests, and declaring that she was guided by the immediate Spirit of God, vouchsafed in answer to her prayers and sufferings. In 1653, when the death of her parents had placed her in possession of a handsome property, she undertook the care of a female orphan asylum, which led, through a series of the strangest circumstances on record, to her arrest on a charge of witchcraft, of which, however, she was acquitted. Wisely avoiding any further entanglement in affairs of this nature, she now busied herself in the diffusion of her principles through the press, and it may here be remarked, that she wrote with great facility in the French, Dutch, and German languages. The opposition of the authorities exposed her to continual vexation and insult, so that her life now, as in childhood, was one of perpetual trial; and still more aggravated by the fatal gift of a preternatural genius which no one knew how to compassionate or control. In her case, as in many others of a similar nature, we have to lament a nobly endowed mind sacrificed in a just revolt against a priest-made religion, for want of the guidance which only the Word of God, accepted in sincerity of heart, and consulted with the utmost simplicity of purpose, can afford. Her principal works are a treatise on 'The Blindness of Man, and Light Born in Darkness,' 'The New Heaven,' 'The Renewal of the Evangelic Spirit,' a 'Treatise on Solid Virtue,' and the 'Truth Discovered.' The substance of all her writings has been formed into a system by the celebrated Poiret, in his work entitled 'Economie de la Nature,' contained in 21 vols. 8vo. She died at Franeker, East Friesland, after passing the last years of her life in ministering to the poor. [E.R.]

BOURMONT, LOUIS AUGUSTE VICTOR, Count, a French marshal and royalist, minister of war under Charles X., and previously the chief instrument in Ney's condemnation, 1773-1846.

BOURNE, RICHARD, missionary among the Indians of New England from about the year 1658 to 1685. During the last fifteen years of his life he officiated at Marshpee, of which place he was pastor. He did much to promote the temporal as well as spiritual interests of the Indians, and after his death, his son, though not a missionary, continued to act as their counsellor and benefactor. His name was Shearjashub. The Bourne family long resided at Marshpee and attained wealth and eminence. Ezra Bourne, grandson of Richard, was chief-justice of common pleas, and Joseph Bourne, a great-grandson, graduated at Harvard in 1822, and acted as missionary at Marshpee from 1729 to 1742.

BOURNE, VINCENT, a Latin poet, died 1747.

BOURRIENNE, L. A. FAUVELET DE, a French diplomatist, the schoolfellow, and afterwards the secretary of Napoleon, au. of 'Memoirs,' 1769-1824.

BOURSAULT, EDW., a Fr. dramat., 1638-1701.

BOUTERWECK, F., a Ger. philo., 1766-1828.

BOWDEN, JOHN, D.D., a clergyman of the Episcopal church, rector of Norwalk, Conn., and professor of *Belles Lettres* and moral philosophy in Columbia College, New York. In 1808 he published a series of letters addressed to Dr. Miller on the apostolic origin of episcopacy. He was elected Bishop of Connecticut, but on his declining the office Mr. Jarvis was elevated to it. He died in 1817 in the sixty-fifth year of his age.

BOWDICH, TH. EDW., an English naturalist and traveller in the service of the African Company, 1790-1824.

[Nathaniel Bowditch.]

BOWDITCH, NATHANIEL, LL.D., was born at Salem, Massachusetts, March 26th, 1773. His ancestors, for three generations, had been shipmasters, and his father, on retiring from the sea, carried on the trade of a cooper, by which he gained a scanty subsistence for a family of seven children. He enjoyed the benefit of school instruction only till his tenth year, when his assistance was required in his father's shop. At twelve he was apprenticed to a ship-chandler. In 1795 he first went to sea. Such was his ardor for mathematical study, that he had taught himself the Latin language for the purpose, and actually read the *Principia* of Newton. He made five long voyages: the first in the capacity of captain's clerk, the next three as supercargo, and the fifth as master and supercargo. It was on his return from the last of these, on the 25th of December, 1803, that he found his way into Salem harbor, in a dark and snowy night, with no other assistance than his own reckoning, and a single glimpse of the light on Baker's Island. In 1799 he was elected a member of the American Academy of Arts and Sciences, and in 1802 received from Harvard University the degree of Master of Arts. He married in 1798, and lost his wife in October of the same year. In 1800 he married a second time. With the second Mrs. Bowditch he lived 33 years, and had a numerous family of children. In 1800 he published his '*Practical Navigator*,' so well known and extensively used in our mercantile marine. From 1804 to 1823 he was president of an insurance company at Salem. He then went to Boston to take charge of the Massachusetts Hospital Life Insurance Company, which under his auspices also became a Trust Company, and was managed with signal ability and success. Dr. Bowditch's great attainments in mathematics had become so well known in the country that he

was offered at different times the office of professor in Harvard University, the University of Virginia, and the Military Academy at West Point. He contributed many valuable articles to the *Transactions* of the American Academy of Arts and Sciences, *Rees' Cyclopædia*, the *North American Review*, and other scientific periodicals. His reputation as a profound mathematician and astronomer, rests chiefly on a translation, accompanied by an elaborate commentary, of the '*Mécanique Celeste*' of Laplace, in four large quarto volumes. Dr. Bowditch's additions to the original work are so extensive and important as to entitle him to be ranked in the first class of writers on the higher mathematics.

The degree of LL.D. was conferred on him by Harvard University in 1816, and he was elected a member of the Royal Societies of London, Edinburgh and Dublin, of the American Philosophical Society, the Astronomical Society of London, the Academy of Sciences at Berlin, &c. He died at Boston, on the 16th of March, 1838. Dr. Vethake, from whose notice of him in the *Encyclopædia Americana* the above is condensed, says that 'Dr. Bowditch was not only a profound mathematician and a skillful man of business, but in despite the defects of his early education was imbued with a taste for elegant literature, and was a very general reader;—that he had acquired an acquaintance with several languages, ancient and modern;—that he passed through life with a high sense of religious and moral obligation, and was beloved and respected by all who had intercourse with him.'

[Early Residence of Dr. Bowditch.]

BOWDOIN, JAMES, LL.D., governor of Massachusetts, a descendant of Pierre Baudouin, who fled from France on the revocation of the Edict of Nantes, was born at Boston in 1727 and graduated at Harvard in 1745. By the death of his father two years after, he came in possession of an immense fortune. His wealth and leisure he devoted to literary and scientific pursuits. He was elected in 1753 a representative from Boston to the general court, and in 1756 was made a member of the council. Being opposed to the arbitrary measures of Governor Bernard, the latter put his veto on his election in 1769; but he was re-elected the subsequent year, and Hutchinson who had then succeeded Bernard made no opposition, as he thought he would be less dangerous to British interests at the council than in the legislature. After representing Massachusetts in the first Congress, he was in 1755 chosen president of the council, in which office he continued till 1780. In 1785 he was elected governor of Massachusetts. Shay's rebellion occurred during his administration. He was succeeded by Hancock as governor in 1787. Harvard University enrols him among the lists of its benefactors. In early life he occasionally wrote poetry. But astronomy was his favorite pursuit, in which he attained

considerable eminence. He died in 1790, at the age of sixty-three.

BOWDOIN, JAMES, the son of Governor Bowdoin, was born in 1752, graduated at Harvard in 1771. He afterwards pursued his studies at Oxford and travelled upon the continent of Europe. On the commencement of hostilities with England he returned to Boston. He did not take any active part in the war, but served in a civil capacity on several occasions. In 1805 he was sent by Jefferson as plenipotentiary to the court of Madrid, to purchase Florida and settle the limits of Louisiana, but failed in his negotiations. He was a liberal benefactor to Bowdoin College. He died in 1811, aged 60.

BOWELL, H. P., an English merchant, established at Smyrna, famous as a collector of, and writer on Greek coins; died 1851.

BOWEN, JABEZ, LL.D., lieutenant-governor of Rhode Island, a native of Providence. He was graduated at Yale in 1757. For 30 years he was chancellor of the college in Providence. He was made lieutenant-governor during the war. He died in 1815, aged 75.

BOWEN, PARDON, M.D., an eminent physician of Rhode Island, born in 1757. He graduated at the college in Rhode Island in 1775. He first practised as a surgeon on board a privateer, and for some years led an adventurous roving life. He went to Philadelphia in 1783 to complete his studies, and on his return to Providence, of which he was a native, obtained great celebrity, principally by his success in the treatment of yellow fever. He was struck with palsy in 1820, but lingered until 1826.

BOWEN, WM. C., M.D., professor of chemistry in Brown University. He died in 1815 at the age of 29, of disease contracted in making experiments with chlorine. His labors led to the establishment of the bleaching establishments of Rhode Island.

BOWER, ARCH., a Scotch hist., 1676-1766.

BOWLES, WM., an Irish naturalist, 1720-1780.

BOWLES, WILLIAM A., agent of the Creeks and Cherokees. He played a conspicuous part during the war of the Revolution, by inciting the Indians against the Americans. He was a native of Maryland. His influence was found so detrimental to the Spanish interests that they twice caused him to be betrayed into their hands, and he finally died miserably in Moro Castle, Havana, December, 1805. He was a man of cruel and ferocious disposition.

BOWLES, REV. WILLIAM LISLE, a poet and miscellaneous writer, rector of Bremhill, in Wiltshire, 1762-

BOWYER, WM., an English printer, 1699-1777.

BOXHORN, M. Z., a Latin writer, 1612-1653.

BOYCE, WM., an English composer, 1710-1779.

BOYD, H., an English traslator, last century.

BOYD, WILLIAM, a Presbyterian minister of eminence in New Jersey, born in 1758, was graduated at Princeton College in 1778, and died at Lamington in 1815.

BOYD, JOHN P., brigadier-general in the United States Army in the War of 1812. Before he entered the American service he was commander of an irregular mercenary corps in India, which he raised, paid, and equipped himself, and served whichever of the native princes would pay him best. Having sold his interest in the regiment to an Italian, he came in 1808 to Paris, and from thence came to the United States. He commanded in the battle of Williamsburg, Nov. 11, 1813. The British force was the most numerous, but the American loss was the most severe. He published in 1816 a brief account of the events of the war. His death occurred at Boston in 1830.

BOYD, ZACHARY, a Scotch religious writer, died 1653.

BOYDELL, J., an English artist, 1719-1804.

BOYE, J., a Danish philosopher, 1756-1830.

BOYER, ABEL, a Fr. grammarian, 1664-1729.

BOYER, ABEL, a pharmacopolist, died 1768.

BOYER, ALEXIS, Baron, a French surgeon, 1760-1833.

BOYER, CLAUDE, a French dramatist, 1618-1698.

BOYER, J. B. N., a Fr. wr. on disease, d. 1768.

BOYLE, ROG., the first eminent name of this family, whose ancient seat was in Hertfordshire, died 1576.

BOYLE, RICHARD, son of the preceding, known as the great earl of Cork, distinguished as a statesman in the reign of James I., 1566-1643.

BOYLE, ROGER, son of the preceding, and earl of Orrery, a royalist of the restoration, 1621-1679.

BOYLE, LORD CHARLES, son of Roger, and nephew of the preceding, a fugitive writer and scholar, 1676-1731.

BOYLE, ROBERT, brother of Roger, and son of Richard, earl of Cork, a very distinguished Inquirer of the 17th century; born at Lismore in Ireland in 1626, the year of Lord Bacon's death; died in London in 1691. Boyle was an able and sedulous Investigator of Nature by *Experiment*; and he contributed much to many branches of Physics, Optics, Pneumatics, Natural History, Chemistry and Medicine;—Pneumatics probably gaining most from his researches. He was one of the foremost of those illustrious men who founded the Royal Society in 1645, for the purpose of improving experimental knowledge, on the plan laid down by Bacon. Boyle's mind was essentially reverential, and he wrote largely on religious topics. He founded a Lectureship at Oxford, which has produced a number of valuable works on the being and attributes of God. [J.P.N.]

BOYLE, JOHN, earl of Cork and Orrery, son of Lord Charles, and, like him, a scholar and author (*Life and Writings of Swift, &c.*), 1707-1762.

BOYLE, RICHARD, earl of Burlington and Cork, an amat. archit., and patron of learning, 1695-1753.

BOLYSTON, NICHOLAS, founder of the Boylston professorship of rhetoric and oratory in Harvard College. He was by profession a merchant, and died in 1771, aged 55. John Quincy Adams was the first professor under the bequest, in 1806, at which time the sum originally given had accumulated to the amount of \$23,000. His portrait is preserved in the college.

BOYLSTON, WARD NICHOLAS, another benefactor of Harvard College, and son of the preceding. He established the nucleus of a medical and anatomical library, with provision for its enlargement.

BOYLSTON, ZABDIEL, M.D., F.R.S., a distinguished American physician, born 1680. He first introduced inoculation into America in 1721, when the smallpox was raging in Boston. Beginning with his son, he inoculated in that and the following year 247 persons. He was eminently successful in the experiment, but his triumph was purchased by the temporary loss of his popularity, as it was thought not only dangerous to impart the disease in that manner, but impious to forestall the work of Providence. He was even threatened with prosecution for poisoning and spreading infection, and an attempt was made against his life. On going to England he was received with great honor, and chosen member of the Royal Society. He published in 1726 a historical account of the introduction of inoculation in New England. He died at the age of 86, at Boston, in 1760.

BOYS, WM., an antiq. and naturalist, d. 1803.

BOYSE, SAM., a fugitive wr. and poet, d. 1749.

BOYSEAU, a Spanish general, 1659-1740.

BRACCIOLINI, FR., an Ital. poet, 1566-1645.

BRACHMANN, LOUISA C., a poet. and fugitive writer of Germany, who unhappily drowned herself, 1832.

BRACKENRIDGE, HUGH HENRY, a miscellaneous American writer, born in 1749, and graduated at Princeton in 1771. He was appointed judge of the Supreme Court of Pennsylvania in 1798. In 1774 he published a poem on the glory of America; in 1794 an account of the insurrection in Pennsylvania, and the adventures of Capt. Farrago in two vols. 1808; also instructions for the study of the law, 1814.

BRACKETT, ANTHONY, one of the first settlers of Portland, Maine, then called Casco. Together with his family he was made prisoner by the Indians in 1676, and conveyed to Arrousic Island. Having made his escape, he was intrusted for several years with the command of various forts. He was at last killed by the Indians in battle, in 1689.

BRACKETT, JOSHUA, M.D., an eminent physician of New Hampshire, born in 1733, graduated at Harvard in 1752, and died in 1802.

BRACON, HY. DE, a writer on law, 13th ct.

[Braddock's Field—Scene of his Defeat.]

BRADDOCK, EDWARD, major-general. This brave and able but unfortunate officer was commander-in-chief of the British army in America in the year 1755. The disastrous event which has made his name memorable in history, was owing to his contempt of the enemy and his neglect to provide against surprise. Conducting in person the expedition against Fort Du Quesne, he was attacked on the 8th July, when about seven miles distant from the fort, by a concealed enemy, who fired upon him from the shelter of the tall grass and the surrounding trees. The attempt to rally the troops was fruitless. All his officers, except George Washington, fell. He himself received a mortal wound, and expired a few days after at Dunbar, forty miles distant from the field. The entire loss of the British was 700 men.

BRADFIELD, H. S., an English adventurer and miscellaneous writer of prose and poetry. On a visit to the United States he became known to some literary circles, and died 1853, aged 48, by his own hand on his return to England, where the latter part of his career was marked by poverty, misery and despair.

BRADFORD, ALDEN, secretary of the State of Massachusetts from 1812 to 1824, and author of a history of Massachusetts and other works; d. 1843, aged 78.

BRADFORD, ANDREW, publisher of the American Mercury, the first newspaper that appeared in Philadelphia. The first number came out in December, 1719. He followed the profession of a printer, and was the only one in Pennsylvania from 1712 to 1723.

BRADFORD, GAMALIEL, a descendant of Bradford, governor of Plymouth. He served in the British army during the French war, and commanded a regiment in the American service during the Revolution. He died in 1807, aged 77.

BRADFORD, J., a martyr of the reformation, 1555.

BRADFORD, WILLIAM, attorney-general of the United States, was born at Philadelphia in 1755. He was graduated at Princeton, in 1772, and commenced the study of law under Edward Shippen. The war with Great Britain breaking out, he served for several years as an officer in the militia, and attained the rank of lieutenant-colonel. Delicate health compelling him to leave the army he resumed the study of the law, and was admitted to the bar in 1779, in Pennsylvania. In 1784 he married the daughter of Elias Boudinot. In 1791 he was appointed a judge of the Supreme Court of Pennsylvania. On the promotion of Edmund Randolph to be Secretary of State, he was invited by Washington to become attorney-general of the United States. But he did not live long to enjoy his new honors. His appointment took place in January 1794, and he died in August of the following year, of bilious fever. He was much regretted, alike for his rare abilities and his amiable disposition. He was a clear, persuasive and eloquent speaker. His work on capital punishment, published in 1793, has tended greatly to meliorate the severity of the penal laws, not only in Pennsylvania but in many other States.

BRADFORD, WILLIAM, colonel, was a grandson of the first printer in Pennsylvania, and adopted by his uncle, Andrew. In 1742 he published the Pennsylvania Journal. During the Revolutionary war he fought as major and colonel, at Trenton and Princeton. He died in 1791, at the age of 72.

BRADFORD, WILLIAM, was the first printer in Pennsylvania. He emigrated to America about the year 1683, from Leicester in England, of which he was a native. His first publication was an almanac, printed in 1687. In 1692 he was tried for having printed the writings of George Keith, which were alleged to be seditious, but was acquitted. He removed the next year to New York and printed the laws of that colony. In October, 1725, the New York Gazette, the first newspaper published in that city, was begun by him. He also started the manufacture of paper at Elizabethtown, N. J. For 30 years he was the only printer in the province of New York, and for 50 years printer to the government. He died in 1752, at the age of 93.

BRADFORD, WILLIAM, one of the first settlers in New England, and the second governor of the colony at Plymouth, was born in the north of England in 1588, and brought up on a farm. At an early age he embraced the principles of the separatists, and when about 19 years old, after several ineffectual attempts, escaped to Holland and learned the art of silk dyeing at Amsterdam. With the produce of his paternal estate he engaged in successful commerce. After ten years he determined to remove to America with Mr. Robinson, and set sail for the new continent from Plymouth, in England, on the 22d July, 1620. Before a landing was effected his wife was drowned. The first governor of the colony dying soon after, Mr. Bradford was chosen in his place in 1621. One

of the first acts of his administration was to secure the friendship of Massasoit, an Indian sachem. In 1622 the unprovided colonists suffered severely from famine, but were partially relieved by the Indians, among whom, however, a conspiracy took place to effect their destruction, which was discovered by Massasoit, and the ringleaders put to death. In 1630 an enlarged charter was given by the council for the colony, to Bradford, his heirs, associates and assigns, one of a more limited nature having previously been obtained in the name of John Pierce. Enjoying a high reputation in the colony, Bradford was annually re-elected governor until his death, which occurred in 1657, with the exception of five years at intervals, when, at his request, either Mr. Winslow or Mr. Pierce was chosen. In spite of the disadvantages attending an early lack of education, Governor Bradford, by assiduity and perseverance, attained a competent knowledge of Hebrew, Greek, Latin, French and Dutch. He wrote in a folio volume of 270 pages, a history of the church in the colony to the year 1647, but the MS. has been unfortunately lost, with the exception of some fragments found in a grocer's shop at Halifax, and published by the Massachusetts Historical Society. An abridgment of it is however contained in Morton's memorial.

BRADFORD, WILLIAM, another descendant of Governor Bradford, born in 1729, and educated as a physician. He afterwards built a house at Mount Hope in Rhode Island, on the spot associated with the name of King Philip, and devoted himself to the study of law. In 1792 he was elected a senator to Congress, and was for many years speaker of the assembly in Rhode Island and deputy governor. His death occurred in 1808, at the age of 78.

BRADLEY, JAM., an English astronomer, d. 1762.

BRADLEY, RICH., a wr. on botany, d. 1732.

BRADLEY, STEPHEN R., one of the first senators to Congress from Vermont, was born in Connecticut 1754, graduated at Yale 1775, retired from public life in 1812, and died in New Hampshire in 1830, aged 76.

BRADSHAW, J., a republican lawyer, presid. of the court for the trial of Charles I., d. 1659.

BRADSTREET, ANNE, author of the first volume of poems written in America, was the daughter of Governor Dudley, born in England in 1612, married Mr. Bradstreet in 1630. Her father and husband shortly afterwards emigrated to America, and became governors of Massachusetts. Her poems were published in 1642. The subjects of them were 'the four elements, constitutions, ages of man, seasons of the year, the Assyrian, Persian, Grecian and Roman monarchies.' They possess a simplicity and melody of which the quaint title gives little promise. We quote a single stanza:

'When I behold the heavens, as in their prime,  
And then the earth, tho' old, still clad in green,  
The stones and trees insensible of time,  
Nor age, nor wrinkle on their front are seen;  
If winter come and greenness then do fade,  
A spring returns and they more youthful made;  
But man grows old, lies down, remains where once he's laid.'

BRADSTREET, JOHN, major-general in the English army. He was appointed in 1746 lieutenant-governor of St. John's, Newfoundland. General Shirley placed him in command of 2,000 men in 1756, for the purpose of transporting stores and opening communication with Fort Oswego, on Lake Ontario, which he successfully accomplished. On his return by the Onondaga river, he was attacked from an ambuscade nine miles distant from the fort. He landed on an island and with only six men main-

tained his position till succor arrived, when an engagement ensued, in which he obtained the victory. In 1758, at the head of 3,000 men, he made an expedition against Fort Frontenac, on Lake Ontario, and captured it together with 40 pieces of cannon, merchandise and provisions. In 1764, at the head of a large force, he advanced into the country of the Indians, and at Presque Isle compelled them to accept terms of peace. In 1772 he was appointed major-general, and died at New York in 1774.

[Governor Bradstreet's House.]

BRADSTREET, SIMON, governor of Massachusetts, was a native of Lincolnshire, and brought up in the family of the Earl of Lincoln. He studied for a year at Cambridge, and soon after became steward to the Countess of Warwick. After his marriage with a daughter of Mr. Dudley, his former tutor at the Earl of Lincoln's, he emigrated to Massachusetts, and arrived at Salem in 1630. He occupied for several years many offices of public trust, went as agent of the colony to Charles II. on his restoration, and was appointed deputy governor in 1763, which office he held till 1679, when he succeeded Leverett as governor. In 1686 the charter was dissolved and the administration of Joseph Dudley in New England began. He was again chosen governor in 1689, and continued in office until 1692, when Sir William Phipps arrived with a new charter, which deprived the colony of the power of electing their governor. He died in 1697, aged 97.

BRADSTREET, SIMON, a very learned congregational minister, was graduated at Harvard College in 1693, ordained in 1698, and died in 1741, aged 72. He was more celebrated for his learning than for his eloquence, and was a man of great eccentricity. He delivered his sermons extemporaneously, in a sitting posture, from the deacon's seat, and avoiding doctrinal preaching of the Calvinistic school, adopted the practical tone of the English divines, of whom Tillotson was his favorite.

BRADWARDIN, T., abp. of Canterb., d. 1349.

BRAHE, P., Comte De, a disting. Swede, tutor of Christina, and founder of many universities, died 1680.

BRAHE, TYCHO, a celebrated astronomer, was born on the 14th December, 1546, at Knudstorp in Scania, and was the eldest son and the second child of a family of five sons and five daughters. Having been adopted by his uncle, George Brahe, and placed under his care, he commenced the study of Latin in his seventh year; and in opposition to the wishes of his father, who had destined him for the military profession, he prosecuted his scholastic studies for five years under private teachers. About three years

[Oranienberg—The Astronomical Castle of Tycho Brahe.]

after his father's death in 1559, he went to the university of Copenhagen, with the view of preparing himself for the profession of the law by the study of rhetoric and philosophy. He had spent but little more than a year at college when a great eclipse of the sun, on the 21st August, 1560, excited general interest, and made Tycho an astronomer. Surprised at the close agreement between the calculated and observed phenomena, he resolved to study a science which, in addition to its power of predicting future events, was, in general opinion, connected with the destinies of man. While he was indulging this new passion by the study of Stadius's '*Tabulæ Bergenses*,' he was sent from Copenhagen, in February, 1562, under the charge of a tutor, to study jurisprudence at Leipzig. There he devoted all his leisure hours to the study of astronomy, making calculations, constructing instruments, and carrying on astronomical observations. In May, 1565, he left Leipzig to take possession of the estate of his uncle, to which he had succeeded; but in consequence of the opposition made by his parents to his astronomical studies, he quitted Denmark in order to pay a visit to some of the more interesting cities in Germany. From Wittemberg, which he reached in 1566, he went to Rostock, where in a duel with a countryman of his own, he lost his nose, which he very ingeniously replaced by one of gold and silver. Here he remained till 1569, when he visited Augsburg, where he made the acquaintance of John and Paul Hainzel, two distinguished citizens and ardent lovers of astronomy. Paul Hainzel constructed for him, at his own expense, a magnificent quadrant, which exhibited single minutes on its graduated limb, and with which Tycho made many valuable observations during his stay at Augsburg. On his return to Denmark in 1571, Tycho found that his reputation had preceded him. The king invited him to court, and his maternal uncle, Steno Bille, gave him, at the convent of Herritzvold, where he resided, apartments for an observatory and a laboratory. Tycho, most unfortunately, conceived a passion for alchemy, and indulged in the hope of converting the baser metals into gold. He was roused, however, from this dream by the appearance of the *new star* in Cassiopeia, which continued visible from November, 1572, till its disappearance in March, 1574.—After marrying a peasant girl, in 1573, and delivering, at the king's request, a course of lectures on astronomy, he visited Hesseland, Frankfort, Basle, and Venice, and returned in 1575 to Ratisbon to witness the coronation of the emperor Rüdolph. Tycho's reputation in foreign countries had now begun to excite notice in his own. Frederick II. sent messengers to invite him

to his capital, and Tycho willingly obeyed the royal summons. The king received him with the most flattering attention, gave him a grant for life of the island of Huen, and offered to erect at his own expense all the buildings and instruments that were necessary for carrying on his astronomical and chemical studies. The celebrated observatory of Uraniburg, or *the city of the heavens*, was founded in August 1576, and supplied with instruments; and within its walls Tycho carried on those observations with which his name is inseparably connected.—Upon the death of Frederick II., and the accession of Christian III., the prospects of Tycho were greatly changed. Although a temporary glory was thrown around himself and his children by a visit from James VI. of Scotland, and other princes, yet his studies were unwillingly tolerated by the Danish court. The nobles grudged him his pension and the magnificent establishment at Uraniburg. The physicians envied his popularity as a medical practitioner, and with such influential enemies, Walchendorp, the president, had no difficulty in indulging his own personal dislike to Tycho by measures of injustice and persecution.—Resolved to abandon for ever his ungrateful country, Tycho, with all his apparatus of instruments and books, his wife, five sons and four daughters, along with his pupils, assistants, and servants, male and female, embarked at Copenhagen to seek the hospitality of a better country. After landing at Rostock in 1597, he went by invitation to the castle of Wandersberg, near Hamburg, the seat of Count Rantzau, where his family remained till he was munificently established at Prague, the capital of the emperor Rüdolph. This distinguished sovereign gave him the castle of Benach as a residence, with a pension of 3,000 crowns. There he was visited in 1600 by Kepler, for whom he obtained the appointment of imperial mathematician to the emperor, on the condition of assisting Tycho in his observations. Tycho did not long enjoy the liberality of Rüdolph. The persecutions and sufferings to which he had been exposed, had preyed upon his mind, and disturbed its tranquillity. An exile from his beloved country, and a stranger in a foreign land, his studies lost their power over his mind, and under the influence probably of a painful disease with which he was affected, a temporary delirium overshadowed some of his latest hours. From this painful condition, however, he recovered, and resigned himself with true piety into the hands of his Maker on the 24th October, 1601, in the fifty-fifth year of his age. The instruments of Tycho were purchased from his heirs by the emperor Rüdolph for 22,000 crowns. They were shut up in the house of Curtius, and were regarded with such veneration, that not even Kepler was allowed to examine or make use of them. They remained in the same place till the death of the emperor in 1619, when they were carried off, or destroyed, during the troubles which agitated Bohemia.—The island of Huen was, in Tycho's lifetime, sold to a Danish nobleman. The buildings were all demolished, excepting the farm-house, which belonged to Tycho. His dwelling-house and his observatory are marked by two pits and a mound of earth which enclosed the garden. A very full account of the life and labors of Tycho will be found in Sir David Brewster's '*Martyrs of Science*.' [D.B.]

BRAINARD, JOHN G. C., an Am. poet, was born at New London, Conn., in 1797, and graduated at Yale College, 1815. He was a relation of the celebrated missionary of the same name, though their names by mistake or caprice were spelled differently. He practised for a time as a lawyer at Middletown,

and in 1822 became editor of the Connecticut Mirror, which he enriched with his productions, both of prose and verse. His most celebrated lines are a description of the Falls of Niagara.

BRAINERD, DAVID, a celebrated Indian missionary, born in Connecticut in 1718. He was expelled from Yale College in 1742, for some indiscreet expressions uttered in a fit of religious enthusiasm respecting one of his tutors. He then prosecuted his studies under a Mr. Mills; was licensed to preach before the end of the year, and sent as missionary among the Indians. He first went to an Indian village between Stockbridge and Kinderhook, where he labored faithfully for some time, when leaving his converts under the care of Mr. Sergeant, he turned his attention to the Delaware Indians. He was ordained at Newark, N. J., in 1774, and went to the forks of the Delaware, where finding little encouragement, he removed to the neighborhood of Freehold, N. J. At Crosweeksing, his new abode, his exertions were attended with remarkable success. In less than a year he baptized 77 persons, and had the satisfaction of finding that their lives corresponded with their Christian profession. In 1746 he visited the Indians on the Susquehanna, but his strength failed, and in the spring of 1747, he returned to New England, and spent the brief remainder of his life in the family of Jonathan Edwards. He died at the age of 29, on the 9th of Oct. 1747. Though young he was a man of extensive knowledge, and was a forcible, instructive, and pathetic preacher. But his incessant and effectual labors as a missionary, perpetuate his name. He published an interesting account of them in 1746.

BRAINERD, JOHN, brother of the preceding, was also a missionary among the Indians, and succeeded David in his mission in 1748. He was succeeded himself by William Tenant, about 1755. He died at Brotherton, N. J., in 1772.

BRAMAH, J., a disting. mechanic, 1749-1814.

BRAMANTE, DONATO, or BRAMANTE LAZZARI, one of the great Italian architects of the Renaissance, was born near Castel Durante, in the duchy of Urbino, in 1444. He followed in the great path of Brunelleschi, who died almost within a year from the time that Bramante was born. He was originally a painter, and studied the works of Fra Bartolomeo, of Urbino, but first distinguished himself as an architect at the court of Ludovico il Moro, at Milan. Bramante remained chiefly in Milan until 1489; he was employed on the cathedral, and on the repairs of the Basilica of Sant' Ambrogio; and was much engaged in neighboring cities. In 1500 he settled in Rome; here he took advantage of the opportunities afforded by the ancient ruins of perfecting his knowledge of classical art, and qualified himself for the high position as an architect which he eventually attained. His works, however, are more properly termed Italian than classic, as he accommodated the classic features to the wants of modern society. The Cancelleria Apostolica at Rome, built as the private residence of the cardinal Riario, in 1495, is a fine example, and at the same time is one of the best specimens of the architecture of the Renaissance. The Vatican, however, was the arena of the greatest glories of Bramante; here he carried out vast works for Julius II.; he first joined the Belvidere villa to the old palace of the Vatican, and enlarged and embellished this by the addition of the Court of San Damaso, and the famous Loggia containing the celebrated arabesques of Raphael, with many other improvements. In 1506 he commenced his great work, the rebuilding of St. Peter's. Julius II. laid the first stone on

the 18th of April of that year; but Bramante did not live to execute much more than the four great piers which support the dome, which, however, became the key to the whole. Bramante died in 1514; and the great work was carried on by Raphael, aided by Giuliano da San Gallo, and Fra Giocondo, till 1518, and after Raphael's death, in 1520, Baldassare Peruzzi was appointed architect, and continued the work until 1536. Peruzzi was succeeded by Antonio da San Gallo, the nephew of Giuliano, who considerably altered the plan. After the death of Antonio, in 1546, Michelangelo Buonarroti prosecuted the work, and completed the dome. After the death of Michelangelo, in 1564, the work was carried on by Vignola, and Pirro Ligorio, under the condition that they were to adhere to the plan of Michelangelo. Ligorio was removed by Pius V. for wishing to infringe this condition. At the death of Vignola, in 1573, Giacomo della Porta assumed the direction, who with Domenico Fontana, at length completed the cupola, and fixed the cross, during the short pontificate of Gregory XIV., in 1590. After the death of Della Porta, in 1604, the work was carried on by Carlo Maderno, and Giovanni Fontana; and the greatest and most magnificent of Christian churches was eventually consecrated by Pope Urban VIII., in the year 1626, one hundred and twenty years after the laying of the first stone by Julius II.—(Vasari, *Vite dei Pittori*, &c.; Platner and Bunsen, *Beschreibung der Stadt Rom*. BRAND, JOHN, a political writer, died 1809.

BRAND, JOHN, an antiquarian, 1743-1806.

BRANDENBURG, an electorate of the Ger. empire, from 1417 to the time of Frederick William, who succeeded as elector 1640, and created the kingdom of Prussia.

BRANDER, G., an antiq. and nat., 1720-87.

BRANDT, a Dutch alchemist, died 1692.

BRANDT, ERNEVOLD, Count De, a Danish statesman, executed for conspiracy, 1772.

BRANDT, GEO., an exp. philosopher, d. 1768.

BRANDT, SEB., a satirical poet, 1454-1524.

BRANT, JOSEPH, a celebrated Indian chief, of pure Mohawk blood, who was at the head of the Six Nations. About the year 1756, he was sent by Sir William Johnson to Dr. Wheeling's Indian Charity School in Connecticut. He there received a good education, and was employed on public business. In 1762 he acted as interpreter to Smith, a missionary. He visited England in 1775, where his attainments in learning attracted attention. In the war he acted on the British side, and destroyed the settlement of Minisink, in Orange County, on the 22d of July, 1779. In the engagement which ensued, 44 Americans fell beneath the tomahawk of the Indian. The destruction of the settlement of Wyoming has been ascribed to him by Campbell, as well as by other writers, but proofs were presented to the poet in 1822, by one of the sons of Brant, that he was not concerned in that dreadful massacre. He visited England after the peace. The saddest event of his life was the death of a son, whom he killed in self-defence, when making a drunken attempt to murder him. He never recovered from the sorrow and remorse occasioned by this act, and as an expression of penitence for a deed which was perhaps unavoidable, he resigned his captain's commission in the

British service, and surrendered himself to justice, but Lord Dorchester, the Governor of Canada, would not accept his resignation. He translated the Book of Common Prayer, and the Gospel according to St. Mark, into the Mohawk, which were published in London, 1787. He died in 1807, at the age of 65.

BRANTOME, PETER DE BOURDEILLES, lord of, au. of memoirs illus. life in the 16th c., 1527-1614.

PRASAVOLA, A. M., an Ital. phy., 1500-1555.

BRATHWAYTE, RICH., a poet, 1588-1673.

BRATTLE, THOMAS, a British merchant, born 1657, and was graduated at Harvard, in 1676. He is the author of an admirable account of the witchcraft delusion in 1692, which is preserved in the historical collections, and also of several communications on astronomical subjects in the philosophical transactions. He died in 1713.

BRATTLE, WILLIAM, brother of the preceding, a learned New England minister, author of a Latin System of Logic, highly esteemed, and long used in Harvard College. He was born in 1662, and graduated in 1680; he was ordained a pastor of Cambridge in 1696, and died in 1717, aged 54. As a preacher, calm, soft, and persuasive.

BRATTLE, WILLIAM, the son of the preceding, an American. It is more difficult to say what he was not than what he was. He was an eloquent congregational preacher, an able lawyer with a lucrative practice, a representative of Cambridge in the general court, a member of the Council of Massachusetts, a physician of celebrity, a great epicure, and to crown all, major-general of militia. When the Revolution broke out, sympathizing with the plans of General Gage, he accompanied the troops to Halifax, and died in 1776. He married the daughter of Gov. Saltonstall.

BRAVO, JOHN, a Spanish physician, 16th ct.

BRAXTON, CARTER, born in Virginia, 1736, and educated at William and Mary College, became member of the House of Burgesses in 1765, and succeeded Peyton Randolph as member of Congress in 1775, in which capacity he was one of the signers of the Declaration of Independence. He was afterwards a representative in the Legislature of Virginia. He was a graceful speaker, and a man of respectable attainments. Pecuniary embarrassments clouded the last years of his life.

BRAY, SIR REG. a fav. statesman of Henry VII., and architect of the famous chapel, d. 1503.

BRAY, THOMAS, D.D., was appointed by the bp. of London, in 1699, Ecclesiastical Commissary for Maryland and Virginia, and devoted a great portion of his life to the extension of religion among all classes in the American colonies. The Protestant Episcopal Church in the United States must ever rank him among the foremost of those who have labored in her behalf, and indeed, wherever the principles of the Church of England obtain throughout the world, the name of Bray will be honored as one of the chief promoters of the establishment of the Venerable Society for the Propagation of the Gospel in foreign parts. He devoted the whole of his own fortune to the cause of missions, raised large sums by appeals to the benevolence of others, established parochial schools both in England and America, and was instrumental in the formation of benevolent and religious societies, calculated to elevate and improve the social and spiritual condition of the lower classes, and to cultivate and develop self-denial and missionary zeal among the wealthy and enlightened. He was an able and eloquent writer. All his productions are eminently practical. He published a memorial on the State of Religion in America, a discourse on apostolic charity

and the baptismal covenants, besides letters to the clergy, &c., &c. His death occurred in 1730, at the age of 73.

BREWSTER, WM., one of the earliest settlers of the Plymouth Colony; was born in England in 1650, graduated at Cambridge, and afterwards entered into the service of William Davison, ambassador of Queen Elizabeth in Holland. After the disgrace of his patron

he retired to the North of England. Some time after he separated from the Church of England, and attended the ministry of Clifton and Robinson. In 1607 he accompanied Bradford in an attempt to escape from England, but was apprehended and imprisoned. After his release he departed to Holland, and having lost the bulk of his property, supported himself by teaching English at Leyden, using the Latin tongue as a medium. In 1620 he came to New England, and as ruling elder preached for many years at Plymouth. He died in 1644, at the age of 83.

BRIGHT, FRANCIS, arrived in America in 1629, and became minister of Charlestown, Massachusetts, but finding the spirit of religious innovation greater than suited his temper and judgment, he relinquished his post, and returned to England.

BRIGHT, TIMOTHY, an Eng. physician and theo., author of numerous works, died 1616.

BRILL, M., a landscape painter, 1550–1584.

BRILL, PAUL, a landscape painter, 1556–1626.

BRIMSMEAD, WM., a congregational minister, born at Dorchester, and educated at Harvard College. He was ordained at Marlborough, of which place he was the first minister in 1666. While preaching on Sunday, March 30, 1676, the Indians made an attack on the church, but all inside, with one exception, escaped to the fort. He kept a Latin journal, which was made use of by Prince in compiling his annals. His death occurred in 1701.

BRINDLEY, JAMES, the man who first devoted himself to *civil engineering* as a profession. In Great Britain engineering works were not intrusted to civilians till about the middle of the 18th century, when capitalists began to embark their wealth in speculations that promised a pecuniary return only, without regard to their own neighborhood being the scene of the projected improvement, or facilities being afforded by it to their peculiar business. The change was the forerunner of increased national means, and by the enlarged field of employment it opened up, gave rise to this new order of professional men,—pioneers of civilization. Brindley was born in 1716, at Thorssett, near Chapel-le-frith, in Derbyshire. He followed the usual labors of agriculture until his seventeenth year, without the advantages of even the most ordinary education. But he was a genius—

‘Of mother wit, and wise without the schools.’

He was apprenticed to a millwright, who left him often to work out what the master himself should have designed and directed. Thus his inventive faculties were brought into exercise, and he frequently astonished his employer by the ingenious improvements which he effected, and by the results of his zeal for his master’s honor. When his apprenticeship

ended he engaged in business on his own account. In 1752 he erected machinery for draining coal pits at Clifton, in Lancashire. The water wheel was 30 feet under ground, and the water was supplied from the Irwell, by a tunnel 600 yards long. This was a work of boldness and ingenuity a century ago, though we may smile at it now! In 1756 he erected a *steam engine* at Newcastle-under-Lyne, which was calculated to effect a great saving in fuel over the ordinary Newcomen engine. About 1757 Brindley was consulted by the duke of Bridgewater as to the practicability of constructing a canal from Worsley to Manchester. Brindley’s success in this undertaking was the means of awakening public attention to the advantages of canals. Had a man of inferior genius, or less dauntless courage, undertaken the works, it might probably have turned out a failure, and the development of British inland navigation might have been deferred some years longer. When the canal was completed as far as Barton, where the Irwell is navigable for large vessels, Brindley proposed to carry it over that river by an aqueduct 39 feet above the surface of the river! This project was ridiculed by the *practical* men of the day. One much respected individual of the time would not discount the duke of Bridgewater’s bill for £500, and when the dimensions of the canal aqueduct were communicated to him, he exclaimed:—‘I have often heard of castles in the air, but never was before shown where any of them was to be erected.’ The duke raised the money, however, and in less than one year Brindley completed the aqueduct! Within forty-two years after the duke of Bridgewater’s canal was opened, application had been made to parliament for 165 acts for making canals in Great Britain at an expense of £13,000,000. Brindley engineered the great undertakings which opened an internal water communication between the Thames, the Humber, the Severn, and the Mersey, and united the great ports of London, Liverpool, Bristol, and Hull, by canals which passed through the richest and most industrial districts of England. Brindley died 1772, at the age of fifty-six, the victim of intense application to an arduous and exciting profession. He was interred at New Chapel, in Staffordshire. Brindley is reported to have answered a Committee of the House of Commons, when asked for what object rivers were created:—‘To feed navigable canals.’ Railway engineers of the present day conceive that they are turning rivers to their primitive destinations, for canals are being converted into railways! Brindley could neither read nor write until late in life, and then but poorly. He had great power of mental calculation, was of unwearying application and industry, and eminently successful. BRISSON, M. J., a Fr. naturalist, 1723–1806.

BRISNOT, PETER, a medical au., 1478–1522.

BRISNOT, JEAN PIERRE, distinguished in the history of the Revolution as leader of the Girondins, was an orator and political writer of the first ability. The commencement of his public career as a journalist was characterized by a singular stroke of vanity, whereby the plebeian appellation of the humble pastry-cook who begot him, was metamorphosed into the name of his birth-place, and shone with aristocratic refulgence as ‘De Warville.’ In the ob-

security of his early life he seems to have acquired all the experience of men and things necessary to a political intriguer. Restless, scheming, and ambitious, he was indefatigable in his zeal for reform, especially for the amelioration of the criminal code and the abolition of slavery. It is difficult to say whether his character was spoiled, or rather made, by the philosophy of Rousseau. Madame Roland, when it became her fate to meet him, was certainly disappointed in his appearance, for she saw no passion in his countenance corresponding to that of his style, and was rather struck by the busy mobility of a novice than the dignity of an apostle in his conversation and manners. When the revolution first dawned he was the advocate of a constitutional monarchy; growled at by Marat for 'giving his paw to Lafayette,' and again as bitterly denounced, especially by Robespierre, for his imprudence in blazoning forth the word 'Republic' when his convictions were changed. While the states-general were discussing the constitution, Brissot associated himself with Condorcet and Clavière as joint proprietors of the *Moniteur*, and in 1791 was returned to the first parliament. His love of occupation, his activity as a senator, as a member of the Jacobin Club, and in the coterie at Madame Roland's—perhaps also his extreme shiftiness in argument—soon marked him out as the head of the middle class republicans, first distinguished by his own name, and called 'Brisotins' by the spirited Camille Desmoulins. His hour of triumph was under the ministry of Roland and Clavière, with whom he, of course, fell at the period of Marat's insurrection, 2d June, 1793, when his name appeared first of the twenty-two Girondins ordered under arrest. He endeavored to escape disguised as a merchant travelling to Neufchatel, but was discovered *en route* by the Revolutionary Committee of Moulins, and finally placed with his colleagues, 'all chief republicans,' 'the eloquent, the young, the beautiful, the brave,' at the bar of Fouquier Tinville. Brissot defended himself with the courage of a patriot and the serenity of a philosopher, and though it was not him, but his friend La-source, who addressed the tribunal in an epigram, it exactly expresses the feeling of the whole party, 'We die on the day when the people have lost their reason; ye will die when they recover it!' The philosophical repast in prison, and the chorus of the Marseillaise at the scaffold on the following morning, 31st October, have been often described, and it was at the former that Brissot emphatically said, in answer to the question whether he believed in the immortality of the soul and the providence of God—'I do believe in them; and it is because I believe in them that I am about to die.' His history is that of his party, a well-intentioned and talented body of men, but too scrupulous of forms, too philosophical and studious of theory as legislators, and in a word, hardly audacious enough for the exigencies of the period. He left behind him many works of importance, but especially on criminal jurisprudence. The chief of these are 'Théorie des lois Criminelles,' 2 vols. 8vo, 1780, and 'Bibliothèque Philosophique du Législateur, du Politique, du Jurisconsulte; sur les lois Criminelles,' 10 vols. 8vo. 1786. As to his personal appearance, he was a man of small stature, with thin pale features, lighted up by intelligence, and ennobled in circumstances of danger by intrepid determination. His dress and habits had been formed to the Quaker model during his residence in America, where he had taken refuge from the terrors of a 'lettre de cachet,' before the outbreak of the revolution.

BROMLEY, JOHN, an Eng. clergyman, 17th c.

BRONDSTED, P. O., a Dan. antiq., 1780–1842.

BROOCMAN, C. U., a Sw. wr. on educ., d. 1812.

BROOKE, FRANCIS M., a novelist, died 1789.

BROOKE, H., a novelist and mystic, whose principal work is 'The Fool of Quality,' 1706–1783.

BROOKE, SIR R., a wr. on civil law, d. 1558.

BROOKES, J., an em. anatomist, 1763–1833.

BROOKS, J., a phy. and man of let., 1752–1825.

BROOKS, ELEAZAR, brigadier-general, born at Concord, Massachusetts, in 1726. He was chosen in 1774 a representative to the General Court, and continued for 37 years in public life. He fought at the battle of White Plains in 1776. In 1801 he retired into privacy, and died in 1806, at the age of 80. Though deficient in early education his mind was improved by diligent reading and contact with the world.

BROOKS, JOHN, LL. D., governor of Massachusetts, born in 1752. He was brought up on his father's farm, but at the age of 14 was apprenticed to a physician named Tufts. Count Rumford was his fellow-pupil. After commencing the practice of medicine at Reading, he raised and drilled a company, having obtained some practical knowledge from observing the training of the British soldiers on Boston Common. He fought at Concord in 1775. He was raised to the rank of Lieut. Colonel in 1777. He acted in concert with Arnold in the expedition on the Mohawk. He fought gallantly at the battle of Saratoga, storming the German intrenchments. He acted as adjutant-general at the battle of Monmouth, and won the esteem of Washington by his conduct at Newburgh. After the peace he retired into private life, and succeeded Dr. Tufts in his practice as a physician. In the war of 1812 he was adjutant-general of Massachusetts, having long held the rank of major-general of the State militia. He was elected governor in 1816, which office he filled for seven years in succession. His death occurred in 1825, at the age of 72. One of his sons was

killed in the battle of Lake Erie in 1813—another son was Major Alex. S. Brooks, of the U. S. army.

BROOKS, MARIA, an Am. poet, was born in Medford, Mass. She resided, however, mostly at Boston. On a visit to Europe she was welcomed by the literary circles gathered about Wordsworth and Southey, the latter of whom superintended the publication of her poem 'Zophiel,' and pronounced the author 'the most impassioned and imaginative of all poetesses.' 'Zophiel' was her principal work, but she published others. She died at Matanzas, Cuba, Nov. 11, 1845, at the age of about 50.

BROOME, DR. W., a classical scholar, d. 1745.

BROOME, JOHN, lieut. governor of the State of New York, and president of the Senate—elected in 1804, died August, 1810, aged 82. His early life was spent in commerce, in which he attained wealth and eminence.

BROSCHI, CAR., a disting. singer, 1705–1782.

BROSSE, GUY DE LA, a Fr. botanist, 17th ct.

BROSSES, CH. DE, a Fr. *savant*, 1709–1777.

BROSSETTE, CLAUDE, a Fr. hist., 1671–1746.

BROTHERS, R., a pretended prophet, whose public hist. and publicat. date from 1793 to 1802.

BROUGHTON, H., a Heb. schol., 1549–1612.

BROUGHTON, T., a fugitive writer, d. 1774.

BROUKHUSIUS, J., a Dutch schol., d. 1707.

BROUNCKER, WM., Lord, a philos., d. 1584.

BROUSSAIS, F. J. V., a medic. au., 1772–1838.

BROUSSONET, P. A. M., a Fr. nat., 1761–1807.

BROUWER, ADR., a Dutch painter, 1608–40.

BROWALLIUS, J., a writer on bot., 1707–1765.

BROWN, ANDREW, editor of the Philadelphia Gazette, was a native of Ireland. He came to America in 1773 as a British soldier. After leaving the service, he engaged in the colonial cause and fought at Lexington and Bunker Hill. When the war was over he set up a school in Pennsylvania, but relinquished the employment of teaching, and began the publication of the Philadelphia Gazette in 1788. His paper was the vehicle through which much of the political discussions of the period were carried on. Its name at first was the Federal Gazette, but changed from a desire to divest it of a partisan character. He died in January, 1797, of injuries received during the burning of his house, in which his wife and three children perished. The paper was carried on by a sole-surviving son.

BROWN, CATHARINE, a converted Cherokee, an interesting memoir of whose life has been compiled by Rufus Anderson of the American Board of Foreign Missions. She was born at Wills Valley in Alabama in 1800. At the age of 17 she entered the school of the American Board at Chikamaugah, and was baptized the following year. She is described as a girl of great loveliness and promise. Her death from consumption in 1823, cut short the hopes of earthly usefulness which had been entertained of her.

BROWN, CHARLES BROCKDEN, an American novelist, born in Philadelphia in 1771. He was educated for the legal profession, but an unconquerable timidity induced him to turn his undivided attention to literary pursuits. His first production was Wieland, published in 1798, which was followed by Ormond, Arthur Mervyn, Edgar Huntley, Clara Howard, and Jane Talbot. He was also editor of the Monthly Magazine, the American Review, the Literary Magazine, and American Register, besides publishing several pamphlets on political subjects. He married in 1804. In 1809 he fell into a consumption and died in 1810, at the age of 39. His writings, notwithstanding the brilliancy of their

style, have not attained any lasting popularity, as they are both destitute of unity and moral purpose, and given up to the delineation of revolting crime.

BROWN, DAVID, a converted Cherokee, brother of Catharine Brown, who was educated at the same school, and labored for some years as an interpreter and preacher among the Cherokees. His letters and reports show him to have possessed a cultivated and highly intelligent mind. He acted for a time as secretary of the Indian government. The disease of which his sister had died proved also fatal to him, and he died at Creekpath, Mississippi, in Sept., 1829.

BROWN, FRANCIS, D.D., president of Dartmouth College, born at Chester, New Hampshire, in 1784, graduated at Dartmouth in 1805. He was ordained at North Yarmouth, in Maine, in 1810, and appointed president of Dartmouth College in 1815. He was a man of great learning and amiability. He died in 1820 of consumption, at the age of 36.

BROWN, JACOB, major-general in the United States army, was born in Pennsylvania in 1775. At the age of 20 he went to Ohio as a surveyor of public lands. From thence he went to New York, where he studied law and taught school, but soon relinquished these pursuits, and emigrated to the shores of Lake Ontario. He entered the service of his country as a militia officer in 1812, but distinguishing himself greatly in the defence of Ogdensburg and Sacketts Harbor, he was in 1814 appointed brigadier, and soon after major-general in the regular army, and placed in chief command at Niagara. He commanded in person at the battles of Chippewa and Niagara, and the sortie of Fort Erie. At the conclusion of the war he and General Jackson were alone retained as major-generals, and the sole command of the army devolved on him in 1821. He died at Washington in 1828, aged 52.

BROWN, JAMES, an Am. statesman and diplomatist, was born in Virginia, 1766. He distinguished himself as a lawyer, and was joined with Livingston in the preparation of the Code of Louisiana, to which state he removed after its purchase by the United States. He was successively U. S. senator, and minister to France in 1832, d. 1835.

BROWN, JOHN, an officer in the American army during the Revolution. He was born in Berkshire county, Massachusetts, in 1744, was graduated at Yale College in 1771, and after completing his legal studies at Providence, was appointed King's attorney at Caghawaga, New York. From thence he removed to Pittsfield in 1773. In 1774 he went into Canada in the disguise of a horse-dealer, to excite the people to rebellion. He was member of the Provincial Congress in 1775. He shared with Ethan Allen in the capture of Ticonderoga. He took Fort Chamblee on the 24th Sept. The next enterprise in which he coöperated was the attack upon Quebec, in which Montgomery fell. In 1776 he was raised to the rank of lieutenant-colonel in the Continental army, and the next year did eminent service on the shores of Lake George. A quarrel with Gen. Arnold, whose character he appears to have penetrated, induced him to retire from the service, not, however, without publishing an account of the enormities which he knew the General to have committed, and predicting that he would prove a traitor. He was not however idle, but performed service in the militia of Massachusetts. In 1778 he was elected a member of the General Court. While attempting to relieve General Schuyler on the Mohawk, he was treacherously led into an ambushade, and died on his birthday, Oct. 19, 1780, at the age of 36, together

with forty-five of his command. He was, however, revenged on the same day by Gen. Van Rensselaer, who met and defeated the party by whom he had been slain.

BROWN, MOSES, captain, a naval officer of the United States. During the Revolutionary war he commanded several of the largest privateers, and was engaged in many severe conflicts. On the establishment of the American navy he was put in command of the *Merrimac*. He died in 1804 of an apoplectic fit, at the age of 62.

BROWN, NICH., a distinguished citizen of Rhode Island, remotely descended from Chadd Brown, the colleague of Roger Williams. He greatly contributed by his liberality to beautify the city of Providence, and benefit the college. He died in 1791, at the age of 61.

BROWN, J., D.D., an essayist, 1715-1766.

BROWN, J., a Scotch artist, 1752-1787.

BROWN, J., a biblical expositor, 1772-1787.

BROWN, J., M.D., a wr. on pathology, 1735-88.

BROWN, JOHN, an engraver, died 1801.

BROWN, L., a landscape gardener, 1715-1782.

BROWN, R., fr. of the independents, 1560-1630.

BROWN, SIR SAMUEL, Capt. R. N., inventor of iron suspension bridges, 1777-1852.

BROWN, THOMAS, a recent Scottish metaphysician; successor of Dugald Stewart in the university of Edinburgh. Born near Edinburgh in 1778, he died at an early age in 1820. His tastes were literary; and he relished philosophical discussion. When only eighteen years of age he published a refutation of Darwin's *Zoonomia*; the first edition of his Essay 'on Cause and Effect' appeared in 1804, on occasion of a singular but unprofitable and ill-managed controversy that had arisen within the Scottish Church: he afterwards issued a fragment entitled *Outlines of the Physiology of the Human Mind*: but his principal work consists of *Lectures*, of which multitudes of editions have been sold in Great Britain and America. Brown likewise paid offerings to the Muses: his poems were collected into four volumes, but they are already forgotten. The metaphysical system—if so it may be called—to which the writings of this philosopher gave currency, is certainly no continuation of what is termed the Scottish School, but rather an effort at revolt, alike against its leaders and doctrines. In the first place, he makes an elaborate attempt to create an impression that the supposed merits of Dr. Reid in refutation of the *Ideal Theory*, are reducible to his successful demolition of a fallacy held by no important metaphysical writer, (except perhaps Berkeley and Malebranche)—a pure creation of Reid's own fancy. On this historical point we shall remark at length under the article *Reid*; suffice it to state here, that Brown has completely failed, and shows besides an ignorance of the true merits of the question, quite remarkable in a man of undeniably quick apprehension. The subject of Sensation disposed of, he next attacks the account given by his predecessor of our mental *faculties*—a word to the use of which he strongly objects; producing, instead of the careful description of phenomena occupying the volumes of Reid and Stewart, an artificial classification of specious simplicity, but throwing no real light either on the nature of the more important psychological facts, or their relations. Mental phenomena, he conceives, should be divided into *external* and *internal States* of the thinking principle,—the former being our sensations, the latter the contents of the *Intelligence*. Internal states, he considers, are either the reproduction of ideas of absent objects, by means of

what he calls *simple suggestion*, or the perception of their relations, through *relative suggestion*. Adding our *Emotions*, classed into *immediate*, *retrospective*, and *prospective*, Brown conceives he has described and explained all mental phenomena.—It were easy to show that in most of his attempts to simplify, Brown has mistaken and contorted the great facts of psychology; his fatal error, however is this,—an error which may be inferred from the mere phraseology of his system,—he confounds the *will* with merely passive *desire*, from which it had been a prime aim of his predecessors clearly to distinguish it. The *will*, he says, is simply *desire*, coupled with the belief that the object of the desire will follow as an effect. That great faculty, the coequal of Sensibility and Intelligence, the source and condition of human liberty and dignity, is thus purely and simply suppressed; nor was it possible for Brown to evade consequences which ever belong to that suppression;—his philosophy is on the edge of those two abysses, scepticism and fatalism. It is in nowise a favorable symptom either of the taste or acuteness of the time, that these *Lectures* have obtained a currency so wide. If their metaphysics are bad, their style, considered as a philosophical one, is certainly the reverse of commendable. Diffuse and inaccurate, it is wearisome and misleading. Ambitiously rhetorical, its metaphors and digressions, often pleasing by themselves, distract the attention of the student from the *thought*. Brown himself seemed to imagine that a philosophy might be *improvised*: and it is to be feared that his example and writings have done much to maintain the youth of our time in the delusion, that acquaintance with the Science of Mind may be promoted, and truth discerned, through glib use of the mere forms of philosophical thought. There is no use in such popular philosophy. If an aspect of dialectic is demanded of public instructors now, the time will come, when, to obtain acceptance, they must exercise reflection also. BROWNE, ANTH., an English lawyer, d. 1567.

BROWNE, GEO., Count, an officer in the Russian service, 30 yrs. gover. of Livonia, 1698-1792.

BROWNE, ISAAC HAWKINS, a poet, 1706-1776.

BROWNE, PAT., M.D., a naturalist, 1720-1790.

BROWNE, SIMON, a contriv. divine, 1680-1732.

BROWNE, ARTHUR, missionary in New Hampshire, for the Society for the Propagation of the Gospel, was born in Ireland, and graduated at Dublin University in 1729. He was ordained by the Bishop of London, and went in the first place to Providence, R. I., but removed in 1736 to Portsmouth, where he continued to officiate till his death in 1773, at the advanced age of 73. He was a learned man and an eloquent preacher.

BROWNE, ARTHUR, LL.D., Greek professor in Trinity College, Dublin, was the son of the Rev. Marmadake Browne, of Newport, R. I., who carried him to Ireland for education, and placed him at Trinity College, but died on his return to America of the effects of sea-sickness. Thus left an orphan in 1771, he continued throughout life connected with the College. He was a man of high attainments, and represented the University in the Irish House of Commons. He was the author of a compendium of the civil law, and of a translation from a poem entitled 'Hussen O'Dil, or Beauty and the Heart'—together with two volumes of miscellaneous sketches. His death occurred in 1805.

BROWNE, SIR THOMAS, the distinguished author of the *Religio Medici*, was born in London 1605. His early education was received at Winchester and Oxford. He studied medicine subsequently, and took

his degree at Leyden. On his return to England he settled at Norwich, where he became famous as a practitioner of the medical art. He was fond of study, and passed his leisure in the preparation of his famous work the *Religio Medici*, which was first published surreptitiously, but afterwards given to the world in a new edition by the author himself. This work, on its first appearance, drew down upon the author many grave charges against his orthodoxy and even his christian belief, which were triumphantly refuted by Browne, who was the most sincerely religious of men. The *Religio Medici* was followed by the *Treatise on Vulgar Errors*, the *Hydriotaphia, or a Treatise on Urn Burials*, and the *Garden of Cyrus*. The works of Sir Thomas Browne are marked with the odd conceits and errors of his age, but are remarkable for their majestic eloquence and wealth of illustration. He died in 1682, leaving behind him a son, EDWARD, who inherited his eminence as a physician, having risen to the distinction of president of the London College of Physicians, and his literary tastes, of which he gave proof by the authorship of a book of travels entitled *Travels in Austria, Hungary, Thessaly, and Italy*. Edward was b. 1642, d. 1708.

BROWNE, ULYSSES MAXIM., an Irish exile, field-marshal in the service of Austria, 1705-1757.

BROWNE, SIR W., a wr. on optics, 1692-1774.

BROWNE, WM., a pastoral poet, 17th century.

BROWNE, W. G., a disting. traveller, k. 1814.

BROWNRIGG, W., an exp. philos., 1714-1800.

BRU, MOSES V., a Spanish painter, 1682-1703.

BRUCE, ARCHIBALD, M.D., was born in New York 1777. His father was at the head of the medical department of the British army. His mother was the widow of Jeremiah Van Rennselaer. He was graduated at Columbia College in 1795, and became the pupil of Dr. Hosack. He, however, took his medical degree in Edinburgh. After travelling on the continent and marrying in London, he returned to America in 1803, and was appointed professor in the College of Physicians and Surgeons in New York in 1807. He commenced the *Journal of American Mineralogy* in 1810, of which one volume only was published. His death occurred in 1818 from apoplexy.

BRUCE, DAVID, a Moravian missionary, who died in Litchfield county, Conn., in the year 1749.

BRUCE, ROBERT, king of Scots, was born in the year 1274. It is unusual to call monarchs by their family name, but Bruce has generally been made an exception, as he rather gained his kingdom by his services than acquired it by hereditary succession. After the death of Margaret of Norway, the daughter of Alexander III., there were several competitors for the Scottish throne, chiefly among those adventurous Norman knights who were collaterally connected with the Scottish royal family. Among these was a Robert of Bruce—supposed to be a corruption of Bruix, his ancestral domain in Normandy—whose claim was that he was the son of Isabel, second daughter of David earl of Huntingdon, the brother of King William the Lion. On hereditary principle, as we now understand it, there was, however, a preferable claimant in John Balliol, who was grandson of the eldest daughter of the earl of Huntingdon, and there were many other claimants. The advantage which the English king took of this confusion, and his attempt to subjugate Scotland, are well-known chapters in British history. Had he been less tyrannical the Scots might have submitted to his sway, but he brought in high Norman notions of prerogative and feudal exactions, to which the

Scots were unaccustomed. Exasperated and prepared to free themselves, they offered a good opportunity to any daring and ambitious man who could put forth a title to head them as their king. Robert, the grandson of that Bruce who had been one of the original claimants, after attending the court of Edward, and for some time hesitating, was at length, partly by accident, driven to take up his position as the kingly leader of the Scots. He had been concocting with Cumyn, who had similar claims, a plan for one or other of them starting for the crown, and receiving the assistance of the other, who should be largely rewarded with the private estates of both. Cumyn revealed the project, and Bruce, secretly warned, escaped from the English court to Scotland. Unconscious that his treachery was known, Cumyn met the fugitive in the Church of the Franciscans in Dumfries. Hot words passed, and Bruce in his fury stabbing him, he was despatched by an attendant. The deed of sacrilegious violence, while it occasioned Bruce's excommunication by the pope, drove him in desperation to raise the banner of Scottish nationality. Finding an enemy not only in the English invader, but in the Celtic potentate the lord of Lorn, his cause seemed long hopeless. But oppression increased the number of his followers, and at last he gained such substantial success, that Edward resolved to go again to Scotland to crush him. He died on the way, and when his strong hand was removed the Scots rallied in larger numbers round the liberator and put him at the head of a considerable army. Edward II., attempting to restore the English power by leading into Scotland a vast army of the flower of the English chivalry, only brought them to destruction at the field of Bannockburn. This conclusive battle was fought on the 14th of June, 1314. Its history shows that Bruce was a consummate general according to the tactic of the day. His principle of warfare was what has always proved the best for a poor nation; not to ape cavalry, but to trust in highly trained foot soldiers well placed. His frame was injured by the hardships of his early struggles, and he died on 7th June, 1329. [J.H.B.]

BRUCE, JAMES, F.R.S., the celebrated explorer of Africa, was born on the 14th December, 1730, at Kinnaird, an estate and mansion near Larbert, in Stirlingshire, which had been in the possession of the family for about 400 years. In 1590, Sir Alexander Bruce, of Airth, made over the lands of Kinnaird to his second son, Robert, a minister of Edinburgh. This Robert Bruce, who was distinguished in the times of the Reformation, had two grandchildren, Robert and Alexander; the former died of his wounds after the battle of Worcester, without issue; the latter, ill required for his services in the royal cause, died in 1711, leaving two daughters, of whom the eldest, married to David Hay, of Woodcock-dale, Mid-Lothian, was heiress of Kinnaird, and left the property to her eldest son, David, he assuming the name and arms of Bruce. David Hay Bruce was the traveller's father. The Hays of Woodcock-dale were a branch of one of the oldest families in the three kingdoms. There is no foundation for the statement that the family of Bruce is descended from king Robert:—that line was itself a branch, and became extinct on the death of David II., 1371. All the families who have any records, are descended from the youngest of three sons of the fourth Lord Annandale, lineally sprung from Robert De Bruis, who came over from Normandy with William the Conqueror. The name was variously spelt, Brus, Bruis, Bruise, Bruix, and afterwards Bruce—

The subject of this notice was educated in London, Harrow-on-the-hill, and the university of Edinburgh. Obligated to abandon his studies for the profession of advocate on account of his health, he went to London in 1753, in order to make arrangements for settling in India in the way of trade. Here he changed his plans, and marrying a Miss Allan, daughter of a rich wine merchant, deceased, he became partner in that business. His amiable wife died within a year, leaving him in the deepest grief. Rallying, however, he set himself vigorously to several studies, which proved of the greatest use afterwards, and had meanwhile the effect of changing the current of his thoughts. In 1757, he went on a lengthened tour to the continent, combining pleasure with business connected with the firm. His father's death the year following, hastened his return. Though he now succeeded to the property, and though his income from it began to improve considerably from the year 1760—owing to the establishment of the Carron iron works—no change took place in his designs. He was, in fact, in daily expectation of an appointment from government. He had made some suggestions about a descent on the Spanish coast, which brought him under the notice of Mr. Pitt and Lord Halifax; and from the latter, in 1762, he received the appointment of consul at Algiers, with the understanding that it was to be temporary, and was to facilitate plans of discovery, which had been discussed between Lord Halifax and himself. Promises of assistance in carrying out these were made only to be broken; and on his being superseded, in 1765, he left Algiers, and having visited many parts of North Africa, and Western Asia, he reached Alexandria on the 20th June, 1768, and entered at his own cost, upon that long and perilous journey to discover the sources of the Nile, for which he is famous. The head waters reached by him are now known not to have been those of the principal stream, but of an important branch of the great river, whose sources, though never yet reached, are ascertained to lie close upon the equator, 800 miles south of the point reached by Bruce. His singular adventures going and returning, and during his residence in Abyssinia of two years, are detailed at length, in his travels. He reached Cairo, on his return, on 10th January, 1773; but remaining in France and Italy for the restoration of his health, he did not arrive in London till June, 1774, having been absent twelve years. Returning to Scotland, he was actively engaged for some time in improving his property. He married, May 20, 1776, Mary, daughter of Thomas Dundas of Fingask and lady Janet, daughter of Charles, sixth earl Lauderdale, by whom he had two sons and one daughter. Mrs. Bruce died in 1784. It was not till 1790 that his *Travels* appeared—in 5 vols. 4to. They excited universal interest, and were translated into French and German. Many of his most startling statements which caused his veracity to be seriously called in question, have been since amply confirmed—among others, that of the horrid practice of devouring flesh cut quivering from the body of a living cow! On the evening of April 26, 1794, when handing a lady down stairs to her carriage, he fell headlong, and was taken up insensible, but without apparent hurt. He expired next morning, in the sixty-fourth year of his age. He was succeeded by his second son, the eldest having died an infant. His daughter married John Jardine, Esq., advocate, of Edinburgh. His remains were interred in the family vault at Larbert.—Mr. Bruce was tall of stature, being six feet four inches in height, his person was large and

well-proportioned, and he had a commanding air. He was extremely expert in the use of firearms, and of the javelin and lance—no small recommendation among the rude tribes with whom he sojourned.

BRUCE, JOHN, a moral philosopher, 1744–1826.

BRUCE, MICHAEL, one of the minor Scotch poets, was born at Kinneswood in the county of Kinross, 27th March, 1746, and died of consumption in the twenty-first year of his age, 6th July, 1767. His

[Bruce's Monument in Portmook Churchyard.]

parents were in poor circumstances, his father being a weaver; but the merit belongs to them of improving the genius which they early discovered in poor Michael by a liberal education, with a view of qualifying him for the ministry. They even sent him to the university of Edinburgh for three or four years from 1762, where he made great progress in his classical and philosophical studies; but the graces of poetry and the *Belles Lettres* were his chosen pursuit, in which the pensive melancholy to which men of genius are so frequently subject, and the gifts of his imagination, could be more freely indulged. There is little to record of his innocent uneventful life. In 1765–6 he was teacher of a school at Gairney Bridge, near Kinross, and felt the heart-sickness of a disappointed attachment for the daughter of the people with whom he lodged, and who was a pupil of his. Several of his poems have perpetuated the memory of this circumstance, and the best of them is his 'Alexis, a Pastoral,' in which the refinement of the scholar is elegantly blended with the poetical sense of the muse, and the plaintive eloquence of the lover. In 1766 he removed to a school near Alloa, where he composed his 'Lochleven,' a descriptive poem in blank verse, in which he has gratefully remembered the virtues of his tried friends Arnot and Henderson. All this time his health was gradually sinking, and the fatigues of the village school, no longer relieved and hallowed to his heart by the evening instruction of his 'Eumelia,' were more than he could endure. In the winter of this year he abandoned whatever expectation he may have formed in the great business of life, and returned to his parents, that the loving hearts which had watched him with so much solicitude in the morning of his days might hush him to rest in their early evening. His last words are a celebration of the return of Spring—

but not to me returns  
The vernal joy my better days have known;  
Dim in my breast life's dying taper burns,  
And all the joys of life with health are down.

The pathos and melody of many passages in this elegy, with the 'Alexis' already alluded to, and his farewell to Lochleven, in imitation of 'Lochaber nae

Mair,' fairly represent the natural talent of Bruce for poetry. In personal character he was remarkable for ingenuousness and modesty, and, as a matter of course in a poet, for a feeling heart and a lively imagination. Living a few short years, consumed by hard study and anxiety, his poems are few in number. They were published in a volume, with some others added to make a miscellany, but without any means of distinguishing the authors, soon after his death, by his friend and fellow-poet, the Rev. John Logan, and at a later period, properly discriminated, in the collection of Dr. Anderson. [E.R.]

BRUNE, W. M. A., marshal of Fr., 1763-1815.

BRUNEAU, MATHURIN, a pretender to the crown of Fr. under the title of Louis XVII., 1818.

BRUNEL, MARC ISAMBARD, a civil engineer of great fame, a consummate mechanical genius, a man of rare singleness of mind and kindly disposition. He was born at Hacqueville in Normandy, in 1769—the year that produced so many notabilities. He

[Thames Tunnel.]

began an education for the church at the seminary of St. Nicain, at Rouen. His genius had a different bent, however, and he so distinguished himself in mathematics and physical science, that the superior of the establishment recommended his adopting another profession. He entered the royal navy of France—constructed a quadrant for himself—made several voyages, and returned home in 1792, during the reign of terror. Being a royalist, he emigrated to the United States, where necessity became the mother of his wonderfully fertile invention. He surveyed for canals, planned sawing mills, erected boring mills for the ordnance, was architect of the first theatre in New York (since burned down); and while in America conceived the blockmaking machinery, the success of which should alone give him a conspicuous place in the annals of industrial mechanism. With the block machinery on paper he came to Britain in the year 1800. Lord Spencer,

then first lord of the admiralty, became his friend and patron. From this time Brunel continued to reside in England, and refused to entertain propositions made to him to settle abroad, under the auspices of other governments. After much delay, he was employed to make a set of block machinery for Portsmouth Dockyard. With happy discrimination Brunel selected the late Henry Maudslay as the maker of the machines, and thus was laid the foundation of one of the most extensive and perfect engineering establishments in the kingdom. The machines were made *exactly after Brunel's models*. They have been for forty-seven years at work, and no change or improvement in any of them has since been made or suggested. This is a type of all Brunel's work. His plans and drawings were kept to himself till so elaborated that they really contained the essence of all that could be done in simplifying the means to accomplish the end in view. His circular saw for cutting veneers, the machine for winding cotton balls, as inventions in pure mechanism—and the Chatham Dockyard and the Thames Tunnel, amongst works of civil engineering, may be cited in illustration. The first steamboat that run on the Thames, and the first double acting steam engine used for propelling steam vessels, were erected under his instructions in 1816. The history of the Thames Tunnel is too recent and familiar to require that we should repeat it here. Despite its failure, commercially speaking, Brunel continued to look upon it as his greatest achievement, and devoted the latter years of his valuable life in completing it. It is undoubtedly a great and marvellous triumph of skill, and only those who know the extraordinary variety of engineering resources which it called into play, can sufficiently appreciate the talents of the engineer who planned them and superintended their execution. Brunel died in 1849, in his eighty-first year. His son carries his father's fame in full vitality to another generation. Brunel was knighted in 1842. He was V.P.R.S., and corresponding member of the Institute of France. [L.D.B.G.]

BRUNELLESCHI, FILIPPO, one of the earliest and most celebrated Italian architects of the Revival, was born at Florence, in 1377. He was brought up a goldsmith, but devoted himself equally to sculpture and architecture. He paid, also, early attention to perspective, and instructed Masaccio in this science. Brunelleschi joined the competition, in 1401, for the bronze gates of the Baptistery of St. John, at Florence; but both he and his celebrated contemporary, Donatello, admitted that they were surpassed by Ghiberti, who gained the commission, though then a mere youth; the centre gates were not fixed up until half a century after the competition, 1452.—Brunelleschi visited Rome, where the Pantheon seems to have made a great impression on him, and to have determined him to undertake his great work, the dome of Santa Maria del Fiore, or cathedral of Florence, which had been left unfinished by Arnolfo di Lapo. He returned to Rome in 1417, and made a model of the dome, but without convincing his contemporaries of the practicability of his scheme, until after the great congress of architects at Florence, in 1420, who then looked upon him as mad. At length, however, in 1423, he was appointed sole architect of the cathedral, Lorenzo Ghiberti being at first joined with him; and though he did not live long enough to see his great work quite completed, it was sufficiently advanced to secure its completion by his successors. This dome is the largest in the world constructed of masonry, it being some feet wider than that of St.

Peter's at Rome. The angular interior diameter is 78 Tuscan ells, nearly 150 English feet.—Brunelleschi executed many other great works in Florence, and elsewhere; in Florence, are worthy of mention, the magnificent Pitti Palace, the residence of the grand dukes of Tuscany, and the church of San Lorenzo. He died in 1446, and was buried with great pomp in the cathedral—(Vasari, *Vite dei Pittori*, &c.; Moreni, *Vite del Brunellesco*, &c., 1812; Fantozzi, *Guida di Firenze*.) [R.N.W.]

BRUNET, FR. F., a Fr. philos. and theological writer, author of 'Parallèle des Religions,' d. 1806.

BRUNO, GIORDANO, a remarkable Italian Inquirer of the 16th century, whose very daring and original speculations derive fresh interest from his fate—he was burnt as an Atheist by the Inquisition at Rome, on 17th February, 1600. Wearied of shackles inseparable from his first position as a Dominican priest, Bruno fled to Geneva in 1580, where he lived two years. The rigor, the despotism, and intolerance of Calvin, did not, however, suit him; and finding no adequate compensation in the intellectual power, logical acuteness, or vehement courage of that great Reformer, he departed for Lyons, Toulon, and Paris. For some years, indeed, Bruno was a wanderer over Europe; he lived in London at the close of 1583; but led by an unhappy fatality, or through effect of that home-sickness which is part of the moral being of every Italian, he wearied of free and safe lands, and returned to teach in Padua. The Inquisition arrested him, and retained him in prison for two years—vainly attempting to reduce him to recantation. On 9th of February he was degraded, excommunicated, and delivered to the secular magistrate, after the usual disgusting formula—'*That he be dealt with as mercifully as possible, and punished without effusion of blood.*' Bruno exclaimed,—'Your sentence strikes more terror into your own hearts than into mine, and he died as a brave man ought.—It is far from wonderful that Bruno called down ecclesiastical fury on his head. His writings consist for the most part of keen and scarcely-concealed satire on the Romish Church and priesthood: nor was his philosophy less unacceptable, for, revolting against the despotism of that Aristotle of the middle ages, he took refuge with Plato and the School of Alexandria. His errors lay not in the direction of Atheism, but in that of Pantheism: so far from bringing down

the absolute and ever-living Cause towards things or forms finite, he rather inclined to diminish the importance of the created or external universe; nor is it precisely easy to see, in what way he provided for, or saved human liberty and responsibility in his really devout and imposing scheme. We shall characterize his peculiar phase of the doctrine of the 'absolute' under the article *Spinoza*. Bruno wrote very largely. His Italian writings were collected and published at Leipzig in 2 vols. 8vo, in 1830. A very interesting account has recently been given of his life and general philosophy by the French writer *Bartholomess*. [J.P.N.]

BRUTI, J. M., an historical writer, 1515–1594.

BRUTUS, the surname of a Roman family, several members of which appear in history. 1. LUCIUS JUNIUS BRUTUS, was the son of Marcus Junius, and of Tarquinia, sister of Tarquinius Superbus (Tarquin the Proud), the last king of Rome. When still young he lost his father and elder brother by the cruelty of Tarquin; and he himself escaped a similar fate by feigning idiocy; which perhaps gave origin to the surname Brutus or Dullard. The violence offered by Sextus, the son of Tarquin, to Lucretia, the wife of Collatinus, called forth the true character of Brutus. Being a witness along with her husband and father to her injured virtue, he drew from her bosom the knife with which she vindicated her innocence, and bound himself by the most solemn oath to visit the crime of Sextus upon Tarquin and all his accursed race, and to suffer no man thereafter to be king in Rome. The populace were easily excited, and these being readily joined by the army, Tarquin and his family were banished from Rome, B.C. 510. In the following year Brutus and Collatinus, the husband of Lucretia, were elected as the first consuls, and headed the army against the attempts which were made to restore the banished family. When leading the cavalry against Porsenna, who had espoused the cause of the Tarquins, Brutus engaged in single combat with Aruns, the son of the exiled king, and both fell, pierced by each other's spears. 2. DECIMUS JUNIUS BRUTUS, served under Cæsar in Gaul; and, on the breaking out of the civil war, B.C. 49, actively exerted himself in promoting his interests. He afterwards obtained the command of Further Gaul, and performed services so important, that Cæsar promised him the government of Cisalpine Gaul, with the prætorship for B.C. 44, and the consulship for B.C. 42. Being thus in possession of the entire confidence of Cæsar, his co-operation was of great

value to the other conspirators; and he was accordingly sent by them to conduct their victim to the senate house on the day of the assassination. The motives which induced Brutus to join the conspiracy against his friend and benefactor, are not known. After the death of Cæsar, B.C. 44, he went to his province of Cisalpine Gaul, from which he was expelled in the following year by Antony, to whom the same province had been assigned by the people. He now resolved to cross over into Macedonia to Marcus Brutus, but his soldiers deserted him on the march; and he was betrayed by Camillus, a Gaulish chief, and put to death by order of Antony. 3. MARCUS JUNIUS BRUTUS, son of M. Junius Brutus, by Servilia, sister of Cato of Utica, was born B.C. 85. When the civil war broke out between Cæsar and Pompey, B.C. 49, Brutus, contrary to expectation, joined the party of the latter, and fought under his banners at the battle of Pharsalia, B.C. 48. Having thus incurred the displeasure of the predominant party, he solicited and obtained the pardon of the conqueror, who restored him to his confidence, and generously allowed him to spend his time in his favorite literary pursuits. In B.C. 46 he was made governor of Cisalpine Gaul; and in B.C. 44, obtained the office of city prætor; thus not only acquiescing in the usurpation of Cæsar, but accepting favors and offices from the dictator. The change of mind which at this time took place was effected through the influence of Caius Cassius, by whom he was persuaded to join the assassins on the Ides of March. Failing to enlist the people on the side of the conspirators, he retired to Athens, where receiving a large sum of money, he collected the scattered troops of Pompey, and proceeded to take possession of Macedonia, the province which Cæsar had assigned to him. After making himself master of Greece and Macedonia, he went to Asia and joined Cassius, whose efforts in raising an army had been equally successful. Brutus and Cassius now returned to Macedonia, and met Augustus and Antony on the plains of Philippi, B.C. 42. In the first engagement the army of Augustus gave way before that of Brutus, while Cassius was defeated by Antony. But in a second battle, fought about twenty days later, Brutus was defeated, and fell upon his own sword.

BRUYERE, JEAN DE LA, a native of Normandy, was born in 1644. After having been royal treasurer at Caen, he was appointed, on the recommendation of Bossuet, to give instruction in history to the duke of Burgundy, the grandson of Louis XIV. He remained attached to the court, and died in 1696. In regard to the details of his life very little has been recorded; but a prudent and unobtrusive reserve seems to have accompanied those habits of keen observation, on which mainly his literary fame was built. His 'Characters,' published in 1687, but much augmented in following editions, placed him immediately in the highest rank as a master of French style; and they still entitle him to be named with Rochefoucault and Montaigne, among those writers whom the French regard as most thoroughly acquainted with human nature. The work is unlike the 'Characters' of Theophrastus (a translation of which was prefixed to it), in substituting minutely drawn portraits, full of individuality, for outlines of characteristics common to large classes of men; and from those sketches of a similar kind which had been so frequently produced in England during the first half of the 17th century, it differs not only in the variety and particularity of its scenes and

figures, but also in the prominence it gives to general maxims, and to reflections prompted by them. It abounds, to an extraordinary degree, both in striking thoughts expressed with epigrammatic force and conciseness, and in fragmentary sketches of men and manners, which suggest to every one parallels encountered in actual experience. The attempts which were eagerly made (and which are embodied in a key usually attached to the book) to identify the personages described, proved at once the Parisian love of scandal, and the general conviction that the writer had drawn faithfully from the life. La Bruyère's view of human nature is severe, but less bitterly so than that of Rochefoucault; and he excels in a delicate and philosophical irony, which he applies with especial dexterity in half-hinting his real opinions on questions about which he dissented from his contemporaries and countrymen. BRY, THEODORE DE, published in 13 parts, between the years 1590 and 1599, a work entitled "Collectiones peregrinantium in Indiam, orientalem et occidentalem Americam."

BRYAN, M., a wr. on art biography, 1757-1821.

BRYAN, SIR F., a statesman and poet, 16th ct.

BRYAN, GEORGE, a Judge of the Supreme Court of Pennsylvania, was descended from an ancient and respectable Irish family, and emigrated to America in early life. He took an active part in public affairs prior to the Revolution. In 1765 he was a member of the congress which protested against the arbitrary measures of the British Government. In 1778 he was made President of the Supreme Executive Council of Pennsylvania, having previously occupied the office of Vice-President. The following year he was elected to the legislature. He was appointed a judge of the Supreme Court in 1780, and in 1784 one of the council of censors. He was opposed to the establishment of the federal constitution. His death occurred in Philadelphia in 1791, at the age of 60.

BUAT-NANCAY, LOUIS GABRIEL, Comte Du, a French diplomatist and historian, 1732-1787.

BUCELIN, G., a German historian, 1599-1691.

BUCER, MARTIN, was born in 1491 at Schelestadt in Alsace. His early life was spent among the Dominicans, who sent him to Heidelberg to pursue his education, and there he had a dispute with Luther on free-will. In 1521 he became a convert to the Reformation. At Strasburg he was both a pastor and teacher of theology for many years. At the diet of Augsburg he incurred such suspicion and danger by opposing the 'Interim,' that he welcomed an invitation from Cranmer to go and reside in England. He taught theology at Cambridge with no little acceptance, and died there in February, 1550. Under the intolerant and fanatical reign of Mary, his ashes were dug up and burnt. His works are numerous, and some of his commentaries are still held in repute. Cardinal Contarini said of him,—'That he was able to contend alone with all the doctors of the Romish church.' [J.E.]

BUCHAN, WM., a Scotch physician, au. of the well-known 'Domestic Medicine,' 1729-1805.

BUCHAN, ELIZABETH, a visionary, 1758-1791.

BUCHANAN, DR. CLAUDIUS, was a native of Cambuslang, in the neighborhood of Glasgow, where he was born, 12th March, 1766. His father, who was parish teacher of that place, and a very pious man, brought him, both by his precepts and example, under the early influence of religion; and the character and pursuits of his future life took their direction, in all probability, from the impressions received under the parental roof. The family having removed to Inverary, young Buchanan received his education at the grammar school of that town, of which his father had become master; and having made great proficiency in his knowledge of Latin and Greek, he obtained, while yet under fourteen, the appointment of tutor to the sons of Mr. Campbell of Dunstaffnage. During the two years that he continued in that office, he exhibited a prudence and practical knowledge above his years; and what is more, he advanced in piety and strict habits of devotion, in which he engaged daily in a lonely spot on the sea shore. Repairing in 1787 to London, he there acquired the friendship of the good John Newton, under whose ministry he sat; and having, after a ripened intimacy, communicated to that venerable counsellor his earnest wish to be employed in preaching the gospel abroad, he was introduced to the notice of an eminent Christian philanthropist, Mr. John Thornton, who delighted to spend his fortune in advancing the cause of Christ. That gentleman, having satisfied himself as to the character and principles of the young Scotchman, resolved to undertake the expense of giving him a university education, and accordingly Buchanan was in 1791 admitted into Queen's College, Cambridge. After a very distinguished career at the university, Buchanan was in 1795 ordained by Bishop Porteus, and in the March following sailed for India as a chaplain in the East India Company's service. In that character he was destined to render important services to the cause of Christ; and indeed the name of Claudius Buchanan stands foremost in the history of the propagation of the gospel in India. Amid much opposition he continued his evangelical labors; and having been appointed by the marquis of Wellesley, Vice-Provost of the College of Fort-William in Bengal, he issued in 1804 the first translation ever made of the gospels in Persian and Hindostanee. In 1806 he published proposals for a subscription to aid in translating the Scriptures in fifteen Oriental languages; and through his zealous exertions the British and Foreign Bible Society, the universities of Oxford, Cambridge, and Glasgow, were induced to aid in that important undertaking. To qualify himself by more familiar acquaintance with its dialects, he devoted a year to travel through the Indian continent. On Lord Minto's appointment to the gov.-generalship in 1807, Mr. Buchanan, who considered the course of administration pursued unfavorable to the interests of religion, published his celebrated 'Memoir of the Expediency of an Ecclesiastical Establishment in British India.' Compelled through declining health to abandon the field of his arduous labors, he left India and arrived in England in the month of August, 1808, and after having visited his friends in Scotland, he returned to England, where he preached, and afterwards published 'The Star in the East,' and 'Christian Researches in Asia,' an interesting and eloquent appeal on behalf of missions. He finally settled as incumbent of the parish of Ouseburn, Yorkshire, where he died of a paralytic shock on 9th February, 1815.

[R.J.]

BUCHANAN, GEORGE, the celebrated Latin poet and historian of Scotland, was born of an old but re-

spectable family in the parish of Killearn, Stirlingshire, February, 1506, and having lost his father when young, was educated by his maternal uncle, James Heriot. He had been at the university of Paris about two years when the latter also died, and Buchanan was reduced to such indigence that he enlisted as a common soldier in the duke of Albany's army, but at the conclusion of the war he was enabled to resume his studies, and took a master's degree in 1528. Between this period and 1539-41 he was employed under various circumstances as a classical teacher, and was residing with the earl of Cassilis in Ayrshire, when his unlucky wit, and the Lutheran principles he had imbibed, led to his imprisonment for some satirical verses written against the Franciscans. He was fortunate enough to escape from St. Andrew's castle, and finding his way beyond seas, lived some twenty years in exile, undergoing much persecution, even to confinement in the prisons of the Inquisition, yet always recovering himself and living by his professional avocations. About the year 1562 he is known to have been residing in Scotland again, and had the good fortune a few years later to be intrusted with the education of the young prince, (James VI.,) whom he made 'a pedant' because, as he said, 'he could make nothing better of him.' Whether at home or abroad, his literary industry never flagged, and few men have received more uniform praise from the learned, who seem to have vied with each other in celebrating the graces of his style, especially in his beautiful paraphrase of the Psalms, composed in the imprisonment of a monastery, and his Scotch history; at the same time that he is generally blamed as an historian, for writing of things as he was casually informed, and especially for his severe expressions against the unhappy Mary Stuart. The examples of royalty with which he had made acquaintance were hardly calculated to impress him with much reverence for the institution, and his work 'De Jure Regni apud Scotos,' was really a vindication of the democratic control of princes. Sir John Scot, in his short description of Buchanan, quaintly observes:—'He was in so great disgust with the court before he died, that they caused summon him before them sitting in council, for some passages of his history too plain of the king's mother and grandmother; and he had undoubtedly run a great hazard of his life if the Lord had not freed him of the miseries of this world betwixt the citation and the day of compearance.' His life was thus curiously saved on the 28th September, 1581, and as he left no property, he was buried at the expense of the city of Edinburgh. [E.R.]

BUCHEZ, ARNOLD, a Dutch hist., 1565-1641.

BUCHEZ, P. J., a naturalist, 1737-1807.

BUCKINGHAM, GEORGE VILLIERS, duke of, minister of Charles I., assassinated 1628. His profligate son, of the same name, the unprincipled minister and favorite of Charles II., 1627-1688.

BUCKINGHAM AND CHANDOS, ANNE ELIZA, duchess of, a lady of distinguished accomplishments and benevolence, 1779-1836.

BUCKINGHAMSHIRE, JOHN SHEFFIELD, duke of, author of 'Memoirs of the Revolution of 1688,' in which he took a part, 1649-1720.

BUCKINK, ARNOLD, an engraver, 15th cent.

BUCKINGHAM, JAMES SILK, an English traveller writer and politician, was born in Falmouth, 1786. He commenced life as a sailor, and, subsequently abandoning the sea, he commenced a career of various adventure. He established a newspaper in India, and boldly advocated reform in the management of the East India Co. He afterward com-

menced his travels in the East, and published the result of his observations in a work on the Arab tribes in Palestine and Mesopotamia. On his return to London he made an unsuccessful attempt to establish two literary papers, the *Sphinx* and the *Athenæum*. Both were failures under his management, but the latter became finally established. Buckingham was a member of Parliament for Sheffield during several years. He visited the United States, and lectured there on the East, and on his return home frequently made his appearance as a lecturer on various topics. His autobiography lately published is a rambling account of the very diversified career of a man full of caprice and fond of adventure. Died, June 30, 1855.

BUCKLER, B., an antiq. and div., 1716-1780.

BUCKMINSTER, JOSEPH, was graduated at Harvard College in 1739, ordained in 1742 at Rutland, Massachusetts, where he died in 1792, after a ministry of 53 years, at the age of 72. His son of the same name, was born in 1751, and graduated at Yale College in 1770, and lived there as tutor from 1774 to 1778. He was ordained at Portsmouth in 1779, and died on the 2d June, 1812. He was a man of zeal and eloquence. Joseph Stevens, his son, born in 1784, graduated at Harvard in 1800, and was ordained in Boston in 1805. He was a man of considerable learning, and superintended the publication of Griesbach's New Testament. He died of epilepsy at the age of 28 in 1810.

BUDDÆUS, JOHN FRANCIS, author of a German 'Historical Dictionary,' 1667-1729.

BUEL, JESSE, a famous Am. agriculturist, was born in Coventry, Conn., 1778. He was apprenticed to a printer, at his own earnest request, by his father in Rutland Vt., where his family had removed. In early life he established several newspapers in the State of New York, and, finally in 1813, he removed to Albany, and became the Editor of the *Albany Argus*. In 1814 he was appointed State-printer, and, having held that office until 1820, he retired to a farm near Albany, where he engaged in his favorite pursuit of agriculture, and, to advance its interests, he established the *Cultivator*, which he continued until his death in 1839.

[Buffon.]

BUFFON, GEORGE LOUIS LE CLERC, Comte De, an eminent naturalist, was born at Montbard, in Burgundy, in 1707. He died in 1788. Buffon was educated at the college of Dijon. When nineteen years old he travelled through Italy, and it is most

probably owing to his having inspected in person the effects of the convulsions of nature, and the proofs of ancient revolutions of the globe in that country, that we are indebted for the works which have immortalized his name. In 1739 he was appointed superintendent of the Garden of Plants; and from that time he devoted his whole life to the study of natural history. He was assiduous in his attention to the duties of his office; and under his excellent management the garden, and museum of natural history attached to it, became the first in Europe. For ten years he devoted himself to his grand work, his *Natural History*, the first volume of which appeared in 1749, the remaining following at short intervals. The object of this work is to give a general theory of the globe which we inhabit, the disposition, the nature, and origin of the substances which it offers to our view, the grand phenomena which operate at its surface or in its bosom; the history of man, and the laws which preside at his formation, in his development, during his life, and at his death; the nomenclature and the description of quadrupeds and birds, the examination of their faculties, and the delineation of their manners. This work is written with great elegance of style; and his eloquent descriptions, the brilliancy of imagination which prevades them, and the correct taste he exhibited in arranging his subjects, soon made it the most popular book of the kind ever written. An extraordinary impulse was given by Buffon to the study of natural history in his own country; and he has the great merit besides of having spread a love for the study of nature far and wide. The solid anatomical portion contributed to the history of the quadrupeds by Daubenton, added much to its value amongst scientific men; and many of the best works in natural history, that have been written in France since his death, have been published under the name of *Suites à Buffon*.

BUGEAUD, MARSHAL, duke of Isly, distinguished in the wars of Napoleon, and in Africa, 1784-1849.

BULKLEY, PETER, first minister of Concord, Massachusetts, was a native of Bedfordshire in England, and born in 1583. He was graduated at Cambridge, and ordained in the English Church, but 21 years after was silenced for non-conformity to its discipline. He emigrated to New England, and in 1636 was constituted pastor in Concord, where he died in 1659. He was an excellent scholar, and a benefactor to Harvard College. His

son, John Bulkley, was one of the first graduates at Harvard. Having taken his degree in 1642 he returned to England, and divided his time between practising as a physician and preaching to dissenting congregations. He died in London, 1689.

BULL, GEORGE, a theological au., 1634-1709.

BULL, JOHN, a disting. composer, 17th cent.

BULL, JOHN, General in the Revolutionary Army, was born in Pennsylvania. He saw much service in the French wars, and also in the war of independence. He died in 1844, aged 94.

BULL, WILLIAM, W. D., son of William Bull, Lieut. Gov. of S. Carolina, who died in 1755. He is supposed to be the first native of America who obtained a medical degree. He was a pupil of Boerhave, and studied at the University of Leyden. After returning to America he filled several important civil offices, and in 1764 was appointed Lieut. Governor of S. Carolina. He was also commander in chief of the British forces. He accompanied the troops to England in 1782, and died there in 1791.

BULLANT, JEAN, a French architect, 16th c.

BULLER, RT. HONB. CH., a polit., 1806-1848.

BULLIALDUS, ISMAEL, an astron., 1605-1694.

BULLIARD, PETER, a Fr. botanist, 1742-1793.

BULLINGER, HENRY, was born at Bremgarten in 1504, studied logic and scholastic philosophy at Cologne, was gradually weaned from popery, then became the confidant of Zuinglius at Zurich, and at length was appointed to succeed him by the suffrages of the senate and the ecclesiastical synod. For more than forty years he presided over the church in Zurich with singular prudence and success. He was a bulwark and an apostle of the Reformation, and he displayed great hospitality to the refugees from England under the persecution of Queen Mary. His works are not very numerous, nor are they of present value. Died September 17, 1575. [J.E.]

BULLOCK, WILLIAM, author of a work entitled 'Virginia impartially examined,' published in 1649.

BULMER, WM., an Engl. printer, 1746-1830.

BULOW, F. W., Count Von Dennewitz, a Prussian general in the late war, 1755-1816.

BULOW, HENRY, Baron Von, a Pruss. diplom., at length minister of foreign affairs, 1790-1846.

[Birth-place of John Bunyan.]

BUNYAN, JOHN, the celebrated author of the 'Pilgrim's Progress,' was born in 1628 at Elstow, in Bedfordshire. His father, though a travelling tinker, had taught him to read and write; but seduced by evil example, he plunged into every species of vice, and acquired the character of a notorious and hardened profligate. He became a soldier in the service of the parliament, and was at the siege of Licester, where having been drawn on one occasion to act as sentinel, he narrowly escaped the fate of his comrade, who was shot by a musket ball from the

royalist camp. Many other remarkable deliverances are recorded in his early history, clearly showing that Providence, who threw over him the shield of Divine protection, had some important work in reserve for him. Overhearing the conversation of four pious women, who were talking to each other of the necessity and blessedness of a religious life, and the hopeless misery of the wicked, his conscience was struck; he began to think seriously, and his dissolute companions perceiving a sudden alteration in his conduct, which all their raillery could not affect, gradually abandoned his society. As for Bunyan, he put himself in private communication with Gifford, a dissenting minister in Bedford, whose chapel he attended, and being persuaded that baptism by immersion was the only Scriptural mode of receiving the ordinance, he was in that manner received, in 1653, into the communion of the church. Conceiving himself called to proclaim the gospel, he perambulated the country as an itinerant preacher. After the restoration, this course of life brought him within the grasp of the law, which prohibited conventicles, and as he could not desist from a duty to which he imagined himself specially called, he was condemned to perpetual banishment. This severe sentence was not carried into execution; but he was confined in Bedford jail for the long period of twelve years and a-half. In that place he supported himself and family by tagging laces, and although cut off by his protracted confinement from all opportunity of public preaching, he was, in the overruling providence of God, more extensively useful than while in the enjoyment of unfettered liberty; for having during his leisure hours exerted the extraordinary talents with which he was endowed, he produced the 'Pilgrim's Progress,' a work which has been more extensively circulated, and done more good in the world than any other book, except the Bible alone. Bunyan being at last released through the kind intercession of Dr. Barlow, bishop of London, he was chosen pastor of the Baptist church in Bedford. Wherever he went, he was attended by crowded audiences, amongst whom were sometimes found persons of high eminence both in the church and state. He died in London, 1688, in the sixtieth year of his age, and was buried in Bunhill cemetery. His other works, 'The Holy War,' and 'Grace Abounding to the Chief of Sinners,' are pieces of great merit, though their fame is eclipsed by his unrivalled allegory. [R.J.]

BURCH, EDW., an English artist, 1730-1814.

BURCHARD, J., a Roman prelate, died 1505.

BURCKHARDT, JOHN LUDWIG, was born at Lausanne, in Switzerland, in the year 1784, or 1785. He studied at Basle, Leipzig, and Göttingen, graduating at the latter. Introduced by Blumenbach, in 1806, to Sir Joseph Banks and the African Association, he was engaged to travel under their auspices in central Africa: and having carefully prepared himself by various studies, he received his instructions in January, 1809. These bore that he was to remain two years in Syria, perfecting himself in the Arabic, thence to proceed to Mourzouk, in Fezzan, from which he was to cross the desert to Soudan, and the sources of the Niger. While in Syria, he visited most places of interest. In 1812 he reached Cairo, and being repeatedly disappointed in finding a caravan to convey him to Mourzouk, he performed various journeys in Egypt, Nubia, Abyssinia, on the shores of the Red Sea, and through Arabia, collecting a great amount of the most important information. When, at length, in the autumn of 1817, the long-expected caravan was ready to depart, Burckhardt was seized with dysentery, and expired at Cairo, October 15, 1817, in the thirty-third year of his age. His last days were cheered by the kind attentions of Mr. Salt, the English consul; and his death caused lively regret in Europe. His *Travels* occupy 4 vols. 4to., published at different times between 1819 and 1830. [J.B.]

BURCKHARDT, J. C., an astron., 1773-1825.

BURDER, GEO., an evangelical minis., d. 1832.

BURDETT, SIR FRANCIS, an eminent popular and parliamentary leader, was born on 25th January, 1770. The younger son of a younger son, it was only after a series of unexpected and calamitous deaths that he succeeded to the title and estates of his ancient and affluent family. Before that event he had in 1793 married a daughter of Thomas Coutts, the banker. He began his eventful parliamentary career by advocating an exposure of abuses in the Coldbath Fields, and other prisons. It was from the popularity thus achieved that in 1802 he was started for Middlesex. After a hot contest of fifteen days he was returned, but the House found the election void, and imprisoned the sheriffs. The contest was still carried on by him in vain at enor-

mous expense. In 1807, when disabled by a wound in a duel, he was started on the memorable contest for Westminster. His friends were successful, and he sat nearly thirty years for that constituency. The main incident in his subsequent career is, that in a quarrel with the House of Commons he attempted to resist the Speaker's warrant for his arrest, and created a disturbance, in which lives were lost. On this occasion the serjeant-at-arms found him affectedly teaching his child magna charta. It was always suspected that his politics were founded more on love of popularity than conviction, and he proved this by capriciously changing them in 1835, and vehemently adopting the other side. When professing democracy he was a thorough aristocrat in personal feeling. His appearance was handsome and commanding, and with his dress and deportment made him the picture of a high-bred English gentleman of the old school. He died on 23d Jan., 1844.

BURGH, JOHN DE, earl of Comyn, a soldier of the mid. ages, descended from Charlemagne, d. 1324.

BURGKMAIR, HANS, a German painter and wood engraver, was born at Augsburg in 1472. Though a painter of great excellence in his time and style, he is better known for his series of woodcuts, chiefly illustrating the achievements and life of the emperor Maximilian; as 'Der Weiss Kunig,' (the wise king,) an account of the acts of the emperor Maximilian I., with 237 large cuts, published with the life by Treitzsauerwein, at Vienna, in 1775; and the triumphal procession of the same emperor in 135 large cuts folio, executed in 1519; 'Le Triomphe de l'Empereur Maximilien I.,' accompanied with the ancient description dictated by the emperor himself to his secretary Marc Treitzsauerwein, Vienna, 1796. There is a third curious book of the 'Saints' of the imperial family, also by Burgkmair.—The above works, especially the 'Weiss Kunig,' are very valuable for the great variety and accuracy in detail of the illustrations of the manners and customs of the commencement of the sixteenth century. The blocks of these cuts, and many others by Burgkmair, are still preserved in the imperial library of Vienna. They are only partly executed by Burgkmair, he was aided by Albrecht Durer, and several other of the principal artists of his time: it is supposed that he actually cut very few of the blocks. The date of his death is uncertain, it is fixed by some authorities as late as 1559. [R.N.W.]

BURGOYNE, JOHN, lieutenant-general in the British army during the American war. After serving in Portugal against Spain he entered into Parliament. Prior to the breaking out of the Revolution he came to America and was present at the battle of Bunker's Hill. In 1777 he was placed in command of 7,000 British and German troops, for the purpose of opening communication between Canada and New York. He was at first attended with success, and compelled General St. Clair to evacuate Ticonderoga; but, partly owing to some injudicious movements by which he lost time, and partly to the defeat of several officers whom he had detached in different directions, together with the difficulties of transportation, his situation gradually became one of great peril. He also found himself neither supported by the rest of the British army nor by the Indians in the way which he had expected. In the battle of Stillwater on the 19th of September he re-

mained master of the field, but his loss considerably exceeded that of the American army. His supplies were limited, and in the presence of a superior force he vainly applied to Howe and Clinton for relief. Another disastrous action was fought at Saratoga on the seventh of October, in which his camp was stormed and several of his most valuable officers killed. His army was now reduced to 3,500 fighting men, his retreat cut off, his provisions exhausted, and no course left him but to surrender, on condition that his troops should be permitted to march out with all the honors of war and be allowed to embark for England. A convention was accordingly signed on the 17th of October, and the English army escorted to Cambridge, Massachusetts. Burgoyne went to England in the following May, but was not at first received by the king. He afterwards entered parliament, and in 1781 warmly advocated the discontinuance of hostilities. Towards the close of his life he devoted himself to literature, and was the author of several dramatic pieces which are still popular, and other works. The dramas entitled the *Heiress*, the *Maid of the Oaks*, the *Lord of the Manor*, and *Richard Cœur de Lion*, were written by Burgoyne, as well as some pamphlets in his defence, and a *Probationary Ode*. He was an officer of bravery and ability, but had the misfortune to contend unsupported in a country with which he was unacquainted, against a superior enemy abundantly supplied, and familiar with every inch of the ground.

BURIDAN, JOHN, a philosopher, 14th century.

BURIGNY, J. L. DE, a Fr. author, 1691-1785.

BURKE, EDANUS, Judge of the Court of Chancery in South Carolina, and in 1778 judge of the Supreme Court, and was chosen a member of Congress in 1789. He was born in Ireland, and emigrated to America at the commencement of the Revolution, during which he fought as a volunteer. Died 1802.

BURKE, EDMUND, a celebrated orator, statesman, and philosopher, was born at Dublin on 1st January, 1730. It has been much questioned whether he was from the beginning what is termed a political adventurer without means of livelihood to keep him independent, or entered on life with a considerable fortune. His family was said to be high and ancient, but his enemies, who were many and bitter, treated this as a common national boast of all Irishmen, and spoke of Burke as a sort of barbarian, who had come from a wild tribe to fight his way on in civilized life by the fierce unscrupulous habits in which he had been brought up. His early education, however, was derived in the calm seclusion of a Quaker seminary at Ballitore in Kildare, where he probably acquired much of the solemn reflective character which tempered his natural ardor. He studied, but not with any known distinction, at Trinity College, Dublin, where he took his master's degree in 1751. He was destined for the bar, and entered the Middle Temple, but legal studies seem to have had no charm for him. His abilities must have been seen in 1752, for it is known that there was then a proposal to choose him professor of logic in the university of Glasgow, though he does not appear to have been, as David Hume was, an avowed candidate. His first literary work, called 'A Vindication of Natural Society'—a close imitation of Bolingbroke, was published in 1756. Immediately afterwards appeared his well-known essay on the Sublime and Beautiful. Its originality of thought, and luxuriant flow of words, and ideas, at once arrested attention; and whatever may be thought of the leading principles, so well ridiculed by Payne Knight, and others, the literary merits of the work entitled it to its high reputation.

In 1757 he published his account of the settlements in America, and shortly afterwards co-operated with Dodsley in the 'Annual Register.' In 1763 his ability as a political partisan obtained for him a pension of £300 a year on the Irish establishment, and the event was rendered remarkable by the indignation with which Burke repelled the claims which the gentleman known 'as single speech Hamilton,' made on his political allegiance, on the plea of having obtained for him this pension. He entered political life, for which he had been industriously training himself, by becoming private secretary to the marquis of Rockingham, when first lord of the treasury in 1765, and at the same time entering parliament as representative of Wendover. At the conclusion of this ministry he commenced that long opposition to its successors, which became memorable from the tone of philosophical and constitutional wisdom with which he pleaded what, after all, was in reality the restoration of his own party connections to power. On the re-establishment of the Rockingham administration in 1783, he was made paymaster-general. His subsequent career is entwined with the history of the period. Its main features are his share in the prosecution of Warren Hastings, and that stern denunciation of the revolutionary progress of France, which caused his dramatic quarrel with Fox and his other old political friends. He made a large contribution to the parliamentary oratory of his day, and his speeches were remarkable for their richness of language and abundance of imagery. He died on July 8, 1797. [J.H.B.]

[Tomb of Burke.]

BURKE, JOHN DOLY, author of a history of Virginia, from its first settlement to 1804, and of two dramatic pieces, entitled *Bunker Hill* and *Bethlem Gabor*. He was a native of Ireland, and first came to America in 1797, where he edited some political newspapers in Boston and New York. He was killed in a duel by a Frenchman named Coquebert, in 1808.

BURLEIGH, WILLIAM CECIL, Lord, an eminent English statesman, was born in 1520. His father was master of the robes, and thus naturally opened a court career to the capacities of the son. He married in 1541 a sister of Sir John Cheke, who soon dying, after she had given birth to the son who became earl of Exeter, he was united in 1546 to Mildred, daughter of Sir Anth. Cook, the director of the royal studies. He was appointed master of requests by the Protector Somerset. He was at first involved with the fall of his master, but not expressing any romantic fidelity

to him, speedily rose again and was made secretary of state. His sagacity and caution prevented him from committing himself to the claims of Lady Jane Grey. Though thus commended to Queen Mary, it was neither consistent with his principles or his caution to aid her efforts for the re-establishment of the power of Rome, and he kept himself apart, offering a modified opposition to the court. He was in the mean time in close communication with the Princess Elizabeth, helped her to evade the dangers surrounding her, and prepared her to occupy the throne. On the day of her accession he took that place as her principal adviser, which he retained while he lived. In 1571 he was raised by the queen, always sparing of her honors, to the rank of baron. The history of his administration is the history of England. He was essentially a statesman of wise management rather than of constitutional views. Taking the immediate results of his policy, no statesman was ever more successful, but looking at ultimate effects, it may be said that he did more than any other man to bring England near to a despotism, and thus to lay the foundation of the civil wars of the ensuing century. It was his principle to make himself acquainted with the individual histories of men, and to dive as nearly as possible to the bottom of their character and intentions. Thus among his characteristic studies was genealogy, and he kept up such a potent system of secret inquiry as Britain never knew before, and has not known since. One of the most unpopular and unjustifiable of his acts was the death of Mary Queen of Scots. He was affected to the extent of a lively apprehension by the massacre of St. Bartholomew, and thought it inconsistent with the safety of England and the Protestant cause that the captive queen should continue to live. He was in general, however, moderate and averse to severity. He lived a moral, domestic life, characterized by the grave deportment of the age. He was neither malignant nor greedy, and left behind him a high name for integrity. He died on the 4th of August, 1598. [J.H.B.]

BURNET, GILBERT, bishop of Salisbury, an ecclesiastical historian, author of the *History of the Reformation*, *History of his Own Times*, *The Exposition of the 39 Articles*, and other works. 1643–1715.

BURNET, JACOB, an American lawyer, judge and politician, was born in Newark, New Jersey, removed to Cincinnati in 1790, where he practiced law. He became Judge of the Supreme Court of Ohio, a U. S. Senator, and a delegate to the Harrisburg Convention of 1839, and was instrumental in obtaining the nomination of General Harrison to the presidency, d. 1853, aged 82.

BURNET, THOS., an ecclesiastical wr., d. 1715.

BURNET, WM., son of bishop Burnet, born at the Hague, in 1688. The future Prince of Orange stood as his godfather. In 1720 he was appointed Governor of New York and New Jersey, and during his administration was chiefly occupied in withstanding the encroachments of the French. He married Miss Van Horne, of New York. His wise and disinterested opposition to the French, rendered him unpopular with those whose mercantile interests were affected, and he resigned in 1728, and was

appointed the same year Governor of Massachusetts and New Hampshire. He died in September, 1729.

BURNET, G. T., F.L.S., a botan., 1800–1835.

BURNETT, JAM., Lord Monboddo, the well-known speculative wr. on language, &c., 1714–1779.

BURNEY, CHARLES, Mus. Doc., was born at Shrewsbury in 1726, and partly educated at the free school there, and partly at the public school in Chester. His first music master was Mr. Baker, organist at Chester; he received further instructions from James Burney, his elder half-brother, organist at Shrewsbury, and he was three years under the tuition of Dr. Arne. In 1749 he was appointed organist of a church in London, in which year he was introduced to Mrs. Cibber, through whom, besides making the personal acquaintance of the literary and scientific men, the artists, actors, and wits of the time, he was induced to compose for Drury Lane Theatre three musical dramas, 'Alfred,' 'Robin Hood,' and 'Queen Mab.' After this period, being in ill health, he went to Lynn Regis in Norfolk, where for nine years he occupied himself in collecting materials for his great 'History of Music,' at the same time filling the situation of organist, with a salary of £100 per annum. In 1760, recovered in health, he returned to London, where he soon procured full employment and gained a high reputation in his profession, and where his eldest daughter, then only eight years old, attracted much attention as a performer on the harpsichord. In 1766 he brought out at Drury Lane a translation of Rousseau's 'Devin du Village.' In 1769 the college of Oxford conferred upon him the honorary degree of Doctor in Music. In the following year he set out on his travels with the object of visiting the great continental libraries, that he might add to the stores of matter he had collected for his 'History of Music.' In 1771 he published his 'Musical Tour,' a work of which his friend Dr. Johnson said when he wrote his account of the Hebrides, 'I had that clever dog Dr. Burney's tour in my eye.' In 1776 the first volume of the 'History of Music' was published, the second appeared in 1782, and the third and fourth in 1789. In this year Edmund Burke procured him the situation of organist at Chelsea College. In 1796 he published his life of Metastasio. He also contributed the principal articles on music to Reese's Encyclopedia. His other literary works were 'An Essay towards a History of Comets,' 'A Plan of a Public Musical School,' 'An Account (written for the Philosophical Transactions) of little Crotch, the Infant Musician,' 'A Memoir of the Musical Festival in Honor of Handel, which was held in Westminster Abbey in 1785.' In the year 1806 Mr. Wyndham procured for him a pension from government of £300, from which period he gave up his intellectual labors. He died on the 15th of April, 1815. Dr. Burney was twice married, and left by his first wife two sons and four daughters, and by his second one daughter. His eldest daughter, already mentioned, was celebrated as a musician. His second daughter, Madame D'Arblay, is known from her novels, 'Cecilia,' 'Evelina,' 'Camilla,' and the 'Wanderer,' which works commenced a new era in light literature. His eldest son, JAMES, sailed round the world with Captain Cook, and afterwards commanded the Bristol, fifty guns, in the East Indies. His second son was the learned CHARLES BURNEY, LL.D. Dr. Burney was on terms of intimacy and friendship with all the eminent men of his day. In all the relations of life, his character is described as exemplary, while his manners were peculiarly easy, spirited, and gentlemanly. [J.M.]

[Birth-place of Burns.]

BURNS, ROBERT, the great peasant poet of Scotland, lived and died within the latter half of the 18th century. His father, William Burness, according to the original spelling of the name, was a native of Kincardineshire, whence he migrated, first to Edinburgh, and afterwards to Ayrshire, obtaining employment as he best could as a working gardener. He ultimately took a lease of seven acres of land, about a couple of miles from the town of Ayr, in the district of Kyle, where he built, by the roadside, with his own hands, a clay cottage, which is still standing, an object of interest to strangers. To this humble dwelling, consisting merely of a *but* and a *ben*, he brought in due time a young bride, named Agnes Brown, daughter of a small farmer in the neighboring district of Carrick, and the first fruit of this union was ROBERT, born on the 25th of January, 1759. The position of William Burness at that time, and indeed throughout his whole life, was that of a high-minded and noble-hearted man struggling with adversity. Nevertheless, he contrived to give his children a respectable education, Robert, and his next brother, Gilbert, having been placed under an excellent teacher, named Murdoch. In 1766, when the poet was 7 years old, his father removed with his family to Mount Oliphant, a farm a couple of miles distant, but for some time afterwards the boys continued to attend Murdoch's school. If the library at Mount Oliphant was small, it yet comprised several good books, including the 'Spectator,' Allan Ramsay's 'Poems,' some plays of Shakespeare, and above all, a collection of English Songs, which Burns acknowledges to have studied with critical care. In his fifteenth year Robert was the principal laborer on the farm, which was far from prosperous; and to the drudgery and affliction which he endured at this period, his brother Gilbert ascribed that depression of spirits, accompanied at times with an irregular motion of the heart, to which he was afterwards liable. From the miseries of Mount Oliphant, the Burns family fled in 1777 to the farm of Lochlea, in the parish of Tarbolton. In the midst, however, of every hardship, the young men continued to advance not only in learning, but in accomplishments. Robert, with the assistance of his old teacher, Murdoch, had so far mastered the French language as to be able to read it with ease. At Kirkoswald he likewise acquired a smattering of mensuration and land surveying; while at Tarbolton he cultivated his powers of oratory in a debating club. Before this

time he had fallen in love with 'a bonnie, sweet, sonsie lass,' with whom he had worked at harvest, and his feelings had vented themselves in verse of no very noticeable merit. Not long, however, after the indifferent song of 'Handsome Nell,' he produced the inimitable lyric of 'My Nannie, O.' In the hope, according to his brother Gilbert, of being able to marry, he became a flax-dresser at Irvine; but at this occupation he continued only six months, during which time he was initiated into the mysteries of freemasonry, and acquired some additional knowledge of the world, together, it must be confessed, with some little laxity of morals. His return to Lochlea was a return to a quiet and correct mode of life. About this time a visitor described the Burns family at meal-time as having 'books in one hand and spoons in the other.' Inspired by a volume in his possession of letters from the pens of the best English authors, the poet aimed at epistolary excellence, and kept copies of such of his own communications to his friends as pleased him. In 1784, William Burness, 'the priest-like father' of the 'Cottar's Saturday Night,' died, leaving his family involved in a ruinous litigation. With what little they could rescue from the wreck at Lochlea, Robert and Gilbert Burns entered upon the farm of Moss-giel, in the parish of Mauchline. The former, in his new and responsible position, determined to read agricultural books, calculate crops, and attend markets. In place, however, of becoming a good practical farmer, he became only a great poet! It was at Moss-giel that he produced his most masterly pieces, including 'The Cottar's Saturday Night,' 'Address to the Deil,' 'The Jolly Beggars,' 'Halloween,' 'To a Mouse,' 'The Holy Fair,' 'Man was made to Mourn,' and others on which his fame chiefly rests. His powerful satires on the 'Unco Guid,' including the merciless and somewhat profane verses entitled 'Holy Willie's Prayer,' together with some transgressions against the laws of morality, stirred up many enemies, particularly among the 'Old Light' clergy. On the other hand, his genial, not to say convivial disposition, manly independence of character, and brilliant poetical parts, gained him a host of friends, and his first volume, printed at Kilmarnock in 1786, was largely subscribed for, and yielded him a clear profit of £20. With this money it was his intention to proceed to a situation in Jamaica, as book-keeper on the estate of a Dr. Douglas, in order to escape from the consequences of an intrigue with Jean Armour, the daughter of a master-mason in Mauchline, who ultimately, however, became his wife. With his attachment to 'bonnie Jean,' was mixed up a romantic affection for a Highland girl, named Mary Campbell, the subject of some of his most beautiful and high-toned effusions. The extraordinary favor, however, with which his poems were received by the critical world, induced him to proceed in 1788 to Edinburgh, with the view of getting out a second edition. His reception in the Scottish capital was of the most dazzling kind. In the society of the earl of Glencairn, Lord Monboddo, Mr. Henry Erskine, Dr. Robertson, Dr. Blair, Dr. Adam Ferguson, Dr. Blacklock, Mr. Henry Mackenzie, Mr. Fraser Tytler, and other celebrities, he was exhibited as a 'lion,' and the force, originality, and brilliancy of his conversation seem to have produced even a greater impression than his poetry. Admired and marvelled at by eminent men, Burns exerted a still more wonderful fascination over beautiful women. Among the latter was Mrs. Jas. McLehose, a wronged and deserted wife, about his own age, with whom he entered into a singularly roman-

tic and imprudent correspondence, under the Arcadian names of Sylvander and Clarinda. His second edition was at length published by Mr. Creech, and realized for the poet a profit of £500, the list of subscribers having extended to thirty-eight pages. This was the culminating point in the career of Burns. Out of the funds of which he was now in possession, he lent his brother Gilbert, who was still struggling with the unfortunate farm of Mossiel, the sum of £180. With the rest he took various tours through Scotland, a professed 'rustic bard' and man of genius, writing diaries and letters, scratching impromptu verses on the windows of inns and taverns, and inditing passionate love-strains to ladies and damsels of every degree, with whom he had the slightest possible acquaintance. After three months' rapturous raving to Clarinda, together with sundry other episodical attachments, he formally installed Jean Armour as his wife; and having leased from Mr. Miller of Dalswinton the farm of Ellisland, on the banks of the Nith, between five and six miles from Dumfries, he once more turned his attention to agricultural pursuits; but in reality chiefly occupied himself with railing at fortune, and writing the most exquisite songs in the world. In August, 1789, he entered the excise with a view to eke out his insufficient income. His duties, however, which compelled him to ride some two hundred miles in the course of every week, interfered with the business of his farm, and in 1791 he abandoned the latter, and established his headquarters wholly in Dumfries as an exciseman. The emoluments of his office did not exceed £70 a-year. Although poor, however, and often pinched for money, he was never in absolute want; and it is remarkable, that although contributing assiduously, first to Johnson's 'Scots Musical Museum,' and afterwards to Mr. Geo. Thomson's 'Melodies of Scotland,' he always seemed to resent any offer of remuneration as an affront. The written, collected, or altered songs contributed by Burns to these two miscellanies amounted to 284 in number. At Dumfries Burns lived about five years, leading a somewhat irregular life, occasionally getting into trouble on account of his capricious temper, or his democratic sentiments, resenting fancied slights by pungent epigrams, but still retaining many warm friends, and penning lyrics which were destined to live for ever. Broken at length in health, owing, it is said, to his having slept all night on one occasion in the open air, this extraordinary man expired at his house in Dumfries, on the 21st of July, 1796, in the thirty-eighth year of his age. Immediately after his death all Scotland was touched with remorse at having suffered her greatest son to perish in poverty and neglect. Subscriptions to a large amount were raised for behoof of his widow and family; costly monuments were erected in various quarters to his memory; and ever since, his fame has continued to increase. Although fond of representing himself as 'unlettered,' and as bred 'at the plough-tail,' it may be doubted whether there was any thing either in the position, or in the training of Burns, unfavorable to the full development of his genius. His brightest effusions were born of his toils, aspirations, and sufferings. In several other respects, the humbleness of his station in life was an advantage. It heightened the surprise occasioned by his writings, and procured for him an amount of substantial patronage which has been too much overlooked. That his career was prematurely cut short must always be a matter of regret to those who remember that 'Tam o' Shanter,' 'Bruce's Ad-

dress,' and the celebrated parting song of 'Ae Fond Kiss,' were among his later productions; but in his poetry and in his life, which are inseparably associated, he has left a sufficiently splendid impression. The moral failings which he himself acknowledged and deplored, are more easily forgiven than defended. Even, however, if there is something to condemn in his character, there is much more to admire and honor. His poverty never betrayed him into any mean or sordid action, or lowered the manly integrity and sturdy independence of his character. In literature his place is among the great ones of the earth. Much of his prose composition is labored and inflated; and his letters to Clarinda, in particular, present a strange and incongruous mixture of friendship and folly, religion and wild passion. But his poetry is replete with fire, humor, and pathos, combined with perfect simplicity and naturalness. One main secret of his success was his almost always writing directly from nature. His Jeans, Marys, and Peggies, were creatures of veritable flesh and blood. He even seemed to be continually working himself into fits of love, for the mere purpose of finding subjects for his muse; while his intense admiration of natural scenery, in place of venting itself in cold description, was generally associated with some engrossing human emotion. Hence it is that he rarely fails to find his way to the hearts of his readers, and that he has succeeded in bequeathing to his country and the world, the most admirable body of lyrical composition, whether as regards force of expression or tenderness of sentiment, to be found in the literature of any age or nation. BURR, AARON, president of the College of New Jersey, born in Connecticut in 1714. He was graduated at Yale College in 1735. In 1742 he was ordained at Newark. It was in a great measure owing to his influence that the College of New Jersey was founded, and he was appointed president of it in 1748. In 1752 he married a daughter of Jonathan Edwards, and died in 1757.

BURR, AARON, an Am. statesman and third vice-president of the United States, was born in Newark, N. J., Feb. 5, 1756. His father was the learned and devout president of Princeton College, and his mother the daughter of the eminent divine Jonathan Edwards. Both of his parents died before their son had reached the age of three years, and to this early deprivation of the precept and example of his exemplary parents, may be attributed the immoral life of Aaron Burr. He entered Princeton College at the age of twelve and graduated at sixteen, having won for himself during his college career the reputation of a youth of fine natural parts and studious application. While in his twentieth year, before he had completed his preparation for the bar, to which he had determined to devote himself, he joined in 1775 the American army under Washington, at Cambridge. His ardor in behalf of the Revolutionary cause was such, that he was induced to join Arnold as a volunteer in the expedition against Quebec. After his arrival there he was appointed aid-de-camp to Montgomery, and was by the side of that brave officer when he fell. Subsequently in 1776 he was received by General Washington as one of his military family, but was soon cast off by that stern moralist in consequence of his debauchery. He never forgave Washington this act of just retribution, brought upon him by his own vice. Burr's military talents, however, secured for him the high position of lieutenant-colonel in 1777, which he retained until 1779, when he was obliged to relinquish it in con-

sequence of ill health. Upon Burr's retirement from military life, he resumed the study of law, and commenced its practice in Albany in 1782, but soon removed to New York, where he early acquired a prominent position as a great lawyer. In 1789 he was made attorney-general of New York. From 1791 to 1797, he was a member of the United States Senate, where he was distinguished as a leader of the republican party. In 1800 he was a candidate for the presidency, and received the same number of 79 votes as Thomas Jefferson, and the choice was thus left to the decision of Congress, which on the thirty-sixth ballot elected Jefferson as president and Burr as vice-president. In 1804 was fought the famous duel between Alex. Hamilton and Burr, in which the former was killed and the latter for ever lost in the public esteem. Burr had pursued Hamilton with the most malignant animosity, and forced him to be his antagonist in a duel, which Burr seemed to have contrived for the purpose of taking deadly revenge upon his hated opponent. In 1807 he was apprehended, taken to Richmond, Va., and tried on a charge of a treasonable design upon Mexico; he was, however, after a long trial acquitted. His public life was now at an end, as his country had no faith in his integrity; he, however, resumed the practice of law, but lived in comparative obscurity until his death on Staten Island, Sept. 14, 1836. His unscrupulous conduct as a statesman, and his debauchery in private life, deprived him of all public or personal sympathy, and he left accordingly but an ill-fame behind him.

**BURRILL, JOHN**, speaker for many years of the House of Representatives in Massachusetts under Governor Shute. He was chosen member of the Council in 1720, and died in the following year, aged 63.

**BURRILL, JAMES**, United States Senator from Rhode Island, was born in 1771, and graduated at Brown University in 1788. After the completion of his legal studies, he attained great eminence at the bar and was appointed Attorney General and Chief Justice. He was elected also a member of the Assembly, of which body he became speaker. His election to the Senate of the United States occurred in 1816, and while there he principally distinguished himself in the debate concerning the admission of Missouri. He died at Washington in 1820, at the age of 49.

**BURROUGHS, GEO.**, a congregational minister, who was graduated at Harvard in 1670, and executed at Salem on a charge of witchcraft in 1692. In the testimony against him it was affirmed that he had performed feats of extraordinary strength, and some of the witnesses declared that two of his deceased wives, who accused him of having caused their death, appeared to them in open court, and occasioned the paroxysms of fear with which they pretended to be seized. It was in vain that he asserted his innocence, and even at the moment of death repeated with tears the Lord's Prayer, which it was supposed impossible for a witch to do. The fanaticism was too strong, and he perished with many others.

**BURROW, REUBEN**, a mathematician, d. 1791.

**BURROWS, STEPHEN**, an Englishman; accompanied Chancellor in his voyage to the N.E. in 1553; and sailed again in 1556 in a small vessel to explore the N. coasts of Europe and Asia. He was the first, at a later date, to observe the gradual change in the declination of the magnetic needle; from his observations, and those of Gunter and Mair, in 1612, the existence of this secular variation

was completely established in 1625 by Gellibrand, professor of geometry in Gresham College, London.

**BURROWS, WILLIAM**, an officer in the United States navy, born near Philadelphia in 1785. He entered the service as a midshipman in 1799. During the last war with England, he was appointed to the command of the *Enterprise*, and engaged the British brig *Boxer* off Portland on the 5th of September, 1813, which surrendered to him after an action of 45 minutes, in which her commander, named Blyth, was killed. Lieut. Burrows had himself been lying on the deck mortally wounded since the very beginning of the fight, but received the sword of his enemy with the words 'I am satisfied—I die content.' The bodies of Burrows and Blyth were buried together at Portland on the 9th of September, and Congress voted a gold medal to the nearest relatives of the victor.

**BURT, FEDERAL**, pastor of Durham, New Hampshire, and editor of a religious paper published in that State called the *Observer*. His name is to be ascribed to the coincidence between the day of his birth, March 4, 1789, with the beginning of the first government under the Federal Constitution. Allen quaintly says, "There are names in our country originating in greater caprice,—as Mr. Preserved Fish, a sound merchant of New York, and Mr. Adam Eve, who died lately in Pennsylvania at a great age, and Mr. Pickled Ham, of Maine, who has not yet turned to corruption." Mr. Burt died in 1828, aged 47.

**BURT, FRANCIS**, the first governor of the territory of Nebraska, born in Pendleton, S. C., and died Oct. 1854, a few days after reaching the country whose affairs he had been appointed to administer.

**BURT, JOHN**, a clergyman, graduated at Harvard, and ordained in Bristol, R. I., where he dropped dead of emotion or fatigue in a field adjacent to the town on the 7th October, 1775, at the moment that a cannonade was opened upon it by Capt. Wallace, a British officer. He married the daughter of Lieut. Governor William Ellery.

**BURTON, J.**, a classic. schol. and theol., d. 1771.

**BURTON, ROBERT**, the celebrated author of the 'Anatomy of Melancholy,' 1576–1640.

**BURY, ARTHUR**, an English divine, 17th cent.

**BURY, ELIZ.**, a distinguished au., 1664–1720.

**BUSBY, DR. RICH.**, a classical teacher, fifty-five years master of Westminster school, 1606–1695.

**BUSCHE, H. VON DER**, a Ger. schol., d. 1534.

**BUSCHING, A. F.**, a miscel. wr., 1724–1793.

**BUSHE, RT. HON. SIR C. KENDAL**, an able lawyer and orator, privy councillor in 1822, d. 1843.

**BUSHE, GEO. MACARTNEY**, a celebrated surgeon, born in Ireland but resident in New York, author of a work on the 'Rectum,' d. 1836, aged 39.

**BUSHNELL, DAVID**, attained some celebrity during the Revolutionary war by the invention of a vessel for submarine navigation designed to destroy ships of war from beneath. The experiment was not successful, and the machine itself was captured in the Hudson on board a sloop and sunk. Bushnell was a native of Saybrook, Connecticut.

**BUTE, JOHN STUART**, earl of, minister of state soon after the acc. of Geo. III., 1760–1762, d. 1792.

**BUTINI, J. A.**, a physician of Geneva, last ct.

**BUTLER, ALBAN.**, a catholic biog., d. 1773.

**BUTLER, C.**, a catholic histor., &c., 1750–1832.

**BUTLER, JAMES ARMAR**, a British officer, who fell in the successful defence of Silistria against the Russians in June, 1854. His skill and courage were powerful aids in securing the success of the Turks. He was 27 years of age only.

**BUTLER, JOHN.** The atrocities committed by this miscreant during the Revolutionary war almost exceed belief. He was a native of Connecticut, but removed to the valley of Wyoming, where in 1778 at the head of 1,600 men, of which 300 were Indians and the rest Tories painted to resemble Indians, he attacked the towns and villages in that romantic region and indiscriminately massacred those who submitted as well as those who fought, women and children as well as men. To the question what terms would be granted, he replied, 'The hatchet;' people of both sexes and every age were indiscriminately shut up in houses which were then set on fire; some were held down in the flames by pitchforks, and in one instance at least a poor wretch had his body stuck full of pine-knot splinters and then burned. He renewed these cruelties the next year in Cherry Valley, where he sent his son in company with Brant, the Indian chief. Butler survived the war and settled in Upper Canada, where he had 5,000 acres of land and £500 a year from the British government. The massacre of Wyoming has been ascribed by Campbell to Brant, but he was not present, and even in Cherry Valley the Indian was more merciful than the white man.

**BUTLER, JOSEPH,** a learned English bishop, author of the cel. 'Analogy of Religion,' 1692-1752.

**BUTLER, PERCIVAL,** general, an officer in the American army during the Revolution. He shared in the siege and capture of New York in 1781. Died in Kentucky in 1821, aged 61.

**BUTLER, PIERCE,** a descendant of the dukes of Ormond in Ireland, came to America as an officer in the British army, but attached himself at the Revolution to the republican cause. He was bitterly opposed to Great Britain. He represented South Carolina in the Congress of 1787, and in the convention which framed the Constitution of the United States. His dislike of England led him to disapprove of Jay's treaty, and the general policy of Washington's administration, and highly to applaud the war of 1812. He died in 1822, at the age of 77.

**BUTLER, RICHARD,** major-general in the army of the United States, who was killed in the disastrous expedition of General St. Clair against the Indians in 1791. The defeat was owing to the panic with which the militia who occupied the first line were seized, on the attack of the Indians upon them on the morning of the 4th of November. They recoiled upon the first line of regulars commanded by General Butler, and although that officer gallantly repulsed the Indians with the bayonet, the confusion was irretrievable. He himself was wounded, and while lying on the ground at a little distance where he had been carried for safety, was pounced on by an Indian, tomahawked and scalped. The savage who performed this feat did not bear away his trophies, but was immediately killed by the American troops. The rout, however, was complete, and out of an army of 1,200 men 600 were in a brief space killed and wounded, and the rest put to flight. The loss of General Butler occasioned universal sorrow. He was an officer of distinguished valor and ability, and performed eminent services toward the close of the Revolutionary war.

**BUTLER, SAMUEL,** author of the exquisite poetical satire, 'Hudibras,' known and quoted wherever the English language is spoken, was born in Worcestershire, 1612, and lived a life of drudgery and poverty till 1680. His poem was published after the restoration, the first two parts in 1663 and 1664, the third in 1678, and its popularity from the first was unprecedented. Two collections of the author's

posthumous poems have appeared in 1719 and 1759, respectively, but his reputation rests exclusively on the 'Hudibras,' which, for its pungent wit, ludicrous casuistry, and droll humor in the description of life and character, is unparalleled in the language.

**BUTLER, DR. S.,** a learned prelate, 1774-1840.

**BUTLER, THOMAS,** colonel, an officer in the United States army, who highly distinguished himself at the battles of Brandywine and Monmouth, at the former of which he was thanked upon the field for his gallantry by Washington. He fought at the defeat of St. Clair, where his brother Richard lost his life, and led his battalion to a charge of bayonets seated on horseback after his leg had been broken by a ball. His life was saved by Capt. Edward Butler, another brother. He was promoted to the rank of lieutenant-colonel in 1794, and commanded against the insurgents at Pittsburg. In 1797 he was sent by Washington to Tennessee to dispossess those who had settled on the Indian lands. He died in 1805, at the age of 51.

**BUTLER, WILLIAM,** major-general in the American army during the Revolution. His father was treacherously killed in South Carolina, which circumstance incited him to redoubled efforts to revenge his death. He was elected to Congress in 1800, and in 1812 was placed in command of the troops retained for defence in South Carolina. He died in 1821, aged 67.

**BUTLER, WILLIAM,** lieutenant-colonel of the 4th Pennsylvania regiment, an officer in the Revolutionary war, who after the massacre at Wyoming was sent into the Indian country on the Susquehanna, and served in 1779 in the expedition of Sullivan against the Indians.

**BUTLER, ZEBULON,** an inhabitant of the Vale of Wyoming at the period of the massacre by the infamous John Butler. He was the second in command on the American side, and one of the few who escaped on the 3d July, 1778.

**BUTTNER, GOTTLIEB,** a Moravian missionary among the New York Indians, arrived in America in 1741, was ordained by Count Zinzendorf in Pennsylvania in 1742, and died after severe labor in February, 1745.

**BUTTON, SIR THOMAS,** was employed in 1612 by the merchants of London to prosecute the discoveries of Henry Hudson on the N.E. coast of North America. He was the first who reached the east coast through Hudson's Strait. With his two ships, Resolution and Discovery, he passed the winter at the mouth of Nelson's River, west side of Hudson's Bay, lat. 57° 10', and showed extraordinary sagacity and tact in keeping up the health and spirits of his crew. In the following summer he made some important discoveries northwards, and returned home in the autumn of 1613, but was not again employed. He was first patronized by Prince Henry, son of James I., and received the honor of knighthood as a reward for his services. [J.B.]

**BUXTON, JEDEDIAH,** a celebrated calculator, about 1705-1775.

**BUXTON, SIR THOS. FOWELL,** Bart., a distinguished philanthropist and reformer in the same field of labor as Mrs. Fry, (his sister-in-law,) and Wilberforce, 1786-1845.

**BUXTORF, JOHN,** a cel. Hebraist, 1564-1629. His son, of the same name, also distinguished as a Hebrew and classical scholar, 1599-1630.

**BUZOT, FRANCIS LEONARD NICHOLAS,** a member of the French convention, and one of the Girondist party proscribed by Robespierre; b. 1760, found dead after his escape to Bordeaux, 1793.

**BYFIELD, NATHANIEL**, a nephew on his mother's side of Bishop Juxon, and son of Richard Byfield, one of the Westminster divines, was born in 1653, emigrated to Boston in 1674, became one of the chief settlers of Bristol, Rhode Island, and was judge of the vice-admiralty court of Massachusetts, besides occupying other distinguished civil and military offices. He died in 1773, aged 79.

**BYLES, MATHER, D.D.**, a congregational minister of Boston, remarkable for his genius, wit, and literary attainments, was born in 1706, and was graduated at Harvard in 1725. He became pastor of the church in Hollis street, Boston, in 1733. He was not only eminent for eloquence as a preacher, and elegance as a prose writer, but by his poetical talents attracted the attention and esteem of Pope, Lansdowne, and Watts, together with other men of genius and learning in England. In his ministrations he abstained on principle from all political preaching, which together with the fact of his continuing in Boston during the siege, receiving British officers into his house and praying for the king and the safety of Boston, occasioned him in 1777 to be denounced as a tory and sentenced to be transported to England, which, however, was not put in effect. He married for his first wife a niece of governor Belcher, and for his second the daughter of lieutenant-governor Taylor. His son of the same name, after being ordained as a congregational minister, joined the church of England in 1768, and officiated at Boston, while his father was still pastor of the Hollis street church. The elder Byles died in Boston in 1788, at the age of 82, and the younger at St. John's, New Brunswick, in 1814.

**BYLOT, ROBT.**, a skilful and enterprising seaman, who made many voyages in various capacities with Hudson, Button, Baffin, &c., early in the 17th cent.

**BYNG**, the name of two English admirals; **GEORGE**, com. in the Spanish war, 1663-1733. **JOHN**, his son, exec. for alleged cowardice, 1757.

**BYRAM-KHAN**, a Mogul chief, assassin. 1561.

**BYRD, WILLIAM**, Colonel, one of the commissioners for establishing the line between North Carolina and Virginia, in 1723. He was distinguished for his wealth, munificence and literary and scientific attainments, was member of the Royal Society, and owned one of the largest libraries then on the continent of America. To the French Protestants, who arrived in Virginia in 1699, when driven from their country by persecution, he displayed the greatest liberality. A history of the drawing the line between Virginia and Carolina, published anonymously, is supposed to have proceeded from his pen. He wrote also in the philosophical transactions. His son of the same name served as commissioner with the Indians about the year 1756, and in other public employments.

**BYROM, DR. J.**, cel. as a poetical humorist and fugitive prose writer, 1691-1763.

**BYRON, JOHN**, second son of William, Lord Byron, was born November 8, 1723. He went out with Anson, as midshipman on board the *Wager*, and was wrecked on the west coast of South America, about lat. 47°. An Indian Cacique conveyed him and his companions, after thirteen months' dreadful sufferings, to the island of Chiloe. Thence they made their way northwards, being treated by the Spaniards with the utmost kindness, though the nations were at war, chiefly in consequence of the fame which had spread abroad regarding Anson's lofty chivalrous behavior towards some Spanish ladies whom he had made prisoners. 'Byron's Narrative' of the sufferings and adven-

tures of himself and his companions, published in 1745, after he returned home, was one of the most interesting accounts of nautical adventures ever given to the world. Being constantly employed afterwards, as well in war as in peace, he performed many brilliant services, of which the most worthy of mention is the destruction of a French squadron in Chaleur Bay. In command of two ships he made a voyage to the South Sea in 1764. In 1769 he was made governor of Newfoundland. In 1778 he commanded a fleet in the West Indies, and soon after rose to the rank of Vice-admiral of the White. He is better known, however, by the humbler title of commodore. He had a family of two sons and seven daughters, by Sarah, daughter of John Trevanion, Esq., of Cartrays, Cornwall, whom he married in 1748. Byron died in London, April 10, 1786, enjoying to the last a well-earned reputation. Captain Byron, one of his sons, was father of the poet, who thus oddly alludes to his ancestor's misfortunes in describing those of one of his heroes:—

‘——his sufferings were comparative

To those related in my grand-dad's narrative.’ [J.B.]

**BYRON, GEORGE GORDON**, Lord, was the descendant, and became the head of an ancient and noble family. Commodore Byron, the celebrated voyager, was his grandfather; and his father, Captain Byron, a profligate extravagant man, married Miss Gordon, an Aberdeenshire lady of old descent. The poet was born in London, on the 22d of January, 1788. Two years afterwards, his father having fled from his creditors to the continent, where he soon died, Mrs. Byron Gordon sought at Aberdeen, a residence suited to her scanty resources, which seem to have been in no way aided by the then Lord Byron, her husband's uncle, a retired and despondent man. In the course of the eight years spent in Scotland, she, a violent and misjudging woman, acted as if it had been her aim to weaken all the good tendencies in her son's fine nature, and to aggravate all the bad ones. Capricious alternations of severity and indulgence cherished his hereditary hastiness of temper, and pampered his proud wilfulness into selfish defiance; a constant change of teachers, and of methods of teaching, cherished habits of desultoriness and inattention in the boy's studies. Byron was already a spoiled child, when, about the commencement of his eleventh year, his granduncle's death made him the possessor of the family title and property.—His mother, left by the guardians to take her own way, now spoiled him more than ever; while at the same time she subjected him to fruitless and tormenting operations, designed to remove the lameness which, caused at his birth, she had taunted him with from childhood in her fits of anger. Improvement, both in temper and industry, began on his being placed in an excellent private school at Dulwich; but the promising prospect was destroyed by his mother's constant interferences; and he remained at this place for no more than two years, and these broken by frequent and long visits to home. He was next removed to Harrow, where, though somewhat rebellious, and a very careless student of the Classics, he was liked as a generous and spirited youth, and went through a good deal of miscellaneous reading. During his school days at Harrow, and before he had entered his eighteenth year, he formed an attachment which, though doubtless poetized and magnified in his own imagination afterwards, was probably more genuine and ardent than any he felt in mature life. The lady was Miss Chaworth, two years older than himself, the heiress of estates in the neighborhood of

his patrimonial mansion of Newstead Abbey in Nottinghamshire, and the near relative of a gentleman who had been killed in a duel by the preceding Lord Byron. He has immortalized her marriage and melancholy fate in 'The Dream' and other poems.—Entered at Trinity College, Cambridge, in the autumn of 1805, he resided for two years. His career at the university was eccentric, profuse, and on the whole idle; but he read zealously when the humor seized him, acquiring a very considerable amount of stray knowledge; and a few persons of talent, with whom he had become intimate, were quite aware that he was a young man of no ordinary promise. While he was still at the university, he circulated privately copies of a thin volume of verses, which was prudently reserved for friendly readers and soon suppressed. But before the end of 1807, and when in his twentieth year, he was rash enough to face the public with the 'Hours of Idleness,' a collection of poems, from the very best of which no one would have ventured to presage the strength he was soon to exhibit. This strength was brought to a point by the anger which the young poet felt at the famous criticism on his book in the 'Edinburgh Review.' Studying the satirical poets as models, and collecting every available piece of gossip that could point an ill-natured jest, he at length, in 1809, poured forth his wrath, all the warmer for the nursing he had given it, in his poetical satire 'English Bards and Scotch Reviewers.' Scurrilously personal, and indiscriminately contemptuous of all the literary celebrities of the day, this poem showed powers which evidently wanted only maturity and fit guidance to achieve very great things.—In the same year he embarked with Mr. Hobhouse on a two years' journey on the continent, in the course of which he visited the Peninsula, extended his travels to Greece and Turkey, and, with his poetical enthusiasm now fairly awakened, composed in great part the first and second cantos of 'Childe Harold's Pilgrimage.' The publication of these, in the spring of 1812, when he had just completed his twenty-fourth year, made him at once the most popular poet of the time. The few who had already learned to appreciate Wordsworth and Coleridge, found, in the new poet, a freedom both from the affectations of the one and from the obscurities and eccentricity of the other; while there were united with these a poetic elevation and richness not exceeded by either. The popularity, again, which Scott had won, by the 'Lay,' 'Marmion,' and the 'Lady of the Lake,' was already beginning to suffer from the satiety produced by bad imitations; and the Scottish minstrel's favor with the public waned rapidly, when Byron, deserting the meditative poetry of the 'Pilgrimage,' adopted, like Scott, the seductive form of the metrical romance, and gave it the charm of novelty by choosing Turkish and Grecian stories. In 1813 appeared his wildly striking fragment 'The Giaour,' and the more regular 'Bride of Abydos.' 'The Corsair' and its sequel 'Lara,' followed in 1814, and were accompanied by the 'Ode to Napoleon Bonaparte.' In the beginning of 1816, the first and most characteristic series of Lord Byron's works was closed by the appearance of 'The Siege of Corinth' and 'Parisina.'—While he was thus building up his poetical fame, his domestic history underwent several changes, to which he was no way slow in inviting attention. 'Childe Harold,' the sated voluptuary, seeking to refresh his sick heart amidst the magnificence of nature, but contemplating all things through the medium of a cynical and despondent philosophy, had been avow-

edly presented as an idealized portrait of the young poet himself, bitterly convinced, by a premature experience, of the hollowness of worldly pleasures, yet unable to discover any higher truths, in the contemplation and realization of which happiness might be attained. Till the publication of the earlier cantos of 'Childe Harold,' Byron's proud and sensitive spirit had been tempted to misanthropical discontent by the equivocal position he held in society, partly through accidental circumstances, partly through the reputation of his youthful irregularities. But the stamp thus imprinted on his earlier poetry was too much in accordance with his natural temperament to be easily effaced. The exaggerated and theatrical exhibition of his own character, in the persons of his heroes, was repeated even in those of his tales, which were written while he was the idol of fashionable society, and enjoyed the prospect of domestic happiness; and when misfortune and opprobrium darkened round him, the petulant rashness of ill-trained youth passed into a permanent mood of morbid and haughty defiance, to which his later poems gave utterance with increasing eagerness and constancy. With as little power as any great poet ever possessed, of observing or delineating the character and passions of other men, Byron was not true to nature, unless when he drew his materials from within; but his poetry, thus unreal and fantastic in all its representations of human life, has the singular charm which belongs to the self-drawn image of a nature nobly endowed with the poetic elements of greatness, and vacillating in its moral aspect between the extremes of goodness and of evil.—In the autumn of 1814, after having passed some years in that round of extravagant and unsatisfying dissipation into which he had been initiated even in boyhood, Lord Byron married the daughter of Sir Ralph Milbanke. The marriage proved unhappy for both parties, through causes which have never been clearly explained; pecuniary embarrassments aggravated dissension; and in the beginning of 1816, soon after the birth of a daughter, Lady Byron quitted her husband's house never to return. Very soon afterwards Lord Byron left England, in which he never again set foot. His first place of residence was in the neighborhood of Geneva, where the sublime scenery of Switzerland, and the society of the poet Shelley, co-operated in awakening his mind to an elevation and purity of poetic inspiration such as he never reached before or after. Here were written 'The Prisoner of Chillon,' and the third canto of 'Childe Harold.' The influence of Swiss landscapes lingered fondly in his imagination during the next stage of his travels. It gave birth to 'Manfred,' which, with all its faults, ethical and dramatic, is perhaps richer in poetical imagery and sentiment than any of his other works. In the end of 1816 he took up his abode at Venice, where he remained for three years, visiting Rome, and there gathering materials for the fourth canto of 'Childe Harold.' His residence at Venice was disgraced by low and gross debauchery; and if there was greater refinement, there was no real improvement of morality, in a more lasting attachment which he next formed for the Countess Guiccioli, and which is not recommended to our English feelings or notions, even by the countenance vouchsafed to it by the lady's father and brother. In the beginning of 1820 Byron followed the countess and her family to Ravenna; where, with them, he became engaged in political plots, which soon caused his Italian friends to be banished from the papal states. Pisa then became the abode of

the party. Here Byron received Mr. and Mrs. Shelley, and afterwards Mr. Leigh Hunt, and with these coadjutors attempted unsuccessfully the periodical called 'The Liberal.' His poetical vein, however, flowed freely during his residence in Italy. Besides 'Manfred' and the last canto of 'Childe Harold,' and several works which are universally admitted to be poor, he then produced 'Mazeppa,' 'The Lament of Tasso,' and his Dramatic Poems, of which, while 'Cain' abounded in the old leaven, the tragedies indicated, morally, though not poetically, an inclination to rise into a higher and purer region. Other inclinations, however, were betrayed by a new class of poems, in which the strength and versatility of the poet's genius were strikingly displayed. They were modelled on the burlesque poetry of the Italians, which had hardly been emulated in the English language except by Frere. Byron's first attempt in this path was 'Beppo,' and the ethical looseness of this lively piece became exaggerated into open depravity, while it was accompanied at first by much noble poetry, and always by much stinging wit, in the notorious cantos of 'Don Juan.'—That Byron was secretly weary of aimless profligacy, and eager for opportunities of honorable action, may be inferred from his

willingness to take part in the abortive Italian conspiracies. A more promising field was now opened to him, soon after the unfortunate death of his friend Shelley. The London Committee of Philhellenes requested him to take part in the emancipation of Greece; and he enthusiastically accepted the invitation. He sailed from Genoa in July, 1823, and began his philanthropic exertions in the island of Cephalonia. In January, 1824, he landed at Missolonghi, already laboring under illness, which he had aggravated by bathing in the sea in the course of his last voyage. Disappointments in the great object of his expedition gathered round him, and were bravely borne; but his health was further injured by anxiety, and by repeated exposure to bad weather in an unhealthy climate. He died at Missolonghi, of rheumatic fever, or its accompanying inflammation of the heart, on the 19th of April, 1824, soon after having celebrated, in affecting verses, the completion of his thirty-sixth year.

CABANIS, PIERRE JEAN GEORGES, a very cel. physician and philosopher, belonging to a recent school; much concerned with the events which marked the close of the last and the beginning of the present century in France. He was born in Connac, in 1757, and died in Paris, in 1808. Cabanis was closely associated with the greatest men of the Revolution; it was he who gave Condorcet that fatal dose of *stramonium*, through whose energy he escaped death by the guillotine; Cabanis attended and ministered to Mirabeau during his last illness, and he was the favorite physician of Napoleon. Considerable interest still attaches to the physiological and psychological speculations of Cabanis; whoever desires fullest acquaintance with the best compacted physiological theory of mind, must indeed betake himself to this author. A thorough disciple of Condillac; starting with it as an axiom that all of our sensations, (see CONDILLAC and LOCKE,)—he sprang at once to the physiological expression of that theory, viz: that *thought* or *soul* is the secretion of vital organs—a result or phenomenon of vital structure. 'If,' says he, Condillac had known the animal economy better, he would have seen that *soul* is a *faculty*, not an *existence*.' Among the physiological schools prevailing during the times in which he lived, the position of Cabanis is apparently as follows. There are *three* of these schools; the *first* discerns in the animal economy nothing save peculiar *physical* phenomena, evolved by the same laws which rule inorganic sequences; the *second* admits that independently of physical phenomena, life is a set of special actions, or

consists of vital *properties*; the *third*, to which Cabanis belonged, and which he represents, concedes that with material elements, some peculiar vital *principle* has been conjoined. Although this principle did not in the mind of Cabanis have any relation with intelligence or reason, nevertheless the concession—far from insignificant in France at the time—seems gradually to have opened his mind to those more advanced views expressed in his famous letter to M. Fañriel, in which he declares at least for the *possibility* of the existence of the moral system governed by this principle, after the dissolution of the organism. The student will find enough to repay perusal in the works of Cabanis. His style is literary, distinct, and strong; and he has thrown much light on the really physiological and physical phenomena of our human nature. A good edition of his collected works has recently appeared in Paris. [J.P.N.]

CABARRUS, FRANCIS, Count De, Sp. minister of finance under Joseph Buonaparte, 1752–1810.

CABELL, SAMUEL I., Lieut.-Colonel in the American army during the Revolution; was born about the year 1757, in Virginia. He had not completed his studies when the war broke out, but abandoned them, and joining the army, served in every campaign until he was taken captive in 1780, at the surrender of Charleston. After the conclusion of the war he was a member of Congress, and died in 1818, aged 61.

CABOT, GEORGE, a Senator of the United States, born in Massachusetts, in 1752. He was destitute of the advantages of early education, and spent his first years at sea, but he improved his time so well in observation and the acquisition of knowledge, that he became at the age of 25 a member of the Provincial Congress, which met at Concord, and devoted the remainder of his life to politics, and commercial pursuits. His talents and sound principles won for him the approbation of Washington, of whom

he was a firm upholder, and he coincided with Hamilton in his views of finance, as well as in his sentiments respecting the French Revolution. He was a brilliant conversationalist, a man of general intelligence, of integrity, amiability and religious principle. He died in 1823 at the age of 71.

CABOT, JOHN, the discoverer of the Continent of America, was a Venetian, who embarked from Bristol in 1497, with a commission from Henry VII. to conquer and settle unknown lands, and find out a north-west passage to the East Indies. In latitude 58 floating ice compelled him to pursue a more southerly direction, and on the 24th of June he came in sight of some part of the coast of Nova Scotia or Newfoundland. He followed the line of coast to the north-east till he reached the latitude of  $67\frac{1}{2}$ , when he changed his course to the south, and next saw land in Florida. A mutiny, owing to the scarcity of provisions, now compelled him to go back, without turning his discovery to any practical account. Columbus did not see the coast of North America till the following year, but as his previous discoveries had prompted the voyage of Cabot, to him after all belongs the honor of having unveiled the New World to the gaze of mankind.

CABOT, SEBASTIAN, the second son of John Cabot, whom he accompanied in the voyage of 1497, which resulted in the discovery of the new continent. It was some years before the delusion was

dispelled that a path to the East Indies lay direct over the western ocean, and Sebastian made another attempt to discover this in 1517. In 1525 he entered into the service of Ferdinand and Isabella, but with no better success than effecting some discoveries on the coast of Brazil. For many years he acted as chief pilot, having the supervision of all projects designed by Spain to lay open the West to the adventurous spirit of Europe. He returned to Bristol towards the end of his life, and was patronized by Edward VI. The favorite enterprise of his later years was the discovery of a North-Eastern passage to China, and through his means the Russian Trading Company was instituted. In 1583 he published a folio volume, entitled 'Navigatione nelle parte settentrionale,' and to him is ascribed the first discovery of the variation of the magnetic needle. He was one of the foremost men of the enterprising age in which he lived. He died in 1557, at the age of 80.

CABRAL, F., a Portuguese missionary, author of 'Letters from Japan and China,' 1528-1609.

CABRAL, PEDRO ALVAREZ DE, was sent out by the king of Portugal soon after the return of Vasco de Gama, in command of a fleet of thirteen ships,

with 1,200 fighting men, and a number of Franciscan monks as missionaries, with the object of making settlements in the East Indies. He was the first who had the boldness to adopt the route now generally followed in order to reach the Cape without incurring the delays and dangers of the coast voyage. His plan was to sail S.W. till he should gain the latitude of the Cape, and thus cross the Atlantic twice. Following this route from the Cape Verde Islands, he came in sight of the coast of Brazil, about lat.  $10^{\circ}$  S., on 3d May, 1500. Coasting S. as far as lat.  $17^{\circ}$ , he took possession in name of his sovereign, and the cross then erected at Porto Seguro is still preserved. A ship was sent home with the news; and although Yanez Pinzon had visited this coast on the part of Spain three months earlier, the claim thence derived was waived, and the sovereignty of Brazil secured to Portugal. In crossing to the Cape, Cabral lost four ships in a dreadful storm which lasted twenty days. With the rest he reached India, made some settlements, and returned in July, 1501, with rich cargoes. Yet he was coolly received by his master, on account of the great loss of life which had been sustained, though without any fault on the part of Cabral, who was undoubtedly a navigator of high ability. CÆSALPINUS, ANDRE, a celebrated botanist, was born at Arezzo in Tuscany in 1519. He died at Rome in 1603. Destined for the medical profession, he was educated under Luke Ghines, at the time director of the public gardens at Pisa. It was this undoubtedly which gave him such a love for that branch of study by which his name is most favorably known to posterity. After teaching medicine and botany at Pisa, he was invited to Rome, was made physician to pope Clement VIII., and elected professor of medicine at the college of Sapienza. His medical and philosophical works, of which he wrote a considerable number, are seldom now looked into; and were it not for his book 'On Plants,' the name of Cæsalpinus would probably ere this have been forgotten. Previous to his time naturalists had studied plants more as classics and physicians than as botanists. Cæsalpinus was the first who studied them according to nature; and the publication of his system, though very imperfect, forms a decided era in the study of botany. His method was founded upon the parts of fructification and the germination of the plant; and his observations upon these two subjects have laid the foundation for the natural arrangement of plants formed on the differences of the cotyledon, and the more artificial divisions of Linnæus drawn from their sexual distinctions. Ray, Tournefort, and Linnæus, unite in giving him great credit for his botanical knowledge, and are not above acknowledging the assistance they derived from him in their systems of botany. In his work 'De Plantis,' Cæsalpinus, amongst other things, shows that he had a tolerably good idea of the circulation of the blood. Indeed a knowledge far beyond the age in which he lived, is the grand characteristic of Cæsalpinus.

CÆSAR, AQUIL. J., a Gr. savant, 1720-1792.

CÆSAR, CAIUS JULIUS, the dictator, was born on the 12th of July, B.C. 100. Connected by birth with Marius, and afterwards by marriage with Cinna, he was naturally placed in opposition to the dictator Sulla; and the injuries and insults which he received from the dominant party led, perhaps, to that settled purpose of breaking the power of the aristocratical party, which he cherished from his first appearance in public life. At an early age he distinguished himself both in the camp and in the forum; and had he devoted his great mind to the study of eloquence, he would, doubtless, have been a formidable rival of his great contemporary Cicero. At the age of twenty-three, (B.C. 77,) he made his first appearance in the forum as a public accuser; and though forced for some time by his youth to act a subordinate part, he steadily kept in view the grand object which he had proposed to himself, and used every means to

[Julius Cæsar—From an Ancient Statue.]

increase his popularity. He served as quæstor in Spain, B.C. 68, was elected ædile for B.C. 65, and in the following year was made pontifex maximus at the age of thirty-six. When prætor-elect in B.C. 63, during the famous Catilinarian conspiracy, his avowed hostility to the aristocracy excited a suspicion that he was himself privy to it, but no proof was adduced even by his enemies. In the following year he obtained the province of Further Spain, and there first displayed that genius for war which has entitled him to be ranked among the greatest generals of the world. Returning to Rome in B.C. 60, he found Pompey ready to desert the aristocracy; and having succeeded in effecting a reconciliation between him and Crassus, he formed with them the coalition which is known in history as the First Triumvirate. By the influence of his new friends he was elected to the consulship for B.C. 59, and, while in office, obtained the provinces of Transalpine Gaul, Cisalpine Gaul, and Illyricum, with six legions, for five years. Having thus obtained the command of an army, and the management of an important war, he proceeded to prepare himself for the struggle which he foresaw was impending at Rome. His field of operation afforded him peculiar advantages; the Gauls were the hereditary enemies of the Romans, and the glory of subduing them could not fail to increase his popularity; while the opportunity of passing the winter in the north of Italy enabled him to watch the proceedings of parties in the capital. During the next nine years he was occupied in the subjugation of Transalpine Gaul; having also twice (B.C. 55 and 54) landed in Britain, and received the submission of the inhabitants of the southern portion of the island. The interval of Cæsar's absence from Rome had produced a great change in the state of parties. Pompey, jealous of the fame of a man to whose elevation he had mainly contributed, had effected a reconciliation with the aristocratical party; and, aided by their support, resolved to crush the conqueror of Gaul. Accordingly in B.C. 49, a decree of the senate was passed, 'that Cæsar should disband

[Cæsar invading Britain.]

his army by a certain day, and that if he did not do so, he should be regarded as an enemy of the State,' the predominant party relying on the influence of Pompey, to whom the management of the contest had been intrusted. But the feelings of the army were entirely with Cæsar; and he, finding that his men were ready to follow him, crossed the Rubicon, which separated his province from Italy, and thus commenced the civil war, the issue of which invested him with dictatorial power. In three months he made himself master of the whole of Italy. Proceeding next to Spain, the stronghold of Pompey, he reduced it to subjection; and after passing a short time in Italy, followed his opponent into Greece, and brought the contest to a final issue on the plains of Pharsalia, 4th Aug., B.C. 48. The battle of Pharsalia decided the fate of the Roman empire: Pompey fled to Egypt, but was murdered as he landed on the coast; and Cæsar, who followed him, speedily quashed all opposition in the eastern portion of the empire. After a short residence in Rome in B.C. 47, he proceeded to Africa to prosecute the war against Scipio and Cato, who had there collected a large army, and finally brought it to a close on the 6th of April, B.C. 46, by the battle of Thapsus, in which the Pompeian party were completely defeated. In his absence Cæsar had been elected dictator for ten years; and his return to Rome was signalized by four magnificent triumphs. Devoting himself now to the duties of a legislator, he corrected various abuses which had crept into the state; reformed the calendar, thereby conferring a real benefit on the civilized world; and exercised his unlimited power with a degree of moderation which affected even his enemies with surprise. But his career was destined to be short: a conspiracy against his life was formed at the beginning of B.C. 44; and on the Ides, or 15th of March, he perished by the hands of assassins in the senate house, in the fiftieth year of his age. As a warrior, a statesman, and a man of letters, Cæsar was one of the most remarkable men of any age.

He was the pupil of his uncle Antonio Badile, and having earned considerable reputation in Verona and its vicinity, settled finally in Venice, where he was the rival of Titian and Tintoretto, and where he died in 1588. Paul Veronese may be accounted among the first of the *machinist* painters, many of his works being little more than ornamental schemes, such as the celebrated 'Marriage at Cana' in the Louvre, containing 120 figures, or portions of figures, of the natural size. The magnificent architectural backgrounds to some of these works are said to have been executed by his brother Benedetto Cagliari. The St. Nicholas in the National Gallery, though small, is a fine example of his style: the chief attraction of his pictures is their gay and rich coloring; they are further distinguished for their great freedom of execution, but are often careless in drawing, and for the most part purely capricious in costume. — (Ridolfi, *Maraviglie dell' Arte*, &c.; Zanetti, *Della Pittura Veneziana*, &c.) CAJETAN (THOS. DE VIO, cardinal), so called from his birth-place, Gaeta, in Latin Cajeta, was born in 1469. At the age of twenty-nine he published a noted book in defence of the papal prerogative as to the calling of general councils, and was in consequence raised successively to the bishoprick of Gaeta and the archbishoprick of Pisa. In 1515 he was created cardinal. As the papal legate, he met Luther at Augsburg, and was signally outwitted

by the reformer. Cajetan relied on philosophy and Peter Lombard, but Luther appealed to the Bible and St. Paul. The cardinal's last years were spent in writing learned commentaries on the scholastic philosophy, and on many books of Scripture. He died in 1534. [J.E.]

CALDERON DE LA BARCA, PEDRO, the Shakspeare of Spanish literature, was born at Madrid, of a noble family, in 1600. After having completed his studies, he was for some time attached to the court; after which he served for several campaigns in the Low Countries and in Italy. He had already become famous as a dramatic poet, when in 1636 he was called to Madrid by Philip IV., a patron of letters, and himself a play-writer. From this time he was fixed at the court, and produced dramas with incessant rapidity. After he had reached his fiftieth year he took holy orders, and now busied himself oftenest in composing dramatic pieces on sacred subjects. His life was spent in an affluence and popularity very unlike the fate of Cervantes, and did not close till he was very old. He died in 1681 at earliest, and perhaps some years later.—Calderon was neither the founder of the Spanish drama, nor in any respect an improver of its forms or ideas. It had been completely developed before the death of Lope de Vega, which happened while Calderon was still young. But he brought to it both a wealth of fancy, an intensity of feeling, and a fertility and dexterity of invention, which were not paralleled by any other Spanish dramatist, and hardly by those of any other country. Full scope was given for his powers by the structure of the Spanish drama, in which the irregularities of the old English school were not equalled merely, but far outdone. As a painter of character he has little either of strength, of precision, or of accurate observation; he is neither a master of human nature nor a poet of the highest order, while Shakspeare was both; and, indeed, the lyrical cast of all his works gives them the air of dramatic poems rather than of poetic dramas. But, within his own circle of thought and sentiment, he treads with a vigorous and elastic step; and there are few poets that have stronger attractions for minds keenly alive to the poetical and the romantic.—Calderon's dramas are said to have amounted to not fewer than five hundred; a surprising number (though not more than a fourth of

Lope's), and a number which precluded the possibility of deliberate care in construction. The principal of those which have been preserved are distributable into three groups. The first contains his comedies of familiar life, the 'Comedies of Cloak and Sword,' as they were called in Spain. These are equally remarkable for their grace and fluency of dialogue, and for their poetic beauty; for the liveliness and interest which animate the stories of the best of them, their general ingenuity in situation and incident, and the equivocal morality and singular violations of good taste which prevail in them all. From among them may be named, 'The Fairy Lady,' 'Welcome Evil, if it come Alone,' and 'Give Time to Time!' The second division consists of the Heroic Comedies, among which are to be found some of the very finest and most dignified of his works. His master-piece is usually held to be one of these, 'The Constant Prince,' which represents with profound pathos the self-sacrifice of Don Fernando of Portugal, in an unsuccessful expedition into Barbary. The 'Heraclius' became famous in France, Corneille having been asserted to have imitated it. The singular play, called 'Life is a Dream,' unites poetical imagination with melancholy reflectiveness in a way which imparts to it a charm altogether peculiar. The third class of Calderon's dramas embraces his Religious Pieces, or 'Sacramental Acts' (Autos Sacramentales), compositions which bear a strong resemblance to our own miracle-plays of the middle ages, and are, like them, deformed by fantastic extravagances of religious opinion and feeling. Some of them, however, are beautifully poetical. One of the most characteristic, held also by some critics to be the best, is 'The Devotion of the Cross,' a strange farrago of the wildest supernatural inventions, and the most impractically-motivated exhibitions of human conduct, but breathing a poetic spirit which is wonderfully impressive. One of its main incidents is the legend of one dead man shriving another, which had been used in a narrative poem of Lidgate, our old monk of Bury.

CALDERWOOD, DAVID, one of the founders of Presbyterianism, banished for his opposition to Episcopacy, died 1651.

CALDWALL, RICH., an Eng. phy., 1513-1585.

CALDWELL, CHARLES, an American physician, medical writer, and professor of the Medical College at Louisville. Died 1853, aged 90.

CALDWELL, ELIAS BOUDINOT, one of the chief promoters of the American Colonization Society, and clerk of the Supreme Court of the United States. Died at Washington in 1825.

CALEB, a patriarch of the Jews, 15th cent. B.C.

CALEF, ROBT., author of a book entitled, 'More Wonders of the Invisible World,' in opposition to Cotton Mather's 'Wonders of the Invisible World,' advocating the witchcraft delusion. It was burned in the College yard at Harvard, by order of Increase Mather, in 1700, and its author rendered very unpopular by his manful defence of the truth. He died in 1719.

CALENIUS, WALTER, a Welch hist., 12th cent.

CALETTI, GIUSEPPE, an Ital. paint., d. 1660.

CALHOUN, JOHN EWING, United States senator from South Carolina, and cousin of John C. Calhoun, was born in 1749, and educated by his uncle, Patrick Calhoun. He graduated at Princeton in 1774, and addicted himself to the law. After serving in the legislature of South Carolina he was elected to the Senate of the United States in 1801, but died in November of the following year at the age of 52. He was a man of eloquence and great

independence of character, which he manifested in his brief career in the Senate by voting against his party, and with the federalists in the contest for the modification of the judiciary system of the U. S.

CALHOUN, JOHN CALDWELL, Vice-President of the United States, was born at Long Cane at Abbeville district, S. C., on the 18th March, 1782. His father, Patrick Calhoun, was a native of Ireland, but emigrated with his parents to Pennsylvania in 1733. From thence the family removed to the west of Virginia, but being driven away by the Indians after the defeat of Braddock, they settled in South Carolina on the borders of the Cherokee territory. Before the Revolutionary war Patrick commanded a body of rangers raised for the defence of the frontiers against the Indians, and afterwards took an active part in the struggle for independence. He was for many years a member of the legislature of South Carolina, and died in 1796. The future statesman remained at home some years after his father's death, but in 1802 was sent to Yale College, where he was graduated in 1804. He then entered the law school at Litchfield, Conn., and having completed his studies returned home and was admitted to the bar in South Carolina. His great abilities as a public speaker immediately designated him for public life, and in 1808 he was chosen to the legislature of his native state, in which he so distinguished himself that in 1811 he was sent to Congress. From that period until his death he was mixed up with all the great events and questions which attracted public attention. After remaining six years in Congress he was in 1817 appointed Secretary at War by President Monroe, and in 1825 was elected Vice-President of the United States. He was in the Senate from 1831 to 1843, when he became Secretary of State. In 1845 he was again returned to the Senate, of which body he continued a member till his death, which took place at Washington, on the 31st of March, 1850. As a public speaker Calhoun occupies the foremost rank among the great orators, not of America merely but of the world. His diction was remarkable for the absence of ornament and metaphor, and for its clear, terse and logical compactness. Avoiding all discursiveness of the imagination, his speeches are characterized by a salient pressure to the point, and a fiery vehemence of dogmatic argumentation unbroken in its flow. His whole mind and soul were given to politics. In earnestness he was never surpassed by even a religious devotee. He was from first to last the unbending advocate of State rights, but though his views were extreme, and his expression of them fearless, he retained till death the respect and esteem of the whole country, which knew his integrity and admired his independence.

CALIDASA, an Ind. dram., supposed 1st c. B.C.

CALIGNON, S. DE, a political writer and historian, chancellor of Navarre, 1550-1606.

CALIGULA, a tyrant of Rome, whose proper name was Caius Caesar Augustus Germanicus, was the son of Germanicus and Agrippina, and began his reign at the age of 25, A.D. 37. After reigning happily a few months, he suffered from a fever, which is supposed to have affected his mind. Four years of the most revolting excesses followed this misfortune, when a conspiracy was formed against him, and he was assassinated.

CALL, J. VAN, a Dutch engraver, 1655-1703.

CALLCOTT, JOHN WALL, the son of Thomas Callcott, bricklayer and builder, was born at Kensington, Gravel-pits, in the county of Middlesex, on the 20th of November, 1766. At a very early age he gave indications of that love of literature, and for the acquisition of knowledge, which distinguished him in his after life. At seven years of age he was sent as a day-boarder to a neighboring school, where he remained five years, made considerable progress in the Latin language, and commenced the study of Greek. He acquired the first rudiments of music from Henry Whitney, organist of Kensington church, to whom he was introduced in the year 1778. In 1779 he began to practice upon the spinnet, with the view of becoming an organist. In 1780 he learned to play upon the clarionet, and made his first essay in musical composition. In the mean time he continued to improve himself in classical learning, and acquired a knowledge of French, Italian, and German, and made an attempt to master the Hebrew and Syriac languages, while mathematics and algebra also occupied his attention. About the year 1782 he became intimate with Drs. Arnold and Cooke, whom he always regarded as his first patrons. In 1783 he obtained the situation of assistant organist at the church of St. George the Martyr, which he held till 1785. At this time his musical compositions were both numerous and varied; but the connections he had formed induced him to make glee-writing his particular study. His first glee, 'O Sovereign of the Willing Soul,' was written in the year 1784. In 1785 he obtained three medals from the Catch Club, for a catch, a canon, and a glee. In the same year he took his degree of Bachelor in Music, and in 1786 he had two medals awarded him by the Catch Club. In 1787, Drs. Arnold and Callcott established the Glee Club, which has ever since continued to form one of the most attractive musical societies in London. In this year he was admitted among the honorary members of the Catch Club, and received two medals. In 1789, and every year till 1793 inclusive, he obtained all the four medals by the club, and took his place as the most popular glee-writer of the day. In 1789, as colleague with Mr. Evans, he entered upon the office of organist at St. Paul's, Covent Garden, which situation he held until the church was destroyed by fire six years afterwards. In 1790 Haydn arrived in England, and Callcott became one of his earliest pupils; and in the same year he took his degree of Doctor in Music at Oxford. In 1791 Callcott was married, and on that occasion he wrote the words and music of his glee, 'Triumphant Love;' and the following year was appointed organist in the chapel of Female Orphans, which place he held till 1802, when he resigned in favor of Mr. Horsley. In 1797 he commenced to collect materials for a musical dictionary, which was never published, but which led to the publication of his musical grammar, which appeared in 1805. Shortly after this he was appointed to succeed Dr. Crotch, as lecturer at the Royal Institution, but his life of arduous and unremitted study weakened his mind, which at length sank under the burdens he had laid too heavily upon it. He died on the 15th of May, 1821. Dr. Callcott was one of the brightest ornaments of the British school of music, and he had the strongest claim to esteem and reverence as a man. His works are well known to all glee clubs, but are much too numerous to be mentioned by name here. A fine selection of his glees, edited by his son-in-law, William Horsley, Mus. Bac., Oxon, was published in 2 volumes in the year 1824.

CALLY, PIENE, a French Catholic divine, dist. for his controver. and philosoph. writings, d. 1709.

CALMET, AUGUSTINE, was born in 1672, near Commercy. After studying at Breuil and Port-à-Musson, he entered the order of Benedictines, assuming the vows finally in 1689. Afterwards he was removed to Münster as sub-prior. For a short time he held the priory of St. Lay, and he was, abbé of St. Leopold of Nancy when he was removed to Senones, where he died in 1757. Calmet was a biblical scholar of no mean pretensions and acquirements, as is shown by his *Commentaire Littéral*, by his *Dictionnaire de la Bible*, and by many dissertations on biblical subjects. His dictionary is well known in various English translations and abridgements, the most famous of the former being that of C. Taylor, in 5 volumes quarto. [J.E.]

CALO, JOHN, a chief of Bulgaria, 13th cent.

CALOGERA, FATHER, a philolog., 1699-1768.

CALONNE, CHARLES ALEXANDRE DE, controller-general (or finance minister) of the French government from the fall of Necker, 1783 to 1787. His name is chiefly memorable as the last of the plodding, intriguing, accommodating, and unprincipled statesmen by whom the French monarchy was hurried to the declivity of the revolution; and especially for his daring experiment of assembling 'the notables' on the 22d of February, 1787. Instead of extricating him from his difficulties, this measure really proved the signal of the revolution, as it did of Calonne's disgrace and exile. He was born at Douai, 1734, and educated for the law, which he dishonored by his treacherous conduct to his client La Chalatois. He is the author of numerous political works and financial memoirs, the best of which may be his 'Tableau de l'Europe in November, 1795.' Buonaparte permitted him to return to France in 1802, where he died on the 30th of October, about a month after his arrival. [E.R.]

CALVERT, DENIS, a Dutch paint., 1565-1619.

CALVERT, FREDERIC, seventh Lord Baltimore, author of a 'Tour to the East,' &c., d. 1771.

CALVERT, GEORGE, secretary of state to James I., first Lord Baltimore and founder of Maryland, d. 1632.

CALVERT, BENEDICT, governor of Maryland, from 1727 to 1732. He resigned from ill health, and died on his passage to England.

CALVERT, FREDERICK, baron of Baltimore, and proprietor of Maryland, author of a tour in the East, and *Gaudia Poetica, Lintina, Anglica et Gallica*, died at Naples, in 1771.

CALVERT, GEORGE SIR, baron of Baltimore, was born in England in 1582, and graduated at Oxford, in 1597. After travelling in Europe, he was made clerk of the Privy Council under James I., through the friendship of Sir Robert Cecil. In 1619 he was appointed one of the secretaries of state, and received a pension from the king of £1,000 per annum. His adoption in 1824, of Roman Catholic principles, seem rather to exalt him in the royal favor, for he was received into the Privy Council, and created baron of Baltimore in Ireland, in 1825. He also received a patent as proprietor of the south-eastern extremity of Newfoundland, but being annoyed by the French, abandoned it, and visited Virginia. Finding his creed displeasing to that colony, he fixed on the unoccupied territory north of the Potomac, and obtained a grant of it from Charles I., but died in London, in 1632, at the age of 50, before the completion of the patent, which was granted to his son Cecil in the same year, and the colony called Maryland, from Henrietta Maria, wife of Charles I.

CALVERT, LEONARD, the first governor of Maryland, was brother of Cecil, baron of Baltimore, the proprietor by whom he was sent as head of the colony in 1633, accompanied by his brother George and two hundred Roman Catholics. They anchored in the Potomac, on the 24th of February, 1634. Through the agency of Henry Fleet, an Englishman, who lived for some years on the bank of the river, the governor opened a friendly conference with the natives, and was allowed by them to take peaceable possession of the country. The most liberal ground was taken in regard to toleration, and the Roman Catholic Colony of Maryland presented in this respect a striking and remarkable contrast to New England. On the establishment of the commonwealth in England the parliament appointed another governor, and assumed command of the colony, but at the restoration the rights reverted to the original proprietor. At first Maryland was used as a penal colony, but the importation of convicts was prohibited by an act of the Assembly, during the administration of Charles Calvert, son of Cecil.

CALVET, ESPRIT CL. F., a natur., 1728-1810.

CALVI, LAZZARO, an Italian painter, d. 1606.

CALVIN, JOHN, (CAUVIN JEAN,) was born at Noyon, in Picardy, 10th July, 1509. Law and theology were combined in his earliest studies. He received, when he was but twelve years old, a benefice in the cathedral of his native town, and at the age of seventeen, there was added to this previous gift the pastoral cure of Monteville. At his father's request he pursued legal studies at Orleans and Bourges. His mind, however, had been gradually opening to the errors of popery; and, in the place last named, he openly avowed himself a disciple of the reformation. In 1532 he proceeded to Paris, but, having provoked the Sorbonne by his zeal for the new doctrines, he was obliged, with his friend Cop, to quit the city in haste. Under the anticipated

patronage of the queen of Navarre, he returned to the French capital in 1534, but the fate of his previous visit again pursued him, and he retired to Basle, then travelled into Italy, visited the duchess of Ferrara, soon came back, and arrived, 1536, as if by accident, at Geneva, the city with which his name is now immortally identified. His early labors and stern discipline did not at first suit the Genevese, and he was banished along with Farel. The reformer halted at Berne for a time, and then removed to Strasburg, in one of the churches of which town he labored as pastor with all his characteristic activity and decision, and not without marked success. In 1541 he returned to Geneva—or rather was recalled—and from that period till his death, his labors were unremitting in the pulpit and from the press. As a citizen, as a pastor, as an ecclesiastical ruler and reformer, and as a correspondent and counsellor of foreign churches, he was instant 'in season and out of season.' The literary work which he executed is almost incredible, especially when we consider the weak and emaciated constitution in which his indomitable spirit was lodged. Frequent headaches and frequent fastings to relieve those spasms—nocturnal study with a dim lamp suspended from the canopy of his humble bed—watchful anxiety and domestic bereavement—contributed to shorten his life, and on the 27th of May, 1564, he died at the age of fifty-five. He had previously summoned the syndics of Geneva to his deathbed, and solemnly adjured them to persevere in their adherence to the pure gospel of Christ. The works of Calvin comprise commentaries on nearly the whole of the Bible—in all of which, with varying success, the mind of the sacred writers is simply and forcibly expounded, without the parade of erudition, but with a clear perception and logical analysis of the process of inspired thought and argument. His 'Institutes,' published at the early age of twenty-four, are a remarkable monument of precocious ability, and not only speedily gained for its author a European renown, but contributed in no ordinary degree to strengthen, fortify, and extend, the protestant reformation. The Latinity of the long dedication to the king of France is remarkable for its elegance and purity. His numerous tracts against popery have wit as well as wisdom in them—especially the one called the 'Inventory of Sacred Relics.' His voluminous correspondence has been partly published, but a very large collection of letters remain in MSS. in the library of Geneva. The industry of M. Bonnet has, during the last two years, discovered many others, and collected them with a view to speedy publication. Of the system of theology named Calvinism, espoused so extensively in France, Britain, and America, this is not the place to speak. The merits of Calvin have been acknowledged by men of very opposite sentiments—as even by Simon and Bayle. No one now will justify Calvin's share in the burning of Servetus. The other reformers, even the gentle Melancthon, vindicated the sad tragedy. It will not suffice to say that Calvin was drawn into the measure, or that the fate of Servetus was in accordance with the law of the state, and therefore beyond the control of the reformer. Calvin distinctly understood his own part in the business, and felt that compassion was to yield to conscience. The only apology for him is, that Calvin was not, in the matter of religious liberty, before his age. He was no exception to the general rule. Cranmer sent Joan of Kent to the stake, and himself in a few years followed. Five Genevan disciples of Calvin were burnt in France about the same time that Servetus was

committed to the flames in Geneva. John Knox and Peter Dens use the very same argument and imagery for the capital punishment of heretics. Nay, Servetus himself admitted the legal theory under which he suffered; for in his work called *Restitutio*, published a few months before his own death, he says expressly that the crime of blasphemy is worthy of death—'simpliciter'—'without dispute.' Similar doctrines are propounded in old books of Scottish theology, by Samuel Rutherford, and in 'The Hind Let Loose.' It took a long time to teach protestants that man is responsible to God alone for his belief, and that liberty of conscience is a universal birthright. [J.E.]

CAMARAY Y MURGA, a Sp. prelate, d. 1641.

CAMBACERES, JEAN JACQUES REGIS DE, duke of Parma, prince of the empire, &c., born at Montpellier 1753, died at Paris 1824. Though a child of the revolution, and from the first favorable to its progress, the ambition of Cambacères was rather constructive than otherwise, and added to his education for the law, well qualified him for his great share in the preparation of the civil code, and the judiciary organization of France. He possessed the rare talent of preserving his credit for patriotism, without committing himself to the strife of parties, and in 1799 was associated with Napoleon Buonaparte in the consulate. It does not appear that the first consul had much regard for him, and his conduct must be regarded as equivocal, at the least, when it is considered that he rose to fresh honors under the second restoration. The real product of his political activity is fairly represented by his 'Projet du Code Civil, et Discours Preliminaire,' published 1794, and the practical application of it in following years. The most distinguished of his relations were his brother, STEPHEN HUBERT DE CAMBACERES, archbishop of Rouen, and peer of France, a most esteemed prelate, 1756–1818; BARON CAMBACERES, his nephew, and one of Napoleon's generals, 1778–1826; and his uncle, the ABBE DE CAMBACERES, distinguished as a religious writer and preacher, 1721–1802. [E.R.]

CAMBON, JOSEPH, one of the more violent Jacobins of the French Revolution, was born at Montpellier, 1754, and returned to the legislative assembly, 1791. He is chiefly memorable as the reporter of the finance commission, by which some kind of order was eliminated from the confusion left by Calonne and his predecessors, and the basis laid for the subsequent financial prosperity of his country. Whatever share he may have taken in the agitation of the period, the merit belongs to him of pursuing this one aim with steady perseverance. He was disliked by Robespierre, and contributed to his fall on the 9th Thermidor, (27th July, 1794,) but was shortly afterwards compelled to save himself by flight. In 1815 he reappeared on the public stage as a member of the representative assembly, and in 1816 was driven into exile as a regicide. He died at Brussels in 1820.

[Grotto of Camoens at Macao.]

**CAMOENS**, LUIS DE, is the only Portuguese poet who enjoys a European celebrity. He was of noble family, and his ancestors on the father's side were Spanish. He was probably born at Lisbon, and the date of his birth was 1527, or a few years earlier. After having been educated at Coimbra, he passed some time in courtly society at Lisbon; but an attachment to a lady of distinction brought on him a sentence of banishment to Santarem, where he composed several of his poems, and is said to have planned or began that which is the greatest of them. He then volunteered into the fleet, distinguished himself against the African Moors, and lost his right eye in an attack on Ceuta. On his return he found himself neglected and poor; and in 1553 he embarked for India, declaring a resolution of never again seeing his native country. Escaping from a storm, in which the other vessels of the fleet foundered, he reached the Portuguese settlement at Goa; and sixteen years passed over him in the East, amidst peri-

ous adventures, and continual disappointments and misfortunes. He failed to obtain employment in the public service, and entered as a volunteer in two expeditions, the one to Cochin, (in which almost all the Europeans were destroyed by the climate,) the other against the pirates of the Red Sea. A versified satire on the abuses of the government, provoked the viceroy to banish the poet to Macao, where he lived for five years, glad to support himself by the fees of a small office. In this period his great poem is believed to have been completed. He saved the manuscript with difficulty on being shipwrecked on the coast of Cambodia, when at length allowed to return to Goa. Here he was twice imprisoned, first on a groundless charge of malversation in office, and again for debts which he was unable to pay. He now took up arms again, in the service of the governor of a remote settlement; and there, weary and dispirited, he was tempted to sail for Europe in a homeward-bound vessel which happened to pass. He returned to Lisbon in 1569, as poor and unprosperous as he had been when he departed. He published his noble poem, but gained by it neither fame nor profit. The public were blind to its value; and the government and court were otherwise occupied. It was probably about this time that Camoens would have died of hunger, had not a black servant begged for him at night in the streets. In 1578 King Sebastian, embarking on his fatal expedition against Morocco, perished in the bloody battle of Alcazar; and, while his mind had been diverted alike from administration and from literature by his chivalrous dreams, his successor, an aged churchman, was engrossed by ecclesiastical business and dismayed by public calamities. The great poet of the nation was left to his fate. He died in a public hospital in the year 1579.—Camoens left untried hardly any department of poetry, from the tragedy to the sonnet; and high praise is given to many of his smaller compositions. But his immortality was caused by the magnificent heroic poem which we commonly call 'The Lusiad.' The name he himself gave to it was 'Os Lusíadas,' that is, 'The Lusitanians,' or 'Portuguese.' He designed in its ten books to celebrate the glory and greatness of a nation, as to which he triumphantly declared that it was soon to surpass the fame and majesty of all others in the world. The main story is the voyage in which Vasco de Gama rounded the Cape of Storms, and discovered the passage to India, but the whole history of Portugal is engrafted on this stock. Nearly a third of the poem is occupied by a narrative of the rise of the kingdom, which Vasco delivers to the king of Melinda, much in the manner of Æneas's tale to Dido; and occasion is taken for introducing minor incidents and characters in shorter episodes. A plan embracing a field so wide, could not well be executed without making too heavy demands on the attention of the reader; and undoubtedly there are few who do not feel the poem, as a whole, to be wanting in interest. Another weakness lies in the want of local truth which pervades it, and which exhibits itself both in the scenery and in the characters. The work abounds in supernatural machinery, which is nothing else than a repetition of the heathen mythology, while it often passes into undisguised allegory. Nor is any attempt made at describing exactly either the landscapes or the manners of the East: all is general and uncharacteristic. But the glow of patriotic and warlike animation, the frequent pathos, (as in the story of Inez de Castro,) and the constant affluence of imagery beautifully poetical, combine in present-

ing us with a series of pictures, such as is very rarely to be met with in poetry, and fully sufficient to vindicate the place of Camoens as one of the greatest among modern poets. The diction and versification, also, are pronounced by competent critics to possess the very highest merit. [W.S.]

CAMPAN, MADAME DE, a lady of the royal household, celebrated for her memoirs of Marie Antoinette, 1752-1822.

CAMPANELLA, THOMAS, a distinguished Spaniard of the 16th century, no less remarkable from the originality of his writings, than through the extraordinary reverses of his life. The contemporary of Bacon and Des Cartes, he ranks with Giordano Bruno and a few others, as evidence that the time had come for a successful revolt against the philosophy of the Peripatetics and the Church. Like Bruno, his tendencies were towards Platonism; many of his views, also, were tinted with mysticism. He had, however, a clear conception of the nature of metaphysics; and he has contributed one of our many 'Utopias' to political theory, in his 'Civitas Solis.' Campanella found in the Spanish government a mortal foe. Seven times did he undergo the horrors of the *question*; he passed seven years in a dungeon—supporting his courage and nourishing his soul, with thought. At length he escaped to France, and found a protector in Richelieu, with whom the hatred borne him by Spain was sufficient recommendation. Campanella's works cannot be overlooked by the thorough student of metaphysics: the more important of them have been recently collected and published in Germany. [J.P.N.]

CAMPBELL, ARCHIBALD, marquis of Argyle, a distinguished partisan of the covenanters, beheaded 1661. His son of the same name, earl of Argyle, disting. as a royalist, and beheaded 1685.

CAMPBELL, ARCH., bp. of Aberdeen, d. 1744.

CAMPBELL, GEORGE, D.D., a professor of divinity in the presbyterian church, 1709-1796.

CAMPBELL, J., d. of Argyle and Greenwich, a partisan of the house of Hanover, 1671-1743.

CAMPBELL, JOHN, a Scotch archit., d. 1734.

CAMPBELL, JOHN, a miscellan. au., d. 1775.

CAMPBELL, MAJOR-GEN. SIR NEIL, British resident at Elba in charge of Napoleon, died 1827.

CAMPBELL, THOMAS, was born at Glasgow in July, 1777. His father, descended of a good family in Argyleshire, was a Virginia merchant; but before the birth of the poet, the youngest of his eleven children, he was in decayed circumstances, and subsisted on small annuities from mercantile societies, and by receiving young men into his house as boarders. Thomas, after distinguishing himself at school, passed through the university of Glasgow with high reputation, which, however, was gained less by steady industry or exact learning, than by the precocious brilliancy of his essays in prose and his versified translations from the classics. Till the end of his life, Greek was his favorite study; and he was vainer of his proficiency in it than of his poetry or the fame it brought him. His studies at college were assisted by a bursary or exhibition, and by the hard-won gains of private teachings; and he became successively, for short periods, tutor in two families in the west of Scotland. The poverty of his family precluded his pursuit of the more ambitious professions; and a few months spent as a copying clerk in Edinburgh, disgusted his sensitive and indolent mind with the drudgery and captiousness

of the attorney's chambers. This migration introduced him to the notice of literary men; and to the encouragement and criticism of Dr. Robert Anderson, more than to any thing else, was owing his prosecution of poetical composition.—One of his first printed efforts was 'The Wounded Hussar,' which appeared when he was about twenty years of age. About the same time, living in humble lodgings in Edinburgh, and supporting himself by private teaching of the classics, and by obscure drudgery for booksellers, he was composing poetical fragments,

[Alison Square, Edinburgh, where Campbell wrote his 'Pleasures of Hope.']

which were gradually incorporated into 'The Pleasures of Hope.' This poem, published in 1799, in its author's twenty-second year, became immediately and deservedly famous; and, though, in spite of advice, he sold the copyright absolutely for sixty pounds, the publishers, on its success, were for some time very liberal to him; and the reversion of the copyright became profitable in his declining years. Being now determined on making literature his profession, he spent upwards of a year in Germany. A great poem, 'The Queen of the North,' ardently projected, was soon dropped; but he transmitted from abroad, to the *Morning Chronicle*, several of his finest lyrics, among which were, 'Ye Mariners of England,' and 'The Exile of Erin.' He had intended settling in Edinburgh, where he had long been intimate with Jeffrey, Brown, Scott, and Stewart, and most of all with Alison; and with this design he set down his parents in that city. To them, indeed, to his mother after her husband's death, and to his sisters always afterwards, he was steadily and honorably affectionate and generous.—In 1803, however, he found it advisable to remove to London; and in the same year, uncertain though his prospects were, he married his cousin Miss Sinclair. Next year he obtained an engagement with the *Star* newspaper, from which he received about four guineas a-week, chiefly earned by translating foreign gazettes. About the same time appeared 'The Battle of the Baltic.' For seventeen years from this date he inhabited a house at Sydenham, near London. In 1805 his circumstances were improved by a pension of two hundred a-year bestowed by Fox's administration; partly, perhaps, for zealous advocacy of Whig principles, but prompted also by his poetical celebrity, and by the necessities of one who was always thriftless, and disqualified, both by temperament and by feebleness of health, for steady labor as a bookseller's hack. In 1807 was published one of the fruits of his taskwork, 'The Annals of

Great Britain,' for which he received three hundred pounds from an Edinburgh bookseller. In 1809 appeared 'Gertrude of Wyoming,' to which, the year after, 'O'Connor's Child' was annexed. The place which Campbell justly holds as one of the classics of English poetry was now securely gained, when he had only reached his thirty-third year; and, though his life was but half spent, it may safely be said that nothing which he afterwards wrote was worthy to be ranked with his earlier achievements. His time, in fact, was thenceforth frittered away in desultory and occasional studies, and in toils which had no higher purpose than the subsistence of his family; and the exquisite delicacy and correctness of taste, which give such a charm to his finest poems, did no more than impede him in his prose writing. The romantic glow of imagery and sentiment, which had inspired, in youth, his ethical meditations, and which had risen into a more manly enthusiasm in his martial lyrics, died away amidst the hurry and coarseness of real life; and the poet certainly wanted the leisure, and probably wanted the native vigor of thought, which might have furnished him with other and severer themes, and prompted a new tone of poetic inspiration.—In 1812 he delivered, with great popularity, six lectures on poetry at the Royal Institution: two years afterwards, a long visit to Paris, while the masterpieces of Grecian sculpture and Italian painting were still unremoved from the Louvre, gratified his classical taste, and suggested much of attractive reflection. Soon afterwards a legacy from a Highland cousin placed at his command the income of a sum, which in the end exceeded four thousand pounds. In 1819 appeared his well-selected 'Specimens of the British Poets,' accompanied with criticisms, which, written with very fine judgment and fair knowledge, are the only prose compositions of Campbell that are likely to be remembered. In 1821 he became editor of 'The New Monthly Magazine,' to which he contributed a good many critical essays and poems; and the editorship, though never carefully attended to, was retained for ten years. During these years several events occurred. The ill success of 'Theodric' disappointed him grievously. His surviving son, (the other having died in infancy,) was now, at the age of fourteen, pronounced to labor under mental aberration, which proved to be hopeless; and in 1828 his domestic calamities were completed by the loss of his wife. In 1825 he was chiefly occupied in organizing the London university, visiting Berlin to obtain information for the purpose. In November, 1826, he was elected rector of the university of Glasgow; and, exerting himself actively in promoting and suggesting reforms, he was reelected twice afterwards. About and after the close of this period, also, very much of his time was taken up with the affairs of the Polish refugees.—In 1831, having resigned his first editorship, he for a short time edited the *Metropolitan*. Seven or eight months from September, 1834, were spent by him in Algiers, which he seems to have had no purpose in visiting except that of making a book. He executed this design in his 'Letters from the South.' Among several pieces of drudgery which he now performed was his 'Life of Mrs. Siddons.' 'The Pilgrim of Glencoe,' the last of his considerable poems, published in 1842, was not successful even in his own estimation. His health, long uncertain, was now irretrievably shattered; and fond of society, and often tempted to convivial excesses, he had taken but too little pains to preserve health, especially since domestic distresses had fallen so heavily on him. His affairs too,

became much embarrassed; and in July 1843, giving up the last of several houses he had successively occupied in London, he retired with his niece to Boulogne. There, after a winter of suffering, he died in June 1844. [W.S.]

CAMPBELL, ALEXANDER, attorney-general of the United States for Virginia, died in 1796. His uncle, Archibald Campbell, who once resided in Virginia, was the father of Thomas Campbell, the poet.

CAMPBELL, GEORGE W., an Am. statesman, minister to Russia, Senator and Secretary of the Treasury, died at Nashville, Tenn., 1848, aged 80.

CAMPBELL, Lieut. Col., an American officer, killed in a successful charge upon the British line in the battle of Eutaw, Sept. 8, 1781.

CAMPBELL, SAMUEL, Colonel, an officer of the American army during the Revolution, born in New Hampshire in 1738; served in the French wars, and especially at the battle of Oriskany. He resided in Cherry Valley at the time of the massacre under Butler and Brant, and together with his family was taken captive, while all his property was destroyed. He died in 1824, aged 86.

CAMPE, J. H., a German author, 1746–1818.

CAMPEGGIO, LORENZO, cardinal nuncio to the court of Henry VIII., 1474–1539.

CAMPER, PIERRE, a celebrated anatomist and naturalist, was born at Leyden in 1722. He died in 1789. He was educated as a medical man, under Albinus, Gaubius, and Musschenbroek. After he had taken his degree, and paid the last duties to his parents, he visited England and Paris, where he made the acquaintance of such men as Hunter, Sir Hans Sloane, Buffon, &c. He successively filled the chairs of philosophy, medicine, and surgery, at Franeker, Amsterdam, and Groningen. At the latter place he spent ten years devoted to study and the duties of his professorship, and used to say these years were the happiest of his life. He was twice elected deputy to the assembly of the states, and was at length nominated councillor of state. Camper possessed a singular facility for acquiring languages. He spoke fluently in Latin, English, German, and French, and read Greek and Italian with ease. The dissertations and memoirs upon medical subjects which he published, extended his fame to all parts of Europe; but it is upon his profound knowledge of comparative anatomy applied to the study of natural history, that his chief reputation depends, and it is by it that his name will descend to posterity with the greatest éclat. One of the great objects of Camper's life, was to show from anatomical details applied to natural history, that there is a regular gradation in animal beings from man downwards, and a scale of proportions by which it might be demonstrated how all living beings are connected one with another in the general system of creation. He was one of the first to lead the way in the study of Paleontology, and in a memoir upon fossil bones, after examining and comparing a series of those with the skeletons of animals existing at the present time, he arrived at the conclusion (since his time so ably carried out by Cuvier) that certain species of animals have at different times been destroyed by various revolutions of the globe. One of his most striking discoveries was that of the bones of birds containing air. It was known that the bones of birds were light, and possessed no marrow; but it was reserved for Camper to show from anatomical demonstration that there was a direct communication between the cavities of the bones and the lungs. Hunter made the same discovery soon afterwards. Camper's memoirs upon the organs of hearing in

fishes—on the anatomy of the orang-outang—on the origin and color of the negro—and on the facial line as applied to characterize the different races of man, show great talent and observation; while the zeal with which he undertook the cure and prevention, by inoculation, of the terrible epizootic which raged amongst the horned cattle in Holland in 1768, proved him to be a patriotic citizen, as well as an enlightened anatomist and physician. CANDIDUS, P., a protestant historian, 1540–1608.

CANDOLLE, AUGUSTIN PYRAMUS DE, a distinguished botanist, was born at Geneva in 1778. He died in 1841. From the age of sixteen he devoted himself to the pursuit of botany. He betook himself to Paris, where he attended the lectures of Cuvier, Lamarck, Fourcroy, Vauquelin, &c., and prosecuted his botanical studies under Jussieu and Desfontaines. He adopted the natural system, and became one of its most distinguished supporters. In 1807 he was elected professor of botany at Montpellier. This chair he resigned upon the restoration of the Bourbons, at which time his native city was restored to its independence. Hither he retired, and was appointed in 1816 to the chair of natural history, which was expressly instituted for him. His botanical works are numerous and excellent. The 'Prodromus Systematis Regni Vegetabilis,' is the most important, though he did not live to complete it. His incessant studies, it is to be feared, at last told heavily upon his constitution. For some years his health was declining, and though in 1840 he undertook a journey as a relaxation from his labors, he did not derive any decided benefit from it. M. De Candolle was distinguished, in addition

to his great and deserved reputation as a botanist, for his activity in promoting measures of public utility, such as the improvement of agriculture, the cultivation of the arts, the advancement of public instruction, and the amelioration of the legislative code of his native city. [W.B.]

CANER, HENRY, D.D., rector of King's Chapel, in Boston, was graduated at Yale College in 1724, and ordained in England in 1727. He became rector of King's Chapel in 1747, and continued in that office until 1775, when the American revolution induced him to retire to England, where he died in 1792, aged 92.

CANGE, CHARLES DU FRESNE DU, a French historian, in high repute for his learning, 1610–1688.

CANINI, J. A., an Ital. paint., 1617–1665.

CANNEMAN, ELIAS, a Dutch statesman, principal agent in restoring the house of Orange, 1813.

[George Canning.]

CANNING, GEORGE, a distinguished British statesman, was born in London, on 11th April, 1770. He began life in circumstances little likely to have fostered a statesman. His father, a man of good family, suffering from the light in which his connections viewed an imprudent marriage, died while George was an infant. The widow was subsequently twice married, tried the stage, and, though there was no blot on her reputation, by a wandering and rather discreditable life, justified the distaste towards her of the Canning family. It is, however, among the amiable features of this statesman's character, that, when he was attracting the attention of the world, and must have felt his mother an impediment to his prospects, he treated her with uniform kindness and public respect. He was educated by his maternal uncle, a merchant in the city, and studied at Christ Church, Oxford. He early showed the versatility of his powers, by not only taking a high academical position, but gaining a host of admirers among his own contemporaries by his conversational powers and efforts in light literature. His early association with Sheridan marked him out as a probable acquisition to the Whigs, and a dramatic anecdote is told of Godwin having been sent to offer him the championship of the friends of the people—an offer on which he is said to have deliberated ere he rejected it. In 1793, however, he entered parliament as a supporter of Pitt. His opinions were naturally liberal, but his fastidious taste, and somewhat scornful temper, revolted against popularity, and thus it was, that, while he joined the Tory party,

he carried into it a decided practical leaning to Whig principles. While the aristocracy have charged him with betraying them, he wrote in the 'Antijacobin,' and other quarters, some of the bitterest satires against democracy that have appeared since the days of Theophrastus. He took office as under-secretary of state, in 1796. In 1800, he married one of the daughters of General Scott of Balcomie, in Fifeshire, whose large fortune rendered him no longer liable to the imputation of being an adventurer. On the return of the Tory party to power in 1807, he was made foreign secretary. In 1809, in consequence of a quarrel with Castlereagh, which produced a duel, he resigned his office. He soon afterwards commenced his pleadings for catholic emancipation, which tended so greatly to the consummation which he did not live to see. He was on the eve of his departure to be governor-general of India when the death of Castlereagh, in 1822, made him yield to the urgent demands that he should strengthen the ministry by taking office as foreign secretary. In 1825, he performed one of his favorite achievements in the acknowledgment of the independence of the Spanish settlements in South America. In February, 1827, he succeeded Lord Liverpool as prime minister. The chancellor, Eldon, and some other members in the government, of high Tory principles, resigned office on the occasion, in a peculiarly emphatic manner: and Canning sought and to a considerable extent obtained the support of the Whigs. But in his short career he was so severely harassed by the opposition of his former colleagues, that he died on 8th August, 1827, exhausted both in body and mind. [J.H.B.]

CANO, ALONSO, a celebrated Spanish painter and sculptor, and also architect, was born at Granada in 1601. He studied at Seville, sculpture with J. Montanes, and painting under Pacheco and Juan de Castillo. He was appointed painter to Philip IV., and practised some time at Madrid, but settled finally at Granada, where he established a considerable school; he died there in 1667. The extent and versatility of his powers have procured Cano the title of the 'Michelangelo of Spain;' his pictures are rich in effect, and display great vigor of execution; they are numerous at Seville, Madrid, Toledo, and Granada, where are still preserved some celebrated altarpieces.—(Can Bermudez, *Diccionario Historico de los mas Ilustres profesores de las Bellas Artes en España.*)

CANO, JAMES, a Portuguese navigator, 15th ct.

CANO, J. S. a Spanish navigator, died 1526.

CANONICUS, a Narraganset chief, who the second year after the landing of the Plymouth colony, sent them, as a token of hostility, a bundle of arrows tied with a snake's skin, but was awed into peace by receiving in return the snake's skin filled with powder and shot. He was the generous protector of Roger Williams, when driven by persecution from Massachusetts, and in 1638 made over to him by deed Rhode Island and Providence. He died in 1647.

CANOVA, ANTONIO, one of the most celebrated sculptors of modern times, was born in the village of Possagno, near Trevigi, in 1757. He was sent at an early age by the Venetian government to complete his studies in Rome; for which purpose he was granted a pension of 300 ducats per annum for three years. This judicious liberality of the Venetian government was the indirect cause of Canova's settling in Rome, and similarly in a great measure contributed to the revival of the arts in the nineteenth century. His first work of note was the group of Theseus and the Minotaur; this was succeeded by

[Antonio Canova.]

the great monuments to popes Clement XIII., and XIV., and Pius the VI., which raised the reputation of Canova above that of all his contemporaries; the monument of Clement XIII. is that in St. Peter's of which the celebrated reposing lions form a part.—Canova's works are extremely numerous, and are generally beautiful, combining nature with classic beauty and proportion; his extraordinary ability, and perhaps industry also, are well displayed in the noble collection of casts after his works, preserved together in the academy at Venice, among which Hercules in the tunic of Deianira hurling Lichas into the sea from the rock, is a most imposing group. Some of his best works are preserved in the Vatican, as the Boxers and many others; his celebrated Venus is in the Pitti Palace at Florence; the three Graces are in England. At Apsley House is a colossal statue of Napoleon. Canova died at Venice, October, 1822, and a magnificent design which he had made for a public monument to Titian, was with slight alterations adapted, and in 1827 executed by some of his pupils in commemoration of his own memory; it is in the church of the Frari.—Canova was in every sense a most successful artist; his reputation is European; he amassed great wealth, and was created marquis of Ischia by the pope; there is a portrait of him by Sir Thomas Lawrence.—(Misirini, *Vita di Antonio Canova*, 1827; Canova's Works by Moses, &c., &c.) CARACALLA, MARCUS AURELIUS ANTON., emp. of Rome, b. 183, suc. Severus, 211, killed 217.

CARACCI. The name of a celebrated family of painters of Bologna.—AGOSTINO CARACCI, was born at Bologna, where his father carried on the business of a tailor, in 1559. He was placed first with a jeweller, and studied painting afterwards under Prospero Fontana, Domenico Tibaldi, and Cornelius Cort: with the last he practised also engraving. Agostino was the most active teacher in the academy opened by the Caracci in Bologna in 1589 until 1600, when

he went to Rome; he was then employed by his brother Annibale to aid him in the Farnese Gallery there, for which he executed the 'Cephalus and Aurora,' and the 'Triumph of Galatea;' the cartoons of these two frescoes are in the National Gallery. But the brothers disagreeing, Agostino retired to Parma, where he died shortly afterwards, March 22, 1602. He was more distinguished as an engraver than a painter. ANNIBALE CARACCI, the younger, brother of Agostino, was born at Bologna in 1560; his father intended him to be a tailor, but his cousin, Ludovico Caracci, induced him to follow painting, for which Annibale showed decided ability, and in which his cousin gave him all necessary instruction. After carrying on conjointly with his brother and cousin the celebrated academy of Bologna for 10 years, Annibale was invited by the cardinal Farnese to Rome in 1600, and he there executed the celebrated frescoes, known as the 'Farnese Gallery,' for that cardinal, receiving a salary of £25 a year besides maintenance. This great work was finished in 1604, when Annibale received a further donation of 100 guineas. It was preferred by Poussin to all the works in Rome after the frescoes of Raphael; it has been engraved by Carlo Cesio. Annibale appears to have been an invalid after the execution of this work, for he did little more in Rome, and died there 15th July, 1609; he was buried in the Pantheon by the side of Raphael.

—LUDOVICO CARACCI, the founder of the eclectic school of Bologna, was born there in 1555; he appears to have been very dull in his youth, and at the school of Prospero Fontana was known as the *ox*, (*il bue*.) He studied afterwards many masters in various places, as Correggio, Julio Romano, Titian, and others, and in endeavoring to combine their several beauties led to the establishment of the principle of eclecticism, and was actually the founder of the academic system.—He was the real head of the academy of the Caracci established in 1589, and after the departure of his two cousins for Rome, carried on by him alone until his death in December, 1619. Domenichino, Guido, Albani, and Lanfranco, were among the numerous distinguished scholars of this celebrated school. Ludovico's principal works were the frescoes of the convent of San Michele in Bosco, near Bologna, long since perished, but existing in the prints after them by Giovannini. There are several excellent oil pictures by Ludovico in the gallery of Bologna.—(Bellori, *Vite de' Pittori Moderni*, &c.; Baglione, *Vite de' Pittori*; Malvasia, *Felsina Pittrice*; Wornum, *Descriptive and Historical Catalogue of the National Gallery*.) CARAFFA, A. C., a French painter, d. 1812.

CARAFFA, ANTHONY, a statesman of Naples, 15th cent. A cardinal and great scholar of the same name, cousin of pope Paul IV., died 1591.

CARAFFA, J. A., put to d. by Pius IV., 1560.

CARAFFA, V., a gen. of the Jesuits, 1583-1649.

CARDAM, a king of Bulgaria, 776-806.

CARAMUEL DE LOBKOWITZ, JOHN, bishop of Messi, dis. as a divine and poet, 1606-1682.

CARASCOSA, BARON, a dis. partisan of the Fr. in the Neapolitan revolution, b. 1769.

CARAUSIUS, MARCUS AURELIUS VALERIUS, proclaimed emp. in Britain 287; assass. 291.

CARAVAGGIO, MICHELANGELO MERIGI, commonly called MICHELANGELO DA CARAVAGGIO, where he was born in 1569, was originally a mason's laborer, but while still young gained so considerable a position as a portrait painter at Milan, that he was induced to try his fortune in Venice, where he became a student of the works of Giorgione; and he eventually established himself in Rome. His poverty was a serious obstacle to his success in the great capital of the arts, for some time, when he was obliged to work for the Cavaliere d'Arpino; but his celebrated picture of the 'Card Players,' and shortly afterwards a few religious pieces, of which his masterpiece is the 'Deposition of Christ,' now in the Vatican picture gallery, established his reputation as one of the principal painters of his time.—Caravaggio's good fortune was of short duration: being of a violent temper, he killed a companion in consequence of a dispute at a game of tennis. He fled to Naples, thence he went to Malta, and spent some time at Palermo; but finally having obtained the pope's pardon for the act of homicide, he set out in 1609 in a felucca for Rome; he was arrested on his way by mistake, by a Spanish coast guard, and when he gained his liberty he discovered that the crew of the felucca had gone off with all his property; he wandered despondingly along the coast to Porto Ercole, where, what with disappointment and the extreme heat of the weather, he was seized with a fever, and died in a few days, at the early age of forty. Caravaggio was a great colorist, but his pictures are black and heavy, and so ordinary in their general treatment of form and accuracy, that his style was designated the *naturalist*, in contradistinction to the prevailing *ideal* taste of the time. He had many imitators, who are called *naturalisti* and *tenebrosi*; the celebrated Spagnuolotto is the most distinguished of his followers. This taste was much spread in Spain, and had its votaries in France and the low countries. Valentine and Honthorst (Gherardo, della notte) were decided imitators of Caravaggio.—(Bellori, *Vite de' Pittori*, &c., Rome, 1672.) [R.N.W.]

CARBACCIA, GENERAL, a French officer, and archæologist. While in Africa he devoted himself to an exploration of its monuments and antiquities, and wrote an account of it; died in Turkey, where he had gone with the French army, in 1854.

CARDAN, JEROME, one of our true 'curiosities of literature,' born in Pavia in 1501, said to have caused his own death in 1576, that he might not, by living longer, falsify his prediction of that event! There are not many characters more difficult to delineate by a few sketches than Cardan's. Of great industry, undoubted originality and power, and extensive acquirements, his fame yet rests for the most part on his pure charlatanerie. As a moral entity, if indeed the term can with decency be applied to him, he was also a mass of contradiction; he loved knowledge, sought apparently for truth, and experienced high as-

pirations; nevertheless he never shrunk from deceit and falsehood; his practical life full of disorder; his scientific faith worth nothing—he stole from *Tartaglia*, and published as his own the famous rule for the solution of cubic equations. He wrote on every thing—often advancing knowledge; but he pretended to deal with all difficulties under the sun. He said that, like Socrates, he had a demon; like Swedenborg afterwards, he claimed supernatural insight during the *extasis*;—it is not improbable that he was affected by that singular modification of vitality now known as *mesmerism*. It were useless to recount seriously the opinions of a man so strange and disorderly; nor can we undertake to reckon up even the topics on which he wrote. His productions fill ten volumes folio; the oddest of them being the treatise 'De Vita Propria,'—something of the cast of Rousseau's 'Confessions,' as full of vanity, of insincerity, of passion, of eloquence. Cardan's fame, while he lived, resulted from his skill as a physician, and his astrology. He was doubtless helped in his profession by superior acquaintance with chemistry; to which, one may safely give the credit of his celebrated cure of the archbishop of St. Andrews. As might have been expected, his private life and affairs were ever in confusion; one son fell under the axe of the public executioner, because he had poisoned his wife; another was shut up in prison for safety's sake, at the instance of his own father.—These notices may help the imaginative to conceive something of Cardan. [J.P.N.]

CARDELL, W. S., author of a system of grammar and other school books, resided in New York, and died at Lancaster, Pa., in 1828.

CARDI, LOUIS, an Ital. painter, d. 1613.

CARDONNE, DENIS DOMINIQUE DE, an Eastern schol. and historian, prof. at Paris, 1720-1783.

CAREL, JAMES, a Fr. poet, 17th century.

CAREW, GEORGE, made earl of Totness by Chas. I. for his military services, historian of the Irish wars, died 1629.

CAREW, SIR GEORGE, a courtier and fugitive historian, knighted by Queen Elizabeth, d. 1614. His brother, RICHARD, a topographical wr., d. 1620.

CAREW, HENRY, earl of Monmouth, eminent as a scholar and translator, d. 1661.

CAREW, THOMAS, a dramatic poet, d. 1639.

CAREY, HENRY, a distinguished ballad-wr. and composer, died by his own hand, 1743. GEORGE SAVILLE, his son, also a song-wr. and playwright, d. 1807.

CAREY, JOSEPH, a French printer, regarded by his countrymen as the inv. of stereotyping, d. 1801.

CAREY, WILLIAM, was born on 17th August, 1761, in the village of Paulerspury, Northamptonshire. Although his father was clerk of the parish, he early displayed a tendency to dissent, and having announced his adherence to the principles of the Baptist persuasion, was in 1783 baptized in the river Nen, and soon after chosen pastor of a small baptist church in the neighborhood of Northampton. While assiduous in the discharge of his official duties, he prosecuted his studies with intense ardor in private, and was greatly distinguished for the extent and variety of his knowledge, his accomplishments embracing all the modern European languages, and several branches of science, particularly botany and natural history. In 1787 Carey was removed to the pastorate of a more numerous church in Leicester, where his flock comprising many educated members, he found better scope for the exercise of his natural and acquired talents. But his mind was absorbed with visions of missionary enterprise among the heathen;

and while on a visit to Mr. Fuller at Kettering, along with Dr. Ryland and Mr. Sutcliffe of Olney, he laid the foundation of a baptist missionary society, of which he himself became the first agent and the brightest ornament. Accompanied by his wife and sister-in-law, he embarked on 13th June, 1793, for India, and after experiencing some very trying vicissitudes, he chose Mudnabatty for his station; but the Indian government having refused their permission to any permanent establishment of a missionary kind, he was obliged to quit that place. Through the influence of the governor, who was exceedingly favorable to the missionary cause, Mr. Carey now established his head-quarters at the Danish settlement of Serampore, where, assisted by Messrs. Marshman and Ward, his efforts for the Christian good of a populous and extensive province were followed by a degree of success far exceeding his most sanguine expectations. Carey was appointed by the marquis of Wellesley to the professorship of Bengalee in the College of Fort-William, and as he voluntarily added to the duties of this chair instruction in the Sanscrit and Mahratta languages, he became familiar with the leading dialects of India. Many literary works connected with this department of Oriental philology proceeded from his pen. But his greatest achievements were in the province of biblical translation, having been the main instrument in issuing new versions in upwards of forty of the Indian languages, and bringing the Scriptures within the reach of three hundred millions of human beings. Under these indefatigable exertions the health of Dr. Carey at length sank, and he died in 1834, in the seventy-third year of his age. [R.J.]

CARHEIL, ETIENNE DE, a Jesuit, who for sixty years was missionary among the Huron and Iroquois Indians in Canada, of whose languages he obtained the most complete mastery. The time of his death is uncertain. He first visited them in 1668, and was laboring with undiminished activity, though little success in 1721, when Charlevoix left Canada.

CARLETON, SIR DUDLEY, Lord Dorchester, a statesman of arbitrary principle, au. of 'Letters' during his embassy to Holland, 1616-1620, d. 1632.

CARLETON, GEO., bp. of Chichester, and author of numerous works celebrated in their day, d. 1628.

CARLETON, GUY, Lord Dorchester, captain-general and governor of Quebec during the Revolutionary war. He successfully resisted the attack of Arnold and Montgomery on Quebec in 1775, and at length compelled the American army to recross the St. Lawrence. It was a great misfortune to the British army that he was superseded in his command of the Northern army by Burgoyne. He succeeded Sir Henry Clinton as commander-in-chief of the British forces in 1782, and arrived in New York in May. On November 5th, 1783, he evacuated the city, after the signing of the treaty of peace. His death occurred in England, in 1808, at the age of 83. His kind treatment of American prisoners is still gratefully remembered.

CARLETTI, F., an Italian navigator, 16th cent.

CARLETTI, N., a Neapol. archbp., 1723-1800.

CARLISLE, SIR ANTHONY, a distinguished English surgeon, 1768-1840.

CARLISLE, NICH., an antiqu. wr., 1771-1847.

CARLISLE, THOMAS HOWARD, earl of, uncle and guardian of Lord Byron, himself a poet and dramatic author, and in politics a Whig, b. 1748.

CARLOS, DON, crown prince of Navarre, noted for his frequent rebellions, 1420-1461.

CARLOS, DON, son of Philip II. of Spain, and the hero of one of Schiller's tragedies, 1545-1567.

CARLOS, THE DUKE OF SAN, at one time English ambassador from Spain, a great promoter of national improvements, died 1828.

CARLTON, OSGOOD, a mathematician, author of the American Navigator 1801, and of the South American Pilot 1804. Died at Litchfield, N. H., 1816.

CARLYLE, JOSEPH DACRE, an Oriental scholar and poet, fellow-traveller with Lord Elgin, d. 1804.

CARMAN, Captain, celebrated for his brave resistance in 1642, to a Turkish Pirate, carrying 26 guns and 300 men, near the Island of Palma. He had only 20 men and 7 cannon. After a fight of three hours he was boarded by the Turkish captain and 100 men, but he killed her commander, and the pirate retreated leaving 50 men on board Carman's vessel, whom he either shot or forced into the sea. In 1645 his vessel ran aground off the coast of Spain and he perished.

CARMELI, MICHELANGELO, an Oriental scholar, editor of the Greek classics, and author of commen., 1706-1766.

CARMICHAEL, WILLIAM, a diplomatic agent of the American government at the Courts of Paris, Berlin, and Madrid. He was aid to Mr. Deane at Paris in 1776. In 1778 he was member of Congress from Maryland. In 1879 he became secretary of legation to Mr. Jay in Spain. In 1782 he was left by him Chargé d'Affaires, in which capacity he continued, after receiving his commission from Congress, for several years. He died in 1795, after his return to the United States.

CARMONTELLE, a miscel., Fr. wr., 1717-1806.

CARNARVON, HY. JNO. GEORGE HERBERT, earl of, and formerly Lord Porchester, distinguished as a writer of his travels, 1800-1849.

CARNE, J., author of 'Travels in the East,' 1789-1840.

CARNEADES, a Greek philosoph. and ambassador, celebrated for his eloquence as a dialectician, died 125 B.C.

CARNES, THOMAS P., member of Congress from Georgia, in which State he was solicitor-general, attorney-general, and judge of the Supreme Court. He died in 1822, aged 60.

CARNOT, LAZARE NICOLAS MARGUERITE, characterized by Bourdon de l'Oise as 'the man who had organized victory in the French armies,' is one of the fairest and most steadfast characters in the history of the French revolution. He was distinguished in early life for his application to the exact sciences, and the mathematical and philosophical works which he has left behind him are no mean monument of his genius and industry in the pursuit of his favorite studies. But it is as a military engineer and minister of war under the revolutionary government and the empire that the reader of history is most interested in him. He was born in 1753, and was only eighteen years of age when his skill in fortification and tactics procured him an appointment as second lieutenant in a corps of engineers. In 1783 he received the laurel crown from the academy of the ancient capital of Burgundy for his eulogium of Vauban, and in 1791 was sent to the legislative assembly by the Pas-de-Calais. In the convention he voted for the death of Louis XVI., and in the Committee of Public Safety was implicitly and exclusively trusted with the direction of the military operations, a trust which he fully justified by his admirable conduct of affairs on the defection of Dumouriez. His influence and daring in the committee, where he always opposed himself to the dictatorial ambition of Robespierre, Couthon, and St. Just, was

due to his 'cold mathematical head,' which enabled him to organize so many armies and send them all to combat with the *prestige* of victory. After the revolution of the 18th Brumaire, he was some time minister of war, but voted against the consulate for life and the empire, and when all hope of the republic was lost, retired from public life and devoted himself to literary and scientific pursuits. The disasters of 1812, and the dangers which threatened France, recalled his public spirit, and he frankly offered his sword to the emperor, who appointed him to the command of Antwerp, and on his return from Elba restored him to his old functions as minister of war. He opposed the second abdication, but it was in vain, and Napoleon manifested his esteem and regret in the memorable words,—'M. Carnot, I have known you too late!' He was proscribed at the restoration, and died at Magdeburg in 1823. Some of his brothers have also acquired a name in French history, of these we may mention JOSEPH FRANCOIS CLAUDE, a magistrate and writer on criminal law, born 1752; and CLAUDE MARIE, a military officer and minister of state, born 1755, whose identity, perhaps, is sometimes confounded with that of his brother Lazare. [E.R.]

CARO, ANNIBALE, a scholar and poet of Italy, engaged in public affairs as secretary to the cardinal Alexander Farnese, 1507–1566.

CAROLI, F. P., an Italian painter, 1638–1716.

CARPACEIO, V., an Italian painter, 16th ct.

CARPENTER, DR. LANT, an industrious theological writer, and unitarian minister, 1780–1840.

CARPENTER, R. C., an English architect, died 1855, aged 43.

CARPENTER, RICHARD, a theologian, 17th c.

CARPI, UGO DA, an engraver, 16th century.

CARPINI J., a Venetian painter, 1611–1674.

CARPOCRATES, founder of a heresy, 2d cent.

CARR, SIR JOHN, au. of several 'Tours,' d. 1822.

CARR, W. H., a clergyman, and patron of the fine arts, distinguished for a bequest of pictures to the National Gallery, died 1830.

CARR, SIR ROBERT, commissioner from Charles II. to New England, in 1664. On the 27th August, in conjunction with his colleague, Colonel Nicolls, he captured, with a small force, the Dutch settlements at New Amsterdam and Fort Orange on the Hudson, which were respectively named New York and Albany, in honor of the duke of York. After completing his conquest by the addition of New Jersey, Carr returned to Boston. He returned to England on June 1st, 1667, and died immediately after landing.

CARRA, JEAN LOUIS, a political and historical writer, condemned with the ill-fated Girondists by the revolutionary tribunal, 1793, was one of the earliest in the field at the outbreak of the French revolution, as editor of the '*Annales Patriotiques*.' He was born in 1743, and though his parents were in narrow circumstances, received a liberal education. He was a man of adventurous spirit, and astonished Mirabeau by offering to raise all Germany against the emperor with only 'fifty thousand men and twelve printing presses.' He is worthy of re-

membrance as the chief instrument in exciting a vindictive feeling against the royal family, and this, perhaps, may be considered his real part in the revolutionary drama. His condemnation with the illustrious party of the Gironde, was an honor to which he was scarcely entitled, and is a sign, at least, of his improved taste as he approached the end of his career. Having when a young man spent some time in the Danubian provinces, he published a work on the history of Moldavia and Wallachia, with an essay upon their actual state in 1776.

CARRANZA, B. a Fr. ecclesiastic, 1503–1573.

CARRARA, FRANCIS, lord of Padua, memorable for his wars with the Venetians, died 1393. His son of the same name, after a long struggle with them, strangled in a Venetian prison, 1406.

CARRA-SAINT-CYR, J. F., Comte De, a French officer distinguished in the late wars, died 1834.

CARRE, the name of several Dutch painters, flourished at Amsterdam 17th and 18th centuries.

CARRE, a Fr. East Indian voyager, 1666–1671.

CARRE, LOUIS, a Fr. geometrician, 1663–1711.

CARRE, REMI, a writer on singing, 1706–1773.

CARRE, W. L. J., a wr. on civil law, 1777–1832.

CARREL, NICOLAS ARMAND, one of the most sincere patriots and noble-minded men of modern times, chief editor of the *National*, and author of several historical works, was born at Rouen, 1801, and killed in a duel by M. Girardin, 24th July, 1836. He received a military education at St. Cyr, and fought in the auxiliary legions of Spain in the late struggle against absolutism. He took the direction of the *National* after the revolution of 1830, and distinguished himself by his fine spirit and patriotic sincerity. He was extremely sensitive in points of honor, and had fought several duels before his last fatal rencontre with his more wily opponent. He bears the reputation of a good man, and was much beloved by his friends in private life. His principal work is a '*History of the Counter-Revolution in England*.' [E.R.]

CARRERAS, JOSE MIGUEL, a patriotic Spaniard of South America, engaged with his two brothers, JUAN and LUIS, in the revolution of Chili, and executed in 1822, as the latter had been 1818.

CARRIER, JEAN BAPTISTE, born in 1756, was an obscure attorney, brought into note by the progress of the French revolution, and sent to the national convention, 1792. His memory is held in execration for deeds of horror without a parallel, except in the similar scenes of iniquity enacted by his rival in cruelty, Collot D'Herbois. He was sent to Nantes in October, 1793, to assist in repressing the civil war commenced in La Vendée by the priests and royalists. He selected his committee, to give an air of legal sanction to his atrocities, from the very refuse of the canaille, and at length dispensed with all form whatever, and executed his prisoners *en masse*, no less than 15,000 being disposed of by fusillades or drownings in one month, with whose corpses the waters of the Loire were literally infected and the banks strewn. The refinement of cruelty with which all this was accomplished, and the obscenities with which he seasoned his repast of blood, almost surpass belief. He was at length recalled by the Committee of Public Safety, and on the fall of Robespierre, condemned by the revolutionary tribunal and executed. A memoir upon the life and crimes of Carrier was published by Boëuf in 1798. Care should be taken not to confound this monster with a professor of civil law, and author of various treatises on jurisprudence, born 1770, who must have felt it a misfortune to bear precisely the same names. [E.R.]

CARRIER, THOMAS, died at Colchester, Conn., in 1735, aged 109. He was a native of England. His wife was burned for witchcraft at Salem, in 1692, on the charge of appearing to her daughter as a black cat. Carrier retained his strength and faculties to the last, and walked six miles a few days before he died.

CARRIERES, L. DE, a biblical com., 1662-1717.

CARRINGTON, N. T., an Eng. poet, 1777-1830.

CARRINGTON, EDWARD, an officer in the American army—served at the South under General Green, was delegate to Congress from Virginia, and foreman of the jury which tried Aaron Burr. Died 1810, aged 61.

CARRINGTON, PAUL, Judge of the Superior Court of Virginia, fought while a boy in the actions of Guilford and Green Spring. Completed his studies at William and Mary College after the war, and served as a delegate in the Virginia legislature. He died in 1816, aged 52.

CARRION, E. R. DE, a learned Spaniard, 17th c.

CARRIGAIN, PHILIP, for many years the most eminent physician in New Hampshire, was born in New York, 1746, and died at Concord in 1806. His son, bearing the same name, was secretary of state in New Hampshire about the year 1806.

CARROLL, JOHN, D. D. L. L. D., first Roman Catholic Bishop in the United States, was a native of Maryland, and educated at St. Omer's, Liege and Bruges, in the last of which he was professor in 1773. He came to America in 1775—was appointed vicar-general in 1786, and in 1790 was consecrated in England with the title of the Bishop of Baltimore. He was afterwards made Archbishop. He died in 1815, at the age of 80.

CARROLL, CHAS., of Carrollton, one of the signers of the American Declaration of Independence. He survived all his associates in that memorable act. He was a native of Annapolis, and was born in Sept., 1737. His parents were of Irish descent, and educated him as a Roman Catholic. Having studied civil law in France, he went to England to acquire at the Temple a knowledge of the Common law. On his return to his native land he soon distinguished himself by his able political writing, and his opposition to the arbitrary encroachments of the British ministry. He was elected to the Congress of 1776, where he placed his name to the declaration of independence. In 1778 he entered the state legislature, in which he continued until 1789, when he was chosen to the Senate of the United States. He was actively engaged in public life until 1810, when at the age of 74 he retired to spend his last days in tranquillity amid his friends in the grateful pursuits of literature. His valuable life was prolonged until 1832, when he expired in his 96th year.

CARS, LAURENCE, a Fr. engraver, 1703-1771.

CARSTARES, WILLIAM, a Scotch divine, an adherent of William, prince of Orange, afterwards his chaplain, 1649-1715.

CARTE, S., a wr. on chronology, died 1740. His son THOMAS, dist. as an antiquarian and historian, noted in the polit. troubles of the period, 1686-1754.

CARTER, ELIZABETH, daughter of a clergyman, disting. for her extraordinary learning, 1717-1806.

CARTER, JOHN, an antiquar. wr., distinguished also for his skill in drawing and engraving, d. 1818.

CARTER, JAMES, an English writer, author of 'Memoirs of a Working Man,' d. 1853, aged 61.

CARTER, NATHANIEL HAZELTINE, an American writer, born in New Hampshire in 1788, and was graduated at Dartmouth College in 1811. In this institution he became professor in 1817, and contin-

ued so for several years. In 1820 he became editor of the Albany Register, and in 1822 of the New York Statesman. He travelled on the continent of Europe from 1825 to 1827. Spent the winters of 1827 and 1828 in Cuba, revisited Europe and died at Marseilles in 1830. He published in 1827 his travels in two volumes, under the title 'Letters from Europe,' and was also author of several poems of which the 'Pains of Imagination' is the most considerable. His versification is easy and simple.

CARTER, ROBT., died in 1813 in Virginia. He was a wealthy planter, memorable for the philanthropic emancipation during his own life of 700 or 800 slaves.

CARTER, ROBT., president of the Council of Virginia in 1726. He was owner of 1100 slaves, and 300,000 acres. He died in 1732, aged 69.

CARTERET, JOHN, earl of Granville, an adherent of the house of Hanover, born 1690; secretary of state 1721; lord-lieutenant of Ireland 1723-1726, and again 1727-1730; in opposition to Sir R. Walpole 1730-1741; in office again as secretary of state 1742-1744; and as president of the council from 1750 till his death, 1763.

CARTERET, GEORGE SIR, in 1664, one of the first proprietors, under Patent from the Duke of York, of the Province of New Jersey, which he named from the Island of Jersey, where his family resided, calling Elizabethtown after his wife. Lord Berkeley was the other proprietor. In the division of the Province, East Jersey fell to him. Philip Carteret was governor of New Jersey from 1665 to 1682.

CARTERET, PH., a naval officer, 18th cent.

CARTIER, JACQUES, a French navigator and traveller, sent out by Francis I. in 1534 to make discoveries in the Western Hemisphere. He visited the mouth of the St. Lawrence and returned, having taken possession of the countries adjoining the gulf in the name of the king of France. He again sailed with a more ample commission and equipment in 1535. In this voyage he visited the spots now occupied by Quebec and Montreal, the latter of which he called Mont-royal. On his return in 1536, he carried with him an Indian king named Donnacona, who died in France. In 1540, with five ships he sailed on a third expedition, and on the 23d August arrived in the neighborhood of Quebec. François de la Rogue, Lord of Roberval, had been appointed lieutenant-governor of Canada, but for some cause did not accompany him. On his return in 1542 he met Roberval at St. Johns, Newfoundland, who wished him to go back to Canada, but he declined, and pursued his journey to France. Roberval's attempt to colonize Canada proved a failure, and fifty years elapsed before the experiment was repeated. Cartier published a narrative of his two first voyages and his discoveries in Canada.

CARTOUCHE, L. D., a Fr. brigand, exec. 1721.

CARTWRIGHT, DR. E., a clergyman of the Church of England, distinguished for his discoveries in mechanics, died 1824.

CARTWRIGHT, GEORGE, colonel, one of the commissioners sent by King Charles to New England in 1664. He was captured by the Dutch when on his return to England in the following year and deprived of all his papers, which loss was perhaps fortunate for the colonies, as the free spirit of New England had much offended him. His colleagues were Nicholls, Carr, and Maverick.

CARTWRIGHT, JOHN, at one time major of the Notting. militia, a not. advoc. of reform, 1740-1824.

CARTWRIGHT, T., a biblical com., 1535-1603.

CARTWRIGHT, W., a royalist divine, disting. also as a playwright and poet, 1610-1643.

CARUS, MARCUS AURELIUS, emp., 276-282.

CARUSO, J. B., a Sicilian historian, 1673-1724.

CARUSO, LUIGI, a composer of music, last ct.

[Landing of the Pilgrims.]

CARVER, JOHN, first governor of Plymouth Colony, was born in England, but emigrated to Leyden, with Mr. Robinson's congregation. He came to New England in the Mayflower in 1620. It was the design of the emigrants to settle on the Hudson, upon land obtained by patent from the Virginia company, in which negotiation Carver had acted as agent of the Colony, but they were driven to the North by stress of weather and anchored in the harbor of Cape Cod. Before landing Carver was unanimously elected governor for one year on the 11th November, 1620. For five weeks the vessel lay in the harbor, while expeditions for the purpose of observation were made by order of the governor. In one of these a discharge of arrows and shots was exchanged between the emigrants and the Indians. On the 11th of December, they landed upon Plymouth Rock. The last day of the month was signalized by the first public religious services held on shore. In the beginning of 1621 sickness broke out, and Governor Carver was himself ill with a scorbutic disease in January, from which he did not recover till March. Providence provided the Colony with an interpreter in a Patuxet Indian named Squanto, who six years before had been taken captive, and carried to Malaga, but being liberated found his way to London, and from thence homeward, with some fishermen, after acquiring some use of the English language. A treaty of peace was now established between the Colony and Massasoit, the king of the neighboring Indians. All now betook themselves to labor, and the Indian interpreter was of great assistance in instructing the colonists. But to the grief of all Governor Carver received a stroke of the sun while working in the field and died after a few days illness. His wife survived him but six weeks. His death occurred at the beginning of April, 1621. He was succeeded by Governor Bradford. His sword may still be seen in the collection of the Massachusetts Historical Society, and the town of Carver, in Plymouth County, perpetuates his name.

CARVER, JONATHAN, an American traveller, born in Connecticut in 1732, who after the peace of 1763, attempted to traverse the continent of North America from the Atlantic to the Pacific, in the latitude

of the great lakes, with the hope of discovering some shorter communication with the East Indies than by the Cape of Good Hope. He set out from Boston in 1766, but found it impossible to advance much further than the north-eastern border of Lake Superior. He returned to Boston in 1768, after having travelled 7,000 miles, and after arranging his papers and maps went to England to publish them. They were, however, seized by government after he had sold them to a bookseller, and he did not obtain possession of them for ten years. He died in 1780, two years after their publication, in utter destitution, an example of the treatment usually allotted by the world to those who make great adventures for its sake.

CARY, F., a Fr. antiquarian writer, 1699-1754.

CARY, REV. H. F., the well-known biogr. wr., translator of Dante, and ed. of the poets, 1772-1844.

CARY, LOTT, an intelligent and enterprising negro, born in Virginia, who having purchased in 1813 his own freedom and that of his two children, took a leading part in the attempts to colonize the coast of Africa, and was for some months as vice-agent in command of the settlement of Liberia. He was killed in November, 1828, by the explosion of gunpowder in the agency house, together with seven other persons, while engaged in making cartridges for the defence of the colony against the natives.

CARY, ROBERT, LL.D., a learned div., d. 1688.

CARYL, JOHN, a poet and tragical writer, secretary to Mary, queen of James II.

CARYL, JOS., au. of a 'Com. on Job,' d. 1673.

CASA, JOHN DELLA, an Italian orator and poet, disting. as a statesman and ecclesiastic, 1503-1556.

CASALI, J. B., a Roman antiquarian, 17th ct.

CASALI, JOSEPH, an archæologist, 1744-1797.

CASALINI, LUCIA, a female artist, 1677-1762.

CASANOVA, MARK ANT., a Lat. poet, d. 1527.

CASANOVA DE SEINGALT, J. J., an unprincipled adventurer and intriguer, called the Gil Blas of the 18th century, remarkable for his proficiency in science and literature, 1725-1803. His brother FRANCIS, a painter of landscapes and battle-pieces, 1727-1805. A third brother, JEAN BAPTISTE, professor of painting at Dresden, and fellow-laborer with Winckelmann, 1730-1798.

CASAS, BARTHOLOMEW LAS, a Frenchman by blood, though born in Seville, is memorable in history for his philanthropic efforts in behalf of the aborigines of America, and the sinister effect of those exertions upon the African race. While yet a student at Salamanca, his father, who had been a companion of Columbus, gave him an Indian slave brought from Hispaniola. This event turned his attention to the wrongs endured by the natives of America, and visiting Hispaniola in 1502, his sympathies were so deeply excited by their sufferings that he devoted the rest of his life to the intrepid advocacy of their cause. To spare them he encouraged the introduction of African slaves, on the ground that it was less cruel to employ them, as their power to endure the fatigue of severe labor was greater. He employed his vigorous and caustic pen in behalf of the Indians, and the Spanish government has never permitted the publication of his principal work, which still exists in manuscript. Several able productions on the subject were, however, published by him. He was consecrated Bishop of Chiapa in 1544, but returned to Spain in 1551, and died at Madrid in 1566, where his remains are buried in the Dominican church.

CASAUBON, ISAAC, one of the most learned schol. and penetrating critics of his age, 1559-1614.

CASAUBON, MERIC, D.D., son of the preceding, and like his father, a contriv. wr., 1599-1671.

CASE, JOHN, a scholastic philosopher, d. 1599.

CASENEUVE, P. DE, a Fr. antiq., d. 1650.

CASELLA, P. LE, an hist. and Lat. poet, 16th c.

CASIMIR I., the Pacific, k. of Poland, 1034-1058.

CASIMIR II., the Just, dethroned and d. 1194.

CASIMIR III., the Great, born 1309; elected king on the death of his father, 1333, died 1370.

CASIMIR IV., formerly d. of Lith., 1447-1492.

CASIMIR V., born 1609; became a Jesuit and cardinal, and was secularized when elected king, 1648; abdicated 1667, and died abbé of St. Germain-des-Près, 1672.

CASIMIR, ST., son of Casimir IV., and duke of Lithuania, since his death canonized and invoked as the patron of Poland, 1458-1483.

CASLON, W., an Eng. type-founder, 1692-1766.

CASS, JONATHAN, the father of general Lewis Cass, was a native of Salisbury, Connecticut, and entered the army as a private soldier the day after the battle of Lexington. He fought in almost all the great battles of the Revolution, and continued in the army until 1800. He attained the rank of major. He married in 1790. He died at his residence near Zanesville, on the Ohio, in 1830, at the age of 77.

CASSAGNES, J., a Fr. poet and preacher, translator of Sallust and other classics, 1636-1679.

CASSANDER, one of the generals of Alexander the Great, and after his death a sharer in the divided monarchy, as k. of Macedon, &c., d. 298 B.C.

CASSANDER, F., a French *savant*, 1620-1695.

CASSANDER, G., a Germ. *savant*, 1515-1566.

CASSARD, J., a cel. Fr. navigator, 1672-1740.

CASSASS, L. F., a Fr. painter and architect, au. of an illust. book of Travels in the East, 1756-1827.

CASSERIO, GUILIO, an Ital. anat., 1556-1616.

CASSIBELAN, or CASSIVELAUNUS, a chief of the Britons at the time of Cæsar's invasion.

CASSINI. The family name of several distinguished observers and astronomers.—1. JOHN DOMINIC, born in Piedmont in 1625: the first professor in the Royal Observatory in Paris, which was founded in 1670. Cassini was one of the earliest to conjecture that the comets, like the planets, move in regular curves; he published valuable observations on Jupiter's satellites; but his fame chiefly rests on his discovery of four of the satellites of Saturn. He labored also at measurement of the meridian through France. He died in 1712.—2. JOHN JAMES, son and successor of the foregoing, also enriched science with valuable observations and discoveries—in physics as well as astronomy. Through an unfortunate misapprehension he maintained in opposition to Newton that the figure of the earth is an *oblong* spheroid; and as the contest grew keen, the French sovereign sent out two commissions, one to the equator, the other to the polar circle, to decide it. These are the famous commissions, the first under Bouguer and La Condamine, the second under Maupertuis, &c. Newton's view was of course confirmed. Cassini died in 1756.—3. CASSINI DE THURY, CÆSAR FRANCIS, second son and successor of James. Also a good and laborious observer, he was chiefly occupied with the measurement of the meridian in Europe. He observed also a transit of Venus, and wrote much on parallax and refraction. He died in 1784, and was succeeded in the observatory by his son, COUNT JOHN DOMINIC, with whom terminated a family illustrious in the scientific annals of France.

CASSINI, A. H. G., a botanist, 1781-1832.

CASSIODORUS, MARCUS AURELIUS, a Latin historian, minister and consul of Rome, 6th cent.

CASSIUS, J. L., a Latin historian, 2d c. B.C.

CASSIUS, LONGINUS CAIUS, fellow-patriot and conspirator with Brutus, and called by him 'the last of the Romans,' supposed to have died by his own hand at Philippi, B.C. 42.

CASTAGNO, A. DEL., an Ital. paint., 1409-1480.

CASTALIO, or CASTELLIO, SEBASTIAN, author of a very valuable Latin and French version of the Old and New Testaments, once the friend of Calvin, by whom he was cruelly treated in after years when living in poverty, 1515-1563.

CASTANOS, duke of Baylew, a Spanish patriot, who fought and distinguished himself under Wellington in the Peninsular campaign against Napoleon, from 1808 to 1813. He received his title from the place which was the scene of a memorable victory over the French under Dupont, 1818. Died 1852, aged 95.

CASTEL-CICALA, FABI RUFO, prince of, a minister and ambassador of Naples, died 1822.

CASTELL, EDMUND, celebrated as author of a dictionary compiled in seven languages, 1606-1685.

CASTELLAN, A. L., a pain. and eng., 1772-1838.

CASTELLI, BERN., a Genoese pain., 1557-1629.

CASTELLO, G. L., an antiq. of Sicily, 1727-1794.

CASTELLOSA, DONNA, a female poet, 13th c.

CASTELNAU, M. DE, a Fr. states., 1518-1592.

CASTELNAU, R. DE, a troubadour, 13th cent.

CASTELVETRO, L., an Ital. critic, 1505-1571.

CASTI, J. BATTISTA, an Ital. poet, 1721-1803.

CASTIGLIONE, BALTH., an Italian statesman and ecclesiastic, distinguished also as a poet and man of letters, 1468-1529.

CASTIGLIONE, G. B., a landscape painter of Genoa, a pupil of Vandyck, 1616-1670.

CASTILLEJO, CHR. DE, a Sp. poet, d. 1596.

CASTILLO, AUG. DEL., a Sp. paint., 1565-1626.

CASTILLO, BERN. DIAS DEL., companion in arms of Cortez, and hist. of his campaign, 1519-1560.

CASTILLON, J. F. SALV. DE, a phil., 1709-91.

CASTIN, SAINT BARON DE, a French officer, captain in Carignan's regiment which was sent to Canada in 1665. He was placed in command of the Penobscot Indians, and married an Abénaquis. In 1690 he captured Fort Pemaquid, and assisted in the defence of Port Royal in 1706 and 1707. He died on his estate in France. His son, who inherited his title and succeeded him in his command, was taken prisoner and carried to Boston in 1721.

CASTLEREAGH, ROBERT STEWART, marquis of Londonderry, a British statesman, was born on 18th June, 1769. In the Irish parliament, where he first sat, he was reputed to belong to the opposition, but obtaining a seat in the English Commons, he chose the ministerial benches. On his accession to the title of Castlereagh, in 1797, he returned to the Irish parliament. As secretary of state he made great and successful efforts for the achievement of the Irish Union, and he was one of the statesmen most prominently marked out on that occasion for the wrath of the Irish people. He sat for Down in the united parliament, and in 1805 became the war and colonial secretary, resuming these offices on the restoration of his party in 1807. In 1809, a dispute, on the unfortunate Walcheren expedition, drove him to a duel with Canning, and the resignation of his offices. In 1812, he again became foreign secretary; and in 1814 and 1815 he represented Britain at the settlement of Europe by the congress of Vienna. He was popularly charged with connivance at the aims of the European despots; and yet, arbitrary as were his principles, it is now understood that his liberality and firmness did much to check the tyrannical

ny and rapacity of the continental monarchs. In April, 1821, he succeeded his father as marquis of Londonderry in Ireland, but this did not prevent him from retaining his seat in the House of Commons. He was a man of fine person, and commanding manner, and could look a proud defiance when assailed, which often elicited the admiration of his many adversaries. He was a ready but bad speaker, and his contorted and jumbled similes have often been quoted with much ridicule. In the session of 1822, he seemed to be suffering severely from over exertion and excitement, and on the 12th of August he deliberately terminated his days by a slight incision in the carotid artery. [J.H.B.]

CASTOLDI, GIOV. GIAC., a composer, 16th c.

CASTOR, the first chronological wr., 200 B.C.

CASTOR, ST., founder of an abbey, 4th cent.

CASTRO, ALVAR DE, a Sp. general, d. 1239.

CASTRO, DON FERD. DE, favorite of Peter the Cruel, died a refugee in England, 1375.

CASTRO, GABRIEL PEREIRA DE, an Epic poet, complimented as the second Camoens, 1571-1632.

CASTRO, INEZ DE, a beautiful lady of Castile, secretly married to Pedro, son of Alphonso IV., and assassinated by order of the latter, 1357.

CASTRO, JOHN DE, a Portuguese commander, afterwards governor of the Portuguese possessions in the East Indies, 1500-1548.

CASTRUCCI, P., a cel. violinist, last century.

CASTRUCCIO, a chief of the Ghibellines, died 1328.

CASWELL, RICHARD, governor of North Carolina, was educated for the bar and elected to the first Congress in 1774. He took up arms at an early period in defence of American liberty. At the head of a regiment he opposed in 1776 a body of loyalists who styled themselves regulators, and consisted chiefly of ignorant and disorderly persons on the frontiers who had emigrated from the highlands of Scotland. This party was under the command of General McDonald, who toward the end of February, being pursued by General Moore, was under the necessity of engaging Caswell at the head of 1,000 men near Moore's Creek Bridge, about 16 miles from Wilmington. Caswell defeated him, killed and wounded 70 of his men, took him prisoner and captured about 1,500 rifles. This brilliant action was of eminent service to the republican cause. In 1776 Caswell presided at the convention of North Carolina, convened to form the constitution, and was governor from 1777 to 1780, and from 1785 to 1787. He died at Fayetteville in Nov., 1789.

CATALANI, ANGELICA, the cel. cantatrice and opera performer, born at Sinigaglia 1782, d. 1849.

CATEL, C. S., a compos. of music, 1770-1830.

CATESBY, MARK, F. R. S., a distinguished naturalist, born in England in 1679. He visited Virginia in 1712, for the purpose of gratifying his passion for researches in natural history, and after making extensive observations and collections returned to England in 1719. He again crossed the Atlantic at the request of scientific men in 1722, and spent four years in examining the natural productions of the Carolinas, Georgia, Florida, and the Bahama Islands. Attended by an Indian who carried his painting materials and acted as his guide, he scaled the mountains and penetrated into the recesses of the country, delineating on the spot every object worthy of attention. On his return to England in 1726, he devoted himself to the preparation of his great work on the natural history of America,

which, though superseded by the more profound and elaborate works of modern times, exceeded any thing which had then been published. The plates were engraved by his own hand. It was completed in two volumes in 1748, and so great was the interest excited by it in the scientific world, that as each number appeared an account of it was inserted in the philosophical transactions. A second edition was published in 1754 and a third in 1771. He died in London in 1749, aged 70, having devoted his whole life to one object.

CATHALINEAU, JAMES, general-in-chief of the royalist armies in La Vendée, surnamed by his soldiers the 'saint of Anjou,' where he was born 1759; mortally wounded in the attack on Nantes, 29th June, 1793.

CATHARINE, ST., of Sienna, celebrated for the political influence of her revelations in the pontificate of Gregory XI., and for her extatic writings, 1347-1380.

CATHARINE, queen of Bosnia, died 1478.

CATHARINE OF ARRAGON, daughter of Ferdinand and Isabella, b. 1483; married to Prince Arthur 1501, and to her brother-in-law, afterwards Henry VIII., 1514; died 1536.

CATHARINE OF BRAGANZA, or Portugal, born 1638; married to Charles II., king of England, 1661; died 1705.

CATHARINE OF FRANCE, daughter of Charles VI., b. 1401; married to Henry V., k. of England, 1420, and after his death to Owen Tudor; d. 1438.

CATHARINE PARR, queen of Henry VIII. 1543, afterw. wife of Sir Thos. Seymour, d. 1548.

CATHARINE DE MEDICI, the only child of Lorenzino de Medici, duke of Urbino, and Madelaine de la Tour, a French princess, sister-in-law of the duke of Albany, was born 1519, and married to the duke of Orleans, afterwards Henry II., 1533. During her husband's lifetime, who was mortally wounded at a tournay, 1559, the political history of Catharine possesses little interest for us. He was succeeded by their eldest son, Francis II., who also died the following year, 1560, when Catharine was named regent of France during the minority of her second son, Charles IX. The great events which now succeeded each other, and which belong to the early history of the reformation, were the battle of Dreux, fought between Guise and Condé 1562; the truce concluded between the rival interests represented by these leaders, 1563; the league of Bayonne formed against the protestants, and the commencement of the religious war, 1566; the battle of St. Denis, and the death of Montmorency, 1567; the battle of Jarnac, and assassination of Condé, 1569; the appearance of the courageous Jeanne D'Albret with her son Henry of Navarre, afterwards Henry IV., in the camp of the protestants, and the battle of Mont-Contour, 1569; the peace of St. Germain, to which Catharine submitted under the dictation of Coligni and the protestants, 1570; and the treacherous massacre of St. Bartholomew, 1572.—In 1574 Charles IX. died of the fruits of his debaucheries, and Catharine's third son, who had been elected king of Poland the previous year, succeeded under the title of Henry III., the virtual government of the kingdom still remaining with the queen-mother, who alone preserved it from total anarchy. In 1575 Henry of Navarre was the recognized leader of the

protestants. In 1576 the famous catholic league was formed, and the duke of Guise appointed chief of the crusade. In the next year or two, the war had been renewed from one end of France to the other, and the kingdom was threatened with entire destruction by the rival factions. In 1587 Henry of Navarre gained the battle of Coutras. In 1588 the people of Paris were in insurrection, the states-general were assembled at Blois, and the duke of Guise was assassinated in the palace. In the following year Catharine died. A bare outline of the political complications which produced these events would fill many pages, but they all turn upon the struggle between the catholic and protestant leaders, which rent the kingdom to pieces, and the reckless determination with which the daughter of the Medici endeavored to maintain the royal authority. To estimate her conduct with perfect fairness the character of the age must be considered, and especially the pretensions of a severe Calvinism, its vast network of affiliated societies overspreading France, and the social revolution which it threatened. We have no wish to apologize for the crimes of a Medici, but to understand how they were possible. If a woman without human sympathy occupied the throne of France, can we contrast her cold heart and plotting intellect with an example of Christian meekness and womanly tenderness in the curule chair of Geneva! As we venture to read history, the massacre of St. Bartholomew stamps the period, rather than this single actor in it, with deserved infamy and when we have said this, enough remains in the Machiavel-like subtilty of her policy, and the dark ambition which did not scruple at the debauchery of her own sons, to justify the hatred of her memory. It should not be forgotten that the lurid colors in which this extraordinary woman has been painted are brightened by commanding talents, and by that taste for art, hereditary in the family of the Medici, which has graced her adopted country with the palace of the Tuileries, and which commenced a new era in arts and literature. [E.R.]

CATHARINE I., empress of Russia, as the wife and successor of Peter the Great, 1689-1727.

CATHARINE II., one of the greatest sovereigns of the Russian empire, born 1729; wife of Peter III. 1745; crowned empress after his death 1762; died 1796.

CATHARINE OF RUSSIA, daughter of the emperor Paul, queen of Wurtemberg, 1788-1819.

CATHARINUS, AMB., a catholic wr., d. 1553.

CATHCART, Earl, a British officer, and was aid-de-camp to Sir Thomas Spencer Wilson, then to Sir Henry Clinton, and subsequently quarter-master general in the American revolutionary war. He commanded the British troops at the bombardment of Copenhagen in 1807, and acquired other military distinction. In political life, he became ambassador to Russia and a privy counsellor. Died 1843.

CATHCART, GEORGE, General, an officer of distinction in the British army, third son of the Earl of Cathcart, was born in London 1794. He entered the army in 1810 and was engaged in the Russian campaigns against Napoleon in 1813 and 1814, his father being at that period British minister at the court of St. Petersburg. He published a history of these campaigns. He served under Wellington at Waterloo, and commanded the British troops in Canada in the rebellion of 1834 and the English forces employed against the Caffres at the Cape of Good Hope. General Cathcart was killed on the 5th November, 1854, at the siege of Sebastopol during a

sortie of 60,000 Russians, which resulted in the battle of the Inkermann, and in which the enemy were repelled by the English and French allies of only 14,000 with immense slaughter.

CATHRALL, ISAAC, M.D., a physician of Philadelphia, where he practised from 1793 till seized with paralysis in 1816. He was a man of as much courage as skill, and while the yellow fever raged in Philadelphia in 1793-7-8 and 9, anatomized its victims and even tasted the black vomit. He published Buchan's Domestic Medicine with notes, and several papers on the nature and treatment of the yellow fever. He died in 1819 of apoplexy, aged 55.

CATILINE, LUCIUS SERGIUS CATILINA, the Roman conspirator, subject of Cicero's famous declamation, which precipitated the action before Rome, in which he was defeated and slain, B.C. 62.

CATINAT, the name by which Abdias Maurel, one of the most intrepid of the Camisard chiefs, is known, (the revolted protestants of Languedoc,) distinguished as a cavalry officer, burnt alive 1705.

CATINAT, NICH., a Fr. marshal, 1637-1712.

CATLIN, JACOB, author of a compendium of the system of Divine Truth, published in 1825, was minister of New Marlborough, Mass., and born at Harington, Conn. He died in 1826, aged 68.

[Cato, about to kill himself.]

CATO, the Wise, or the Sagacious, was a name first given to Marcus Porcius Cato the Censor. I. This extraordinary man was born at Tusculum, a municipal town of Latium, B.C. 234. At the usual military age he commenced his career as a soldier in B.C. 217, the year in which Hannibal was laying waste the north of Italy; and served again under Fabius at the capture of Tarentum (B.C. 209), and under Claudius Nero in the memorable battle on the banks of the Metaurus (B.C. 207). His fame, however, does not rest on his military achievements alone. In the intervals of war he employed himself in cultivating his hereditary farm, adopting the simple habits and manners of the peasantry; and soon became conspicuous among them for superior intelligence, prudence and sagacity. Having in this way attracted the notice of L. Valerius Flaccus, a young nobleman of considerable influence, by whom his military talents, eloquence, and integrity were duly appreciated, he was induced to remove to Rome; and there, aided by the support of his patron, soon

began to distinguish himself in the forum, and became a candidate for office. Passing through the subordinate offices of quæstor, ædile, and prætor, and exhibiting in these the principles which he had adopted in youth, he was elected consul in B.C. 195, along with his friend and patron Flaccus. In Hither Spain, which was assigned to him as his province, he displayed military genius of a very high order, which speedily reduced the whole country to subjection. In B.C. 191, he distinguished himself greatly in the battle of Thermopylæ, and there seems to have finished his career as a soldier. Cato henceforth appears as an active and leading citizen, taking a conspicuous part in every public measure. The great epoch in his life was his election, in B.C. 184, to the censorship, the duties of which he performed with the fearless strictness of an ancient Roman. His unshaken firmness in checking the luxurious habits of the nobles, and in assailing their crimes and vices, exposed him to great obloquy; but he pursued the course which he had prescribed to himself, regardless of the consequences. With all his rusticity, Cato was a friend to literature, and was one of the patrons and admirers of the poet Ennius. He applied himself in old age to the study of Greek literature, and is represented by Cicero as an ardent admirer of the historians, philosophers, and orators of Greece. Cato died in B.C. 149, at the age of eighty-five, leaving behind him 150 orations, which were admired for many ages; a work on rural affairs, entitled '*De Re Rustica*;' and an historical work, entitled '*Origines*.'—II. MARCUS PORCIUS CATO, surnamed *Uticensis* (of Utica), the great grandson of Cato the Censor, was born B.C. 95. Even when a boy, he is said to have given indications of sturdy independence; and as he advanced towards manhood, he displayed that decision, severity, and harshness of character which marked him out from his contemporaries during the remainder of his life. Taking his great ancestor as his model, he adopted his principles and imitated his conduct; strengthening his vigorous constitution by exposure to cold and fatigue, and bearing physical infirmities with a degree of patience worthy of the Stoic philosophy to which he had attached himself. He commenced his military career in B.C. 72, as a volunteer, in the servile war of Spartacus; and afterwards earned a high reputation as a military tribune in Macedonia. After some time spent in the study of his favorite philosophy, and in diligent preparation for the duties of official life, he was elected quæstor for B.C. 65; and acting on the principles which he had prescribed to himself, corrected various abuses which had been sanctioned by his predecessors. As the supporter of Cicero, in B.C. 63 in all his measures for suppressing the Catilinarian conspiracy, he decided by his speech, on the 5th of December, the motion that the conspirators should be put to death. Along with the senatorial party he strenuously opposed the coalition of Cæsar, Pompey, and Crassus, in B.C. 60; but the supporters of the triumvirate dexterously removed him from the scene of action by conferring upon him an appointment which called him first to Cyprus, and afterwards to Byzantium. When prætor in B.C. 54, he was exposed to the outrages of the mob, in consequence of his endeavors to put a stop to the bribery and corruption which prevailed. On the commencement of the civil war in B.C. 49, Cato joined the party of Pompey; and, after the battle of Pharsalia, proceeded to Africa, where the hopes of the republican party were finally extinguished by the battle of Thapsus (6th April, B.C. 46). The town of Utica alone remained in the interest of the

followers of Pompey; and Cato, failing to inspire his countrymen who were collected there with courage to endure a siege, resolved not to outlive the downfall of the republic. After providing for the safety of his friends, and instructing them as to the means of effecting a reconciliation with the conqueror, he spent the greater part of the night in perusing Plato's *Phædo*, and then inflicted on himself the wound of which he died in the forty-ninth year of his age. Cæsar's estimate of Cato's character is shown by the exclamation which he uttered when he heard of his death: 'Cato, I grudge thee thy death, since thou hast grudged me the glory of sparing thy life!' CAVALIER, JOHN, chief of the protestants in revolt agt. Louis XIV., after. a royalist, 1679–1740.

CAVALIERI, BONAVENTURA, a very eminent Italian mathematician; the pupil of Galileo and friend of Torricelli. Cavalieri's chief work is on the '*Geometry of Indivisibles*,' in which he details an artifice by aid of which curve surfaces, &c., may be quadrated. In one respect this method must be reckoned the logical predecessor and herald of the infinitesimal calculus. Cavalieri wrote also on trigonometry, astronomy, and astrology. He died in 1647.

CAVALLI, F., a Fr. opera composer, d. 1673.

CAVALLINI, P., a sculp. and pain., 1259–1344.

CAVALLO, TIBERIUS, an Italian philosopher, inventor of several physical instruments, 1749–1809.

CAVANILLES, A. J., a Sp. botan., 1745–1804.

CAVE, EDW., the celebrated bookseller of St. John's gate, founder of the '*Gentleman's Magazine*,' d. 1754:

CAVE, DR. W., a learned and religious writer, 1637–1713.

CAVENDISH, THE HON. HENRY, born at Nice 1731, died at London 1810. The father of Mr. Cavendish was Lord Charles Somerset, a cadet of the house of Devonshire. But unlike the class to which his family belonged, the chemist had no sympathies with his fellow-men, either above or below him. He made important discoveries; but when we are ac-

quainted with his history and his self-seclusion, the wonder is that his researches were not more abundant. Compare the millionaire chemist with the poverty-struck, but indefatigable and noble-spirited Priestley, or with the calm and amiable Black, and we have an intellectual machine contrasted with talent accompanied by humane and generous hearts. 'We start, for soul is wanting there.' Mr. Cavendish was a profound mathematician, electrician, and chemist. Dr. Black, who had discovered carbonic acid, laid the foundation of pneumatic chemistry. Cavendish is usually said to have discovered hydrogen (although it was prepared by Mayow, Boyle, and Hales long anteriorly), and placed the second stone on the great superstructure which was afterwards to be raised by Priestley and others. That common air consisted of oxygen and nitrogen was known; but Cavendish demonstrated (1783) that it consisted by a volume of 20·833 oxygen and 79·166 nitrogen—a result which has been thoroughly confirmed by subsequent experiments. He likewise demonstrated the exact constitution of water, although it is confidently affirmed that James Watt at the same time knew its composition, and that his views were known to Cavendish. Cavendish likewise showed that nitric acid is composed of nitrogen and oxygen—Priestley having previously found that electric sparks, when passed through air, turned litmus red, Cavendish added potash to the solution, evaporated, and obtained nitre. While there is scarcely any doubt that there has been a tendency to overrate Cavendish at the expense of others, he must be always ranked as one of the first of English chemists, who has, by the accuracy of his experiments, assisted in laying the sure foundation of the science. [R.D.T.]

CAVENDISH, THOMAS, was the son of a gentleman of fortune in Suffolk. Coming into possession of his father's property in 1585, he applied his ample means to the fitting out of a stout barque of 120 tons, and accompanied Sir Richard Grenville to the West Indies and Virginia. The object is not ascertained; but of a second voyage, on which he sailed in July, 1586, the purpose certainly was to recruit his finances, wasted in personal extravagance, by plundering on the western sea-board of S. America. England and Spain were long at open war, and among men of fortune this practice was not uncommon in the days of Elizabeth, a commission from the queen being previously obtained. He had only 123 men, and three vessels, respectively 120, 60, and 40 tons burden, for the fitting out of which he had to sell or mortgage what remained of his estates; with these he circumnavigated the globe in twenty-five months, making important surveys in Magellan Straits, plundering and burning many towns of the Spanish colonies, and capturing on the coast of California the great annual galleon, 700 tons burden, laden with valuable merchandise, and 122,000 Spanish dollars. He also reduced to its proper length the distance between Java and the Cape, which the Portuguese had made much too great; and reaching home in safety, 'rich enough to purchase a fair earldom,' he was knighted by Queen Elizabeth. His ill-gotten wealth being dissipated in three years, he embarked in a joint-stock expedition of a like kind, but on a larger scale; this proved unsuccessful from disagreement among elements discordant from the first; and while on his return, in 1593, he died at sea of vexation and fatigue, at the age of twenty-nine. He was the first to point out the importance of St. Helena to the English government. [J.B.]

CAVENDISH, SIR W., a gentleman in the service of Cardinal Wolsey, and afterwards of Henry VIII.,

by whom he was knighted, 1505–1557. His son of the same name, created duke of Newcastle, distinguished in the civil wars as a royalist, 1592–1676. A descendant of the same name, third earl of Devonshire, and friend of William III., 1640–1707. JOHN, Lord Cavendish, br. of the last named, and chan. of the exchq., d. 1796.

CAVOLINI, PH., a naturalist, 1756–1810.

CAWDREY, DAN., a controversial wr., d. 1664.

CAWTON, THOS., and his son of the same name, both dist. as Oriental scholars, d. 1659 and 1677.

CELESTINE, the first of this name, pope of Rome, 422–432; the second, 1143–1144; the third, 1191–1198; the fourth, eighteen days only, 1241; the fifth, founder of the Celestines, 1294–1296.

CELESTIUS, a heretic of the 4th century.

CELLARIUS, CH., a Germ. savant, 1638–1707.

CELLINI, BENVENUTO, a celebrated sculptor and goldsmith, was born at Florence in 1500, and was brought up as a musician (a flute-player) by his father. He entered the service of Clement VII. at

Rome, at an early age, as goldsmith and musician; his active services for this pope and other art-patrons in Rome, especially Porzia Ghigi, were altogether suspended by the sack of the city in 1527, by the soldiers of the constable Bourbon, whom Cellini boasts of having killed in the act of scaling the walls. Cellini returned to Rome a few years afterwards, and continued his works for the pope. Cellini executed several designs also in France for Francis I., for the palace at Fontainebleau, but a portion only were carried out. He returned to Italy in 1545 and executed his celebrated bronze of Perseus with the head of Medusa, now in the Loggia de' Lanzi.—Cellini married at the age of sixty, and died in 1572, leaving two daughters and a son.—Though an able sculptor, Benvenuto Cellini is more distinguished as a goldsmith, or for his ornamental works; he has been long the coryphæus of silversmiths, and until quite recently, was unrivalled as a metal-chaser, but he is now surpassed by several of the modern artists of France, especially M. Antoine Vechte.—Cellini's style is that peculiarly known as the Renaissance, in which scrolled shields or cartouches, and strapwork perform a prominent part; his works are also conspicuous for a minute imitation of natural objects, as in the celebrated silver hand bell made for Clement VII., formerly in the possession of Horace Walpole. Cellini is the great model to this day of the principal ornamental artists of France.—(See *Cellini's Autobiography*.) [R.N.W.]

CELS, J. M., a French botanist, 1743-1806.

CELSIUS, OLAUS, a Swed. naturalist, distinguished as the teacher and protector of Linnæus, 1670-1756.

CELSUS, AURELIUS CORNELIUS, a physician who flourished in the reign of Tiberius, in the first century of the Christian era. He is distinguished for having bequeathed to his successors in the healing art his work 'De Medicina,' written in elegant Latin, and familiar to every student in medicine. His views are characterized by great judgment and sense, especially when we recollect the barbarism of science in the times in which he lived. He has explained many of the opinions of Hippocrates, which would be difficult of appreciation without his commentary. [R.D.T.]

CERINTHUS, a Jew, and a noted heretic of the first century, who had been taught literature and philosophy at Alexandria. In the age of the apostle John he propagated many absurdities about the person of Christ and a sensual millennium, based on Jewish dreams and Gnostic speculations. His fantastic reveries need not to be repeated. According to some, the fourth gospel was written specially against his tenets, but there is no solid ground for

such an opinion, though it has been plausibly defended. [J.E.]

CERUTTI, J. A. J., a Jesuit and miscel. writer, author of an 'Apology' for his order, 1735-1792.

CERVANTES SAAVEDRA, MIGUEL DE, was born in 1547, at Alcala, in New Castile, of an ancient but poor family. His taste for literature seems to have been early developed, and to have been chiefly directed towards poetry. In his twenty-second year, he quitted Spain for Italy, holding a place in the household of a cardinal; and, volunteering in the papal army, he fought bravely in 1571 against the Turks, in the battle of Lepanto, receiving there a wound which lamed his left hand for life. He continued to be a soldier, serving under several leaders, till, in 1576, sailing for the Low Countries, he was taken prisoner by an Algerine corsair. His sufferings and adventures during his three years of slavery in Algiers, are said to be described in his novel, 'The Captive,' inserted as an episode in 'Don Quixote.' On being ransomed in 1580, he resumed military service. In 1584 appeared his first printed work, 'Galatea,' a pastoral romance, mixing prose and verse after the model of Montemayor's 'Diana.' In it he represented, under feigned names, himself and a lady whom he immediately married. He afterwards wrote a considerable number of plays, which have never become famous. About this time of his life his history becomes particularly obscure. He was for some time, at Seville, a purveyor of stores for the Indian fleet; and he is traditionally asserted to have collected tithes in La Mancha. In 1605 he published the first part of 'Don Quixote.' The appearance of this celebrated work of genius speedily made him famous, without, however, rescuing him from poverty, although it brought him some patronage from the court, which drew him to Madrid for the rest of his life. No other work came from his pen for several years. But in 1613 he published the 'Exemplary Novels,' a collection of twelve stories, some of which are the only minor works of his that are at all worthy of the author of 'Don Quixote.' Next year there was printed his 'Journey to Parnassus,' critical and satirical essay in verse. This piece, and the celebrity of his great romance, provoked attacks on him, of which the most bitter were introduced into a spurious continuation of 'Don Quixote.' This work was at length completed by the appearance of the second part in 1615. It is needless to commend 'Don Quixote,' and this is no place for endeavoring to analyse its character and design. The author did not long survive its completion. He died in his sixty-ninth year, on the 23d day of April, 1616; and Shakspeare died on the very same day. 'Persiles and Sigismunda,' a romance which Cervantes left unpublished, is universally allowed to be unworthy of the liking with which he himself regarded it. [W.S.]

CHABOT, FRANCIS, one of those unquiet malignant spirits raised from the deep by the French revolution, was a Capuchin monk, who abandoned his order when the door had been opened by a decree of the constituent assembly, and was deputed to the legislative assembly, 1791, and to the convention, 1792. His declamatory powers and vehement passions were directed by the most unsparing hatred of royalty, and according to his own declaration, he even offered himself for assassination that his corpse might be carried through the streets, and the inhabitants of the Faubourgs excited to insurrection. He voted for the king's death without appeal to the people and without delay, and proved himself so shameless in the advocacy of violence and murder, that he has been called the type of sansculottism. Chabot foresaw his fate when the national convention succumbed to the dictates of the Committee of Public Safety, and one day remarked to his compatriots,—'There ought to be a *Côté Droit*, (opposition side.) If none else will form it, I will alone. People say to me, you will all get guillotined in your turn; first, you and Bazire, then Danton, then Robespierre himself.' The event proved that these apprehensions were well founded. Chabot had married into the family of an Austrian banker, and from his connection with the financial speculations of his brothers-in-law, was accused of falsifying a decree of the convention. Whether this was true or false, it served equally well as a pretext for his execution. He was conducted to the scaffold after attempting to poison himself with corrosive sublimate, 3d April, 1794.

In early life he was a lawyer in Maryland, but removed to England, and died in London, 1825.

CHALMERS, THOMAS, D.D., LL.D., the celebrated pulpit orator and divine, was born on 17th March, 1780, at Anstruther, in Fifeshire, of respectable and pious, though humble, parents. After receiving the elements of knowledge at the parish school, he was entered a student in St. Andrews College at the early age of twelve; and soon gave indications of that strong predilection for the physical sciences which he retained through life. He prosecuted the course of study prescribed to students in divinity, and obtained license to preach in connection with the Established Church of Scotland while only 19, two years under the legal age, on the express ground that he was 'a lad of pregnant parts.' His views towards the church, however, were at this period of his life entertained not from any ulterior intention of giving himself to the sacred duties of the ministry, but from the belief that the character of a licentiate would advance him in his path to the summit of his ambition—a university appointment. Accordingly, after having been employed about a year as assistant in the parish of Cavers, he relinquished that situation for the more congenial office of assistant teacher of mathematics in the university of St. Andrews. His eminent success in that department procured him a presentation to the parish of Kilmany, the patronage of which

[Kilmany Church.]

was vested in the college, and accordingly he was ordained to the pastoral charge of that place on 12th May, 1803. How subordinate to scientific pursuits he then considered the functions of the sacred office to be, appears from the fact that he spent two successive winters in St. Andrews, in giving public lectures during the week on mathematics and chemistry, while he returned to his parish only on Saturdays, leaving it again, early on Monday morning. A great and happy change, superinduced by long personal illness and several domestic bereavements, took place in his views of religion. From being a very secondary concern with him he was brought to regard it as a subject of paramount importance. He now became as assiduous and earnest in his attention to his sacred functions, as he had been formerly negligent of them; and applying his great powers to the illustration and enforcement of Christian truth with all the enthusiasm of a new convert, his fame as a zealous and eloquent preacher spread far and wide. His servi-

ces were now eagerly sought for other and more important places, and accordingly, after having resided twelve years in Kilmany, he was translated in the summer of 1815 to the Tron Church and Parish, Glasgow. His reputation as a preacher continued rapidly to advance. His church was besieged every Sabbath by crowds of admiring listeners; and a volume of sermons entitled 'Astronomical Discourses,' enjoyed a circulation as wide as the 'Tales of My Landlord,' published during the same season. On several public occasions he was engaged to officiate both in Edinburgh and London at this period of his ministry, and the sensation universally produced by his preaching surpassed all that was ever known or heard of in the annals of pulpit eloquence. Chalmers had long devoted his attention to the subject of pauperism, on which he entertained some peculiar views as to the superior efficacy of voluntary and Christian efforts in meeting its evils. To enable him to carry his views into operation, the magistrates of Glasgow erected the new parish of St. John's, to which he was presented as first minister, and in which he was allowed the fullest liberty to work his parochial machinery. A number of enlightened Christian laymen aided his efforts; and the scheme in the hands of such an agency met the highest success. But although he wrought it with characteristic ardor, and developed its principles at full length in his 'Christian and Civic Economy of Large Towns,' it never obtained in any other parish, and has long been abandoned as impracticable, even in St. John's. After a most active and successful incumbency for eight years in Glasgow, Dr. Chalmers relinquished the exercise of the ministry for the more retired, but not less useful office of training the rising hopes of the church. In 1823 he became professor of moral philosophy in the university of St. Andrews; and in 1827 he was translated by the unanimous presentation of the Town Council of Edinburgh, to the chair of divinity in the university of that city. The splendor of his fame attracted an unusual number of professional as well as amateur students to his prelections in both of these offices; and the ability as well as learning he brought to bear on the topics of his chair, amply justified his elevation to the highest and most responsible position in the church. Dr. Chalmers now commenced a career of authorship, by which he still further extended his reputation as a divine. The most flattering honors were heaped upon him from various quarters; for not only was he elected moderator of the General Assembly—the highest position in the Church of Scotland—but he was chosen president of the Royal Society of Edinburgh, created Doctor of Laws by the university of Oxford, selected by the trustees of the earl of Bridgewater one of the eminent writers to publish a treatise in proof of the wisdom and goodness of God in Creation, and appointed corresponding member of the Royal Institute of France—a compliment which no clergyman in Britain had ever previously enjoyed. Dr. Chalmers, who had zealously espoused the popular side in church politics, allowed himself to be prevailed upon, contrary to his own better judgment, to propose the enactment of the veto law in 1833, in the fond hope that it would produce the effect of popularizing the Established Church; and there can be no doubt that it was successful to an eminent extent in realizing his fondest wishes. Never was the church stronger than during its prevalence; and it was on this auspicious period he commenced and carried on his gigantic labors in the cause of church extension. Adhering to the veto act, after the civil courts had decided on its illegality, he min-

gled in all the stormy controversies which followed; and at length finding it hopeless to maintain the position he had assumed, he seceded in May, 1843, with a large body of adherents who joined him in forming the Free Church. He was the first moderator, and indeed there can be little doubt that his name, which was a tower of strength, and his eloquence, which possessed resistless power over the popular mind, contributed more perhaps than any other cause, to give the new secession a local habitation in the land. Dr. Chalmers's health, impaired by his extraordinary labors,—especially in organizing the new church, sank rapidly, and his death, which was sudden, was lamented by Christians of all denominations. His collected works, including sermons, theological lectures, &c, amount to 25 volumes. [R.J.]

CHALMERS, PATRICK, a Scotch antiq., d. in Scotland, in 1854, aged 51.

CHALMERS, LIONEL, M. D., an em. physician of Charleston, S. C., bor. at Cambleton, in Scotland, in 1715, and emigrated at an early age to America. He first practised at Christ Church, but removed to Charleston. He was the author of an essay on fevers, and of a valuable work on the weather and diseases of South Carolina, in two vols. He also published in 1754, in the first volume of the Observations and Inquiries of the Medical Society of London, some useful remarks on opisthotonos and tetanus. He died in 1777, aged 62, leaving behind him the reputation of an honest and highly skilful physician.

CHAMPE, JOHN, an Am. soldier, belonging to

Lee's regiment, who was employed by Gen. Washington as a spy immediately after the capture of Major Andre. He was born in Loudoun Co., Virginia, in 1756, and entered the army in 1776. As soon as Arnold's treason became known, Lee, in whose regiment, he was sergeant-major, sent him, at the request of the commander-in-chief, to New York, to ascertain whether General Gates was implicated in the conspiracy, and also to attempt the capture of Arnold, in order to preserve the life of Andre by the trial and punishment of the true criminal. Champe dreading the ignominy attending apparent desertion, and apprehensive that his hopes of promotion might be destroyed, hesitated to undertake the exploit until assured that at the proper time his character should be fully vindicated. At a late hour, withdrawing his horse from the picket, and taking with him his cloak, valise, and orderly book, he fled under cover of the night from the American camp at Tappan, and though pursued in order to save appearances, escaped as a deserter to some English vessels in the river, and was conveyed to New York. Sir Henry Clinton after hearing his story placed him as recruiting sergeant under Arnold. As he had no immediate opportunity of seizing the traitor, the unfortunate Andre was executed on the 3d of October, but he speedily sent information to Washington, which removed from his mind all suspicions unfavorable to General Gates. Though the chief object in attempting the capture of Arnold was done away by the death of Andre, Champe persisted in the enterprise, as Washington was anxious to make an example of the traitor. His plan was to seize him, while walking, according to his custom, in his garden, late at night, gag him, and drag him as a drunken soldier to a boat on the Hudson, and then convey him to Hoboken, where Lee was to await his coming. This bold but well-contrived plot was foiled by an accidental change in Arnold's quarters, and the subsequent embarkation of his legion to Virginia. On the appointed night Lee impatiently watched the expected arrival on the Jersey shore, and reluctantly withdrew as morning dawned to the American camp. After landing in Virginia, Champe escaped to the quarters of General Greene, who received him honorably, and sent him back in safety to Washington. His services were remembered in subsequent years, but his death prevented any substantial expression of Washington's gratitude for the risk he had endured.

CHAMPAGNE, PHILIP DE, a disting. Flemish painter, instructed by Fouquière, and employed with Lebrun in the Luxembourg palace, and other public buildings of Paris. His works consist of sacred subjects and portraits; born at Brussels, 1602, d. 1674. His nephew, JEAN BAPTISTE, also a painter, born at Brussels, 1643, d. 1688.

CHAMPEAUX, W. DE, a celeb. philosoph. and theolog. of the 12th century, understood to be the first public professor of scholastic divinity, and the founder of scientific realism. Abelard was one of his scholars, and it is by his attacks upon Champeaux that the latter is best known, his works being lost, d. 1121.

CHAMPIER, S., a Fr. physician, soldier, and historical writer, 1472-1539.

CHAMPIONNET, J. S., a Fr. gen., 1762-1800.

CHAMPLAIN, SAMUEL DE, Governor of Canada, and founder of Quebec, from whom Lake Champlain takes its name, was born at Brouage in France. The first attempt to establish a French colony in Canada, after being prosecuted by Cartier from 1534 to 1542 was abandoned, but the enterprise was resumed about the beginning of the 17th century, and Champlain, who had obtained a reputation as a

naval officer in the East Indies, was appointed pilot to De Chatte, the Lieut. General of Canada. In 1603, he ascended the St. Lawrence as far as the Falls of St. Louis, explored the country, and returned to France. The years 1604 and 1605 were spent in further explorations of the coast, and in 1607 went to Tadonssac. Quebec was founded by him in 1608, and the same year he discovered and suppressed a dangerous conspiracy which had for its object his murder, and the abandonment of the expedition. The early part of 1609 was occupied with contests with the Indians, in which he proved successful. He went to France in September, leaving the colony under the care of Peter Chavin, but returned in the spring of 1610. He again engaged in war with the Iroquois with similar success. In 1611 he went again to France, but returned in 1612, as lieut.-governor under Charles de Bourbon. The winter of 1615 was spent among the Hurons. For many years he was actively employed in promoting the interests of the colony, which, however, was taken by the English in 1629, and Champlain, who had capitulated to Sir David Kirk, carried by him to France. In 1633, Canada having been restored to France the previous year by the treaty of St. Germain, he was appointed Governor, which office he retained till his death in December, 1635. He published, in 1632, a history of New France, or Canada from its first discovery to 1631, containing a minute account of his voyages. He deserves credit for his fidelity as an historian, and his skill and courage as an officer.

CHAMPMESLE, MARY DESMARES DE, a French actress, pupil of Racine, 1644-1698.

CHAMPOLLION, J. F., the cel. French archæol. and interpreter of hieroglyphics, 1790-1831.

CHANCELOT, RICHARD, an Englishman, pilot-major of Sir Hugh Willoughby's fleet, sent out by Cabot in 1553, and commander of one of the ships. Landing at Archangel, he proceeded to Moscow, and by his address and judgment in his interviews with the Czar, laid the foundation of the trade to Russia. Returning from a second voyage in 1556, he was drowned, with most of his crew, in Pitsligo Bay, on the E. coast of Scotland. The Russian ambassador, however, who accompanied him, escaped, was conducted to London, and received with great distinction. [J.B.]

CHANDLER, E., a wr. on prophecy, 1671-1750.

CHANDLER, M., an Eng. poetess, 1687-1745.

CHANDLER, SAM., a religious au., 1693-1766.

CHANDLER, THOMAS BRADBURY, D.D., a clergyman of the Episcopal Church, was graduated at Yale College, in 1745. He was ordained in England in the year 1751, and became rector of St. John's Church, Elizabethtown, New Jersey. He was a zealous advocate of the principles of the Episcopal Church, and distinguished himself in his controversy with Dr. Chauncey of Boston. Besides his controversial works and occasional sermons, he was author of the life of the Rev. Dr. Johnson, which on account of the war was not published until 1805. He died in 1790, aged 64.

CHANDOS, JOHN, an English general, lieut. of the French provinces for Edward III., k. 1369.

CHANGEUX, P. N., a Fr. mathe., 1740-1800.

CHANNING, WILLIAM ELLERY, an em. member of the society of 'Liberal Christians,' was born on 7th April, 1780, at Newport, Rhode Island, in the United States of America. William Ellery, his maternal grandfather, was one of the signers of the Declaration of Independence. His father, who was a merchant at Newport, designed him for the medical

profession, but after he had completed his studies at Harvard College, he chose himself the Unitarian ministry.

CHANTAL, JEANNE FRANCOISE, Madame De, a distinguished pupil of St. Francis de Sales, and grandmother of Madame de Sévigné, was born at Dijon, 1572, and married to the Baron de Chantal in 1592, who died eight years afterwards, leaving her with a young family, to whose instruction, and the performance of charitable offices to the poor, she devoted her life. She is celebrated for having founded, under the advice of De Sales, the order of the Visitation at Annecy in 1610, and such was her zeal and virtues, that she acquired the reputation of a saint among the common people, and was canonized 1767. She died 1641. In 1660 a volume of 'Letters' by her was published, of which a new edition appeared with a life prefixed in 1823. Her other biographers are the Jesuit Fichet, Maupas de la Tour, Father Beaufls, and the Abbés Marsollier and Cordier.—(*Biographie Universelle*.) [E.R.]

CHANTEREAU, LOUIS, a French antiq., d. 1668.

CHANTREAU, P. N., a French grammarian, 1741-1808.

CHANTREY, SIR FRANCIS, was born at Norton in Derbyshire, April 7, 1781. He was bound to a carver at Sheffield, but established himself as a modeller in clay, first in Dublin, then in Edinburgh, and finally in London, where he was aided by Nollekens. Chantrey distinguished himself by his sepulchral monuments, and as a sculptor of busts, and experienced a uniformly successful career; he was elected a Royal Academician in 1818, and was knighted by the queen in 1837. He died on the 25th of November, 1841.—By the disposition of his property, Sir Francis Chantrey has secured a more prominent place in the history of art in Britain, than his mere reputation as a sculptor would have secured him. He left the reversion of the greater portion of his property to the Royal Academy, for the promotion of British fine art in painting and sculpture, including an annuity of £300 for the president, and £50 for the secretary, payable on the 1st of January of every year. The amount available will be about £2,500 per annum, which after the deduction of the salaries of the president and secretary, will leave upwards of £2,000 to be spent annually, on the average, in the purchase of paintings and sculpture executed within the shores of Great Britain, towards the formation of a British gallery of art. The funds

cannot accumulate for more than five years, and no commissions can be given to any artists, all purchases must be *bonâ fide* purchases of finished works.—(Jones, *Recollections of Chantrey*, 1849; Holland, *Memorials of Sir Francis Chantrey, R.A.*, 1851.)

CHARILLUS, a king of Sparta, 8th cent. B.C.

CHARLEMAGNE. This illustrious prince, the restorer of order and obedience in a state of society when only the most commanding talents and heroic steadfastness of purpose could have availed him in a struggle against anarchy and ignorance in their worst forms, was the grandson of Charles-Martel, king of the Franks, and lived 742-814, master of an empire which embraced all France, a part of Spain, more than half of Italy, and nearly all Germany. To feel his greatness adequately it must be remembered that all the ancient landmarks of social order had been overthrown with the colossal Roman power, and that the whole civilized world was covered with its ruins and infested with its crimes. The ancient seat of empire was divided among a score of petty

[Charlemagne.]

tyrants; the Saracens had overrun Spain and threatened the farther west; the northern kingdoms were only known as the cradle of adventurous armies, whose leaders in after years organized the feudal governments of Europe; Russia did not even exist; and England was just emerging from the confusion of the Heptarchy. Some two centuries before, 507-511, Clovis had founded the Frankish monarchy and established himself at Paris, but his power was that of an absolute military chief, and he was succeeded by a line of phantom-kings, whose action is scarcely distinguishable from that of the barbarous fermentation proceeding around them. At length Pepin-Heristal and his son Charles-Martel, slowly paved the way for a new authority, the former by familiarizing men's minds with justice and goodness in the sovereign, and the latter by his heroic resistance of the Saracens, and the promise of an irresistible power in the government. The successes of Charlemagne were the natural issue of these circumstances under the command of his ambition and vast genius, favored by the compliance of the popes; who were willing to encourage a Christian protectorate in the west as a counterpoise to the eastern empire of Irene, and the dreaded power of Haroun-al-Raschid. A catalogue of the principal events and dates is all that we can give in the space to which we are limited. In 768 Charles succeeded to the government conjointly with his brother Carloman; and on the death of the latter in 771, became sole master of France by wisely refusing to divide the authority with his nephews. In 770 he subdued the revolt of Aquitaine. In 772 he marched against the still idolatrous Saxons, and commenced a conflict which he maintained for upwards of thirty years. In 773 he crossed the Alps, and was shortly crowned king of Lombardy, and acknowledged suzerain of Italy by the pope, with the right of confirming the papal elections. In 778 he carried his arms into Spain, and pursued his victorious career as far as the Ebro, but was surprised on his return in the pass of Roncesvalles, where many of his knights perished, and among the rest Orlando or Roland, his nephew, the hero of Ariosto. In 780 Louis-le-Débonnaire, his youngest son, was crowned by the pope king of Aquitaine, and Pepin, his second son, king of Lombardy, both at Rome. Between 780 and 782 he visited a terrible retribution upon the Saxons, and compelled their chief to accept Christian baptism. Towards 790 we find him establishing seminaries of learning, and doing all in his power to elevate the character of the clergy, the most of whom had hitherto known little but the Lord's prayer; besides en-

gaging in projects for the acceleration of commerce, the general improvement of the people, and the promotion of science. Before the end of the century he had invaded Pannonia, and extended his dominions in this direction to the mountains of Bohemia and the Raab. In 800 he was crowned at Rome emperor of the west; and in 803 was negotiating a union with Irene in order to consolidate the eastern and western empires, when the empress was dethroned and exiled by Nicephorus. From this period to his death, which took place at Aix-la-Chapelle, in the seventy-first year of his age, and the forty-seventh of his reign, he was engaged in fortifying the coasts of France against the Northmen, and various matters relating to the security and the prosperity of the empire, including the settlement of the succession.—In person and manners Charlemagne was the perfection of simplicity, modesty, frugality, and in a word, of true greatness; and though he was too much given to the society of women, he had the reputation of a good father, a tender husband, and a generous friend. He was indefatigable in all the duties of government, and whether in the camp or the court, had fixed hours for study, in which he took care to engage his courtiers by forming them into an academy. 'For shame!' he exclaimed, to one who came before him attired more elegantly than the occasion demanded,—'dress yourself like a man; and if you would be distinguished, let it be by your merits, not by your garments.' His nearest friend and companion was the illustrious Alcuyn, and his fame was so widely spread that the only man, perhaps, of kindred genius in that age, the great caliph, Haroun-al-Raschid, courted his good-will, and complimented him by an embassy bearing presents. Before his death he confirmed the succession in the person of his son Louis, by an august ceremony. Placing the imperial crown upon the altar, he ordered Louis to take it with his own hands, that he might understand he wore it in his own right, under no authority but that of God.—Perhaps we cannot conclude better by way of further illustrating the character of Charlemagne than with his words of advice to this prince:—'Love your people as your children,' said he; 'choose your magistrates and governors from those whose belief in God will preserve them from corruption, and see that your own life be blameless.' [Charles the XII.]

CHARLES THE XII. of Sweden came to the throne in A.D. 1697, at the age of fifteen. The rulers of Russia, Poland, and Denmark, despised him as a weak boy, and formed a league for humbling the power of Sweden, and appropriating many of her best provinces. In this crisis the young Swedish king showed a degree of energy and courage that astonished both friends and foes. He put himself at the head of his army, invaded Denmark, and besieged Copenhagen. This bold stroke forced the Danish sovereign to beg for peace, and abandon the anti-Swedish confederacy. Charles then turned against his other enemies. On the 30th Nov., 1701, with 8,000 Swedes, he attacked and entirely routed the Russian army of 40,000 men at Narva. He then marched across Livonia and Courland into Poland, gained repeated victories over the enemies of his enemy Augustus, (who was elector of Saxony as well as king of Poland,) took Cracow, Warsaw, Dantzic, and other important cities; and in 1704 compelled the Poles to depose Augustus, and choose Stanislaus Lescinski as their king. Charles then ad-

vanced into Saxony, which he occupied with his victorious troops, and forced the elector to beg a peace, the terms of which Charles dictated, (1707.) Charles lingered for some time in Saxony at the head of his army, which amounted to 50,000 veterans. The eyes of all Europe were now fixed on him. His numerous victories, his daring and resolute spirit, the bearing and discipline of his troops, filled sovereigns, generals, and statesmen with admiration and anxiety. Louis XIV. earnestly implored his assistance against the arms of Marlborough and Eugene; and Marlborough himself undertook a special embassy to the Swedish camp in order to baffle the attempts of the French to win over the hero of the North to their alliance. Charles himself cherished the most ambitious projects. He was bent, in the first instance, on deposing his enemy, Peter, from the throne of Russia, as he had deposed his other enemy, Augustus, from the Polish throne. One year, he thought, would suffice for the conquest of Russia. He next designed to attack the pope; and he had despatched officers privately into Asia and Egypt, to survey the towns and military resources of those countries, with the intention of entering on a career of Oriental conquest, so soon as he had subdued his European foes. He marched out of Saxony in the autumn of 1707, and entered the Russian territory in 1708. He crossed the Beresina in June, defeated a Russian army that was entrenched near

of Pultowa, fought July 8, 1709, between the rival sovereigns, ended in the total defeat of the Swedes. Charles made his escape from the field with difficulty, and sought refuge in Turkey, where he was hospitably received and sheltered. He remained there five years, during which time his enemies were conquering the best Swedish possessions in Germany and on the east of the Baltic. At length Charles suddenly left Turkey, and joined the scanty Swedish bands that were struggling against the forces of Russia, Prussia, Saxony, and Denmark. After several chequered, though generally unsuccessful campaigns, Charles met his death before the fortress of Frederickshall, in Norway, in the winter of 1718. He was leaning, at night, on a breastwork, watching the operations of the siege by moonlight, under the fire of one of the enemy's batteries, when a shot struck him on the head, and he died instantly, in the thirty-seventh year of his life, and the twenty-first of his reign. that river, and advanced as far as Smolensko, where he gained another victory, (28th Sept., 1708.) Instead of marching forward against Moscow, Charles now turned to the Ukraine, trusting to the promises of the old Cossack chief Mazeppa, who boasted that he would bring the whole Cossack nation over to the cause of Charles, but who was only able to persuade 7,000 men to join the invaders. Charles wintered in the Ukraine; but he moved forward upon Moscow in the spring of 1709, and besieged the city of Pultowa, where the Russians had collected large military stores. His army had been fearfully reduced by famine, fatigue, and the fatal frosts of Russia, as well as by the numerous skirmishes and actions in which it had been engaged. He had not more than 25,000 men under him at Pultowa, and at least half of them were Cossack and Wallachian recruits. The Russian czar, Peter the Great, advanced to relieve Pultowa with a well-equipped army, 60,000 strong. The decisive battle

CHARTIER, ALAIN, a French poet and prose writer, 'the father of Fr. eloquence,' 1386-1458.

CHARTIER, R., a Fr. Orientalist, 1572-1654.

CHASE, SAMUEL, judge of the Supreme Court of the United States, was born in Maryland 1741. His father was a missionary of the Church of England, and personally superintended his education. Having acquired distinction by his eloquence and ability as a lawyer in Annapolis, and his resistance of the stamp act, he was elected to the general Congress in 1774, and in 1776 undertook a mission to Canada to excite resistance to Great Britain. In 1783 he went to England as agent of the State of Maryland to recover property intrusted to the Bank of England, and while there formed the acquaintance of Pitt, Fox, and Burke. In 1788 he was appointed presiding judge in Baltimore County, Md., and in 1791 chief justice of the general court of Maryland. In 1796 he was made associate judge of the Supreme Court of the United States. In 1804 he was impeached by the House of Representatives for misdemeanors in

political trials, but acquitted in his trial before the Senate, which after long attracting public attention ended March 5, 1805. He died at the age of 70, in June, 1811. He was a man of integrity, boldness, and decision, and a characteristic instance of the two latter qualities will long be remembered. While on the bench in Maryland in 1794, no person being willing to serve on the *posse comitatus* to assist the sheriff in the apprehension of the ringleaders in a riot, "summon me," cried Chase, "I will be the *posse comitatus*," and he was as good as his word.

CHASE, PHILANDER, Am. episcopal bishop of Illinois. Consecrated bishop of Ohio in 1819, subsequently elected bishop of Illinois; d. 1852, aged 77.

CHASLES, F. J., a French author, last cent.

CHASLES, GREG. DE, a Fr. author, d. 1720.

CHASSE, PIERRE DE LA, superior general of the Jesuit missions in America, to which office he was appointed in 1720. He had been employed as a missionary for many years. He did not depend altogether upon spiritual means for the conversion of the Indians, but sought in the usual spirit of his order to employ political inducements.

CHASSENEUX, BARTH. DE, a writer on civil law, eminent for his conduct as president of the parliament of Provence, when it was in his power to delay the decree against the Vaudois, 1480-1541.

CHASSIGNET, J. B., a French poet, 1578-1621.

CHASTELARD, P. DE BOCOSLE DE, a French gentleman surprised in the bed-room of Mary Stuart, and beheaded on a charge of treason.

CHASTELER, J. G., marquis of, an Austrian general, finally governor of Venice, 1763-1820.

CHASTELET, G. E. DE BRETEUIL, marchioness of, translator of Leibnitz and Newton into French, 1706-1749.

CHASTELET, PAUL DER HAY, lord of, a Fr. hist., and min. of state under Richelieu, 1593-1636.

CHASTELLUX, FRANCIS JOHN, marquis of, a marshal of France, and member of the French Academy, dist. in Germ. and America, 1734-1788.

[Chateaubriand's Residence, where he wrote the 'Martyrs.']

CHATEAUBRIAND, FRANCOIS AUGUSTE, Vicomte De, was born in Brittany, of an ancient family, in 1769. At the age of seventeen he was removed from home to enter the army; but, his regiment revolting, he retired from the service; and after several of his relations had been executed in the reign of terror, he emigrated, returning only for a short time to serve in the invasion attempted by the emigrants under Condé. For several years he resided chiefly in England, paying, however, a visit to the United States, in the course of which he dreamt of discovering the North-west Passage, and gathered among the red men materials for 'The Natchez' and 'Atala.' In this period he published his 'Essay on

Revolutions,' in which there were expressed a good many opinions speedily abandoned by their writer, as conceding too much to the spirit of the age.—In 1799, when Buonaparte had overthrown the directory, Chateaubriand returned to France. In 1802 he became one of the most celebrated authors in Europe, by the publication of his 'Genius of Christianity,' ('Génie du Christianisme,') a work which is in every way instructively characteristic both of his merits and his defects. It has no value either theological or philosophical, even for those who regard Christianity, as the writer did, from the Roman Catholic point of view. But it is a work possessing great attractions for those readers who can sympathize with its tone of feeling, and who are not so severe in taste as to be repelled by its excessive pomp of ornament. It records, with seeming method, but real desultoriness, and with dazzling force of representation, the reflections, and pictures, and emotions, arising in the mind of a man who, though he did not think either profoundly or exactly, possessed a singular fulness of imagination, and was animated by a fervent spirit of religious reverence. Religion, however, interests Chateaubriand most keenly when it is regarded in its relations to literature and art. He exhibits here the same incapacity to apprehend practical realities, which afterwards distinguished his political writings, and his course of political action: and the romantic turn of his elaborate treatise on sacred things is illustrated by the fact, that there was introduced into it as an episode the Indian tale of 'Atala,' subsequently separated from it and receiving the tale of 'René' as a supplement. The 'Génie du Christianisme,' like all the author's other works, is eloquent; but its eloquence is artificial, theatrical, and monstrously strained. It is often pathetic; but its pathos continually tends to degenerate into mawkish sentimentality. Such as it is, however, the ambitious effort displayed an animation and warmth which, breaking in on the recent deadness of French literature, excited universal attention and admiration.—The views which the work expressed were likewise in accordance with the ecclesiastical policy of the new ruler of France; and the imposing character of Napoleon made a vivid impression on Chateaubriand's excitable fancy. He immediately entered the service of the first consul in the diplomatic department. In 1803 he visited Rome as secretary to Cardinal Fesch. He had very soon an opportunity of exercising that courageous integrity by which he was always so honorably distinguished. He had just been appointed minister to the Valais, when, in the spring of 1804, Napoleon sullied his name by the execution of the Duke D'Enghien. Chateaubriand instantly resigned his place, forfeiting, of course, all claims to favor under the empire. In 1806 he set out on those travels to the East, which are recorded in his 'Itinerary from Paris to Jerusalem.' Now likewise he added another imaginative illustration to his 'Génie,' by publishing 'The Martyrs,' a Christian romance of the Roman empire. Afterwards, returning to France, he took no part in public affairs till the fall of Napoleon.—In 1814, while the disposal of the sovereignty of France remained doubtful, he wrote his famous pamphlet, 'Of Buonaparte and the Bourbons.' It is generally allowed that this well-timed appeal did much in diminishing the unpopularity which Louis XVIII. had incurred, by using the arms of foreigners in the recovery of his crown. During the Hundred Days Chateaubriand attended the king at Ghent, and acted as his foreign minister. After the battle of Waterloo, he received a seat in

the Chamber of Peers, and a nominal appointment as a minister of state. But he held no actual office under the ultra royalist ministry, which was the first after the restoration. He came into place with the more liberal administration of Villèle. In 1821 he was ambassador in London. In 1822 he was one of the two plenipotentiaries of France at the Congress of Verona; and in his History of it he claims the credit of having been the real instigator of the French invasion of Spain. Next year he had, as minister of foreign affairs, the satisfaction of directing the ill-advised expedition undertaken in consequence of that resolution of the Congress. He remained in private life during the arbitrary reign of Charles X., excepting that, in 1828, he was appointed ambassador to Rome, but resigned immediately when Polignac was placed at the head of the administration.—On the revolution of 1830, Chateaubriand delivered in the Chamber of Peers an oration, in which he advocated strongly, but by no means on high monarchical grounds, the claim of the Duke of Bourdeaux to the throne. This was his last appearance in public life. On the election of Louis Philippe, he refused to take the oaths, resigned even his pension as a peer, and occupied himself thenceforth in literary labors. These were now necessary for his support, his whole property having been spent. Most of his writings during this period of declining age, such as his 'Sketches of English Literature,' are of small value. His chief employment was the composition or completion of his voluminous 'Memoirs from Beyond the Tomb,' ('Mémoires d'Outre Tombe;') and the right of publishing these after his death was sold by him for a large life annuity. They exhibit an amount of vanity and egotism almost unparalleled; but they are full of interesting details, and have very much of his peculiar kind of eloquence. Chateaubriand died at Paris in the summer of 1848, when he had almost completed his eightieth year. [W.S.]

CHATHAM, WILLIAM PITT, earl of, was the second son of Robert Pitt of Boconnoc, in Cornwall, where he was born on 15th November, 1708. His family was extensively connected with the higher English country gentry, and his grandfather, William Pitt, governor of Madras, was the owner of the celebrated Pitt diamond. Young Pitt studied at Trinity College, Oxford, and on leaving the university he obtained a cornetcy in the Blues. Walpole afterwards, following his relentless system of party warfare, deprived him of his commission. Perhaps this act entirely altered his destinies, since he possessed qualities that, had he remained long enough in the army to have felt an interest in his profession, might have developed great powers of military command. He entered parliament for the family borough of Old Sarum, in 1736. He immediately joined the opposition, which placed the name of the Prince of Wales at its head. The most eminent of his early speeches were delivered in that last effective attack on Walpole, which, in 1742, drove him from power.

They are said to have been brilliant and astounding efforts of oratory, but the usual versions of them are so steeped in the antithetic mannerism of Johnson, who professed to report them for the 'Gentleman's Magazine,' that it is impossible to know how far they are genuine; while other reports, professing to be verbatim, do not justify the high reputation of these earlier efforts. His opposition to the government did not cease with the fall of Walpole. His bold declamation, so much in contrast with the personal and narrow party discussions which then occupied parliament, drew a substantial token of admiration from a kindred spirit, Sarah, duchess of Marlborough, who bequeathed him £10,000. On the other hand, the king had a thorough dislike to him, as a person whose opposition was not of that usual kind which merely tries to remove a ministry and occupy their place, but which aimed at a political power independent of, if not above, the throne. The Pelhams, however, saw the great importance of adding his strength to their ministry, and in 1746 the king unwillingly submitted to his appointment first to a subordinate place, and immediately after to the lucrative office of paymaster-general. The same haughty self-reliance which he had shown in opposition distinguished him in office, and it served to restrain him from drawing on those many sources of irregular emolument which were then attached to official power. His marriage, in 1754, with the sister of George Grenville, opened to him a new political connection. In 1755, he was dismissed, along with his brother-in-law, but in the ensuing year it was found necessary to bring them both back to a cabinet of which Pitt was virtually the head. In 1757, an attempt was again made to dispense with the services of the 'great commoner,' but after the country was two months and a-half without a government, he returned with greater power than ever. It was then that, backed by national enthusiasm, he conducted the brilliant operations which paralyzed France and drove her fleets from almost every sea. On the accession of George III. he was superseded by the royal favorite, Lord Bute. Various overtures were made to him to join or form a ministry, and in 1766 he undertook the latter function, choosing, to the surprise of the world, a sinecure place for himself, and a seat in the upper house. Repeated attacks of gout, from an early period of life downwards, had injured both his constitution and tem-

from which he never recovered, dying in a month afterwards, on the 11th of May, 1778. [J.H.B.]

[Charter Room, St. Mary Redcliffe, Bristol.]

CHATTERTON, THOMAS, born at Bristol in 1752, was the son of a poor schoolmaster, who died a little before his birth. After having spent some years in a charity school, he was articled to an attorney in his fifteenth year. He was not quite sixteen when he published in a Bristol newspaper the first of his extraordinary forgeries, being an account of an ancient procession, which, on being questioned, he alleged to have been found in the charter-room of the church of St. Mary Redcliffe. He next exhibited specimens of old poetry, which he asserted were written in the fifteenth century, by a priest named Thomas Rowley. At the same time, pieces, both in prose and verse, which were avowedly his own, appeared in London magazines; and these, by their singular force and originality, showed him to be quite capable of having concocted the supposed antiques. Indeed, wonderful as was, in the circumstances, the antiquarian and other knowledge which he wasted on his impostures, their spuriousness was at once evident to the few who were competently familiar with the Old English language and history. The poet Gray, and his friend Mason, unhesitatingly denounced the imposition, when some of the poems were sent to them by Horace Walpole. The best imitation of the antique, is perhaps the minstrel's song inserted in the tragedy of Ella; but everywhere there is evidence of genius which, if it had been guided by good intention, and fostered by mature study, would certainly have given birth to poetical masterpieces. But perversity of principle was manifest alike in the unhappy boy's writings, and in his conduct. He extorted a release from his master before he had served him for three years; and immediately sought and found literary employment in London, busying himself chiefly with political and satirical writings. A very few months of toil, ill remunerated, and disappointments in his expectation of patronage from the great, drove his undisciplined mind to despair. He became indigent to the verge of starvation, and poisoned himself in August 1770, when he wanted some weeks of completing his eighteenth year. [W.S.]

[Chaucer.]

CHAUCER, GEOFFREY, the father of English poetry, lived in the fourteenth century, one of those periods which are most important and interesting, both for the history of the nation and for that of our native literature. The sovereigns of England in his time were Edward III. and Richard II.; Wickliffe, his contemporary, to whose opinions, in regard to ecclesiastical polity, Chaucer was inclined through his connections at court, was beginning to undermine the rule of the Church of Rome; the language of the people was now, for the first time, so far developed as to be a fit organ for literary composition, both in prose and verse; and, while the romances and other poems of France were still the favorite models of poetry, higher aims and greater correctness of execution were taught by the Italian masterpieces of Dante, Petrarch, and Boccaccio.—Nothing is known as to Chaucer's parentage, and hardly any thing as to the events of his youth. He was born about 1328, probably in London, and is said to have been educated at both universities, and to have also studied law. Very early he obtained public employment, attaching himself to Edward's son, John of Gaunt, 'time-honored Lancaster. The second wife of this prince, who had already been his mistress, is believed to have been the sister of Chaucer's wife. In 1359 the poet served, and was taken prisoner, in the king's invasion of France; and besides discharging other foreign missions, he was sent to Genoa in 1373, a journey which is supposed to have given him an interview with Petrarch. Among other offices which he held in the course of this reign, was the comptrollership of customs in the port of London; and a pension, with a grant of a daily pitcher of wine, has been erroneously referred to as constituting an appointment as poet-laureate. He likewise received a house in the royal demesne of Woodstock; and there most of his later works are traditionally said to have been composed. In the disturbances which arose after 1377, when the feeble Richard II. succeeded to the throne, Chaucer was implicated; and he is said, on doubtful authority, to have been at one time a fugitive to the continent, and at another a prisoner in the Tower. In 1386, however, he was knight of the shire for Kent. He died in London in 1400, soon after the accession of Henry IV., the son of his early patron. One of his sons became speaker of the House of Commons, and the other married a daughter of the ducal house of De la Pole.—Chaucer de-

serves commemoration as one of the very earliest of those who wrote prose in a language which can properly be called English. But his compositions of this sort have little value for any but the philologist. His minor poems, also, although they would secure his name from neglect, would cause him to be remembered only as one of those who improved most actively a kind of poetry, borrowed in the main from the allegoric and chivalrous fancies of the French, and cultivated for several generations before his time. Some of his works are free translations, or loose abridgments. Such are the 'Romance of the Rose,' from the French; the 'Troilus and Cressida,' from the Italian of Boccaccio; and 'The Legend of Good Women,' derived from the epistles of Ovid. Among his original poems, 'The House of Fame,' and 'The Flower and the Leaf,' are very fine in themselves, and have received injury, not improvement, in the modernized paraphrases of Pope and Dryden.—Chaucer's claim to immortality, as one of the greatest of English poets, and as a poet essentially and strikingly original in spite of many borrowings in detail, rests on his 'Canterbury Tales.' These are currently said to have been all written after the poet's sixtieth year. But there is reason for suspecting that many of the pieces may have been composed before; and that we are not entitled to assign peremptorily to his old age any thing beyond

the collection of the stories into a series, and the writing of that introduction to them which is certainly the best part of the work. This introduction is described as the prologue. It relates how a band of pilgrims, bound for the shrine of Saint Thomas à Becket at Canterbury, meet at the inn of the Tabard in Southwark; and how they agree to relieve the weariness of the way by the telling of stories. The portraits of the pilgrims are among the most admirable things in the whole range of poetry: they are equally good for their delineation of character, for their variety and depth of serious sentiment and arch humor, and for a pointed strength and aptness of language which, antiquated though the diction is, may be understood by every well-educated reader with very little study. Similar excellencies belong to the Tales which follow, and which, breaking off abruptly, leave us to suppose that the design was not more than half completed. The humorous tales are coarse and sometimes immoral, yet felicitously humorous: some of the serious ones are in every way beautiful. The 'Knight's Tale,' telling in chivalrous guise the adventures of the Greek knights Palamon and Arcite, has aptly been called the *Iliad* of Old English literature. [W.S.]

CHAUFOURRIER, J., a French painter, 1672-1757.

CHAULIEU, W. A. DE, a Fr. poet, 1639-1720.

CHAULNES, HONORE D' ALBERT, Duke DE, marshal of France, and favorite of Louis XIII., died 1649. His son, LOUIS, an ambassador, 1625-1698. A later inheritor of the title, distinguished as a mathematician and naturalist, 1714-1769; and his son and successor as a chemist, 1741-1793.

CHAUMETTE, PIERRE GASPARD, one of the vilest scoundrels by whom the French people were maddened in the period between 1789 and 1794, was the son of a shoemaker, and before his advent as a street orator and journalist, had run through a career which seems to have perfected him for every species of villainy, as a cabin-boy, a schoolmaster, a lawyer's clerk, and a novice in a convent. He was born in 1765, and began his public career in one of the low clubs. In 1789 he edited a journal entitled 'Les Révolutions des Paris.' In 1792 he was elected procureur-syndic, or attorney, for the commune of Paris, on which occasion he formally renounced his christian name, and declared that he took that of Anaxagoras, 'a saint who had been hung for his republicanism.' He was the virtual chief of the 'Hébertists,' the inventor of the Feast of Reason, and the high priest who officiated at the worship of the demoiselle Candeille in the cathedral of Notre Dame. His brutal character may be judged from the fact that he presented the prince or dauphin with the model of a guillotine for a plaything, and that the revolting questions put by Herbert to the queen originated in his obscene imagination. His features were abject, yet marked by insolence; and his style of address, to judge from the specimens which have been preserved, was characterized by the vulgarest claptrap, and insolent use of apostrophe. There is reason to believe that he plotted for the destruction of the entire body of the convention along with that of the Girondins. It became his boast that 'he knew the suspect in the streets by the very face of them.' The prisons of Paris were filled with his victims, and the violence and immorality of his party were so extreme, that the Committee of Public Safety could not be insensible to the danger which threatened the republic from this quarter. Robespierre watched his opportunity, and these wretched panderers to the worst vices of the people were sent to the guillotine on the 24th of March, 1794.

CHAUMONT, JOSEPH, an Italian, who settled as a Jesuit missionary among the Hurons on the borders of Lake Erie about the year 1642, and continued for nearly fifty years to labor in North America. He was the author of a grammar of the Huron language.

CHAUMONT, P. P., a French ecclesiastic, died 1697.

CHAUNCEY, CH. D.D., a relig. au., 1705-87.

CHAUNCEY, SIR HEN., the well-known hist. of Hertfordshire, knighted by Char. II., 1632-1700.

CHAUNCEY, ISAAC, commodore, a distinguished naval officer in the U. S. service, was born at Black-rock, Conn. He served with distinction under Preble and Truxton, and in the war of 1812 was placed in command of Lake Ontario. He also negotiated the treaty with Algiers, in 1816. His death occurred in 1840.

CHAUNCY, CHARLES, LL.D., a judge of the Su-

preme Court of Connecticut, born in 1747, was also a descendant of President Chauncy. He was admitted to the bar in 1768. His appointment as judge took place in 1789, and his resignation of the office in 1793. He was a man of profound learning, and especially so in his own profession. He died at New Haven, in 1823, at the age of 75.

CHAUNCY, CHARLES, president of Harvard College. He was born in England, in 1589, and educated at Westminster School, and Trinity College, Cambridge. He was appointed Greek professor in the university. In 1627 he became vicar of Ware, but was soon brought into collision with the ecclesiastical authority for denouncing as unlawful the practice of kneeling in the sacrament, and opposing the making a rail around the communion table. Being brought to trial, and suspended from the ministry, till recantation, he gave in his submission February 11, 1637, but repenting of his conformity he avowed his previous sentiments and emigrated to New England in 1638. Here he was re-ordained and became pastor of Scituate, but not agreeing in sentiment with some around him, and being reduced to poverty, was on the point of returning to England, when he was offered the presidency of Harvard College, which had become vacant by the resignation of the first president, Mr. Dunster. He accepted the office, and entered upon it in 1654. He was a man of great learning, but had all the eccentricity of opinion peculiar to the times. He preached against wearing long hair as a heathen practice and a crying sin. In 1662 he published *Antisynodalia Americana*, in opposition to the decree of the synod of that year, admitting to baptism the children of non-communicants. He died in 1672, aged 81.

CHAUNCY, CHARLES, D.D., born in 1705, in Boston, was a descendant of president Chauncy. He was graduated at Harvard College in 1721, and became pastor of the first church in Boston in 1727. He was a voluminous writer, and published a great many sermons and lectures. He engaged in a controversy with Dr. Chandler, of New Jersey, respecting episcopacy, and published his historical views on the subject in 1771. He was greatly opposed to itinerant preaching, which in his estimation threatened as much danger to the Puritan system established in New England as the introduction of bishops from England. He died in 1787, in the 83d year of his age.

CHAUSSÉ, M. A. DE LA., a French archæ., died 1724.

CHAUSSÉE, P. A. NIVELLE DE LA, a French dramatist and member of the academy, 1692-1754.

CHAUVELIN, G. L. DE, a French statesman in the confidence of Cardinal Fleury, 1685-1762. F. CLAUDE, his son, lieutenant-general in the army, and ambassador to Italy, died 1774. BERNARD FRANCIS, son of the last named, a diplomatist of the revolution, 1766-1832.

CHECKLEY, JOHN, a clergyman of the Episcopal Church, born in Boston, in 1680. Notwithstanding his eminent ability, wit and learning, he experienced some difficulty in obtaining ordination in England in consequence of his attachment to the principles of the church, and the opposition which his opinions encountered in Massachusetts. In 1724 he was found guilty of a libel in Boston, and fined £50, for publishing 'Leslie's short and easy method with the Deists, with an appendix in favor of Christianity and the church of England.' The Bishop of Exeter admitted him to orders after they had been refused him by the bishop of London. He was a missionary at Narraganset, and well acquainted with the In-

dian dialect. He distinguished himself as a controversialist against Calvinism, and in favor of Episcopacy, and had for his opponents Thomas Walters, Wigglesworth, and Martin Mar Prelate. He died in 1753, aged 73.

CHEDORLAOMER, a king of the Elamites, supposed to be the ancient Persians, or a neighboring people, about 2000 B.C.

CHEER, BENJAMIN, chief-justice of Pennsylvania, born in 1722, was the son of the preceding. He was successively recorder of Philadelphia, attorney-general, chief-justice, and president of the high Court of Errors and Appeals. He died in 1810, aged 87.

CHEER, SAMUEL, chief-justice of Newcastle then in Pennsylvania, died in 1744.

CHEESHAHTEAUMUCK, an Indian, who graduated at Harvard College in 1665, being the only person of his race who ever did so. He died the following year in Charlestown.

CHEETHAM, JAMES, author of a *Life of Tom Paine*, and editor of the *'American Citizen'*, died in New York, in 1810, aged 37.

CHEEVER, EZEKIEL, a schoolmaster at Boston, from 1671 to 1708, author of an *Essay on the Millennium*, and a *Latin Grammar*, which passed through 20 editions. Cotton Mather was one of his pupils. He died in 1708, aged 93.

CHEMIR, M. J., a Fr. dramatist, d. 1811.

CHENIER, M. A., a French poet, 1763-1794.

CHENIER, M. J., a Fr. dram. poet, 1764-1811.

CHEOPS, the rep. builder of the great pyramid.

CHERUBIN, a Fr. astron. and math., 17th c.

CHERUBINI, LUIGI CARLO ZENOBIO SALVATOR, founder of the Fr. Conservatory and instructor of thousands of eminent musicians, was b. at Florence on the 8th September, 1760. He commenced his musical studies at nine years of age, first under Bartolomeo and Alessandro Felici, father and son, and afterwards under Bizarri Castrucci, and last under Sarti at Bologna, from whom he derived the greatest benefit. At thirteen years of age he wrote a mass which gave ample promise of his future eminence as a composer. From this time till 1778 he wrote a great number of works in various styles, and all successful. During the time he was a pupil at Bologna, some of Sarti's most celebrated operas were produced, and two of these, *'Achille in Sciro,'* and *'Giulio Sabino'* were afterwards acknowledged to have been almost entirely from the pen of Cherubini. In 1784 Cherubini came to the Italian Opera at London, where he remained two years, and produced his operas *'La Finta Principessa,'* and a re-written version of his *'Giulio Sabino,'* both of which were successful. In 1786 he went to Paris, which became thereafter his adopted country. In 1788 he visited his native country, and produced his *'Iphigenia in Aulida.'* He never went to Italy again. Soon after this he brought out his *'Demophoon'* in Paris, which from various causes proved a failure. In 1791 Cherubini brought out his opera of *'Lodoiska'* at the Theatre Feydeau, which, though it established his reputation as a first-rate composer, was, however, swamped by Kreutzer's more popular opera of the same name. In 1794 he brought out *'Eliza,'* in 1797, *'Medea,'* in 1798, *'l'Hotellerie Portugaise,'* in 1800, *'Les Deux Journees,'* in 1803, *'Anacreon,'* and in 1804 his ballet *'Achille à Scyros.'* His fame, which had now spread far and wide, led to an invitation

to Germany, whither he went in 1805, and produced his opera *'Faniska,'* at the Imperial Theatre of Vienna. During his sojourn all his most favorite works were brought out, and became quite the fashion with the German people, and the great musician of Germany, Beethoven, when he heard the *'Faniska,'* said Cherubini was the first dramatic composer of his time, and Haydn embraced him, and called him his son. In 1809, having returned to Paris, he produced his opera of *'Pygmalion,'* in 1810 *'Le Crescendo,'* in 1813 *'Les Abencerrages,'* the promising career of which was shortened by the news of Bonaparte's retreat from Moscow. In 1815 Cherubini was invited by the Philharmonic Society to come to London, which invitation he accepted, and composed an overture, a symphony, and a grand concerted vocal piece, all of which were performed under his own direction in the concerts of that society. On his return to Paris, the dynastic and musical changes had so materially affected the position and prospects of Cherubini, who was of far too independent a temperament to become a courtier, that he retired from some of his situations in disgust. He was, however, soon recalled, and was appointed composer to the king's chapel and professor of composition at L'Ecole Royale (of which institution, in 1822, he was appointed director), and was elected a member of the Academy of the Fine Arts. These appointments were considered all the more honorable to Cherubini, as he had never condescended to become a flatterer of royalty, and as because of the independence of his character he had received insults and indignities from Napoleon. In 1833 he composed his grand opera *'Ali Baba,'* which was well received in France, but did not long keep the stage. In 1835, in consequence of the ecclesiastical authorities having forbidden the employment of female voices in the service of the church, it was impossible that Cherubini's grand requiem could be performed at the funeral of Boildieu. He then, at the advanced age of seventy-six, undertook to compose a requiem for male voices only, which was his last composition, and was chosen as the one which should be performed at his funeral obsequies. Shortly before his death, he resigned the office of Principal of the Conservatory of Music, of which establishment he had been the head for twenty years, and with which he was connected for forty-eight years; and a month before his demise, which took place on the 15th of March, 1842, he was invested with the grand cross of the Legion of Honor. Cherubini's fame as a composer of instrumental and operatic music is world-wide, but his reputation with future ages will rest chiefly on his sacred compositions. Cherubini was a good man, as he was a great artist. Thoroughly independent, he spoke fearlessly as he felt, and he was loved and venerated by his pupils and all who belonged to the large circle of his friends.

CHESELDEN, R., an English surgeon, d. 1831.

CHESTERFIELD, PHILIP DORMER STANHOPE, earl of, son of the third earl, was born in 1694. After studying in his youth with a zeal of which afterwards he thought proper to be ashamed, he learned on the continent his polished smoothness of manners, his love of gaming, and his loose code of morality. He entered public life in 1715, soon after the accession of George I. In the course of this reign he distinguished himself in the House of Commons as an exceedingly skilful and effective debater; and he supported his reputation when his father's death transferred him to the House of Lords, shortly before the prince of Wales, to whose party and household he had belonged, succeeded to the throne as George II. From this time till 1748, when deafness and other

[Chesterfield.]

infirmities compelled him to retire from public life, Lord Chesterfield took an active part in the petty intrigues and party squabbles which make up the parliamentary and court history of the reign. His diplomatic skill was made useful in two foreign embassies; and his lord-lieutenancy in Ireland, beginning in 1745 and lasting only a few months, has always been mentioned with distinguished praise. After a sickly and melancholy period of old age, he died in 1773. The only writings of this accomplished person that are at all remembered, are his 'Letters' to his natural son, remarkable for their ease of style and their knowledge of society, but notoriously reprehensible for the principles of conduct which they inculcate.

CHITTENDEN, THOMAS, first governor of Vermont, born in Connecticut, 1730, settled in Ver-

mont in 1774, on the New Hampshire grants, and by occupying a large portion of farm land laid the foundation of his fortunes. When Vermont was declared an independent state he was an active member of the convention, and the next year was elected governor. The situation of the state during a great portion of his administration was peculiar, its independence of New York not being acknowledged. He therefore occupied a species of mutual position, as if he meditated submission to England, with whom he opened correspondence, and thus obtained with greater ease the admission of state independence. He retired from public life in 1796, and died in August of the following year, aged 67.

CHRYSIPIUS, a Stoic philosopher, 2d c. B.C.

CHRYSTOSTOM, JOHN, was born at Antioch about the year 351, and was the son of Secundus, a military officer on the staff of the Roman governor of Syria. While the son was yet an infant, the father died, but the widowed mother devoted herself with intense energy to her son's education. Having studied under Libanius and others, with a view to his being placed at the bar, where he practised for a short time with considerable promise, he, in his twentieth year, embraced a monastic life. Some short time afterwards he was ordained deacon, and began to publish. He was not ordained presbyter, and did not preach till about his fortieth year. Many of his most famous homilies, such as those on the 'Statutes,' were preached at Antioch, and his growing fame soon led to his translation to the see of Constantinople in 398. His vigorous prosecution of radical reform among the clergy, his fidelity in rebuking offenders of the highest class, even the empress, and his own sternness of resolution, made him an object of jealousy and dread. An irregular council condemned him in 403 upon the most flimsy grounds, and upon his refusal to submit, he was arrested and sent to Nice in Bithynia, but he had scarce arrived at his place of exile when he was recalled, for fear of an insurrection, and his return had all the appearance of a popular triumph. But the empress was again provoked, and the patriarch was again banished, first to Cucucus in the mountains of Tauris, where he busied himself in instructing the pagan natives, and then to Pityus on the bleak borders of the Black Sea. In travelling to the latter place he reached Somana, and died about the age of sixty. Thirty years after his death his body was brought back to Constantinople, and his bones at length found repose beneath the shadow of St. Peter's at Rome, where the Sistine choir daily chants its requiem over his ashes. It is not to be denied that the 'golden mouth' was occasionally impetuous and self-willed, but he bore his misfortunes with manly piety and fortitude. The faults of his style lie upon the surface of it, in its florid exuberance and continuous accumulation of metaphors. His rhetoric sometimes overlaid his logic. Yet the effects of his eloquence were prodigious, his thrilling appeals went at once to the heart. His conceptions are all painted—ideas start up as images, and his orations resemble a crowded panorama. The humble conventicles of Syria heard the same gospel which at length rolled in glowing periods beneath the great dome of St. Sophia. Splendor of intellect, mellow-

ness of heart, and gorgeousness of fancy, characterize all his sermons, expositions, orations, and letters. He has left behind nearly a thousand homilies, sermons, or expositions, still of great value to the interpreter, besides some polemical writings, tracts on monasticism, and a treatise 'on the priesthood.' The best edition of his works is that of Montfaucon in 1718-38, and in 13 folios. [J.E.]

CHURCH, BENJAMIN, a Boston physician of great literary ability, who, having by his extravagance involved himself in debt, entered into a treasonable correspondence with the British commander in Boston, Gen. Gage, while a member of the provincial congress. A letter in cipher was intercepted, the authorship of which he did not deny, but pretended it was designed to mislead the enemy, from whom however there is every reason to believe he obtained large sums of money. He was expelled the house and imprisoned. He was, however, released in 1776, but was lost at sea on his way to the West Indies. As a graduate at Harvard college he contributed to the 'Pietas et gratulatio Cantabrigiensis apud Novanglos,' in which he was esteemed the best poetic writer.

CHURCH, BENJAMIN, commander-in-chief of the forces of Plymouth colony in the Indian wars, was born in Massachusetts in 1639. In 1676 he pursued the famous King Philip, sachem of Pokanoket, and took him prisoner in a swamp. He ordered him to be shot, beheaded him, cut his body in pieces, and gave one of his hands as a reward to the Indian who killed him. He was placed in command of the forces of the colony in 1689 and sent against the Eastern Indians, to relieve the town of Casco. In his second expedition, the following year, he fought the Indians at Fort Amerascogen and Perpodack, showing no mercy to the prisoners, whatever their age or sex. He set out a third time, in 1692, against Penaquid and Taconoc, and a fourth time, in 1696, to Penobscot and Passamaquoddy. During the next ten years he remained tranquil, having been superseded in his command by Colonel Hawthorne, when the massacre at Deerfield rekindled his ancient hatred of the Indians, and his services being accepted by Gov. Dudley he made fearful reprisals upon the savage foe. A history of King Philip was compiled by his son, under his direction, and published two years before his death, which occurred in January, 1718.

CHURCHILL, CHAS., an English poet, eminent for the keenness of his satire, and equally noted for the laxity of his morals and love of pleasure, was ordained a priest in the Church of England, but first disgraced, and then contemptuously abandoned his clerical character. He was born in 1731, and as early as 1761 had placed himself in this equivocal position. His poems were all written in the short interval between 1760 and 1764, when he died. Though his productions are highly praised for the humorous and effective character of their composition, it is as impossible to regard them with unqualified approbation, as to admire the character of the author.

CIBBER, COLLEY. The life of this comedian has been written by himself, and forms one of the liveliest of autobiographies;—a work sufficient to disprove of itself the charge of being a dunce brought against him by Pope. Mr. Colley Cibber was born, according to his own account, on 6th November, 1671, in Southampton-street, London. His father, Caius Gabriel Cibber, was a statuary, and native of Holstein, who came into England some time previous to the restoration. 'The basso relievo,' says his son, 'on the pedestal of the great column in the city, and the two figures of the lunatics, the raving and the melancholy, over the gates of Bethlehem Hospital are no ill monuments of his fame as an artist.' When ten years of age (1682) Cibber was sent to the free school of Grantham, Lincolnshire, where the boy appears to have shown the same giddy negligence that marked the man; and to have unconsciously made enemies by an inveterate habit of jesting, besides the envy exercised by his literary progress. We may form some idea of his provoking humor from what occurred in 1730, when he had recently received the laurel, and there was so much discontent expressed that it should be conferred upon a comedian. The 'public papers were elivened with ingenious epigrams, and satirical flirts,' on the occasion. The witty author entered the lists against himself, and published a doggerel copy of verses in the *Whitehall Evening Post*, in which he lampooned himself. His vanity, as well as his vivacity, had much to do with this strange conduct. But the former is the actor's foible, and must be put up with. Previous to choosing the stage for a profession, Cibber had the offer of several chances for the church, the court, and the army; but notwithstanding the prejudices of his father, he preferred the boards. The famous year, 1688, witnessed this important revolution in the state of our author's private affairs. At the time that Cibber joined Sir William Davenant's company (1690), the principal performers were Betterton, Montfort, Kynaston, Sandford, Nokes, Underhil, Leigh, Mrs. Betterton, Mrs. Barry, Mrs. Leigh, Mrs. Butler, Mrs. Montfort, and Mrs. Bracegirdle,—'all,' as Cibber calls them, 'original masters in their different styles; not mere auricular imitators of one another.' At this period, it was not customary to pay young actors during their probation, and it was three quarters of a year before young Cibber became entitled to ten shillings a-week. By the time that he received double that salary, he ventured on matrimony. Necessity soon made him a poet. Fortune had begun to smile on his new career. By the recommendation of Mr. Congreve, he had the honor of acting before Queen Mary in one of Kynaston's parts. His next step was the production of a prologue, which was accepted and spoken. *Alderman Fondlewife*, in the play of 'The Old Bachelor,' next afforded him an opportunity of astonishing his fellow-performers, though he received small encouragement from them. The expediency of writing a part for himself led to his composing the comedy of 'Love's Last Shift,' which was produced on the boards in January, 1695, and in which he acted the character of Sir Novelty. Still Cibber won his way but slowly with the actors; and even up to the end of his career had not secured their full faith in him. His talents were at least of the versatile order, for he not only performed the

fops and coxcombs of comedy, but Iago, Wolsey, Syphax, and Richard III. in tragedy. But the performance of vicious characters he seems to have considered injurious to his reputation.—Owing to the censure of dramatic poets, by Jeremy Collier, in his ‘Short View of the Stage,’ the master of the revels became cautious in granting licenses to new plays. Nevertheless, Cibber contrived to get on pretty well; his muse and his spouse, to use his own words, ‘being equally prolific, that the one was seldom the mother of a child, but in the same year the other made him the father of a play.’ ‘I think,’ he adds, ‘we had a dozen of each sort between us, of both which kinds some died in their infancy, and near an equal number of each were alive when we quitted the theatre.’ ‘The Careless Husband’ has always been reckoned Cibber’s best play. ‘The Nonjuror,’ however, was the most popular, owing to its political character. It was levelled against the Jacobites, and was the reason, in fact, of Cibber’s being made poet-laureate in 1730, when he quitted the stage. He died in 1757. His ‘Apology,’ from which we have derived the materials for his life, is an exceedingly amusing work. His works fill five vols. 12mo., published in 1760. [J.A.H.]

CIBBER, THEOPHILUS, son of the celebrated comedian, and like him an actor and play-writer, was a man of profligate character, and very inferior talents, 1703–1758. His second wife, SUSANNAH MARIA CIBBER, was a sister of Dr. Arne, and often performed with Garrick as a tragedian; 1734–1766.

[Marcus Tullius Cicero.]

CICERO, MARCUS TULLIUS, was born at Arpinum, an ancient city of Latium, in B.C. 106; the same year which gave birth to Pompey. The great aptitude for learning which he displayed in boyhood induced his father to remove to Rome, where the future orator and statesman was educated under the best masters of the time. In B.C. 89 he served his first and only campaign under Pompeius Strabo, the father of Pompey, who was then engaged in the Social war. Having thus complied with the custom of his age, Cicero devoted the next six years to the studies which were necessary to raise him to distinction as a lawyer and an orator; practising declamation in Latin and Greek, and storing his mind with those precepts of philosophy, which, throughout his eventful life, cheered him amidst professional toils, and consoled him under disappointment and persecution. At the age of twenty-five he came forward as a pleader, and, even at the risk of incurring the displeasure of Sulla, defended clients who were obnoxious to the dictator. But his health, which was

naturally feeble, gave way under incessant application to study; and, for the purpose of invigorating his constitution, as well as correcting certain defects in his style of oratory, he visited Athens (B.C. 79), made a tour of Asia Minor, and for some time resumed his studies at Rhodes, under Molo, from whom he had received instructions at Rome. After an absence of two years, he returned to Rome with renewed health and enlarged knowledge, and speedily placed himself at the head of the Roman bar. Being qualified by law at the age of thirty to become candidate for the lowest of the great offices of state, he was elected quæstor in B.C. 76, and obtained each of the higher offices as soon as he was permitted by law to hold it, reaching the consulship in B.C. 63. During his consulship he was called upon to grapple with the famous Catilinarian conspiracy; and the courage, prudence, and decision which he manifested in directing the difficult and complicated investigations that led to the detection and punishment of the conspirators called forth the encomiums of all classes of the citizens. The public enthusiasm heaped upon him unwonted honors: in the senate and in the forum he was saluted as *parens patriæ* (the father of his country); thanksgivings in his name were voted to the gods; and all Italy united in testifying their admiration and gratitude. But his unexampled good fortune had excited the jealousy of many of the leading nobility, and his irrepressible vanity exposed him to the ridicule and assaults of his enemies. He was accordingly destined soon to experience a reverse of fortune as remarkable, and more sudden than his rise. It had been judged necessary to put to death five of the ringleaders in the conspiracy; and though this was done in virtue of the dictatorial authority with which the consuls were invested by the senate, and with the consent and approval of that body, Cicero was indicted for having put a Roman citizen to death untried, and forced to go into banishment in April, B.C. 58. But private malice soon expended itself, and public feeling, reverting to his signal services in rescuing his country from impending ruin, recalled him after an interval of seventeen months. His reception at Rome cheered his dejected spirits; but the circumstances which led to his banishment prevented him from ever after recovering his former position. In B.C. 53 he was admitted a member of the college of Augurs, and towards the end of B.C. 52 he was appointed proconsul of Cilicia. He administered the affairs of his province with the strictest impartiality, corrected the abuses which had been introduced or sanctioned by his predecessors, and realized in practice the precepts which in his writings he had inculcated. He returned to Italy in B.C. 49, at the commencement of the civil war between Cæsar and Pompey, and finally resolving to espouse the cause of the latter, followed him to Greece. After the battle of Pharsalia, B.C. 48, at which he was not present, he again returned to Italy, and was received into favor by Cæsar. Separating himself now entirely from all parties in the state, he arranged and published during the next three years nearly all his most important works on rhetoric and philosophy. But the tumults excited by Antony after the murder of Cæsar, B.C. 44, again drew him from his seclusion; and Augustus, knowing the value of such an ally, and carefully concealing from him his real intentions, gladly availed himself of his services as leader of the senate. Cicero’s zeal, which was not always tempered with discretion, now exhibited itself in the famous philippics against Antony, which again made him the idol of

the Roman people. But the formation of the second triumvirate sealed the fate of the great Roman orator. His name appeared in the list of the proscribed, having been placed there by Antony as one of the conditions of the league; and after an unsuccessful attempt to escape, he stretched forward his head to his executioners, and called upon them to strike (B.C. 43). His head and hands were conveyed to Rome, and, by the orders of Antony, nailed to the Rostra. We have not space to delineate the character of Cicero, or to enumerate his works. These have been repeatedly published, both in mass and in detached portions. [G.F.]

CICOONA, PASCAL, doge of Venice, 1195.

CICOGNARA, LEOPOLD, a painter, 1767-1834.

CID, THE. DON RODRIGO LAYNEY (often called, by his countrymen, by the abbreviated appellation Ruy Diaz), was born at the paternal castle of Bivar, in Castile, about the year 1026. He was of the purest Gothic blood; but his family possessions were small; and he was indebted to his own valor and martial genius for the renown and importance which he acquired. His military career against the Moors of Spain was commenced under the banners of Don Ferdinand, king of Castile; and he soon became celebrated throughout Europe as the model of Christian chivalry. Five Moorish kings, whom he defeated and took captive, and to whom he generously granted life and liberty, bestowed on him the title of Sayd (*i. e.*, my lord); whence arose the name of the Cid, by which he is best known in poetry and in history. Don Sancho, who succeeded Ferdinand on the throne of Castile, made the Cid generalissimo of his armies; whence came the title Campeador, by which also the hero is often named by his countrymen. Under the next sovereign, Alfonso VI., the Cid was frequently the mark of unmerited royal jealousy; and he was more than once banished from Castile. On these occasions he took refuge with some of the Moorish princes of the peninsula, where he served gallantly in their wars with one another. But his loyalty to Castile was unblemished; and when recalled by the capricious Alfonso, the veteran Campeador combated for him as zealously as he had fought in his youth for more generous and grateful sovereigns. Among many other achievements, he is said to have wrested the city and kingdom of Valencia from the Mahometans, and to have annexed it to the Castilian dominions. The reputed year of his death is 1099. His tomb is still shown at Bivar; and his countrymen, after so many centuries and so many changes, still speak of him with enthusiastic pride. His victories and his romantic personal adventures furnish the themes of many of the finest old Spanish ballads; and they are also narrated in the 'Poem or Chronicle of the Cid,' the earliest great poem of modern Europe, which is supposed to have been framed about fifty years after the hero's death, from an original chronicle written in Arabic by two Moorish pages of the Cid. CILLEY, JOSEPH, General, an officer in the American army during the Revolution, was born in New Hampshire in 1735. In 1775 he assisted to dismantle the fort at Portsmouth, and shortly after the battle of Lexington was appointed colonel by Congress. He fought at Ticonderoga, Stony Point, and Monmouth. He died in 1799, aged 64.

CILLEY, JONATHAN, a member of U. S. Congress from Maine, who, at the age of 35, fell in a duel fought with rifles by the hand of W. I. Graves, member of Congress from Kentucky, in Feb. 1837.

CIMA, J. B., an Italian painter, 15th cent.

CIMABUE, GIOVANNI, commonly called the father

of modern painting, was born at Florence in the year 1240. The prominence given to the name of Cimabue in the history of painting in Italy, is due solely to the place he has in the 'Lives of the Painters, &c.,' by Vasari, whose work is the great text book on this subject, as far as relates to the revival of painting in Italy. Cimabue possessed more than ordinary merit in his time, but was little if at all superior to his reputed master Giunta of Pisa, whom he is supposed to have assisted in the church of San Francesco at Assisi in 1253. Cimabue had several other able contemporaries, as Margaritone of Arezzo, Duccio di Buoninsegna of Siena, and Gaddo Gaddi of Florence; all, including Cimabue himself, strictly belonging to the Byzantine school of painters. Many Greek artists were established in Italy in the thirteenth century, especially at Venice, Pisa, and Siena; the event which brought the eastern and western civilization into more immediate contact at this time, was the Latin conquest of Constantinople in 1204.—The pictures of this time were executed in *tempera*, and have generally gold grounds: there is still a large picture of the Madonna, by Cimabue, preserved in the church of Santa Maria Novella at Florence; and there is another of the Madonna and Child in the academy of Florence. Cimabue was still living in the year 1302. He was the master of Giotto, whose ability he discovered and cultivated.—(Vasari, *Vite de' Pittori*, &c.) [R.N.W.]

CIMON, an Athenian gen., the son of Miltiades, dist. himself against the Persians, 470 B.C., d. 449.

CINCINNATUS, LUCIUS QUINTUS, the illustrious Roman patriot, consul about 460 B.C., and twice afterwards dictator. The dates and events are somewhat uncertain, but it is sufficiently known that he delivered the republic from her domestic and foreign enemies with the skill of a statesman and soldier, and retired to his farm refusing all recompense.

CINELLI, GIOV., an Italian phys., 1625-1706.

CLAIR, ARTHUR ST., General, was a native of Scotland. He came to America in 1775 with admiral Boscawen, and served in the French war. When the Revolution broke out, he espoused the American cause, and was appointed major-general by Congress in 1777. The same year he was forced to retire before General Burgoyne, and abandon Ticonderoga. The best military judgments applauded his prudence. On the cessation of hostilities he entered into political life. He was president of Congress in 1787, and governor of the North-west Territory from 1789 till 1802. In 1791 he was appointed to the chief command of the operations against the Indians, but was defeated with a fearful sacrifice, near the Miami villages, on the third of November. The disaster resulted from the panic flight of the militia, who recoiled upon and threw the regulars into disorder, from which it was impossible to recover. Thirty-eight officers, among whom were General Butler and Major Ferguson, were left dead upon the field, with 538 men. St. Clair himself behaved with skill and courage, and eight balls passed through his clothes.

He resigned his commission in the army in 1792, and was removed by Jefferson from his territorial government in 1802, having declined an election as governor in Ohio. He died in Pennsylvania in 1818, aged 84.

CLAIRAUT, ALEXIS CLAUDE, a French mathematician of great genius, of the times of Euler and D'Alembert. He was born at Paris in 1713, and died in 1765. Clairaut wrote on the figure of the earth, and on curves of double curvature, besides many separate memoirs and elementary works on algebra and geometry. In his time he belonged to the 'great world' of Paris: the thorough student will read his writings still; he had much taste in composition as well as great analytic power.

CLAIRAUT, J. B., a French mathematician, 1680-1766.

CLAIRBORNE, WILLIAM C. C., governor of Mississippi in 1802, and of Louisiana in 1804. He occupied the latter office from 1812 to 1816 under the constitution. He died at New Orleans in 1817, shortly after his election to the Senate of the U. S.

CLAIRFAIT, COUNT DE, an Austrian general, d. 1798.

CLAP, ROGER, one of the early settlers of Dorchester, Massachusetts, and author of a Sketch of the History of New England. Came to America in 1630. For many years he endured great hardships. In 1665 he was appointed to the command of Castle William, which he held till 1686. He died at Boston in 1691, aged 81.

CLAP, THOMAS, president of Yale College, born in Massachusetts 1703, and was graduated at Harvard in 1722. He was for some years pastor of Windham, Conn., but in 1739 accepted the presidency of Yale College, which he resigned in 1766. He made a collection of materials for the history of Connecticut, but lost his manuscript when New Haven was attacked by Gen. Tryon. Besides sermons and essays he published a history of Yale College. He died at Scituate Jan. 7, 1767, aged 63.

CLAPPERTON, HUGH, was born in 1788, at Annan, in the county of Dumfries, where his father practised as a surgeon. After having entered the merchant service, and made several voyages to America, he was impressed on board a man-of-war. By the influence of an uncle, a captain in the marines, young Clapperton soon attained to the rank of a midshipman; and some time after, while on service in Canada, to that of lieutenant. He gained, in various actions, the reputation of a skilful and brave officer. Being at home on half-pay for five or six years, he became acquainted, at Edinburgh, with Dr. Oudney, then engaged in plans of African discovery; and was soon after associated, under the directions of Earl Bathurst, with this gentleman and Major Denham in an expedition to the sources of the Niger. They crossed the desert from Tripoli to Lake Tchad, which they were the first Europeans to visit, reaching it on 5th February, 1823. Here our travellers separated for a time; and Clapperton explored the country to the S. W. as far as Sokatou, in lat. 13° N., long. 5° 45' E., a distance of 700 miles from Lake Tchad. Dr. Oudney, who accompanied him, died by the way about a month after they started. Meeting in health at Kouka, the capital of Bournou, where they left Mr. Tyrwhit as consul, Denham and Clapperton recrossed the desert to Tripoli, at which they safely arrived on 25th January, 1825. Clapperton was soon after raised to the rank of commander, and equipped for a second expedition, intended to reach the sources of the Niger by ascending the stream from its mouth. This was found impracticable

from the unhealthy nature of the delta of this great river. Proceeding by land Clapperton reached Sokatou from the S. W., thus connecting his observations with those of his former journey. Here, however, he was destined to end his active and useful life; weakened by fatigue, with feelings irritated by the obstacles thrown in his way, he was seized with dysentery, and after a lingering illness, he expired on the 13th April, 1827. Richard Lander, his faithful and attached servant, was the only European who remained of the party, Captain Pearce R.N., Dr. Morrison, and others, having died soon after they left the coast. Full accounts were published of the several journeys, which added immensely to our knowledge of central Africa. [J.B.]

CLARE, St., a follower of St. Francis Assise, and founder of an order of nuns, 1193-1253.

CLARENCE, GEORGE, duke of, brother of Edward IV., drowned in a butt of Malmsey, 1478.

CLARENDON, EDWARD HYDE, earl of, was born in 1608, at Hinton, in Wiltshire, the estate of Henry Hyde, his father. He studied at Oxford with the design of entering the church, but became a lawyer on the death of his elder brother, through which, in 1632, he succeeded to his father's property. Although he practised his profession for a time, it does not seem to have ever engaged so much of his attention as literature did at first and politics afterwards. In 1640 he was elected a member of Charles I.'s Short Parliament, in whose moderate attempts at reform he bore an active part; and when the king contemplated dissolving it, Hyde took advantage of an intimacy he had contracted with Archbishop Laud, to offer earnest remonstrances against that arbitrary and imprudent step. He sat again in the Long Parliament, which the king was forced to summon before the end of the same year. He concurred in some of the earliest of the strong measures now adopted by the house, such as the proceedings against the judges in Hampden's case, and the impeachment of Strafford; but in no long time he became startled by the lengths to which the popular

[Dunkirk House, the Residence of Lord Clarendon.]

leaders were disposed to carry their opposition to the crown. The king seized the first opportunity of securing to himself so useful a servant. Hyde, Lord Falkland, and Colepepper, were secretly appointed to manage the interests of the crown in parliament; and although the cautious and reasonable counsels of the first two of these advisers were disregarded by their master, Hyde continued to frame the royal messages and other documents till the breach with the parliament took place. In 1643, having now attached himself to the king's person, he was knighted and made chancellor of the exchequer; after which he was actively engaged in the king's

affairs till 1646, when, on the irretrievable ruin of the royal cause, he accompanied the prince of Wales in his flight from England.—He now resided for two years in Jersey, occupying himself in study and in the composition of his History; after which he joined the prince at the Hague, and continued in his service when his father's death had made him nominally king. He spent more than a year in Spain, vainly soliciting aid, but extending his own knowledge as well as writing moral and devotional treatises. For several years afterwards he was Charles's chief adviser, and, in 1658, received the place of lord chancellor, then only nominal, but soon real.—He returned with Charles II. to England in May, 1660, and immediately began to act both as speaker of the House of Lords, and as chief judge in the Court of Chancery; being soon also raised to the peerage. At this time his prospects were seriously endangered, by the discovery of the secret marriage of his daughter to the duke of York, through which he became the grandfather of two queens of England. The storm passed away without doing immediate harm. Lord Clarendon was virtually the head of the administration till near the close of 1667; and, as the responsible adviser of Charles II. for more than six years, he cannot but have done many things which would then have been condemned by patriotic men, and many others which would now appear still more censurable. The sale of Dunkirk, and the promotion of the king's marriage, though they were the main causes of the unpopularity which gradually gathered around the chancellor, were certainly not the worst of the steps which were taken, either by his advice or with his sanction and assistance. He had taken a prominent part in the bloody vengeance which in the beginning of the reign was inflicted on the regicides and other parliamentary leaders; he was yet more active in conducting that prosecution of the dissenters, of which the Act of Uniformity was the consummation; and, in conducting the secret negotiations for a loan from France, he made the king of England to be independent of parliament and the pensioner of a foreign and hostile power. Yet even these acts were only such as the circumstances might have prompted to one who was at once a zealous royalist, a somewhat bigoted churchman, and a statesman fond of power, and actuated by considerations of expediency rather than by elevated principles. If such motives are not very dignified, they are at least very much above the level of those that prevailed among the corrupt and profligate politicians who swarmed about the restored king. Nor was Clarendon's fall caused by any of those acts of his that were really reprehensible. He became unpopular with the nation because of the disgraces incurred in a war undertaken in spite of his dissuasions; he made himself obnoxious to the courtiers by reserved haughtiness of manner, and by a strictness of private conduct which silently rebuked their debauchery; and he lost the favor of the king because he connived only at royal vices instead of pandering to them, and countenanced reluctantly acts of misgovernment to which he was expected to give hearty support. After Clarendon's unpopularity had become general, Charles and his parliament vied with each other in their eagerness to ruin him. Repeated messages from the king failed in prevailing on him to make a voluntary surrender of the great seal; and after he had been displaced, and impeached at the bar of the House of Lords, it was only a distinct warning that his master could not and would not save so much as his life, that induced

him to leave the country.—He fled to the continent in November, 1667, and would have returned to face his trial had not illness prevented him. He moved from one town of France to another, resuming his studies and writing some of his works; and at length he died at Rouen in December, 1674. The principal writings which he left were his 'History of the Rebellion,' and his Account of his own Life. The former of these, with all its errors and shortcomings, is unquestionably a valuable storehouse of historical materials; while its comprehensiveness of views, its skill in the portraiture of character, and the interest which is excited by its minutely-drawn narratives of events, combine in securing for it a distinguished place among the monuments of English literature. CLARIDGE, R., a Quaker writer, 1649–1723.

CLARK, ABRAHAM, one of the signers of the declaration of American independence, born at Elizabethtown, N. J., 1726, and died at Rahway, 1794, aged 67.

CLARK, McDONALD, commonly known as the 'mad poet,' author of various fugitive poetical pieces in which there are some glimmerings of genius, died in the Insane Asylum at Bloomingdale, N. Y., 1842.

CLARK, JONAS, minister of Lexington, Massachusetts, at the time of the battle. He was born in 1730, was graduated at Harvard in 1752, ordained in 1755, and died in 1805, at the age of 74. On the first anniversary of the battle of Lexington, he gave a narrative of that famous struggle in a discourse, afterwards published.

CLARK, WILLIS GAYLORD, an Am. journalist, poet and miscellaneous writer, d. 1841, aged 32.

CLARK, WILLIAM, an American statesman, was born in Virginia in 1770, and emigrated with his family at the age of fourteen to the falls of the Ohio, in Kentucky; on the present site of Louisville, which then consisted only of a few rude huts. He availed himself to the utmost of the limited advantages his situation afforded, and in 1808 was appointed in conjunction with captain Merriwether Lewis to the command of the expedition designed to explore the north-western territory lying between the Mississippi and the Pacific Ocean. He acquitted himself with consummate ability in this hazardous employment, which required the combination of military and scientific skill. His journal and the account kept by him of the astronomical observations made by him and Captain Lewis, have been published. He was appointed in 1813 governor of the north-west territory and superintendent of Indian affairs, which offices he retained until 1820, when Missouri was erected into a State. Two years afterwards he was again appointed commissioner and superintendent of Indian affairs, in which capacities he performed great services for the government. He died in 1838.

CLARK, JOHN, a medical author, 1744–1805.

CLARK, WILLIAM TIERNEY, a civil engineer of distinguished merit. He was early apprenticed to a millwright in Bristol, and worked successively at Colebrookdale and in London under the great Kenzie, with whom he remained till 1811. He was the engineer of the West Middlesex Water Works, and to the advancement of this important undertaking his energies were devoted for many years. Suspension bridges early excited his attention, and he has left Hammersmith, Marlow, Norfolk, and Pesth suspension bridges, as monuments of his taste in design, and skill in engineering. The suspension bridge of Pesth, while it stands a monument to his genius, is

the admiration of all who have seen it. It was the last and crowning act of a life devoted to a profession of which he was an ornament. He died 22d September, 1852, aged 69. [L.D.B.G.]

CLARKE, DR. ADAM, was a native of Moybeg, in Ireland, where he was born, 1760. Like many other men of eminence, he was indebted to the influence of maternal counsels and example in the formation of his youthful character, as well as in the choice of his future course; for while his father was an episcopalian, his mother, who was a Scotch-woman and a presbyterian, had, on her settlement in England, warmly espoused the cause of Wesleyan Methodism, and used every endeavor to bias the ductile mind of her son in favor of that sect. Though rather dull when first placed at school, his faculties rapidly developed and gave strong pledges of his future eminence. Having in his seventeenth year become impressed with deep views of religion, he resolved to consecrate his future life to the service of God in the ministry of the gospel, and through the recommendation of Wesley, was sent to complete his education at the Kingswood school. There his taste for Hebrew and Biblical studies was awakened; and so strong a hold had a love of sacred literature taken of his mind, that even amid all his wanderings and harassing difficulties as a Methodist preacher, he continued with unflagging resolution to carry on his course of intellectual improvement. He not only occupied his leisure moments while stopping at inns, but even in riding on horseback he generally had a book in one hand; and by this rigid economy of time, he was storing his mind with useful knowledge, as well as collecting materials for his future works. The circuit assigned him to perambulate as an itinerant preacher was Wiltshire. And although, of course, he had various stations in the country, he pitched his residence at Trowbridge, where he formed a matrimonial alliance with Miss Cooke, daughter of Mr. Cooke, clothier, and a lady of great piety, prudence, and amiable dispositions. Mr. Clarke's fame as an Orientalist and biblical scholar having spread extensively, he received the honorary title of LL.D. from the university of St. Andrews, and was enrolled a member of several learned societies both in Britain and America. His ardent attachment to general, and especially to Oriental literature, led him to take an active part in the management and secretaryship of several of those societies. And the duty of maintaining the various correspondence, together with the pressure of his congregational labors, which always held the first place in his regard, so greatly affected his health, that his medical advisers persuaded him in 1815 to resign his pastoral charge. Retiring to a rural retreat in Lancashire, which the liberality of a few friends had presented to him, he lived in the enjoyment of literary leisure. His Commentary on the Bible was prosecuted with ardor; but finding himself deprived of many advantages which to a literary man are indispensable, he disposed of his farm, and after a residence in Lancashire of eight years, returned to establish himself at Eastcott, a small village in the vicinity of London. In Haydon Hall, an elegant mansion he purchased there, he completed his Commentary, an elaborate work in 8 vols. 4to, which had occupied his attention more or less for forty-eight years, and the publication of which was issued at intervals from 1810 to 1826. Dr. Clarke, though unconnected with any particular charge, had never wholly discontinued the practice of preaching. An engagement of this kind was to have been fulfilled at Bayswater on the morning of

the day on which he died. But having been seized with a sudden attack of Asiatic cholera, which was then committing dreadful ravages in London, he was cut off on the 26th August, 1832, maintaining to the last, amid the paroxysms and frightful bodily contortions which that formidable pestilence produced, a mind calm, collected, and firmly reposing on the bosom of his Saviour.—Besides his commentary, Dr. Clarke was the author of several other works, the chief of which are, 'The Succession of Sacred Literature,' 'Memoirs of the Wesley Family,' 'Fleury's Manners of the Ancient Israelites,' 'Shuckford's Sacred and Profane History of the World,' 'Sturm's Reflections, translated from the German,' and 'Harmer's Observations.' In addition to these he was employed several years by the government in collecting materials for a new edition of 'Rymer's Fœdera,' which since his death has been carried on by a commission under government. [R.J.]

CLARKE, ALURED, au. of sermons, &c., 18th c.

CLARKE, EDWARD DANIEL, LL.D., celebrated for his travels through many countries of Europe and Asia, was born at Wellington, in Sussex, 5th June, 1769. His father was a clergyman of rather limited income, and died before his son's education at Cambridge was completed. After graduating, he obtained, between 1790 and 1798, several situations as resident family tutor; and as travelling tutor and companion to gentlemen of fortune, with whom he visited most parts of England and Scotland. In the latter year he was elected fellow of his college, (Jesus) and came to reside in Cambridge. In the year following he went abroad as travelling companion to Mr. Cripps, and made an extended journey, occupying three years and a-half, a most interesting account of which, originally given in 6 vols. 4to, was his principal work. In 1808, he was appointed first professor of mineralogy at Cambridge, whose museum and library he had greatly enriched by his collections. The British Museum owes to him the celebrated Sarcophagus, incorrectly called that of Alexander, as well as other objects. He took orders in 1805, and enjoyed two livings. His death occurred at London on 9th March, 1822. He was, besides, the auth. of many papers in Thomson's Annals of Philosophy, on physics, and chemistry; and of some dissertations on antiquarian subjects. [J.B.]

CLARKE, H., LL.D., a mathemat., 1745–1818.

CLARKE, HY. JAS. WM., Duc De Feltre, descended from a partisan of the Stuarts settled in France, min. of state under Buonaparte, 1765–1818.

CLARKE, JAS. STANIER, LL.D., brother of Edward Daniel Clarke, a naval historian and founder of the 'Naval Chronicle,' died 1834.

CLARKE, JOHN, a Scotch engrav., 1650–1721.

CLARKE, JOHN, brother of Dr. Sam. Clarke, a classical scholar, author of sermons, &c., d. 1759.

CLARKE, RICHARD, a clergyman of the Church of England, rector of St. Philip's Church in Charleston, about the middle of the 18th century. He was author of several works on the fulfilment of prophecy, and though an excellent scholar seems to have imbibed the mystical sentiments of Behmen. He returned to his native country in 1759, and after nine years became curate of Cheshunt, in Derbyshire. The time of his death is uncertain.

CLARKE, JOHN, author of a narrative of the 'Persecutions in New England.' He practiced as a physician in London before he emigrated to Massachusetts, from which he was driven by persecution and took refuge in Rhode Island. He went to England as agent of the Colony in 1663 to obtain a new charter, in accomplishing which he sacrificed his proper-

ty in Rhode Island. He was for many years pastor of a Baptist church in Newport, where he died in 1676, aged 56.

CLARKE, MARY ANNE, the mistress of the duke of York, son of George the Third, who obtained great notoriety in consequence of her intrigues in connection with army patronage, d. at Boulogne, in France, 1852, aged 74.

CLARKE, GEORGE ROGERS, General, an American officer during the Revolution, who commanded the forces sent against the Indians after the massacre at Wyoming in 1778. The next year he captured Hamilton, governor of Detroit, at Vincennes, and intercepted £10,000 sterling of British money coming from Detroit. He also performed valuable services in Virginia. In 1781 he was made brigadier-general. He was a man of great decision of character and a skilful officer.

CLARKE, DR. SAMUEL, the celebrated metaphysical divine, was born at Norwich on 11th of October, 1675. His father, who had held the highest offices in that city, and was in comfortable circumstances, determined to afford him the advantages of the most liberal education, and accordingly sent him in due time to Caius College, Cambridge, where amid the various objects of academic interest, young Clarke evinced a decided preference for theology. Engaging with untiring ardor in the pursuit of knowledge, he acquired an extensive acquaintance with the different branches of physical sciences, especially optics, and made his first essay before the world as an author by the translation of Rohault's physics—a work which long continued to be regarded in England as the best elementary work for students. While thus, however, improving his mind in general knowledge, his chief attention was directed to theology, and desirous of drawing his information from the fountain head, he gave himself to the earnest study of the Scriptures in the Hebrew and Greek originals. By such devotion to study, Clarke early shone by his theological attainments, and almost immediately after obtaining orders in 1669, he began his career as a theological author by publishing 'Three Practical Essays on Baptism, Confirmation, and Repentance,' and shortly afterwards, his 'Paraphrase on the Four Gospels.' In 1704 he was appointed to a lectureship on the 'Evidences,' and it was in the course of the duty which this situation imposed on him, that he prepared those profound and elaborate works which have raised him to the first rank of philosophical divines, viz., 'A Lecture on the Being and Attributes of God,' and a second on the 'Evidence of Natural and Revealed Religion.' These lectures were afterwards expanded into the form of treatises; and although a diversity of opinion prevails as to the soundness and value of the *a priori* argument, no difference has ever existed as to the force with which Dr. Clarke has discussed the subject, and the piety which pervades the composition. The publication obtained for him a European renown as a Christian philosopher, and a more substantial reward followed in the preferments which were liberally offered to him in his own church. In 1706 he was appointed rector of St. Bennett's, Paul's Wharf, London, and though he was the reverse of a popular preacher, he showed exemplary diligence in the performance of his parochial duties. Amid his multifarious engagements his active mind found time to gratify his taste by the culture of physical science; and he published a translation of Sir Isaac Newton's Latin treatise on Optics, for which that philosopher gave him a present of £500, with the still more valuable addition

of his private friendship. Dr. Clarke published a new theological treatise entitled 'The Scripture Doctrine of the Trinity,' in which he is supposed to lean towards Arianism. He died very suddenly on 7th May, 1729, of an inflammatory attack. [R.J.]

CLARKSON, D., a nonconfor. div., 1622–1686.

CLARKSON, MATTHEW, General, an officer in the American army during the Revolution, aid-de-camp to General Gates at the battle of Stillwater. He was vice-president of the American Bible Society.

[Thomas Clarkson.]

CLARKSON, THOMAS, was born on 28th March, 1760, at Wisbeach, in Cambridgeshire. His father, who was a clergyman of the Church of England, taught the free grammar school of the place, and prepared his son for entering St. John's College, Cambridge, which he did in 1783. In that college his accurate scholarship was rewarded by high honors, and the next year when the subject for prize essay among the senior Bachelors of Arts was announced to be, 'Anne liceat invitos in servitutem dare—is it right to make slaves against their will?' Clarkson entered the lists with increased ardor. In the course of his researches into the history and practices of the slave trade, he was led to read 'Benezet's Historical Account of Guinea;' and the perusal, which had been undertaken for a special and merely literary purpose, produced a harrowing impression on his feelings which time could not efface. Ease and tranquillity were entirely banished from his mind; and the first gleam of inward satisfaction that shone into his sensitive and Christian bosom after his introduction to Benezet, arose from his resolution to set about some practicable scheme for mitigating or preventing the horrors of the slave trade. The formation of such a plan was almost as difficult as its execution. But he resolved on surmounting all difficulties. The first step he took was to translate his Latin prize dissertation into English, and by diffusing information on the subject of slavery in as attractive a form as possible, arouse the interest and sympathies of the British public. His proceedings were viewed with earnest attention by several eminent philanthropists, amongst whom were Rev. James Ramsay, Lord Barham, and Granville Sharpe, Esq. By the counsel and aid of these gentlemen he procured intelligence from every vessel lying in a British harbor that had been engaged in the African trade. In addition to oral information, Mr. Clarkson endeavored at great labor and expense to obtain specimens of the industry and manufactures of na-

tive Africans for public exhibition. And last of all, he procured an accurate engraving of a slave ship, with its cells and gratings and barricades, for the confinement of the poor unfortunate creatures that were kidnapped. The impression produced by this drawing lent, more than any thing else, a powerful impulse to the cause in which he was engaged. Besides all these preliminaries, Mr. Clarkson published a pamphlet on the subject of the slave trade every year—although it was not till 1788 that his great work on the impolicy of that traffic was given to the world. Immediately after this publication he went to France for the public advocacy of the cause in that country. His benevolent exertions met with the warmest encouragement, not only from the French monarch and the celebrated Necker, who was then at the head of the government, but many of the most influential members of the national assemblies, as well as catholic prelates. He needed all this encouragement, for a host of enemies, both in Britain and on the continent, sprang up against him, consisting of parties interested in the maintenance of the slave system, and who foreseeing the hope of their gains to be gone if he should be successful in his aims, used every means, both fair and foul, to thwart his purposes, and disgust him with his task. But the fierce opposition of these enemies only made the friends of the cause rally more closely around him; and two auspicious circumstances turned the scale opportunely in his favor. The one of these was a voluntary and public offer of Samuel Whitbread, Esq., 'to make good all injuries which any individual might suffer in their business from aiding and abetting the movement;' and the other was the interview to which Clarkson was admitted with the emperor Alexander, at the congress of Aix La Chapelle in 1818, and that emperor's promise to employ his influence with his royal brothers of Austria and Prussia to procure the abolition of the slave trade. The hopes, however, excited in that quarter were slow in being realized. But Mr. Clarkson enjoyed the high satisfaction of witnessing the final triumph of his labors in the enactment of the British legislature in 1807, by which the slave trade was thenceforth declared illegal. Mr. Clarkson belonged to the Society of Friends, and published in 1807 'A Portrait of Quakerism,' and a 'Life of William Penn' in 1813; d. 1846. [R.J.]

CLAUBERG, J., a Calvinist philoso., 1622–1665.

CLAUDE, queen of Francis I., 1499–1524.

CLAUDE, duchess of Lorraine, 1547–1575.

CLAUDE. CLAUDE, GELEE, commonly called CLAUDE LORRAINE, from the country of his birth, was born at Château de Chamagne, near Charmes, in the year 1600. He was originally placed with a baker and pastry-cook, and when still young went in company with some cooks of Lorraine to Rome. Claude found a situation as ordinary servant with Agostino Tassi, the landscape painter; he both prepared his master's meals and ground his colors for him. It was to this coincidence that Claude seems to have owed the development of his faculty of painting; he must have been with Tassi towards the close of the pontificate of Paul V.; he became a distinguished landscape painter as early as the time of pope Urban VIII. (1623–44). Claude appeared as an engraver as early as 1630, and his best pictures seem to have been painted from that time to about 1645 or 50. He was extremely slow and careful in his execution; his friend Sandrart, who first taught him to sketch from nature, mentions that he would work a week or more at some portion of a picture without showing any progress; he had great diffi-

culty in drawing the human figure or animals: these were generally added by F. Lauri, J. Courtois, or A. Both, and others. He died at Rome in 1682. The National Gallery possesses some good specimens of Claude, and there is a fine collection of his drawings in the British Museum.—(Sandrart, *L'Accademia Todesca*, &c.; Wornum, *Descriptive and Historical Catalogue of the National Gallery*.) [R.N.W.]

CLAUDE, J., a French protestant in the highest repute as a controversialist, 1619–1687. ISAAC, his son, also a protestant min., 1653–1695. JEAN-JACQUES, son of Isaac, a man of letters, afterwards pastor of the Fr. ch. in London, 1684–1712.

CLAUDIUS, APPIUS, decemvir of Rome, noted in the story of Virginius, 451–449 B.C.

CLAUDIUS, APPIUS CÆCUS, a Roman censor, the founder of the celeb. Appian Way, 311 B.C.

CLAUDIUS I., by name TIBERIUS DRUSIUS CLAUDIUS, fourth emp. of Rome, b. B.C. 9; elected after the murder of his uncle Caligula, 41; poisoned 54.

CLAUDIUS II., by name MARCUS AURELIUS FLAVIUS CLAUDIUS, proclaimed emp. 268, d. 270.

CLAUDIUS, FELIX, Roman governor of Judæa in the time of the apostle Paul, recalled 60.

CLAUDIUS, LYSIAS, a tribune of the Roman troops at Jerusalem, whose name occurs in the history of Paul.

CLAUDIUS, MATT., a Germ. poet, 1743–1815.

CLAUSBERG, C., a German math., 1689–1751.

CLAUSEL, BERTRAND, a count and marshal of France, distinguished in the wars of Napoleon. He was born at Mirepoix in 1773. After gaining a high reputation by his services on the Pyrenees, in Hayti, Italy and Dalmatia, he accompanied Junot and Massena to Spain in 1810. He laid siege to Ciudad Rodrigo, and was wounded at Salamanca. By his skill and conduct the army of Portugal was preserved and led into Spain. In 1813 Napoleon rewarded his valor by conferring on him the chief command of the forces in the north of Spain. On the restoration of the Bourbons he came to the United States, and lived there for a long time in retirement, but when Charles X. was overthrown in 1830, he received from Louis Philippe the command of the French troops in Algeria, which he retained until 1836, when he resigned in consequence of the defeat he had sustained at Constantine. He died in 1842.

CLAVEREAU, N. M., a Fr. archit., 1755–1816.

CLAVIER, STEPH., a Fr. hellenist, 1762–1817.

CLAVIERE, STEPHEN, born at Geneva 1735, was by profession a banker, and one of the first to unite with Brissot under the republican banner in 1789. He shared in the successes and the fall of the Girondins, especially as minister of finance in 1792, and being arrested with the rest of his party, and condemned by the revolutionary tribunal, put an end to his life in prison, 8th December, 1793.

CLAVIGO, RUY GONZALES DE, a distinguished Spaniard sent by Henry III. of Castile, in 1403, as ambassador to the court of the great Tamerlane, at Samarcand. The account which he published on his return contains many important observations on the countries through which he passed. [J.B.]

CLAVIGERO, FRANCESCO SAVERRO, a distinguished writer on the ancient history of Mexico, its antiquities, and conquest by Spain, was born at Vera Cruz in 1720. He spent thirty-six years among the Indians as Jesuit missionary, but little is known of his private life. He died in Italy about the end of the century. His work was published in Italian in 1780–81, 4 vols. 4to., with maps and plates, and is regarded as a high authority. It was translated into English, London, 1787, 2 vols. 4to. [J.B.]

[Birthplace of Henry Clay.]

CLAY, HENRY, a distinguished statesman of the United States, was born in Virginia, in a humble dwelling, in the neighborhood of a region known as the *Slashes* (hence the soubriquet of "The mill boy of the Slashes"), on the 12th of April, 1777. His father was a clergyman, whose means would only allow of a very humble education to his son, who was sent to the district school, whence, after some elementary learning, he at an early age was put as copyist in the office of the clerk of the Court of Chancery in Richmond. With a strong desire for a higher education, Henry Clay commenced the study of law at the age of nineteen, and such was his rapidity of progress that he was admitted to the bar in the course of a year. In 1799 he emigrated to Kentucky, and commenced the practice of his profession at Lexington, which became his permanent home. In connection with the practice of the law, young Clay took a warm interest in politics. When a convention was called for the revision of the constitution of Kentucky, the youthful politician rendered himself remarkable, for his efforts towards the election of such delegates as were in favor of the emancipation of the slaves. His conduct incurred much unpopularity, but his future action, particularly in regard to the alien and sedition laws, which he opposed, soon made him a political favorite, and he was elected in 1803 by a large majority member of the legislature of Kentucky. His natural powers of eloquence, and argumentative skill, acquired for him at once the highest rank, and such was his repute that he was chosen, in 1806, senator of the United States for one year, to fill the vacancy caused by the resignation of General Adair. His presence in that eminent body was marked by extraordinary powers of eloquence and argument in debate, and he acquired at once that reputation as a great statesman which never failed to distinguish him during his long political career. After the expiration of his year of service in the Senate of the United States, Clay returned to Lexington, and being elected member of the legislature was chosen speaker of the Assembly, which position he filled with distinction for two sessions. In 1809, a vacancy again occurring in the Senate of the United States, he was appointed to fill it, and served for two years, during which period he took a prominent position on the great questions of the day, and sustained himself with his usual eloquence and argumentative skill. In 1811, Clay was elected a member of the House of Representatives at Washington, and was chosen by that body as their speaker, which office he filled

with great ability until 1814, when he was appointed one of the commissioners to negotiate at Ghent a treaty of peace with Great Britain. He returned from Europe in 1815, having proved himself no less skillful as a diplomatist than he was eloquent as an orator and able as a debater. During the year of his return he was re-elected a member of Congress, and took his seat in 1815. He now exerted his great powers on all the important questions of state, and shone conspicuously as an advocate of the cause of the republics of South America, and of the interests of his country in the support of a natural system of internal improvements. Clay identified himself with the tariff question in 1819 and 20, and became the acknowledged champion of domestic industry, by his resolute advocacy of protective duties. He also took an active part in the adjustment of the Missouri Compromise, and in other great subjects of national concern. After a retirement of three years from public life, in consequence of the embarrassment of his private affairs, Clay was again returned to Congress in 1823 and was elected speaker of the House. When Daniel Webster presented his resolutions in behalf of the oppressed Greeks, he was ably seconded by Clay, who responded to the appeal of the great New England statesman, in an eloquent strain of sympathy with the benevolent cause. On the accession of John Quincy Adams to the presidency, Henry Clay was made secretary of state, and continued in that office until the election of Andrew Jackson as president in 1829. In 1831, Clay was elected as United States Senator from Kentucky, and being soon after nominated as a candidate for the presidency, he competed in 1832 with Andrew Jackson for that high office, but was defeated. In 1836 he was re-elected to the U. S. Senate, and served until 1842. In 1844 he was nominated by the whig party for the presidency in opposition to James K. Polk, the democratic candidate, and was again defeated. In 1849 he was elected senator of the United States, and made his presence remarkable by his support of the Compromise Act of 1850. His health now began to decline, and after a voyage to the West Indies for the improvement of his condition, he returned to Washington, where he died on the 29th June, 1852, at the age of 75 years.

CLAY, JOSEPH, a judge of the District Court of Georgia, was born in 1764 at Savannah, and elevated to the bench in 1796. He resigned his office in 1801, and in the year 1803 became a Baptist minister, first in Savannah and then in Boston, where he died in 1811.

CLAYTON, JOHN, a distinguished botanist, born in England but emigrated to America in 1705. He was the author of a learned work, entitled '*Flora Virginica*,' which was highly esteemed by Linnæus. Two volumes of MSS., on the botany of America, with plates, which he left at his decease, were destroyed by fire at New Kent during the war. He died in 1773, aged 87. He was an able contributor to the *Philosophical Transactions*.

CLAYTON, JOSHUA, governor of Delaware from 1793 to 1796, having previously been president from 1789 to the period of his election. He was chosen United States senator in 1798, and died the following year.

CLAYTON, ROBT., bishop of Clogher, author of an '*Introduction to the History of the Jews*,' &c., 1695-1758.

CLEANTHES, the pupil and successor of Zeno as chief of the Stoic philosophers, 3d cent. B.C.

CLEEF, JOHN VAN, a Fl. painter, 1646-1716.

CLEAVER, WM., bishop of St. Asaph, disting. as a Greek scholar and religious writer, died 1815.

CLEEVES, GEORGE, an early settler of Maine and deputy governor of Ligonis in 1643. He died about 1670, aged 90.

CLEGHORN, GEO., a Scotch phys., 1716-1787.

CLELAND, JAS., LL.D., a statis. wr., 1770-1840.

CLEMENCE OF HUNGARY, queen of France, married to Louis X. 1315, died 1328.

CLEMENT, the *first* of this name, bishop of Rome, generally allowed to be the same that St. Paul mentions as his fellow-laborer, died about 91.

CLEMENT II., pope, 1046-1047. CLEMENT III., promoter of the third crusade, 1187-91. CLEMENT

IV., concluded the pragmatic sanction with St. Louis, 1265-1268. CLEMENT V., the first who wore the triple mitre, and removed to Avignon, under the influence of Philip the Fair, 1305-1314. CLEMENT

VI., noted for his political activity, 1342-1352. CLEMENT VII., under whom Rome was besieged by the Constable of France, and by whom Henry VIII.

was excommunicated, 1523-1534. CLEMENT VIII., whose pontificate was distinguished by the elevation of Baronius, Bellarmine, Du Perron, and other eminent men to the rank of cardinals, 1592-1605.

CLEMENT IX., 1667-1669. CLEMENT X., 1670-1676. CLEMENT XI., by whom the condemnation of Jansenius was confirmed, and the bull 'Unigenitas' promulgated, 1700-1721. CLEMENT XII.,

1730-1740. CLEMENT XIII., noted for his political reverses, the loss of Avignon, &c., 1758-1768. CLEMENT XIV., distinguished by his enlightened policy, and for his Brief suppressing the Jesuits, who afterwards poisoned him, 1769-1774.

CLEMENT, FR., a learned Fr. monk, d. 1793.

CLEMENT, J. M. BER., a Fr. critic, 1742-1812.

CLEMENT, N., a French librarian, 1647-1712.

CLEMENT, TITUS FLAVIUS, was born toward the middle of the second century. In early life he was a pagan, and strongly addicted to philosophical pursuits. After travelling extensively he became a pupil of Pantaenus, master of a Christian academy at Alexandria. Here he became a Christian and a proselyte, and ultimately rose to be the head of this school of divinity, in which capacity he taught with great renown during the reign of Alexander Severus. About the year 202 he retired at length to avoid persecution, and after various wanderings died about A.D. 220. Clement was an Eclectic in philosophy, but with a very decided bias to Platonism. The besetting sin of his theology is a discursive habit of speculation, without regard to fixed principles, and the fault of his exegesis is his excessive love of allegory, which he indulges without scruple, and on every occasion. His books are valuable for their delineations and samples of contemporary literature and manners. His '*Paedagogus*,' in three books, contains good instructions to a young convert, and his '*Exhortatio ad Graecos*' has many striking and curious thoughts in it. But his best known work is his '*Stromata*' (patch-work) or Miscellany, which is a disorderly storehouse filled with useful and interesting information and anecdotes. One of his tracts 'On the Danger of Riches' has been translated into English, London, 1711. The best edition of his works is that of Potter, Oxford, 1715, 2 vols. folio. Some of his treatises have been lost, such as his '*Hypotyposes*' or commentaries. [J.E.]

CLEMENTI, MUZ., an Ital. pianist, 1752-1832.

CLEMENTI, PROSP., an It. sculptor, d. 1584.

CLEOBULUS, one of the seven Greek sages, and king of Rhodes, 6th century B.C.

CLEOMBROTUS, the *first* of the name, king of

Sparta, 480-479 B.C.; the *second*, 380-371; the *third*, dethroned by Leonidas, 259-239.

CLEOMENES, the *first* of the name, king of Sparta, 519-489 B.C.; the *second*, 371-309; the *third* put an end to his existence in prison, 238-219.

CLEOPATRA, the second wife of Philip of Macedon, after his death cruelly murdered, together with her son, by Olympias, the first wife of Philip, and mother of Alexander the Great.

CLEOPATRA, the daughter of Olympias and sister of Alexander the Great, queen of Epirus by her marriage with Alexander, her maternal uncle, 337; assass. 308 B.C.

CLEOPATRA, the celebrated queen of Egypt, was joint successor with her brother to her father Ptolemy Auletes, 52 B.C.; and being deprived of her share in the government, was re-established by Cæsar as sole sovereign, 47. Some fourteen years later several eastern provinces were added to her dominions by Anthony, and on the defeat of the latter at the battle of Actium she put herself to death, probably by the bite of an asp, B.C. 30.

CLEPHIS, a king of the Lombards, 573-575.

CLERFAYT, COUNT DE, a field marshal of Austria, dist. as com. in the Fr. war, 1733-1798.

CLERK, C., a fellow-voy. with Cook, 1741-79.

CLERK, J., a Scotch wr. on tactics, 1730-1812.

CLERKE, CAPTAIN EDWARD, commanded the ship Discovery in Cook's third voyage; on whose death he succeeded to the command of the expedition. In attempting to carry out the intentions of his late superior, he penetrated through Behring's Straits to lat. 70° 33', when, being stopped by a barrier of ice, he prepared to return home, but died of decline on reaching the harbor of Petro-paulski, in Kamtschatka. He had served first under Byron.

CLERMONT-GALLERANDE, C. G., a military officer and partisan of Louis XVIII., author of 'Memoirs, 1744-1823.

CLERMONT-TONNERRE, CARDINAL ANNE ANT. JULES DE, a deputy to the states-general in 1789, and strenuous opponent of the French ministry in 1829; author of a 'Journal' concerning the captivity of Louis XVI. in the temple, 1749-1830.

CLERSELLIER, C., a Cartesian phil., 1614-84.

CLEVELAND, J., a royal. and pol. wr., d. 1659.

CLEVELAND, HENRY R., an Am. writer, author of Life of Henry Hudson in Spark's American Biography, and editor of various classical works, was b. in Boston, d. at St. Louis, 1843, aged 34.

CLEVENGER, S. L. V., an Am. sculptor, died at sea, 1843.

CLIFFORD, G., a Dutch botanist, last century.

CLIFFORD, GEORGE, earl of Cumberland, one of Q. Elizabeth's most famous sea capt., 1558-1605.

CLIFTON, WILLIAM, an Am. satirical poet, author of the 'Chimriad, ridiculing the excesses of the French Revolution.' He was born in Philadelphia, in 1772, and died in 1799, aged 26.

CLINE, HENRY, F.R.S., a surgeon, d. 1827.

CLINT, GEORGE, an Eng. painter and engraver, 1770-1854.

CLINTON, CHARLES, Lieutenant-colonel, was b. in Longford, Ireland, in 1690, and emigrated to America in 1719. He settled in Ulster county, New York, and fought at the capture of Fort Frontenac, by Bradstreet. He died in 1773, leaving four children, of whom George was governor of New York and vice-president of the United States. William Charles, the ancestor of the Clinton family, in the time of Charles I. was a royalist, and fled for safety to the north of Ireland.

[Residence of De Witt Clinton at Maspeth, L. I.]

CLINTON, DE WITT, was the son of brigadier-general James Clinton, and born in Orange county, New York, in 1769. He was graduated at Columbia College, in 1786. He studied law under the Hon. Samuel Jones, became secretary to his uncle, the governor of New York, and was chosen to the Senate of New York in 1799. In 1802 he was appointed to the Senate of the United States, and was mayor of New York with the exception of two years from 1803 to 1815. He was elected governor of New York in 1817, and again in 1820. He declined renomination in 1822. In 1823 and 1824 he was president of the Board of Canal Commissioners, but being unjustly deprived of his office by the Legislature, was elected governor, with a majority of 16,000, and once more elected in 1826. He, however, died suddenly, before the expiration of his office, on the 11th February, 1828, of disease of the heart. The city and State of New York are greatly indebted to him for his patronage of literature, science and art, and his zeal and enterprise in internal improvements. While mayor of New York, the Historical Society and Academy of Arts were instituted, and the City Hall founded. In 1811 he published a discourse delivered before the Historical Society, and was the author of many other able literary and scientific papers.

CLINTON, GEORGE, governor of New York from 1743 to 1753, was the youngest son of the Earl of Lincoln. James De Laney, who was very popular during that period, occasioned him much trouble. On his return to England he became governor of Greenwich Hospital.

CLINTON, GEORGE, vice-president of the United States, was born in Ulster county, New York, in 1739. He served as lieutenant under his brother James at the capture of Frontenac, but afterwards betook himself to the study of the law. He was member of Congress in 1776, and voted for the Declaration of Independence, but was summoned to the army as brigadier-general before it was prepared for signature. In 1777 he was elected governor and at the same time lieutenant-governor of the State of New York, which latter office was, on his acceptance of the other, conferred upon Mr. Van Courtlandt. He continued governor during the next eighteen years, for which eventful period the history of his life is that of the State. He was again chosen governor after spending five years in private life, in 1801, and in 1804 became vice-president of the U. S. He died in Washington, in 1812, aged 72.

CLINTON, HENRY FYNES, an English classical historian, author of the *Fasti Hellenici*, and *Fasti Romani*, d. 1842, aged 72.

CLINTON, HENRY, SIR, son of George Clinton, the colonial governor of New York, was a major-general in the British army, and served in the Hanoverian and American wars. He fought bravely at Bunker Hill, and was soon afterwards sent, but without success, against New York and Charleston. In 1776 he defeated the Americans on Long Island, and captured New York, and the next year took Forts Clinton and Montgomery. In 1778, having succeeded Howe in command at Philadelphia, he was forced by Washington to retire, but captured Charleston, in 1779. His negotiations with Arnold for the surrender of West Point, which ended in the death of the gallant Andre, need not be here repeated. He was superseded by General Carleton in 1782, and died in 1795. He wrote a review of Stedman's History of the American War, and had some controversy with General Cornwallis on the same subject.

CLINTON, JAMES, brigadier-general, born in Ulster county, New York, 1736. With his father he served at Frontenac, in 1756, as captain, and commanded in 1763 the forces raised to protect Ulster and Orange counties against the Indians. He accompanied Montgomery to Quebec in 1775, and was appointed brigadier-general the following year. While his brother George was governor of New York, he was overpowered at Fort Clinton by the superior force under Sir Henry Clinton, and being severely wounded narrowly escaped with his life. He afterwards served against the Indians under Sullivan, in 1779, and was present at the surrender of Cornwallis. After the peace he occupied many distinguished civil stations, and died in 1812, aged 75.

CLISSON, OLIVIER DE, const. of Fr., 14th ct.

CLIVE, CATHERINE, an Irish actress, d. 1785.

CLIVE, ROBERT, born 29th Sept., 1725, was the son of a gentleman of good family, but small estate, near Market Drayton, in Shropshire. Robert was noted, in his boyhood, as a daring and unmanageable spirit; and at the age of eighteen was sent out to Madras as a writer in the Company's service—an appointment which was then regarded in a very different light to what it is now—and which Clive's friends looked on as providing for them a good riddance of a wild and unpromising youth. The scanty possessions of England in India were then menaced by the French, and their native allies; and, fortunately for Clive, he was soon called on, like other merchant-clerks in India, to turn soldier in self-defence. His mercantile employment had been, in the last degree, distasteful to him; and he had twice in one day, at Madras, attempted suicide, by snapping a loaded pistol at his own head. The pistol missed fire each time. Clive asked a friend, who came into the room soon afterwards, to fire the pistol out of the window; the pistol then went off. Satisfied thus that the weapon had been duly primed and loaded, Clive sprang up, exclaiming with an oath, 'I must be reserved for something great,' and gave up the idea of suicide. In 1747, three years after his arrival in India, he formally abandoned the mercantile profession, and took a captain's commission. He then rapidly distinguished himself, not only as a most daring, but as a most skilful leader; and showed pre-eminently the true characteristic of genius—the power of inspiring all whom he commanded with his own energy and resolution. In 1751 the French were besieging the important city of Trichinopoly; and Clive proposed to make a diver-

sion in its favor, by an expedition from Madras against Arcot. At the head of 300 sepoy and 200 Europeans, Clive surprised and captured Arcot; and then defended that place successfully against the hostile army, 10,000 strong, that speedily besieged him. Being joined at last by a body of friendly Mahrattas, Clive advanced against his enemies, completely defeated them, relieved Trichinopoly, and captured several places of importance, which had been in the hands of the French or their allies. In 1753 the state of Clive's health compelled him to return to England, where he was received with great honor. Both the king's ministers and the Company were now eager to employ him; and in 1755 he was sent out to India as lieutenant-colonel in the army, and governor of St. David's. He destroyed some nests of pirates on the Coromandel coast, and reached Madras on the 20th June, 1756. On that very day the English in Bengal experienced the heavy disaster of the capture of Calcutta by Surajah Dowlah, the savage who caused his prisoners to perish in the hideous agonies of the Black Hole. Clive sailed from Madras to the Hoogly to save the English power in Bengal from being utterly destroyed by Surajah and his French auxiliaries. He drove the enemy out of Calcutta, and a temporary treaty was made; but hostilities soon recommenced, and on the 23d June, 1757, Clive, with 3,000 men, only one-third of whom were Europeans, encountered and utterly routed the nabob's army of 50,000, in the ever-memorable battle of Plassey. This decisive victory secured for the English not only the mastery of Bengal, but the permanent ascendancy over the East. Clive gained other important military advantages over the European rivals, as well as over native enemies, and returned to England in 1760, loaded with wealth and glory. He was enthusiastically received, and created (by an Irish peerage) Lord Clive, baron of Plassey. In 1764 he was again sent out to India, where the affairs of England had fallen into confusion during his absence. Clive on this occasion had no opportunity of earning more military fame; but he honorably distinguished himself by his exertions in the more difficult and invidious duty of reforming the gross abuses that abounded in the Indian administration. This made him many enemies; and on his final return to England, in 1767, he became the object of incessant obloquy and attack in the public press, in the discussions at the India House, and ultimately in the House of Commons. Clive was, in fact, far from a faultless man. Throughout his career in the East, he *had*, in his negotiations and diplomatic dealings, acted on the maxim, that it was quite allowable to fight the cunning and faithless natives with their own weapons. He said, in his defence, that it was a matter of true policy and justice to deceive such villains. Acts of chicanery, and even of forgery, could thus be truly charged against Clive, which, in the judgment of many of the best of his countrymen, no amount of success could justify. But Clive's fearless defence of himself in parliament was very effective. The magnitude of his services was undeniable; and the House of Commons, after a long debate on 23d May, 1773, refused to vote that Lord Clive had abused his power, and came to the resolution, that 'Lord Clive has rendered great and meritorious services to his country.' But though thus honorably acquitted in parliament, Clive's haughty spirit suffered deeply from the attacks aimed at him; his health also was impaired, and he aggravated fearfully both his mental and physical prostration by the immoderate use of opium. Robert Lord Clive, baron of Plassey,

died by his own hand, on the 22d November, 1774.

CLODIUS, a Roman tribune, killed 51 B.C.

CLODOMIR, king of Orleans, 523, killed 524.

CLONCARRY, LORD, an Irish nobleman, who in early life was identified with Emmett, Curran, Grattan, and others, in the popular movement, and became one of the 'United Irishmen,' of his native country. He was the author of a book of political memoirs, entitled 'Personal Recollections of his life and times,' died 1853, aged 80.

CLOOTS, JEAN BAPTISTE DU VAL DE GRACE, better known as Anacharsis Cloots, the classical prenom being adopted by him from Greek history as a substitute for his baptismal names, which he rejected as having a superstitious origin, was a Prussian baron, notorious for his violence in conjunction with the Chaumettes and Héberts of the French revolution, and for his intense hatred of any natural or revealed religion. He was a political fanatic of the blackest dye, and openly proclaimed himself 'the personal enemy of Jesus Christ.' This sentence, from his book entitled 'De la République Universelle,' expresses at once the character of the man and the tendency of his doctrines: 'The people is the sovereign and God of the world; France is centre of the People-God; only fools believe in any other God or Supreme Being.' His particular monomania was a universal republic, of which he professed himself the ambassador, with the title of 'Orator of the Human Race,' and in this character he paraded his followers of all nations, or vagabonds attired to represent them, before the bar of the national assembly. He had visited the greater part of Europe, and expended a considerable fortune to propagate his opinions, for which he at last found a platform in the national convention, where he was sent by the department of the Oise, 1792. He is the author of several works published between 1780 and 1793, the last entitled 'Base Constitutionnelle de la République du Genre Humain.' He was included in the accusation of St. Just, and executed with Chaumette and others, 1794. [E.R.]

CLOSS, J. B., a Ger. phys. and poet, 1735-87.

CLOSTERMAN, JOHN, a Ger. paint., d. 1713.

CLOTAIRE, the *first* of this name, king of France, 497-558; the *second*, 584-628; the *third*, king of Burgundy, d. 1670; the *fourth*, nominal king under Charles Martel, 717-720.

CLUTTERBUCK, R., an Eng. hist., 1772-1831.

CLYMER, GEORGE, one of the signers of the Am. Declaration of Independence, was born in Philadelphia, in 1739. He was three times elected to Congress, and was president of the Bank of Philadelphia, and of the Academy of Fine Arts. He died in 1813, aged 73.

COBB, EBENEZER, born in Plymouth, Mass., 1694, and died in 1801, aged 107. Like all persons remarkable for longevity, his diet was very simple. He formed a connecting link between the establishment of the republic and the foundation of Plymouth colony, having been for ten years the contemporary of Peregrine White, who was born on board the Mayflower, while in the harbor of Cape Cod, in 1620.

COBB, JAMES, an Engl. dramatist, 1756-1818.

COBB, SAMUEL, an English poet, died 1713.

[Wm. Cobbett.]

COBBET, WILLIAM, a self-taught man, who obtained great celebrity and influence during the early part of the nineteenth century, by his genius, energy, and waywardness, is generally said to have been born in the year 1762. His father was a farmer, who kept a small public house in Surrey. William was brought up to that stolid ignorance which has long been the general inheritance of the English peasant; but his was not a temper to endure such bondage, and from an early age he greedily acquired knowledge, stamping all he obtained with that mark of individuality which the self-learner sets on his acquisitions. Fate made him for some time engrossing clerk to an attorney, a pursuit which his soul abhorred. It appears to have been his loathing towards the drudgery of the desk that drove him to enlist in an infantry regiment destined for American service. He became a testimony to the small amount which the routine duties of a soldier can take from the available services of an active mind, for in his leisure hours he gave himself an education such as few hard-working scholastically-taught men possess, and performed his duty so punctually and effectively that he was immediately raised over the heads of many seniors to the rank of sergeant-major. In his service in America he met the young girl who afterwards became his wife, and his conduct towards her throughout, as well as his domestic virtues generally, should be balanced against his public failings. In the year 1791 he desired his discharge from the army and obtained it on the ground of good conduct. He brought a charge of peculation against four officers under whom he had served, and when a large body of witnesses were in attendance, and other preparations were made for the trial, he abandoned it by suddenly disappearing, leaving it still a question whether he acted under caprice or settled design. From this

period to the day of his death, he led a restless life as a political writer. To enumerate his works by their mere names, would fill more space than can be afforded here for his biography. The work for which he was chiefly noted in his day was the 'Weekly Register,' which kept him for thirty-three years in the eye of the public. But his most meritorious service to literature was in his English and French Grammar; while his best gift to the humbler classes, whose cause he always professed, was his 'Cottage Economy.' He was a signal exception to the uneventful nature of literary lives, for his pen was ever exciting new sources of conflict, and the prosecutions he underwent from men of all parties, make in themselves an incidental history. It may be said that he never supported an opinion which he did not live to attack, or praised a man whom he did not live to censure; and in his old age he seemed to be returning to those high Tory opinions of his younger years, which he employed his middle age in lashing with savage scorn. He had to a wonderful degree the capacity of not only advocating a particular side in a question, but of making whatever he took up seem vitally important, while every thing of a different character was childish or foolish. The reader of the greater portion of his works would pronounce his a mind capable of appreciating merely the material elements of existence, and entirely destitute of idealism, poetic dreaming, or enthusiasm. But this appearance is mainly owing to his perverse censures of all his fellow-workers in the intellectual field. He was in reality a wayward victim to the influence of fancy, though it took its character from his energetic nature, and there are few such instances of a perverse idolatry recorded in later times, as he committed when he brought the bones of Thomas Paine to Britain to be consecrated by his homage, like the relics of a saint. He had made several attempts to enter parliament, but did not succeed until after the passing of the Reform Act, when in 1832 he was returned for Oldham. In the House of Commons, where only wonderful eloquence covers such defects as caprice and factiousness, he found his level as a senator, and few members had less influence. To the last, however, his capacity was the object of high admiration. Yet he left nothing behind him indicative of a permanent influence on the opinions or conduct of mankind. He died on the 18th of June, 1835. [J.H.B.]

COBBETT, THOMAS, a controversial writer and minister in New England; born in the county of Berks, in England, 1608. He came to America in 1637. He was author of a work on infant baptism, and of another on the powers of the civil magistrate in matters of religion. He became pastor in Ipswich, and died in 1685, aged 77.

COBDEN, EDWARD, an English divine, died 1764.

COBENTZEL, CHARLES, Count De, an Austrian diplomatist and governor of the low countries, founder of the Academy of Sciences at Brussels, 1712-1770. LOUIS, the son and successor to the title of the preceding, a distinguished diplomatist, 1753-1808. JOHN-PHILLIP, cousin of Louis, a diplomatist and vice-chancellor of Austria, 1741-1810.

COBURG, FREDERICK JOSIAH, duke of Saxe, an Austrian general in the coalition against France, dtd. by Moreau and Jourdan, 1737-1815.

COCCEIUS, AUCTUS, a Roman architect, 1st c. B.C.

COCCEIUS, or COOK, JOHN, an eminent Hebrew prof., and teacher of theolo. at Leyden, 1603-1669.

CO-CHEOU-KING, a Chinese astron., 13th ct.

COCHLÆUS, JOHN, a famous opponent of the reformation, especially of Luther, 1479-1552.

COCHRAN, WM., a Scotch artist, 1738-1785.

COCHRAN, JOHN, M.D., Director General of the Hospitals of the United States in 1781; born in 1730, and died in 1807. Washington had the highest confidence in him, and as an army-surgeon he performed inestimable service during the war. He married the sister of Gen. Schuyler.

COCHRANE, SIR ALEX. FORESTER INGLIS, an English admiral, distinguished in the wars with America and France, especially for an unequal combat with five French vessels in Chesapeake Bay, 1758-1832.

COCHRANE, ARCHIBALD, earl of Dundonald, distinguished for his useful discoveries in chemistry, 1749-1831.

COCHRANE, CAPTAIN JOHN DUNDAS, R.N., an eccentric traveller who performed a pedestrian journey through France and the peninsula; and afterwards through Russia and Siberia, as far as Petropaulski, in Kamtschatka; whence, having married a young lady of the country, he returned to England. His travels were published in 1824. Having engaged in mining enterprises, he went to Colombia, where he d. when contemplating a journey on foot through the whole of S. America. [J.B.]

COCKBURN, CATHARINE, formerly Miss Trotter, a dramatic, philosophical, and religious writer, 1679-1749.

COCKBURN, SIR GEORGE, an English admiral, who, in 1814, laid waste the defenceless banks of the Potomac, and was guilty of the vandal act of burning Washington to the ground. D. 1853, aged 81.

COCKBURN, HENRY THOMAS, Lord, a Scotch judge, and author of the life of Jeffrey. D. 1854, aged 75.

COCKER, EDWARD, an arithmet., 1631-1715.

COCKTON, HENRY, an English novelist, author of 'Valentine Vox.' Died 1853, aged 45.

COCLES, BARTHOLOMEW DELLA ROCCA, an Italian physician and physiognomist, 1467-1504.

CODDINGTON, WILLIAM, the founder of the colony of Rhode Island, was born in England, and arrived in Massachusetts in 1630. He remained in Boston for several years, but not being able to agree with the authorities of the colony, he removed in 1638 to Aquetneck or Rhode Island, where he founded a colony to be governed 'by the laws of the Lord Jesus Christ.' It was soon found necessary to abandon this vague scheme, and in 1640 he himself was chosen governor, and in 1647 aided in the formation of a regular body of laws. He was unable to secure the reception of Rhode Island into the colonial confederacy. In 1674 and 1675 he was again elected governor. Died in 1678, aged 77.

CODRIKA, PANAGIOTI, a Greek diplomatist and man of letters, born 1660, died in Paris, 1830.

CODRINGTON, CHRISTOPHER, distinguished for his noble bequest of £10,000 in aid of All-Souls College, Oxford, at which he was educated, and for the gift of his estate in the West Indies to the Venerable Society for the Propagation of the Gospel. He was the author of some Latin poems, published in the *Musæ Anglicanæ*, and of some commendatory lines to Garth on the publication of the 'Dispensary.'

CODRINGTON, SIR EDWARD, an English admiral, commanded the British fleet in the famous battle of Navarino, October 20, 1827. Died 1851, aged 81.

CODRUS, the last k. of Athens, 1160-1132, B.C.

COEUR, JAMES, a wealthy French merchant, who distinguished himself in the political history of Charles VII., 1400-1461.

COFFEY, CH., an Irish dramatist, died 1745.

COFFIN, NATHANIEL, M.D., the first president of the Maine Medical Society, was born in 1744, at Portland, Maine—where, after completing his medical studies in London, he spent a long professional life, and died in 1826, aged 82.

COFFIN, ROBT. S., an American poet, known as the Boston Bard, born in 1797—lived a worthless, intemperate life, and died in extreme destitution, in 1827.

COFFINHALD, J. B., vice-president of the revolutionary tribunal, shared in the fall of Robespierre, executed 1794.

COGAN, THOMAS, an English physician and philosophical writer, 1736-1818. A physician and medical writer of the same name died 1607.

COGGESHALL, or COXEAL, JOHN, governor of Rhode Island in 1647. Was exiled from Massachusetts in 1638, and became first president of Rhode Island, and governor after Mr. Coddington.

COGGESHALLE, RALPH, an English annalist, 13th century.

COGSWELL, MASON FITCH, M.D., a distinguished physician and surgeon of Connecticut, born in 1761, and graduated at Yale College in 1780. He had a daughter deaf and dumb, and formed the design of establishing an asylum for those thus afflicted, in which Mr. Gallaudet's institution at Hartford originated. He was for ten years president of the Connecticut Medical Society, to which office he was elected in 1812. He died in 1830, aged 69.

COGSWELL, WILLIAM, a theological writer of New Hampshire, born in 1788. He was professor at Dartmouth College, president of the Gilmantic Theological Seminary, and also secretary of the Education Society. He died in 1830.

COHORN, MENNO, Baron De, a military officer and engineer, called the Dutch Vauban, 1641-1704.

COIJNET, ISAAC, a French musician, 1736-1811.

COKEYNE, SIR ASTON, a dramatic poet, 17th century.

COKE, SIR EDWARD, a great practical and institutional lawyer, was born at Mileham in the county of Norfolk, on 1st February, 1552. He was called to the bar on the 20th April, 1578. Next year he began his career of fame and practice by being appointed recorder of Lyons Inn. He was appointed recorder of Norwich in 1586, and of London in 1592. He had not, however, held the office for a year, when he resigned it on being appointed solicitor-general. In 1594 he became attorney-general. He had in such difficult times much very serious and laborious business to transact as a crown lawyer. He has been subject not unjustly to reproach for his overbearing and insulting demeanor to the unfortunate victims of the crown prosecutions, and especially towards Sir Walter Raleigh. He was a man of haughty manners, severe spirit, and irritable temper, and he had little toleration for any thing standing in the path of what he deemed his duty. But his severity was not dictated by subserviency to the court, and no influence in the corrupt reign of James could prompt him to go out of the line of his duty. He was made chief justice of the Common Pleas in 1606, and of the King's Bench in 1613. Here he exerted himself sternly in the investigation of the horrible system of iniquity which Somerset, the court favorite, concentrated round him, and showed a determination which not only overawed the parasites,

but intimidated James himself. In 1616 a systematic attack, in which Bacon had the baseness to aid, was made on the resolute chief justice, and he was dismissed. He was partially restored to favor, but was again subject to attacks, which very naturally disposed him to put his great acquirements at the disposal of the constitutional opposition, which arising in the reign of James, completed its work in that of Charles. He owed much of his success in early life to two marriages—the one bringing fortune, the other connection. After spending his old age in wealthy retirement, he died on 3d September, 1634. His celebrated 'Institute,' which grew out of a commentary on 'Littleton's Treatise on Tenures,' has made him the great oracle of English law. His expressions, however antiquated they may appear, are deemed sacred, and are always embodied where their substance has not been superseded by changes of the law, in the works of subsequent commentators. [J.H.B.]

COKE, THOMAS, a clergyman of the church of England, born in 1747, and educated at Oxford. He became an adherent of John Wesley, and visited New York in 1784. He assumed the title of superintendent of the Methodists, which was gradually changed into that of bishop; but after the consecration of Bishops White and Seabury, he entered into a correspondence with the former, hoping to obtain at their hands reconsecration for himself and Mr. Asbury, and reordination for the whole body of Methodist ministers, but as the scheme contemplated that the Methodists should continue a separate organization under the government of their existing superintendents, the proposition was not acceded to. In this singular correspondence Dr. Coke expressed his fears that he had gone beyond the intentions of Wesley, which Charles Wesley afterwards assured Bishop White was the case. Dr. Coke died in 1814, on his passage to Ceylon.

COLARDEAN, C. P., a Fr. poet, 1732–1776.

COLBATCH, JOHN, an Eng. pharmacop., 17th ct.

COLBERT, JEAN BAPTISTE, a financial statesman, was born at Rheims in 1619. His immediate origin was somewhat obscure. It is disputed whether his father was a wine merchant or a member of the council of state, but he met the prejudices of the noblesse against his rise to power by professing to belong to an ancient Scottish family. The recommendation to employ him was a legacy of Cardinal Mazarin to Louis XIV., and in 1661 he was made comptroller-general of finances. Using the great power either for good or evil belonging to this high office, he redeemed much money to the state by mercilessly scrutinizing the proceedings and liabilities of the farmers-general, and came to an adjustment with the national creditors. He extended the colonial power of France, carried on great public works, created a navy, and fostered into existence several manufactures. In this last operation, as his administration was very prosperous, he seemed to justify the system of government protection and interference with trade, but it was the spending of the resources which his vigorous financial system put at his disposal that created the appearance of prosperity, and subsequent reaction showed that successful trade could not be artificially created. He founded the Academies of Inscriptions, of Sciences, and of Architecture. He died in 1683, neglected by the court, and suspected by the people, who charged him with acquiring his great fortune by unworthy means. [J.H.B.]

COLBURN, ZERA, a native of Vermont, born at Cabot in 1804, died in 1840. He attracted public attention on both sides of the Atlantic by his natural

power of solving in an instant the most intricate arithmetical problems. After an abortive effort to qualify himself for the stage, he became a Methodist preacher.

COLBURN, WARREN, a writer of educational books; author of a treatise on algebra, arithmetic, &c. Died 1833, aged 40.

COLCHESTER, LORD. See ABBOTT, CHARLES.

COLCHEN, VICTOR, Count De, a French diplomatist and senator, 1752–1830.

COLDEN, CADWALLADER, a Scotch physician, medical author, and naturalist, 1688–1776.

COLDEN, CADWALLADER, Lieut.-Governor of New York, was born in Scotland in 1688, and emigrated to America in 1708, after graduating at the University of Edinburgh. Though devoted to the pursuit of medicine, and the study of botany and astronomy, on all of which subjects he was a voluminous writer, circumstances induced him to turn his chief attention to political affairs. He was successively surveyor-general of the colony of New York, master in chancery, king's council, and president of the council. In 1760 he retired to Newburg on the Hudson, where he had a grant of land, but the next year was appointed lieut.-governor, and continued in that office until his death, in 1776. He was a bold, energetic, and ardent adherent of the British government, and rendered himself both conspicuous and unpopular by endeavoring to enforce the stamp act. He published a history of the Indians called the Five Nations, of the Prevalent Diseases of America, besides many papers and essays upon scientific subjects, respecting which he was a constant correspondent of Linnæus, Gronovius, and Dr. Franklin. He imagined himself to have discovered the cause of gravitation, and published a learned treatise in 1751 on the subject. The American Philosophical Society was first proposed by him.

COLE, SIR CHR., a naval com., 1771–1836.

COLE, SIR G. L., a penins. officer, 1772–1842.

COLE, HENRY, a distinguished Roman Catholic divine, died 1519.

COLE, WILLIAM, an English herbalist, died 1662.

COLE, THOMAS, a distinguished landscape and imaginative painter, whose exquisite serial pictures entitled the 'Course of Empire,' the 'Voyage of Life,' and 'Past and Present,' have placed him in the foremost rank of his profession in modern times, was a native of England, where he was born while his parents, who had previously lived in the United States, were on a visit to that country. He was brought in childhood to America, and after a brief stay in Philadelphia was carried to Ohio. His intense delight in beautiful scenery displayed itself at an early age, and with the intuition of genius he began while a child to cultivate the art by which he was to be immortalized. For some time he made his rude sketches almost unaided, when Providence threw him in the way of a travelling painter named Stein, who, struck with the indications of genius he exhibited, left with him a work on painting which enabled him to pursue his studies in a more scientific manner. He now determined to imitate his benefactor, and led for some time a rambling life, beguiling his way like Goldsmith with his flute, making sketches, feasting his eye with the magnificence of western scenery, and obtaining a precarious support by portrait painting. At last he found his way to Philadelphia about the time of Lafayette's visit to that city, and was employed to paint some transparencies for the occasion. From thence he went to N. York and rejoined his relatives, who had removed there from Ohio in reduced circumstances. He

practised his art in obscurity for some time with little profit, but his genius and the kind patronage of his friends at length triumphed over these incipient difficulties, and he was enabled to visit Italy and improve himself by the sights and study of its treasures. His chief productions were painted after his return to America. He fixed his residence at Catskill, on the Hudson, the magnificent scenery surrounding which afforded endless materials for his pencil and incentives to his genius. He died there much lamented in 1847.

COLE, JAMES L., an American writer, who for many years under the name of Adrian wrote in the *New York Statesman*. His compositions were chiefly in verse and of a satirical character. He died at Canandaigua, N. Y., in 1823, aged 24.

COLEBROOKE, H. T., an English Orientalist, 1765–1837.

COLEONI, B., an Italian condottiere, d. 1475.

COLERIDGE, HARTLEY, son of Samuel Taylor Coleridge, remarkable for his original talents as a poet and essayist, and for his unhappy habits, 1797–1849.

COLERIDGE, HENRY NELSON, cousin of the preceding, a distinguished lawyer and classical scholar, died 1843.

[Coleridge's Cottage.]

COLERIDGE, SAMUEL TAYLOR, the youngest son of the vicar of St. Mary Ottery in Devonshire, was born at that place in October 1772. Left an orphan in his ninth year, he was educated for seven years at Christ's Hospital, where Charles Lamb was his fellow-pupil; and in 1791 he became student of Jesus College, Cambridge. He had already devoured numberless books of all kinds, and especially attached himself in boyhood to metaphysics and theology, and had been inoculated with a love for poetry by the sonnets of Bowles. At the university his reading was great; but it was desultory and irregular, and hardly at all directed to the sciences which led to academical distinction. In 1793, vexed by debts, he went to London, and enlisted in a dragoon regiment, from which he was released after four months, and returned to Cambridge for another term or two. Now, however, his theological creed had become unitarian; and he at once gave up all views towards academical preferment. In 1794 was published the drama called 'The Fall of Robespierre,' of which the first act was Coleridge's, and the other two were Southey's; and the two poets, then entertaining, in common, many of those extreme opinions which they afterwards abandoned so thoroughly, occupied themselves at Bristol in planning a new social community, which they were to found in the United States. At this town and elsewhere Coleridge

delivered courses of public lectures (some of which he published), dealing both with politics and with religion; and he also preached in unitarian pulpits. In 1795 he married Miss Fricker, whose sister soon afterwards became Mrs. Southey. In this year also he became acquainted with Wordsworth.—In 1796 he published, without success of any kind, ten numbers of a political miscellany called 'The Watchman;' and in the same year appeared his first volume of 'Juvenile Poems,' to which, in a second edition the years afterwards, other pieces were added. His genius, however, was not exhibited in its strength till the summer of 1798, when Wordsworth's famous volume of 'Lyrical Ballads' appeared. It contained Coleridge's 'Ancient Mariner,' 'Love,' 'The Nightingale,' and 'The Foster-mother's Tale.' The first part of 'Christabel' was written in 1797, the second in 1800; but both parts were for a good many years known only to a few literary men. The tragedy of 'Remorse' also was written in 1797; though being despised by Sheridan, it did not find its way either to the stage or to the press. It is thus a fact, one of the many singular ones in the history of this remarkable man, that almost all the poems on which his celebrity rests, were composed in one short period, not extending much in either direction beyond his twenty-fifth year. We of this generation, whose youth received its poetic lessons from a school in which Coleridge is one of the masters, have difficulty in apprehending aright either the real importance of Coleridge's poetry, or the reasons which naturally exposed it for a time to extremes of dislike or admiration. It bears hardly any traces of those doctrines, in obedience to which Wordsworth worked so doggedly; unless such doctrines dictated to him the outline of 'The Ancient Mariner.' Indeed he never, either then or afterwards, was guided in poetical composition by any deliberately-conceived theory. In poetry, as in philosophy, his thinking was fine and subtle, but neither systematic, nor consistent, nor clear. But in imagery, as in thought, his poetic originality is marvellous; his pictures float in an atmosphere romantically and ideally beautiful; and his tone of sentiment varies from an imaginative rapture to solemn or intense tenderness. 'Christabel,' a poet's hazy dream of loveliness, suggested much both in matter and in versification to Scott, who admirably owned his obligations: it and others of his poems prompted more than any other works to the later poets of the time; they were the prototypes of that visionary beauty which was elaborated by Keats and Shelley; and none owed more to them than Byron, who professed to despise them.—Even before all these fine poems had been written, the poet's worldly helplessness became but too evident. Scheme after scheme failed in securing to him the means of livelihood; and among these was a proposal by his generous friend Mr. Poole to procure an annuity for his support. In 1798 the munificence of Mr. Wedgwood enabled him to reside for more than a year in Germany; an event which opened to him a new world of thought, and modified essentially the whole subsequent history of his intellect. On his return to England he resumed an engagement he had already formed for contributing political articles and poems to the *Morning Post* newspaper, which was followed, some years later, by similar employment in the *Courier*. But notwithstanding the acknowledged ability of his essays, he was neither practical nor industrious enough to be a useful newspaper writer. He resided chiefly, for a considerable time, in the Lake district, near Southey and Wordsworth; and for fifteen months in 1804 and

1805 he made his last attempt as a man of business, by acting as secretary to Sir Alexander Ball, the governor of Malta.—His noble translation or paraphrase of Schiller's 'Wallenstein' appeared in 1800. In 1809 and 1810 he wrote and published at Grasmere, in 27 numbers, the periodical called 'The Friend,' which, though undigested and ill calculated for popularity (like all his prose works), contains much both of deep speculation and of fine criticism. In 1813 'Remorse' was acted with much success at Drury Lane; and 'Christabel' was published in 1816. In that year and the next appeared the two 'Lay Sermons;' and 1817 produced both the dramatic poem 'Zapolya,' the poems entitled 'Sibylline Leaves,' and the series of essays called the 'Biographia Literaria.' In the last of these works he gave his earliest exposition of those philosophical opinions which he had formed since his return from the continent, deriving his groundwork mainly from the German thinkers who had written since Kant. His metaphysical system, here presented in its speculative aspect, is in substance identical with the 'Natur-philosophie' of Schelling; although in many points of detail there is much of originality and acuteness both of thinking and illustration. The dreamy indistinctness which, now and ever after, hung about the philosophy of Coleridge, was owing, doubtless, in part, to the difficulty of the problems with which, in emulation of his German models, he continually ventured to grapple. Much of it, however, arose from the native character of his own mind, and from that tendency towards excursive musing which had become habitual with him. The borrowings from Schelling and others which he made so freely in the 'Biographia,' were repeated, Wilhelm Schlegel being now the leader, in a course of Lectures on Literature which he delivered in London in 1818. He had lectured previously; but this is the only course which has been preserved, and even it only in the shape of fragmentary notes.—Some time before this he had found a quiet and friendly home, in which were spent the last eighteen years of his life. It was in the house of Mr. Gillman, surgeon at Highgate, where he died in July, 1834. There both mind and body were restored, as far as it was possible, from the excitement and ill health which had been caused by the use of opium, resorted to at first as a palliative of illness, but afterwards taken habitually. There, also, in the close vicinity of London, Coleridge, one of the most striking and eloquent of talkers, drew round him attentive listeners to his meditative harangues, and had his words recorded by hands as reverent as those that had chronicled the sayings of Johnson. Some of the fruits were published as his 'Table-Talk.' The principal aim of his thoughts in those later years was the construction of a Philosophy of Religion, bearing a spiritual and mystical cast, and quite alien from the opinions of his youth; and to this point tend, more or less directly, almost all his works of that period. In 1825 appeared the 'Aids to Reflection;' in 1830 the work 'On the Constitution of the Church and State;' extracts from his note-books, with the lectures of 1818, and a good many poems, made up four volumes of his 'Literary Remains,' published in 1836–39; and in 1840 was printed his short treatise on the inspiration of the Scriptures, entitled 'Confessions of an Inquiring Spirit.' [W.S.]

COLEMAN, WILLIAM, editor of the New York Evening Post, a zealous adherent of the principles of Alex. Hamilton, died in 1829, aged 63.

COLERIDGE, SARAH, the only daughter of Coleridge the poet, and widow of her cousin Henry Nel-

son Coleridge, d. 1852. Her notes and illustrations to her father's 'Literary Remains,' show great vigor of intellect and a remarkable appreciation of Coleridge's subtle metaphysical inquiries.

COLIGNI, GASPARD DE, marshal of France, commander at the battle of Marignano, died 1522. ODET, his son, cardinal archbishop of Toulouse, converted to protestantism, poisoned by his valet, 1515–1571. GASPARD, another son, celebrated as leader of the protestants and opponent of Guise, and one of the first victims of St. Bartholomew, 1517–1572. FRANCOIS DANDELLOT, a younger brother, also a protestant leader and general, 1511–1569. GASPARD, son of Francois, marshal of France, 1584–1646. GASPARD, son of the preceding, lieutenant-general in the royal army, whose son was the last of the Colignis, 1605–1639.

COLIGNI, JOHN DE, descended from another branch, a lieutenant-general, author of 'Memoirs,' d. 1686.

COLIGNI, HENRIETTA, a Fr. poetess, d. 1673.

COLLAMORE, JOHN, born in Ireland 1715, died in Kensington, New Hampshire, 1825, aged 110. His hair from silver white regained its original color before his death.

COLLATINUS, LUCIUS TARQUINIUS, nephew of Tarquin, and husb. of Lucretia, consul 509 B.C.

COLLE, C., a French dramatic wr., 1709–1783.

COLLETON, JAMES, governor of South Carolina. His administration, which was very unpopular and ended in his being expelled from the colony, lasted from 1686 to 1690. The difficulties principally arose from his attempt to alter the constitution and diminish the privileges of the church.

COLLIER, ARTHUR, an original and curious writer, born in 1680, died in 1732. In 1713 he published his singular work 'Clavis Universalis'—a book in remarkable analogy with the writings of Berkeley. It is worthy of attention.

COLLIER, JEREMIAH, one of the English non-jurors of the revolution of 1688, celebrated for his attack on the immorality of the stage, 1650–1726.

COLLIN, HENRY DE, a Ger. dram., 1772–1811.

COLLIN, H. J., a German med. wr., d. 1784.

COLLIN D'HARLEVILLE, J. F., a French comic poet and mem. of the Institute, 1755–1806.

COLLINGWOOD, CUTHBERT, Admiral Lord, distinguished at the blockade of Toulon, the battle of Cape St. Vincent, the blockade of Brest, and especially at Trafalgar, where he succeeded to the command on the fall of Nelson, 1748–1810.

COLLINGWOOD, ED., a naval officer, d. 1835.

COLLINO, IGNATUS, an It. sculp., 1724–1793.

COLLINS, ARTH., a genealog. wr., 1682–1760.

COLLINS, J. an English geometr., 1624–1683.

COLLINS, JOHN ANTHONY, born 1676, died in 1729; a daring freethinker, and a friend of Locke. He attached himself to the most objectionable part of Locke's system, denying human liberty, and of course impugning immortality. His writings do not contain much that can interest the student now.—He was one of the adversaries of Dr. Clarke.

COLLINS, JOHN, governor of Rhode Island, and the father-in-law of Dr. John Warren, of Boston. He was governor from 1786 to 1789, and died in 1795, aged 78.

COLLINS, SAMUEL, an English phys., 17th c.

COLLINS, WM., a disting. artist, 1787–1847.

COLLINS, WILLIAM, the most interesting of all the minor poets of England, was born at Chichester, in 1720, and died there in the care of his sister, 1756. He was the son of a respectable tradesman of that city, and was educated at Winchester and Oxford.

[Collins's Monument in Chichester Cathedral.]

Before leaving the university he published the 'Oriental Eclogues,' along with an epistle to Sir Thomas Hanmer on his edition of Shakspeare. In 1744 he came to London as a literary adventurer, and about two years afterwards published his 'Odes,' and made the acquaintance of Dr. Johnson, who held him in high esteem. His life in the metropolis seems to have been irregular, and until the death of an uncle who left him a legacy of £2,000, was one of continual hardship. His conduct to his publishers on the receipt of this little fortune was most honorable, his first use of it being to repay the losses they had sustained by rating his genius more highly than the unappreciating public. Unhappily the seeds of disease and occasional insanity had been too deeply sown in his former abject condition to be eradicated, even by the alteration of climate and the scenes of other lands, and after a short sojourn in France, he passed through the doors of a lunatic asylum to his early home. The tribute paid to his memory by Dr. Johnson is too long to cite here, but some passages of it must not be omitted:—'The appearance of Collins,' he says, 'was decent and manly; his knowledge considerable, his views extensive, his conversation elegant, and his disposition cheerful. He was a man of extensive literature, and of vigorous faculties. He was acquainted not only with the learned tongues, but with the Italian, French, and Spanish languages. . . . His morals were pure, and his opinions pious: in a long continuance of poverty and long habits of dissipation, it cannot be expected that any character should be exactly uniform. There is a degree of want by which the freedom of agency is almost destroyed; and long associations with fortuitous companions will at last relax the strictness of truth, and abase the fervor of sincerity. That this man, wise and virtuous as he was, passed always unentangled through the snares of life, it would be prejudice and temerity to affirm; but it may be said that at least he preserved the source of action unpolluted, that his principles were never shaken, that his distinctions of right and wrong were never confounded, and that his faults had nothing of malignity or design.' With regard to his poetical genius, there can be no hesitation in pronouncing the Odes of William Collins to be unsurpassed by any thing of the same species of composition in the English language, and that to the 'Passions' is a perfect masterpiece of poetical description. The Ori-

ental Eclogues are exquisite portraiture of natural feeling, and, to do them full justice, perfect cabinet pictures of Eastern scenery. [E.R.]

COLLINSON, PETER, an English naturalist and antiquarian, 1694–1768.

COLLOT D'HERBOIS, JEAN MARIE, known for some twenty years previous to the French revolution as a dramatic author and actor, and afterwards as a sanguinary Jacobin, was born at Paris 1750, and commenced his political career as a club orator, and author of the famous 'Almanack of Father Gerard,' which raised him into such notoriety that he was sent to the national convention by the department of the Seine 1792. His first act was to propose a decree declaring the abolition of royalty, and ever after his voice was one of the most influential in the Jacobin Club, the Committee of Public Safety, and the convention, and was always raised in favor of the most violent measures. He was a man of drunken, debauched habits, but had the advantage of a fine figure and commanding voice. His audacity and hardness of heart pointed him out as a proper agent for the punishment of the Lyonnese, after the insurrection of that city and its conquest by the army of the republic. His colleague in effecting these reprisals was the notorious Fouché. Finding the guillotine somewhat formal and tardy in its vengeance, they collected their prisoners together and disposed of them by fusillade. Collot himself admitted, and defended the act, that on one occasion sixty prisoners were killed at a blow by cannonading. It would be difficult to find a redeeming trait in his character, which may be summed up as that of a cruel unprincipled adventurer, in whose estimation the scenes in which he acted involved no higher responsibility than those of his own dramas. The tragical reality to him and his party were their fears of Robespierre, to whose fall Collot contributed as president of the convention on the night preceding the 9th Thermidor. He was among the sansculottes scoundrels transported to Cayenne in 1795, where he died in horrible and most appropriate torments through drinking a bottle of brandy when suffering from the yellow fever. COLLYER, JOSEPH, an Engl. transl., d. 1776.

COLLYER, JOSEPH, an Engl. engrv. 1748–1827.

COLLYER, WM. BENGO, an English congregational divine and religious writer, author of 'Lectures on Scripture Facts,' &c. Died 1854, aged 72.

COLMAN, GEORGE, was born about 1733, at Florence, where his father was then the British minister. While a student at Oxford he began in 1754 to publish, with Bonnel Thornton, the series of periodical essays called 'The Connoisseur.' He was afterwards called to the bar, but never prosecuted the profession, and was speedily immersed in other pursuits. In 1767 he became a joint lessee of Covent Garden Theatre, and was for some time the acting manager; and in 1777 he succeeded Foote in the Haymarket Theatre, which he managed till palsy, followed by mental imbecility, unfitted him for all exertion. He died in 1794. Besides a good translation of Terence in blank verse, and a translation and commentary on Horace's 'Art of Poetry,' he wrote several comedies and farces, and altered a good many older plays for the stage. He is remembered as the author of two stock comedies, 'The Jealous Wife,' and 'The Clandestine Marriage,' the latter of which was in part written by Garrick. [W.S.]

COLMAN, GEORGE, the Younger, the son of the preceding, was born in 1762. After a somewhat shifting course of education, he commenced the

study of the law, which, however, he, like his father, soon abandoned. He was the manager of the Haymarket Theatre during the years of his father's illness, on whose death he received a renewal of the patent. He was the author of a good many comedies and farces; and possession of the stage is still kept by some of his pieces, such as 'John Bull,' 'The Iron Chest,' 'The Mountaineers,' 'The Heir at Law,' 'The Poor Gentleman.' Colman, not very witty in his plays, was remarkably so in his conversation; and there is great liveliness, with still greater coarseness, in his collections of comic rhymes, such as 'Broad Grins,' and 'Poetical Vagaries.' For the last few years of his life he was deputy licenser of plays, and distinguished himself by a more than puritanical severity in the censorship of the language of the dramas he had to read. He died in 1836. [W.S.]

COLMAN, JOHN, a New England minister, pastor of Brattle Street Church, Boston, ordained by some dissenting ministers in London 1699, and died in 1747. He gave offence by introducing the practice of reading Scripture in public and saying the Lord's Prayer, which were condemned as savoring of Episcopacy. He was chosen president of Harvard College, but declined.

COLUMBA, ST., an Irish or Scotch miss., d. 615.

COLUMBUS, DON BARTHOLOMEW, brother and fellow-voyager of the great discoverer, whose tutor he had been, remembered as a constructor of charts and founder of St. Domingo, died 1514.

[Columbus, after a portrait by Parmegiani.]

COLUMBUS, CHRISTOPHER, was born in Genoa, about the year 1435 or 1436. His father followed the trade of a woolcomber, and his ancestors had long occupied a like humble position. The name was Colombo in the Italian; the Latin form was given to it by himself at an early period, in his letters; and conceiving that Colonus was the Roman original, he changed the name to Colon when he went into Spain, better to adapt the word to the Castilian tongue. With the exception of one year spent at Pavia, his education was conducted in his native city, and was confined to such studies as fitted him for the nautical profession, to which he showed an early bent. He went to sea at the age of fourteen, and though few of the events which marked his life for twenty years are known, it is certain that he was often engaged in perilous enterprises, both as commander and serving in a subordinate capacity. We find him at Lisbon in 1470, probably attracted by the fame of the discoveries on the African coast, and a desire to obtain employment under the Portuguese princes. He was now about thirty-five years of age, tall and well-formed, of dignified carriage, and engaging manners. Already his hair had become quite white, doubtless in consequence of the hardships and anxieties of his early days. About this time he married Felepé Mônís de Palestrello, daughter of an Italian gentleman deceased, who had been a navigator under Prince Henry, and had colonized, and been governor of, the isle of Porto Santo.

He now occupied himself in constructing maps and charts, contributing of his means to the support of his aged father at Genoa; he made several voyages to the coast of Africa, and resided for some time at Porto Santo, where his wife had a small property; and here his son Diego was born. He visited also the Canaries and Azores; and, eager to pass the bounds of existing knowledge, made a voyage in 1477 to the northwards of Iceland. Before this date, however, as early as 1474, he had conceived the design of reaching India by a westward course. Judging from the latest and best accounts, he gave by far too great an extension to the east of Asia, and on high authority took the size of a degree considerably below the truth, thus greatly underestimating the earth's size. It followed that the Atlantic might easily be traversed. The scheme was a magnificent one; but it is difficult for us now, in the advanced state of our knowledge, to look at it in all its grandeur and boldness. He supported his views by the authority of Aristotle and other ancient writers, who had suggested that India might be reached by going west from the Pillars of Hercules; and by traditions and rumors concerning land to the west, and objects seen floating in the Atlantic, or cast ashore by westerly winds. Copious memoranda of all the grounds of his persuasion were found among his papers. To reach India by sea was still the great problem of geography. Columbus offered to John II. of Portugal to solve it by sailing westwards; and would most probably have prevailed upon the king to send out an expedition, had it not been for the secret counterplotting of some of the council, whose duplicity, winked at by the monarch, so disgusted Columbus, that he took his departure for Spain. This was in 1484 or 1485; his only companion was his son Diego, then about eleven years old, his wife having died some time previously. Though entering Spain in great poverty, he soon made friends, and got an introduction to the king and queen. They hesitated to undertake so great an enterprise, and several councils reported unfavorably; still Columbus persevered in new applications, and for seven years was kept in a painful state of suspense. At length, after a last trial, in February, 1492, he left the residence of the court, and set out on his way to France. Two of his friends got an immediate interview with the queen—overcame her scruples—and Columbus was brought back. Isabella had offered to pledge her jewels, but the king was afterwards prevailed upon to furnish the greater part of the funds, Columbus himself undertaking an eighth, and getting the same part of the profits. He was to have one tenth of all metals, gems, and merchandise, the office of admiral with descent of title, and to be viceroy and governor-general of the new lands. The articles of agreement were signed on the 17th April, 1492. On Friday, 3d August, 1492, the expedition sailed from Palos, near Moguer on the Tinto; it consisted of three small vessels, two without decks, and 120 men, who had been procured with the utmost difficulty, owing to the general dread of the voyage. The celebrated brothers Pinzon commanded the two smaller vessels, of about fifty tons each, named the *Pinta* and *Nina*, the admiral the *Santa Maria*. The only difficulty encountered was the mutinous tendency of the crews, excited by their terrors. Columbus repressed these with extraordinary tact; he was, besides, a skilful sailor, and had helps which a few years before did not exist. The compass had been receiving more attention, and the astrolabe, an instrument like our sextant, had been lately introduced.—Sitting on the

high poop of his vessel, at ten o'clock on the night of the 11th October, 1492, gazing earnestly ahead, Columbus plainly saw moving lights upon some land. Four hours of most exciting suspense followed. At 2 A.M., Rodrigo Triana, a sailor in the *Pinta*, which was a little in advance, saw the land itself. Dawn revealed a lovely island—Guanahani or San Salvador, one of the Bahamas. He afterwards discovered Cuba and Haiti; and deeming all these portions of Asia—a delusion under which he labored till his latest hour—he called the inhabitants Indians; a name which became general before the truth was known. The discovery produced an extraordinary sensation in Europe; and Columbus was received by the sovereigns, and in every part of Spain, with the highest honor. On September 25th, 1493, he sailed from Cadiz with a fleet of seventeen ships and 1,500 men, and discovered the Windward Isles, Jamaica, Porto Rico, &c., and founded a colony in Hispaniola. Disappointed in their hopes of making rapid fortunes, many of the adventurers who went out with him became discontented, and returning home spread calumnies against the admiral. Leaving his brother Bartholomew governor, he returned home, was received with favor, and refuted all the charges preferred by his enemies. His third voyage, entered upon 30th May, 1498, was rewarded by the discovery of Trinidad, the Orinoco, and the coast of Para. He found the new colony in a disorganized state, and remained some time to restore order. Complaints, however, still reached Spain, and a commissioner named Bobadilla was sent out to institute inquiries. He exceeded his powers, and sent Columbus home in irons, with his two brothers, Bartholomew and Diego. There was a general burst of indignation in Spain; the king disclaimed complicity, and the queen bestowed her usual favors. Bobadilla was recalled, but the admiral was not reinstated. This favor he long sought in vain, and till the day of his death he got no redress, though there was not the semblance of proof against him. Columbus had served the king's purpose, who now repented that he had bestowed such powers and privileges. The admiral was, however, sent upon a fourth voyage, 9th May, 1502, to search for a passage from the Caribbean Sea into what was supposed to be the great Indian Sea, from which Vasco de Gama had recently returned laden with the richest treasure. The voyage was disastrous; and the constitution of Columbus, on which the infirmities of age had already made inroads, never recovered from the shock which it sustained. In coasting central America, he got a hint, which if followed up might have led to the discovery of Mexico and the Pacific, and shed new lustre on his declining years. He returned in the end of the year 1504, and renewed his appeals to the justice and generosity of the king. While urging them in person, or by means of his son, brother, and other friends, he was seized with a violent attack of gout, and expired on the 20th May, 1506, in full possession of his faculties, and in a very pious frame of mind. In his latter days his connection with, and neglect of, Beatrice Enriquez of Seville, mother of his natural son Fernando, 'weighed heavily on his conscience,' and on his deathbed he made provision for her. Fernando was now eighteen years of age; he became the biographer of his father, by whom he had always been treated with the same affectionate regard as his other son. The latter, Don Diego, renewed the application for redress; and at length commenced a law process against the king before the 'high

council of the Indies.' This court decided against his majesty; and about the same time a mutual attachment having sprung up between the young admiral and the Dona Maria de Toledo, niece of the celebrated duke of Alva, who was cousin-german to Ferdinand, and high in his favor, such influence was brought to bear, that the king was obliged to yield, though not so far as to restore fully the dignities and privileges at first conferred. As vice-queen in Hispaniola, this lady behaved with great dignity, propriety, and spirit, and did excellent service to her husband, who, like his father, was never free from the persecution of enemies. Her eldest son, Don Luis, resigned all claim to the former titles for a handsome pension, with the titles of duke of Veragua and marquis of Jamaica. His eldest daughter mar-

ried Don Diego, her cousin; and they jointly enjoyed the honors and estates, but died without issue;—and the legitimate male line became extinct. At length, in 1608, the property and titles passed into a branch of the house of Braganza, in the person of Don Nuno de Portugallo, who was grandson of Isabella, third daughter of Don Diego Columbus, by his vice-queen, Donna Maria de Toledo. CONDER, JOHN, D. D., a religious wr., d. 1781.

CONDILLAC, ETIENNE BONNET DE, born at Grenoble, 1715, died in 1780; certainly the metaphysician who, until the recent revival of philosophy, has exercised greatest sway in modern times over the tone of speculation in France. It is explained under the article LOCKE, under what circumstances, and in what direction, the English philosopher gave an impulse to the inquiry, concerning the *origin of our ideas*. Erroneously we think, it had become, nevertheless, the ambition of metaphysical inquiry to establish, as its starting point, some theory which might account for the generation of human thought; and the doctrine propounded by Locke had obtained

extensive acceptance. Condillac at the outset acknowledged the Englishman as his master; maintaining in his earliest publication, that all knowledge is made up of our sensations, and of the action of the mind in reflecting upon these. Sensation and Reflection; no idea exists or can exist in the human intellect which may not be tracked to one or other as its source. As we have shown elsewhere (article LOCKE) this doctrine ignored the existence of all ideas involving the characters of universality, necessity, and infinity,—reducing them to mere negations, or averments that certain things have *no known limit*; nevertheless, it continued to recognize as much *activity* on the part of the mind, as enabled Locke to preserve the conception of human liberty; but this too fell before the subsequent ‘simplification’ by Condillac. French philosophy—technically so called—reached its culmination in the ‘*Traité des Sensations*’; the agency of *Reflection* being there dispensed with, and all knowledge traced to *Sensation* alone. As a specimen of Condillac’s reasoning, take his positions—fundamental ones—regarding Attention. If, he asserts, a multitude of sensations of equal vivacity are experienced at the same time by any mind, nothing occurs save the perception of the feeling occasioned—a perception which passes off with the circumstances; but if, amidst the crowd of feelings, some one exists of great comparative vivacity and so predominates, the mind is instantly riveted by this sensation in proportion to its vivacity;—which riveting we call *Attention*. Condillac overlooks, of course, the attribute which chiefly characterizes every act of attention, viz. its dependence on the WILL; to be impressed keenly depends indeed not on us,—to be attentive to any impression, does depend on us. In a way quite as faulty, Condillac, with great logical parade, seeks to account for acts of memory, of judgment, of reasoning, and for all our sentiments and emotions. Mind with him is a mere bundle of sensations now being experienced, or which have been experienced; there is nothing in it save the consciousness of all the external world is doing to it, or the recollection of all it has done to it. It is easy to see that in such a system, no pretence of a recognition of human Liberty could find a place; nevertheless, Condillac was not a *materialist*. He held firmly by the averment, that the seat of sensation is the *soul*, not the *organ*—leaving it to Cabanis to take the next downward step,—even then not the last, for we have seen how the physiologist saved himself by the fancy of a supermaterial *vital* principle.—The vices inhering in Locke’s *method*, but veiled so far by effect of the good sense and practical sagacity of the Englishman, stand out as they really are, and are virtually destroyed through exaggeration, in the writings of Condillac. It never seems to have occurred as desirable to this logician, that he should ascertain whether the ideas he is accounting for, be really the ideas which constitute human thought; certainly it would be reckoned strange now in a *physical* inquirer, were he to ignore facts, or rather—without compunction and without shame—to twist facts, so that his theory be saved! Unhappily it is easy to theorize in metaphysics; it is easy to produce schemes which will account, if not for actual fact, at least for something a little like actual fact; the difficulty lies in the just description and analysis of psychological phenomena.—Condillac’s precision and clearness suited the French taste. Not given to introspection, and apparently not capable of it, that accomplished and interesting people have never, notwithstanding their acuteness, succeeded in grappling with mental or moral problems; their metaphysics is like their poetry—

try—purely logical and purely *objective*.—A student with much leisure may still pursue Condillac with some interest; his writings—especially those on language—contain acute remark; but on the whole they are very wearisome.—In private life Condillac is said to have been estimable. He mingled with the *Encyclopædists*—those heralds of the revolution; but his habitual reserve kept him apart from politics, and from writing either on morals or religion. He was brother of Abbé Mably. [J.P.N.]

CONDORCET, MARIE JEAN ANTONIE, marquis de Caritat; an eloquent man, a good mathematician, an earnest political writer, and a victim of the reign of terror. Born in Picardy in 1743, he poisoned himself through dislike to the guillotine in 1794. The circumstances connected with his death are even affecting. Proscribed after the fall of the Girondins as an accomplice of Brissot, he found an asylum in the house of Madame Vernet; and there, with no aid from books, he wrote out his ‘Sketch of an Historical Picture of the Progress of the Human Mind.’ Every evening he gave his protectress the sheets he had written during the day; and it is said he did not even revise them. A new decree of the convention having threatened with death any one who should harbor a proscribed person, Condorcet resolved to leave Madame Vernet’s; and in spite of her entreaties he did so. Half naked he wandered for several days through fields; but, hunger prevailing, he entered an auberge at Clamont, and was arrested. A dose of stramonium (the gift of Cabanis) concealed in his ring, set him free:—it is probable that he thought the right of the condemned Roman Noble, to choose the manner of death, not extravagant or unreasonable.—Like most literary men of that time in France, Condorcet was a materialist; nevertheless, his higher aspirations could not be silenced; one sees their vigor in the very wildness of his dreams concerning the perfectibility of our Race. The ‘*Esquisse*’ will amply repay perusal. It is an exaggeration, and often false; but it abounds with penetrating appreciations of history; and the serenity which reigns through it—a serenity undisturbed by word of reproach or repining—deeply interests one in the doomed man. Condorcet’s best mathematical work is on the ‘*Calculus of Probabilities*’; his life of ‘*Turgot*’—perhaps that of Voltaire—is likely to last.—A worthy and affectionate *éloge* on Condorcet we owe to M. Arago. [J.P.N.]

CONEGLIANO, C. DE, an It. painter, 15th c.

CONESTAGGIO, J. F., DE, an It. hist., d. 1635.

CONEY, JOHN, an Eng. engraver, 1786–1833.

CONFORTI, F., a jurist and theol., 1743–1780.

CONFUCIUS, the philosophical Socrates, or rather demi-god of China. He lived about 550 years before Christ. His moral system seems in the main a *prudential* one; but its entire structure is scientific, and it pronounces much more determinately than any mere chronological record could do, concerning the antiquity of civilization in China. There are great ceremonial festivals in honor of Confucius, held through all China in spring and autumn. They approach as nearly to hero-worship as may be possible with this singular people.—A good analysis of the contributions of Confucius to philosophy is a desideratum; it could not fail to enable us to understand better, at once the history and the character of the remote East.

CONGALL, the first of this name k. of Scotland, 470–500; the *second*, 558–568; the *third*, d. 814.

CONGLETON, ST. B. PARNELL, Lord, a late member of parliament, celebrated for his knowledge of finance, 1776–1842.

CONGREVE, WILLIAM, the second son of a Staffordshire gentleman, was born near Leeds in 1669. His father, who was in the army, being long stationed in Ireland, he was educated at Kilkenny, and at Trinity College, Dublin. He was entered at the Middle Temple, but speedily deserted law for literature, and for the pleasures of a gay life in London. His first comedy, 'The Old Bachelor,' which had remarkable success, was acted in 1693; and 'The Double Dealer' appeared the year after, and was followed by 'Love for Love.' His tragedy of 'The Mourning Bride,' played in 1697, gained for him a brilliant reputation as a serious dramatist; and his writings for the stage were closed in 1700 by his comedy 'The Way of the World.' He was perhaps lazy, perhaps disgusted by the ill success of this last play, perhaps alarmed by the severe denunciations of the immorality of the stage which were thundered forth by Jeremy Collier, and for which Congreve's comedies, though not the coarsest of their day, yet furnished perhaps stronger grounds than any others, through the coolly systematic immorality which is the staple of them all. In skill of construction, wit of dialogue, and liveliness in the portraiture of manners, these pieces are very admirable. His tragedy has as little real value as his other verses, though these were pretty numerous. He was placed in easy circumstances by places under government, bestowed by Lord Halifax; and was much esteemed, both as an agreeable companion, and as a friendly though prudent man. He died in London in 1729.

CONSTABLE, HENRY, an Eng. poet, 16th c.

CONSTABLE, JOHN, R.A., was born at East Bergholt in Suffolk in 1776, and became a student of the Royal Academy in 1800, having selected the department of landscape. He was elected an academician in 1829. He died in London in 1837.—Constable's landscapes are simple in character and composition, and peculiar in execution, having a spottiness which appears to have arisen from a habit of early sketching, when the dew was on the grass, an effect he constantly represents; his pictures improve by time. He always strongly affected originality of style; at the very commencement of his career, being asked by Sir George Beaumont what style he proposed to adopt, he replied, — 'None but God Almighty's style, Sir George.' The neighborhood of Hampstead was the chief arena of his labors.—(Leslie, *Memoirs of John Constable*, &c.)

CONSTANS, the first of this name, emp. of Rome, third son of Constantine the Great, suc., together with his two brothers CONSTANTINE and CONSTANTINUS, 337, killed 350; the second of the name, emperor of the East, 641-668.

CONSTANT DE REBECQUE, BENJAMIN. There are few names in the political and literary history of France, since the first revolution, which present us with a more curious subject of speculation than that of BENJAMIN CONSTANT; but the leading facts of his career, and a very summary judgment upon them, is all that we can give in the space allotted to us. He was the descendant of a French family, denaturalized by the edict of Nantes, and was born at Lausanne, 1767. He came to Paris in the heat of the revolutionary period, and his philosophical spirit led him into alliance with the most talented men of that epoch. In 1796 he brought himself into notice by a work entitled 'De la Force du Gouvernement Actuel de la France et de la Nécessité de s'y Rallier,' being an appeal in support of the directory. The year following he claimed the rights of a French citizen, and procured a decree which restored the descendants of the religious exiles of France to their proper country; increasing his literary fame about the same period by his treatises on political reaction, and on the effects of terror. Though an influential member of the political circle, M. Constant was not called upon to exercise any public function until the ascendancy of Napoleon was established, when he became a member of the tribunate, and aspiring to lead the opposition, was ordered to quit France in 1802. Madame de Stael, with whom he was politically connected, being ordered into exile at the same time, they left the capital together, and travelled over many parts of Europe, at length fixing their abode in Germany, where they cultivated an acquaintance with its rising literature, and enjoyed the intimacy of Schlegel. It was here that Constant wrote his famous work on the religious spirit, and the different modes of worship, his tragedy of 'Walstein,' &c.; and besides courting the muses, contrived to form an alliance with the daughter of the Prussian minister, Prince Hardenberg. On the fall of Buonaparte, in 1814, Constant returned to Paris, and not only advocated the alliance of the Bourbons, as he hoped, with the institutions achieved by the people, but denounced in bitter language the conqueror, who was even then returning to reclaim his authority. By whatever

arguments he was won over to the cause of Napoleon—and there is reason to believe they leave no stain on his patriotism—this singular politician figured as a counsellor of state, during the hundred days, and though he quitted France at the crisis of the second restoration, he appeared again as deputy under Louis XVIII. Benjamin Constant, Manuel, and Lafayette in the chamber of representatives (1819), boded no good to the royalists, and the murder of the Duc de Berry, followed by the discussion of the electoral laws, was the signal for a new conflict, and for that brilliant opposition which ended in the revolution of 1830. During this interval M. Constant, besides taking a leading part in the discussions of the chambers, contributed many political and other works to the literature of his country; and was also actively engaged as one of the editors of 'The Minerva.' The presumed cause of his death, which happened within six months after the abdication of Charles X., was the fatigue and exposure which he underwent during the tumults of July; and it is singular to add, that he closed his career by accepting favors from Louis Philippe. The problem for the biographer is to reconcile his loyalty to constitutional principles, and his cosmopolitan views with his versatile conduct as a politician. We are inclined to believe that he was *trustful* beyond what would be esteemed political propriety, and *hoped*, it may be, too much. Hence he was disposed to accept the *fait accompli*, and make the best of it, and only when his too generous expectations were disappointed, commenced those chivalrous attacks which appear so extraordinary in contrast with his liaisons in the camp of the enemy. His philosophical refinement, his dramatic tastes, and his high sense of honor when placed on one side, in the scale of royalty, as it was natural they should be, weighed too much against his political sagacity on the other. His romance of 'Adolphe,' also, shows that he thought it dangerous to resist the established opinions of the people; but what rule had he for ascertaining what should really be considered as established in scenes so changeable? CONWAY, THOMAS, Major General in the American army during the Revolution, was a native of Ireland. While in the service of Congress he fought a duel with General Cadwallader, who challenged him for intriguing against Washington. He received a severe wound, and left the country.

CONWAY, HENRY SEYMOUR, Field Marshal, an eminent English statesman and military officer. After serving with distinction in the seven years war, he was appointed secretary of state in 1765, and remained in office until 1768. In 1782, he became commander in chief, and on his death in 1795, was Senior Field Marshal in the British service.

CONWAY, ROBERT, General of South Carolina, an officer in the American service during the Revolution, died at Georgetown in 1823.

CONYBEARE, JOHN, bp. of Bristol, au. of a Defence of Revld. Relig. against Tindal, 1692–1755.

CONYBEARE, JOHN JOSIAS, prof. of Anglo-Saxon and poetry, and author of many contributions to mineralogical and antiquarian science, 1779–1824.

COOK, CAPTAIN JAMES, was born at Marton, near Stockton-upon-Tees, 27th October, 1728. His father, who was an agricultural laborer and farm bailiff, apprenticed him at the age of thirteen to a haberdasher in Staiths, near Whitby. Disliking this business, and having a strong inclination for a sea life, he obtained a discharge, and entered into new indentures with a coal company at Whitby. In

[Capt. Cook.]

their employment he gained great practical knowledge of sailing, and soon rose to the situation of mate. Impressment for the navy was actively carried on in 1755; being then in the Thames, Cook at first hid himself to avoid the press-gang; but afterwards judged it best to offer himself as a volunteer. In 1759, by the interest of Mr. Osbaldiston, M.P. for Scarborough, and Capt. Sir Hugh Palisser he obtained the mastership of a sloop; and soon afterwards joined the fleet in the *St. Lawrence*, operating against the French. His judgment, bravery, and great skill in conducting hydrographic surveys, gained for him the highest credit, and secured his promotion. Returning home in 1762, he married Miss Elizabeth Batts, by whom he had a family of six children. In 1764 he was appointed marine surveyor of Newfoundland and Labrador; and was chosen three years after to command an expedition to the S. Pacific, sent out on the recommendation of the Royal Society, to observe an approaching transit of Venus over the sun's disc, in order that, by a comparison with observations at home, data might be obtained for a more accurate determination of the sun's distance. He was accompanied by Mr. Green as astronomer, Dr. Solander as naturalist, and a gentleman of fortune, Mr. (afterwards Sir Joseph) Banks. All the phenomena were successfully observed at Otaheite, on June 3, 1769. Cook then sailed S. in quest of the supposed southern continent; encountering New Zealand, he circumnavigated it; sailed up the E. coast of New Holland, and determined that it was not joined to New Guinea; thence he crossed to Batavia. Before reaching the Cape, Mr. Green, Dr. Solander, and twenty-eight other persons died. On June 12, 1771, the *Endeavor* came to anchor in the Downs; Cook's promotion to the rank of commander followed soon after. It was proved by this voyage that New Holland and New Zealand were not parts of the *terra australis incognita*; and that if such a continent did exist, it must be beyond the lat.  $40^{\circ}$  S. The object of his second voyage was to circumnavigate the globe in high S. latitudes, in order to settle this question. Leaving on July 13, 1772, he was absent about three years, during which time he lost only one man by sickness. He sailed S.E. from the Cape, and returned by Cape Horn; and was the first who traversed the S. Pacific; the highest lat. reached was  $70^{\circ} 10'$  S. The results of this voyage were most important, and excited a great interest among scientific men. He was now raised to the rank of post-captain, and appointed one of the captains of

Greenwich Hospital, a situation of considerable emolument. In February, 1776, he was elected a fellow of the Royal Society, and soon after received the Copley medal for a paper on the methods used to preserve the health of his crews—which was thus adjudged to be the best experimental paper of the year. The second voyage having proved that if a *terra australis* existed, it was too far S. to be of any use—a question set at rest in 1842 by Captain James Ross's discovery of Victoria Land—attention was once more turned to the problem of a N. W. passage between the Atlantic and Pacific; and the act of Parliament of 1745, which had offered a reward of £20,000 for the discovery, having been recently altered so as to include the king's ships, government proposed an expedition. Cook was entitled to repose; but having volunteered to take the command, his offer was accepted; and in the ship *Resolution*, accompanied by the *Discovery*, under Captain E. Clarke, Cook sailed from Plymouth in July, 1776. Passing from the Cape to New Zealand, and thence through the Pacific, he made many important discoveries, of which the chief was the Sandwich group, named after his friend the first lord of the admiralty. Early in the summer of 1778, he reached Behring's Strait; but was able to penetrate no farther than lat.  $70^{\circ} 44'$ . Having carefully surveyed the Aleutian group and adjoining coasts, he returned to winter in the Sandwich isles. On the 13th February, 1779, at Owhyhee, one of the boats was stolen by natives during the night. Next day active measures were taken to enforce restitution, and to prevent similar occurrences. For this purpose Cook attempted to carry the aged king on board, but on reaching the boats he refused to embark, and his wives set up a lamentation; at the same time a shot from one of the boats, fired to prevent a canoe leaving the bay, accidentally killed a chief. The crowd was roused to fury, and rushed upon Cook and his men; four of them were killed, the rest in the confusion could not render assistance to their commander, and he was overpowered, after a desperate and prolonged resistance. His mangled remains were treated with the greatest indignity, and his bones only were recovered by his attached and sorrowing crews. In the extent and value of his discoveries, Cook surpasses every other navigator; his surveys and determinations of latitudes and longitudes are extremely correct; he may be said, indeed, to have been the first scientific navigator. His success in preserving the health of his crews removed all dread of long voyages; and this was certainly not the least of his services. A pension was bestowed upon his widow. [J.B.]

COOKE, SIR A., tutor of Edw. VI., 1508–1576.

COOKE, BENJN., a comp. of music, d. 1814.

COOKE, GEORGE, an English engr., 1781–1834.

COOKE, GEORGE FREDERICK, the great tragic actor of the eighteenth century, and rival of John Kemble, whose supremacy he might have successfully disputed, but for his own fatal habits of intemperance, was born in Westminster, 17th April, 1756. His father was an Irish officer and captain in the 4th Dragoons, but died while Cooke was yet an infant. His mother, on her widowhood, went to reside at Berwick-upon-Tweed, where her son received his school education. In the Town Hall of this place he saw the first play in his experience acted—it was 'The Provoked Husband'—the time either 1766 or 1767; and the circumstance made so strong an impression on his mind, that he began to study a part for himself, that of Horatio in 'The Fair Penitent.' In 1769 he joined a strolling company of players in a barn in the same town, and at-

tempted Young Meadows, in 'Love in a Village.' From this time his passion for the stage increased, and at the age of fifteen he got to London, notwithstanding he was previously apprenticed to a printer; and afterwards, probably as midshipman on board of a king's ship, visited Holland. He was at all times a sedulous reader of plays, and a diligent playgoer. In 1774, and subsequent years, he witnessed in London the best actors of the time—Foote, Garrick, Macklin—and first appeared (1761) as a professed actor himself at Brentford in the character of Dumont. Next year he visited Berwick and Edinburgh, and in 1778 made his *debut* in London; but being neglected, retired with chagrin, to return in 1800 with decided triumph. During the interval he acquired those habits in the provinces which were the bane of his future life. Cooke was eight-and-thirty before he made good his position on a metropolitan stage, and this was at Dublin, which place he left, and enlisted as a soldier, from which Messrs. Banks and Ward, the managers of the Manchester theatre, procured his discharge; and after relieving the distress which his follies had brought upon him, sent him to Manchester. In 1796 he married a Miss Daniels of the Chester theatre, which marriage was afterwards declared null and void by Sir W. Scott in Doctors Commons.—Cooke's successful appearance in London was in the character of 'Richard III.' He was at that time in his forty-fifth year. He next performed 'Shylock,' 'Sir Archy MacSarcasm,' and 'Sir Pertinax MacSycophant,' in all of which he was unapproachably great. Cooke was exceedingly fine in sarcasm, and both in town and country became immensely popular, notwithstanding his irregularities and continual disappointment of his audience. In 1803 he became acquainted with Mr. Cooke, an American actor, who ultimately conceived the design of delivering Cooke from his vices, by changing the scene of his associations, and after much difficulty and some stratagem, got him safely across the Atlantic. The voyage, and necessary total abstinence from spirituous liquors, completely renovated the actor's health; and for some time he ran a triumphant career in the United States. Gradually, however, he relapsed into his former habits of fatal indulgence, and died at New York in 1812. Next day his remains were deposited in the burying ground of St. Paul's Church, where many years afterwards his grave was visited by Edmund Kean, whose character and genius closely assimilated, both in faults and merits, those of his predecessor, and who erected a tablet to his memory. [J.A.H.]

COOKE, ELISHA, agent of the colony of Massachusetts in 1689 to procure the restoration of the charter, was born in Boston in 1637, graduated at Harvard College in 1657, and practised as a physician. He married the daughter of Governor Leverett. He opposed the new charter granted in 1691. He was for many years a member of the council, though Gov. Dudley several times put his veto upon the election. He died in 1715. His son of the same name, was in 1720 speaker of the house, and for many years the leader of the popular party in Boston. He died 1737.

COOKE, HENRY, an Engl. painter, 1642–1700.

COOKE, THOMAS, an Engl. poet, 1707–1750.

COOKE, THOMAS, a dist. singer, 1781–1848.

COOKE, W., a wr. on bankrupt law, 1757–1832.

COOKE, W., a misc. wr. and poet, 1766–1824.

COOMBE, WM., a humorous miscellan. writer, au. of 'The Tour of Doctor Syntax,' &c., 1741–1823.

COOPER, ANTHONY ASHLEY, first earl of Shaftesbury, disting. as a statesman and political intriguer

in the time of Cromwell and Charles II., born 1621, raised to the peerage 1672, d. 1683. He was a talented but dissolute man, and we are indebted to his administration for the famous *habeas corpus* act. His grandson and namesake, third earl of Shaftesbury, dist. as an essayist and moralist, b. 1671–1713.

COOPER, SIR ASTLEY PASTON, Bart., 1768–1841, was the son of the Rev. Dr. Cooper, rector of Yelverton and Morley, Norfolk, under whom, and the village schoolmaster of Brooke, he received the elements of his education. In 1784, he became a pupil of his uncle, William Cooper, surgeon to Guy's Hospital, and, as soon as he was qualified, a lecturer at St. Thomas's on anatomy and surgery, and speedily acquired great reputation as an operating surgeon. In order to succeed his uncle at Guy's, he found it necessary to change his politics, which were previously liberal; and, very fortunately, a certain 'disagreeable sensation' about his throat, which he regarded as a prelude to his fate, added physical to his moral reasons for adopting this step. His important literary labors were his great work on Hernia (1807), his books on dislocations and fractures, and on the Anatomy and Diseases of the Breast. Sir Astley was principally distinguished as a bold operator, a decided practitioner, and as a most industrious and popular teacher. Perhaps no man has ever taught any branch of medicine who possessed more of this element of great success. His manners were of the most engaging kind, while his attention, urbanity, and regard for his pupils, were of the most exemplary character. He thus acquired a hold of the rising profession, which insured him the largest consulting practice probably ever enjoyed by any practitioner that ever existed, his annual income having been at one time £21,000. [R.D.T.]

COOPER, MYLES, D.D., President of Kings College, New York, was a graduate of the University of Oxford, and at the recommendation of the Archbishop of Canterbury came to America in 1762 as assistant to Dr. Johnson, then president, upon whose resignation the following year he was elected in his stead. He returned to England in 1775, and officiated in Edinburgh during the remainder of his life, which terminated suddenly in 1785. His son, William Samuel, was, after the Revolution, president of the College.

COOPER, SAMUEL, D.D., a congregational minister of Boston, born in 1725, was pastor of the Brattle street congregation, which office had previously been held by his father. He took an active part in politics, and was a correspondent of Dr. Franklin and Mr. Adams while they were in France. He wrote much in the journals of the day, and was one of the contributors to the "Pietas et gratulatio."

COOPER, BRANSBY, an English surgeon and writer on surgery, died in 1853, aged 61.

COOPER, THOMAS, an eminent political writer, born 1759 in London. His zealous advocacy of the principles of the French Revolution drew on him the indignation of Burke. He emigrated to the United States, and though educated as a physician, devoted himself to the practice of law. He was for some time the companion of Priestley. During the administration of John Adams his seditious conduct occasioned his prosecution. Besides employing his vigorous but unscrupulous pen upon political subjects, he wrote many treatises on scientific and metaphysical points, translated the Institutes of Justinian, and published a work on the Bankrupt laws. Retiring from the profitless pursuit of politics, he became professor of chemistry in Dickinson College, and in Columbia College, S. C.

COOPER, JAMES FENIMORE, a celebrated American novelist, was the son of Judge Cooper, and born at Burlington, New Jersey, in 1789. After successfully completing his studies at Yale college, he entered the American navy as a midshipman in 1805, and continued for six years. In 1810 he married, and quitted the navy, and commenced his brilliant career as a writer of fiction, and rapidly produced 'The Spy,' 'The Pioneers,' 'The Pilot,' and other novels, which excited great interest. In 1826 he visited Europe, and every where met with a most cordial reception. His works are throughout distinguished by purity, and brilliancy of no common merit. Died at Cooperstown, in the state of New York, in 1851.

[Statue of Copernicus.]

COPERNICUS, NICOLAS, or ZEPERNICH, an illustrious astronomer, who restored the true system of the world as first proposed by Pythagoras, was born at Thorn, in Prussia, on the 19th February, 1473. His father was a surgeon, and his maternal uncle bishop of Ermeland. After taking his degree

of doctor of medicine, with the view of practising the healing art, he devoted his time to the study of perspective and the art of painting; but in consequence of attending the mathematical lectures of Brudzevius, he entered with great zeal upon the study of astronomy. With this view he became the pupil and assistant of Dominic Maria, professor of mathematics at Bologna, and he subsequently went to Rome, where he taught mathematics and made astronomical observations.—Upon his return to his native country, he was appointed to a canonry in the chapter of Frauenberg, and chosen archdeacon of the parish of St. John's. His chief residence, however, was at Frauenberg, where he carried on his astronomical studies. In order to prove the annual motion of the earth, and the immobility of the sun in the centre of the solar system, truths of which he had conceived in 1507, he constructed a large quadrant, by means of which he made numerous observations, afterwards published along with those of Tycho in 1666. These observations were the basis of his new tables of the planets, and enabled him to complete, in 1530, his great work 'On the Revolution of the Celestial Bodies.'—Although the doctrine of the motion of the earth, and the immobility of the sun, published one hundred years afterwards in Galileo's 'System of the World,' was denounced as a heresy by the Church of Rome, yet these great truths, when propounded by the canon of Frauenberg, were not only applauded by his friends, but adopted by the bishops around him. The cardinal Nicholas Schonberg, bishop of Capus, and Tydeman Gyse, bishop of Culm, urged Copernicus to publish his work, but, dreading the prejudices of the public, he resisted every application. He appears, however, to have taken measures for gradually bringing his system before the world. George Rheticus, professor of mathematics at Wittemberg, had resigned his chair in order to study the new system under Copernicus himself, and they appear to have adopted a method of communicating it to the public without any shock to their religious feelings. In 1540 Rheticus published, without his name, an account of his friend's discoveries, but in consequence of its favorable reception by the public, he published a second edition with his name in 1541. Other writers followed in the train of Rheticus, and thus encouraged by the reception which his discoveries had met with, Copernicus placed the MS. of his work in the hands of Rheticus, who superintended the printing of it in Nuremberg, where it was published in 1543, at the expense of Cardinal Schonberg, bishop of Capua. Copernicus, however, was not permitted to read his own work. He received and handled a copy of it on the 22d May, 1543, a few hours before his death, which took place at Frauenberg, in the seventy-fourth year of his age, in consequence of the rupture of a blood vessel, and a paralytic affection of his side. His house at Frauenberg has been lately discovered, and also his tomb, with spheres cut out in relief, in the cathedral church of the same town. 'It is impossible,' says David Brewster ('Life of Copernicus' in *Edinburgh Encyclopædia*, vol. VII. p. 203, 4,) 'to survey the preceding sketch of the life and discoveries of Copernicus without being struck by the indifference with which the Church of Rome witnessed the propagation of a system so adverse to the principles of its faith. More than a century afterwards, when civilization and liberal sentiment had made considerable progress, Galileo was persecuted for holding the same opinions which Copernicus had propagated with impunity. We cannot allow ourselves to imagine that the church was less vigilant in 1530 than in

1634, or that the doctrine of the earth's immobility was less heretical at one period than at the other. We are therefore led to consider the persecution of Galileo rather as the consequence of his personal imprudence than of his astronomical opinions, and to imagine that the cardinals had seized the opportunity which the publication of his dialogues presented of gratifying a private resentment, which might possibly have been well founded. Upon what other supposition can we account for the extreme severity of the church against the Pisan philosopher, and for its total indifference to the same crime in the canon of Ermeland? The publication of Copernicus's system gave no shock to the public mind; and the religious feelings of no individual, and the watchful jealousy of no tribunal were alarmed. The most distinguished members, on the contrary, of the Catholic church encouraged and promoted the propagation of the new system of the world. The cardinal Nicholas Schonberg pressed Copernicus to publish his discoveries. The bishop of Culm employed his influence in the same cause. The work was dedicated to the pope himself. The king of Holland even proposed him as a candidate for the vacant bishoprick of Ermeland; and thirty-eight years after his death Cromerus, bishop of Ermeland, erected a monument to his memory. The charge of heresy was never preferred against Copernicus, either during his life or after his death; and we have never been able to discover that the slightest disapprobation had been either cherished or expressed by the church against his system of the universe. Had Galileo been canon of Ermeland, and Copernicus professor of mathematics, at this day religion would never have been degraded by the persecution of the philosopher, nor science afflicted at the ignominious compromise by which it was averted. 'It is a singular fact,' says the same writer, 'in the history of Copernicus, that while he himself was zealously engaged in establishing a system in direct opposition to the faith of the catholic church, he should have viewed with indifference, and even with hostility, the great reformation which Luther was accomplishing in Germany. An edict was even issued by Maurice, bishop of Ermeland, in 1526, and signed by Copernicus and the other canons, the first article of which was directed against the exertions of Luther; and it is certainly a remarkable circumstance that the diocese of Ermeland, illuminated by the wisdom of Copernicus, should have preserved the catholic religion while all the surrounding provinces had embraced the doctrines of the reformation.' CORDAY, CHARLOTTE, properly MARIANNE CHARLOTTE CORDAY D'ARMANS. Charlotte Corday is one of those rare characters in history which it is impossible to contemplate without a feeling of enthusiastic admiration, and with respect to whom we are willing that the judgment should remain in suspense rather than conclude against the instincts of the heart. She was born at St. Saturnin, near Séez, in Normandy, 1768, and, as her name testifies, was the daughter of a family belonging to the higher classes of society. She was educated in the retirement of a convent, but having a fine understanding and indomitable spirit, she seems to have followed the bent of her own genius, and formed her mind to the classic models of antiquity. In the bosom of her family she pursued these studies with unabated enthusiasm, and as the progress of the revolution, and the dispersion of the Girondins, made her acquainted with a Louvet and a Barbaroux, it is not surprising that her attention was excited by the spectacle of the squalid, blood-thirsty Marat presiding at the sacrifice of all that was noblest and worthiest of her heart's love in her poor country. It has been said that she struck the blow which has rendered her name immortal in revenge of her lover, M. Belsunce, one of the officers in the garrison of Caen, but this supposition is far from well-founded, and we prefer, for many reasons, her own declaration:— 'I killed one man to save a hundred thousand; a villain (un scélérat) to save innocents; a ferocious wild beast to give repose to my country!' How she effected her purpose, and how she paid the sad penalty afterwards, we are under the necessity of relating in few words. Her resolve was formed, as she declared at the bar of Fouquier Tinville, after the proscriptions of the 31st of May, 1793, which is sufficient of itself to prove that she was not moved to it by the murder of M. Belsunce, who was killed in 1790, though it cannot be doubted that the appalling manner of his death must have affected her with a lasting horror of the excesses of sansculottism. She left home secretly, and arrived at Paris on the 9th of July, with an introduction to Duperret, with whom she transacted some business connected with certain family papers in the course of the next day or two. On Saturday the 13th she purchased a large knife, and at seven o'clock in the evening procured admittance to Marat with this weapon concealed under her garments. She had obtained this interview by writing to him that she was from the seat of rebellion, and would 'put it in his power to do France a great service.' Marat was in his bath, with a stool by his side to write upon, and entering into conversation with Charlotte, he penned with ferocious joy the fresh list of victims with which she pretended to supply him. At the instant when he turned aside, muttering of the chastisement they should receive, Charlotte with desperate determination, plunged her knife into his heart. Her aim was so sure that the monster could only exclaim, as he choked with blood,— 'A moi, ma chère amie je meurs,' (Help dear, I am killed!) and instantly expired. It would not be easy to exaggerate the sublime attitude of this beautiful young girl, with her long dark hair and flushed cheek for one moment, and how submissively the

next she surrendered herself to the gendarmes. Her self-possession, sincerity, and maidenly modesty at the trial, were marvellous in the midst of the tumult that agitated Paris. The evidence was prepared, and Tinville commenced the proceedings by addressing some questions of form to Charlotte:—‘All these details of form are needless,’ she said. ‘It was I who killed Marat.’ ‘What instigated you?’ ‘His crimes.’ ‘What do you mean by his crimes?’ ‘The ill that he has done to France since the revolution, and which he would yet do.’ ‘By whom was this assassination suggested to you?’ ‘I alone concluded upon it.’ ‘What are the refugee deputies doing at Caen?’ ‘They are waiting till the end of anarchy shall enable them to return to their posts.’ ‘Was it to a sworn or an unsworn priest that you were accustomed to confess at Caen?’ ‘I neither confessed to the one nor the other.’ ‘What end did you propose to gain by killing Marat?’ ‘To put an end to the troubles of the French people.’ ‘How long since did you form this project?’ ‘Since the proscription of the deputies of the people on the 31st of May.’ ‘It is from the journals, then, that you have judged Marat to be an anarchist?’ ‘Yes; I knew that he had brutalized the French.’ And then, raising her voice to prevail over the confusion which arose in the hall:—‘J’ai tué un homme pour en sauver cent mille; un scélérat pour sauver des innocents; une bête féroce, pour donner le repos à mon pays. I was a republican before the revolution, I never wanted energy.’ ‘What do you mean by energy?’ ‘I mean by energy the feeling of those who are willing to forget their own interest for the sake of their country.’ Such answers astonished her judges, and under the circumstances they are the signs of no ordinary understanding. It is not surprising that many took off their hats as she went to the place of execution, clothed as a murderess in a red smock, and that one young man should propose the erection of a monument to her memory, with the inscription, ‘Greater than Brutus!’ She was guillotined, 17th July, 1793. CORELLI, ARCANGELO, called the founder of the Roman school of music, was born at Fusignano in the Bolognese territory in 1653. He is said to have received his instruction in composition from Sincronelli, and on the violin from Bassoni of Bologna. In 1672 he was in Paris for a short time, but made no impression. In 1680 he visited Germany, and was in the service of the duke of Bavaria. He returned to Rome in 1682, and between this year and 1694, when he was principal violinist at Rome, he published his celebrated sonatas for violin and violoncello. From that period up to almost the present time, these sonatas have been amongst the first studies

which the great masters of the violin have put into the hands of their pupils. His greatest works, the Twelve Concertos, were long known before they were printed. Corelli died at Rome on the 18th January, 1713, and was buried in the church of Santa Maria della Rotunda (the ancient Pantheon), where a monument, surmounted with a marble bust, was erected to his memory. Corelli was amiable and gentle in manners, and his feelings were remarkably sensitive. He received the surname of *Il Divino* from his Italian compatriots, and was usually called ‘*Jamossimo professore di violin.*’ [J.M.]

CORMONTAIGNE, a French military engineer, died 1752.

CORNARIUS, J., a phys. of Saxony, 1500–58.

CORNARO, the name of a patric family of Venice, of whom three were doges of the republic, the first, 1365–1368; the second, 1625–1629; the third, 1709–1722. CATHARINE, descended from the first, was queen of Cyprus, died 1510. LUDOVICO, another member of the family, celebrated for his great age, and works on regimen, 1467–1566; and LUCRETIA HELENA, as a poetess and learned writer, 1646–1684.

CORNBURY, EDWARD HYDE, Lord, the successor in 1702, of Lord Bellamont as Governor of New York, was the son of the earl of Clarendon. His administration was tyrannical in the extreme, and his misconduct drew on him general detestation in the province, and caused his removal in 1708. He afterwards succeeded to the earldom, and died near London in 1723.

CORNEILLE, a pope of Rome, 251–252.

CORNEILLE, MICHEL, a French painter and engraver, 1601–1664. His son, of the same name and profession, 1642–1708. A second son, JEAN BAPTISTE, also a painter, and writer on the art of painting, 1646–1695.

CORNEILLE, PIERRE, named ‘The Great’ by his admiring contemporaries, was the first, in the order of time, among those brilliant writers who did honor to France during the reign of Louis XIV. He had not been preceded by any dramatic writer whose genius was powerful enough to preserve his name in general remembrance; and, himself preceding Molière by a good many years, and Racine by a whole generation, he learned but in part, and obeyed with reluctance, those formal rules which French critics were beginning to teach, and to which the French drama was gradually submitting itself. His countrymen are often much at a loss to reconcile their dislike to his irregularities in form, with the pride they feel in his well-won fame, and the impression which they cannot help receiving from his magnificent pictures of heroically idealized nature.—Corneille, born at Rouen in 1606, was the son of a lawyer, and himself attempted the same profession. But as early as his twenty-third year, he entered on an uninterrupted course of devotion to dramatic composition. His first attempts were six rhymed comedies, and the strong but declamatory tragedy of ‘Médée.’ These pieces were received with applause in a time when there was nothing better, but are now admitted to have been so feeble as to give but poor presage of the strength which worked within him. He was saved from prosecuting this career by being imprudent enough to offend Cardinal Richelieu, who had chosen him as one of the men of genius who were to found

his French Academy. Retiring to Rouen, he turned his thoughts to tragedy, and studied the Spanish language to have at his command the dramatic stores which it already possessed; an old courtier, who happened to have sought repose in Normandy, is said to have been his adviser on both points. The fruits appeared in 1636, when he presented his romantic tragedy 'The Cid.' Its success was prodigious, and was at length allowed to be deserved, even by the academicians who wished to flatter the resentments of Richelieu. It is the most famous, and perhaps the greatest, of all Corneille's works. It is alike admirable for its skill of construction, its chivalrous dignity of sentiment, and the dramatic power with which it depicts the conflict of opposing passions. The poet, however, was sneered at for having freely borrowed incidents and ideas from a Spanish play; and he threw himself boldly on his own resources in his next two works, which stand, with the 'Cid,' among his masterpieces. In 'Horace' he dramatized, with a defective plan, but with great force of passion, and several very striking bursts of sentiment, the Roman combat of the Horatii and Curatii; and on 'Cinna,' celebrating Augustus and the Romans of his age, he bestowed an artful dexterity of management which has recommended it, in spite of its artificiality of feeling, to the especial favor of the French critics. These two fine works, appearing in 1639, were immediately followed by a worthy successor, the 'Polyeucte,' a tragedy of Christian martyrdom. Soon afterwards came 'La Mort de Pompée,' which is fine in some parts; and 'Le Menteur,' the only one of its author's comedies that is held worthy of him, and pronounced to have been the earliest comedy of intrigue and character which did credit to French literature. It was imitated from the Spanish, and has itself been imitated in English by Steele and translated by Foote. 'Rodogune' was thought by the poet to be his best work; and its fifth act is declared by Voltaire to be the finest effort of the French drama. More philosophical critics detect, in this imposing tragedy, traces of that overcharged and unnatural turn of thought and sentiment which began to show itself more and more in Corneille's plays, and which, with not unfrequent feebleness, indicated that the rich mine was nearly wrought out. The acknowledged failure of 'Pertharite' in 1653, warned him to pause; and for six years he produced nothing but a versified translation of Thomas à Kempis. Nor did he add to his fame by the few works which he produced after returning to the stage in 1659. These, though not without flashes of the ancient energy, are acknowledged to be on the whole weak; and they abound in those argumentative and declamatory orations, the occasional intrusion of which into his best plays is confessed by his most favorable critics. Among the critics of Corneille, he himself must be numbered with honor. The remarks which he published with several of his earlier pieces, contain some admirable criticism. In private life he was an unassuming and plain man, who was always most at his ease in the bosom of his own family. He died in 1684.—His younger brother, THOMAS, though now forgotten, was in his day a very popular dramatist, and famous for his readiness of versification. The two brothers, whose wives were sisters, lived in the same house; and it is said that, when Pierre wanted a rhyme, he used to lift up a drap-door and call on Thomas for assistance. [W.S.]

CORNAINI, J. B., an Italian dram., 1742–1813.

CORNUTI, J. P., a French botanist, 1600–1651.

CORNWALLIS, SIR CHARLES, an English ambassador time of James I., died 1630. His son, WILLIAM, author of essays published 1632.

[Moore's House at Yorktown, where the capitulation of Cornwallis was signed.]

CORNWALLIS, CHARLES, Marquis Cornwallis, was born 31st December, 1738. He entered the army early, and obtained deserved promotion and credit in the last campaign of the seven years' war. He served actively and honorably as major-general under Howe and Clinton in the first year of the American war, and in 1780 he held an independent command. He gained several victories, but was at last shut up and besieged in Yorktown, where he was obliged to surrender himself and his army, after an obstinate and gallant defence, on October 19, 1781. In 1786 Lord Cornwallis went to India as commander-in-chief and governor-general. He signalized his rule there by the military advantages that he gained over Tippoo Saib, and by his honesty and vigor as an administrative reformer. After his return from India he was, in 1798, made lord-lieutenant in Ireland, where he put down the rebellion that he found raging there. His humanity and his skill in civil government did more even than his military talents towards restoring order in that unhappy country. In 1805 he was a second time made governor of India; but his health was now shattered. He was suffering severely when he landed at Calcutta; but he exerted himself usefully in the introduction of several salutary measures in the civil department of the Indian service; and then endeavored to put himself at the head of the army, which was actively engaged in the upper provinces.

But the old warrior's strength failed him, and he died at Ghazepore, on his way to head-quarters, on 5th October, 1805. [E.S.C.]

CORREA-DE-SERRA, JOSEPH FRANCIS, plenipotentiary from Portugal to the United States in 1813, was an eminent botanist, and came to America to prosecute his investigations prior to his appointment as minister. He published several volumes in his own language upon his favorite science, and returned to Portugal, where he died in 1823, aged 74.

CORREGGIO. ANTONIO ALLEGRI, commonly called CORREGGIO from his birth-place, was born about 1493-4, and appears to have first studied painting under Tonino Bartolotto of Corregio; in 1519 he was established as a painter at Parma. The celebrated cupola of Parma was commenced in 1520, and in 1522 Correggio undertook the great works of the dome of the cathedral; in the former representing the ascension of Christ, and in the latter, the assumption of the Virgin, both of which series are now admirably engraved by the Cav. Toschi. The frescoes of the cathedral, left unfinished by Correggio, were completed by his pupil Giorgio Gandini. Correggio died of a fever at his native place in 1534, in his forty-first year only.—Correggio's great reputation rests chiefly upon the above-mentioned frescoes, but he had executed many excellent oil pictures before he proceeded to Parma in 1519. All his pictures are conspicuous for a remarkable play of foreshortenings, a powerful and delicate chiaroscuro, or light and shade, and a graceful grouping of forms.—The 'Notte,' or night, of Correggio, in the Gallery of Dresden, is a picture of the nativity of Christ, in which the light proceeds from the body of the infant Savior.—(Pungileoni, *Memorie Istoriche di Antonio Allegri detto il Correggio*, Parma, 1827-21. *Sketches of the Lives of Correggio and Parmigiano*, London, 1823.) CORTEREAL, J., a Portuguese poet, died 1593.

CORTEREAL, JOHN VAZ COSTA, a gentleman of the household of Alphonso V. of Portugal; he is said to have discovered Newfoundland about the year 1463. His son, GASPAS, sailed from Lisbon in the year 1500, and discovered Labrador and Greenland. In May, 1501, he again left Lisbon, with two ships, in hopes of finding a N.W. passage to India; a storm separated the ships on the coast of Greenland; Cortereal's vessel was never heard of, though the other returned in safety. His brother, MICHAEL, went in search of him the next year, with three ships; these separated in order to examine the coast more closely, agreeing upon a certain rendezvous. Two of them kept the appointment; Cortereal and his vessel were never heard of again. VASCO, the

last of the family, master of the household, was anxious to go in search of his lost brothers, but the king would not yield to the most earnest entreaties. [J.B.]

CORTEZ. HERNANDO CORTEZ was born of an ancient Spanish family in Estremadura, in 1485. At the age of nineteen he left Spain, like many of the adventurous youths of that period, to seek fame and fortune in the new world, that had been discovered beyond the Atlantic. He distinguished himself under Velasquez, in the conquest of Cuba; and after passing several years in that island, where he was sometimes the favorite of the viceroy, and sometimes the special object of his jealousy and persecution, Cortez obtained leave from Velasquez to conduct a small expedition to the newly-discovered coast of Yucatan and Mexico. With less than 600 soldiers, with 16 horses, 10 cannons, and four falconets, Cortez sailed, in 1519, to conquer the most powerful empire in America. Cortez landed on the Mexican coast on Good Friday, the 21st of April, in that year, on the spot where the city of Vera Cruz now stands. He persuaded his followers to destroy their ships, and to march inland, with no prospect but to succeed or perish. The Indian republic of Tlascala lay between him and the Mexican capital. Cortez defeated the Tlascalans, when they attacked him, and then succeeded in winning their friendship. They acted henceforth as his zealous and faithful allies. Alarmed by the reports of the prowess of the Spaniards, and of the superhuman terrors of the arms which they wielded, Montezuma, the Mexican emperor, sought to conciliate the Spaniards, and received Cortez and his troops in the capital. Though they obtained lavish presents, and courteous treatment, the treasures which they saw around them inflamed more and more the cupidity of the invaders. The sight of the idolatrous rites, and especially of the human sacrifices which the Mexicans practised, inflamed their religious bigotry; the ambition of Cortez thirsted after absolute conquest, and, by a bold stroke of treachery, he seized the person of the Mexican emperor. Cortez, soon after this, received a material increase of strength, from a force which the viceroy of Cuba had sent to depose him and take him prisoner, but which he partly defeated, and partly persuaded to come over to him. But he now found himself plunged into a most desperate war with the native Mexicans, who rose upon the Spaniards, and assaulted them in their fortified quarters in the capital. The Mexicans strove with equal courage, and infinitely preponderating numbers, against the superior weapons and discipline of the Europeans, who throughout the struggle were gallantly supported by their Tlascalan confederates. Cortez was now at last obliged to evacuate the city; and on the night of the 1st July, 1520 (the *Noche Triste* of the Spanish historians), Cortez and his shattered force, with difficulty, and severe loss, made good their retreat from Mexico. Encouraged with this success, the Mexicans followed the Spaniards, and fought a pitched battle with them in the open field. In this battle (the battle of Otumba), Cortez gained a complete victory, which was mainly due to his own prowess; as in the very crisis of the battle, which was turning against the Spaniards, Cortez personally charged the Mexican general, and slew him with his own hand. After resting and reorganizing his army among the Tlascalans, and receiving some reinforcements, Cortez again advanced upon the Mexican capital. Guatemozin was now emperor of Mexico, and had learnt the inability of his troops to face the Europeans in the open field. He remained

within the city, which Cortez besieged. The geographical position of the city, and the great numbers of native allies who now served under him, enabled Cortez to establish a strict blockade. Many assaults were made and met with various fortune. Fire and the sword swept away thousands of the Mexicans, but famine was their most fatal foe, and Mexico, on the 13th August, 1521, surrendered, and the whole of its vast empire became subject to the crown of Spain. Cortez disgraced his triumph by putting the brave Guatemozin to a cruel death, an act of which he is said to have afterwards deeply repented. The domestic enemies of the conqueror of Mexico had been busy in their intrigues against him in the Spanish court, and in 1528 Cortez returned to Spain to face his accusers. He was coldly received, though with apparent honor; and he could not prevail on Charles V. to continue him in the governorship of Mexico. He returned to America in 1530, a powerful and wealthy noble, but without public authority. He now signalized himself in the arts of peace, in the skilful culture of his ample estate, in the introduction of the sugar cane, and the importation of merino sheep into the province. He made also several brilliant and important voyages of discovery along the Californian and other coasts of the Pacific. In 1540 he finally returned to Spain, where he was treated by his sovereign with ungracious neglect. Cortez died near Seville, in 1547, in the sixty-third year of his age. [E.S.C.]

COSIN, JOHN, an Eng. theologian, 1595–1672.

COSMAS, an Egyptian monk, who, in the beginning of the 6th century, wrote a work on the 'Topography of the Christian World.' Its chief object was to refute the unscriptural and impious doctrine of the earth's sphericity. He argued that it was a plain surrounded by an immense wall, at whose north side there was a great mountain, which concealed the sun every night. His work, however, contains many interesting particulars, especially concerning the East, in which some think he had extensively voyaged; and hence he is styled *Indicopleustes*. [J.B.]

COUTHON, GEORGES, is one of those problematical characters in the French revolution, upon whom it is difficult to pass judgment, though nothing is easier than to call them hard names, and to hold them up, in general terms, to the execration of mankind. He was born in 1756, and was president of the tribunal at Clermont when the revolution broke out; and though his lower extremities were paralyzed, so that he was compelled to speak sitting, he had been remarkable for his eloquence as an advocate. His first act as a member of the legislative assembly was to procure the abolition of the forms which distinguished the king as sovereign, declaring at the end of his address that 'He would have no other *majesty* than the Divine majesty and the majesty of the people.' As a member of the convention he voted for the death of the king without appeal and without delay. He acted with the party of the Mountain, and was mainly instrumental in the overthrow of the Girondins, and on the 2d of June proposed the arrest of the twenty-two deputies, and of the ministers Claviere and Lebrun. His conduct on all these occasions procured his election to the *Comité de Salut Public*, where he acted with St. Just and Robespierre. It was upon his proposition that the convention declared the English government to be guilty of '*lèse-humanité*,' and that Pitt was the '*enemy of the human race*.' He was at the taking of Lyons, and devoted many of its fine buildings to destruction, for which purpose he was carried from place to place in a chair, bearing a wooden mallet, with which he struck the unfortunate edifice, repeating the formula, '*La loi te frappe*,' (the law strikes thee,) after which the work of destruction might be commenced. The charge of cruelty made against him is founded principally on the decree, of which he was the author, for facilitating arrests, and giving new vigor and facility to the revolutionary tribunal, known as the decree of the 22d Prairial; but it is some answer to this, if Robespierre's opinion of his friend is worth any thing, that when Couthon was proposed to him for a new commission among the disaffected, he answered contemptuously,—'Bah! he cried like a woman over the punishment of the rebellious Lyonnese!' It is certain that the words of Couthon may often be cited against him, as the test, for example, which he gave when the Jacobins were to be purged of all but the ultra-democrats, '*What hast thou done to be hanged if counter-revolution should arrive?*' but the question is, what these words really implied *under the circumstances*, and with what degree of earnestness were they uttered? Couthon was faithful to Robespierre to the last; and on the 9th Thermidor endeavored to kill himself with a poniard, but wanted nerve, and was carried bleeding to the guillotine. His features

were mild and pleasing, and his expression remarkable for good-nature. [E.R.]

[Cowper's Summer-house at Olney.]

COWPER, WILLIAM, was the grand-nephew of the Lord Chancellor Cowper, and grandson of a judge in the Court of Common Pleas. His father was rector of Great Berkhamstead in Hertfordshire; and there the poet was born in 1731. After having spent two years of misery in a country school, he was placed at Westminster School, where he remained, comfortable and lively, till he was eighteen years old. He was then articled to a solicitor in London, was called to the bar in 1754, and resided in the Middle Temple for eleven years, neglecting law, contributing a few papers to '*The Connoisseur*,' and gradually exhausting his little patrimony. In 1763 one of his powerful kinsmen appointed him to two clerkships in the House of Lords. Doubts of his competency, and the fear of appearance in public assemblies, developed the tendency to insanity which lurked within him. He made several attempts to

destroy himself; and was consigned for eighteen months to a lunatic asylum at St. Albans. On his release in 1765, subsisting on the remnant of his property, with assistance from relatives, he took up his residence at Huntingdon, and became a boarder in the house of Mr. Unwin, a clergyman. That gentleman dying two years afterwards, the widow and Cowper removed to Olney in Buckinghamshire. John Newton was curate of the place; and his religious views accorded with those which had been adopted by the poet. In 1776 appeared the 'Olney Hymns,' of which some of the best were furnished by Cowper; but it was only about the time of their publication that the unhappy poet was freed from a second confinement, which had lasted for nearly four years.—Mrs. Unwin, anxious to engage his mind safely, urged him to prosecute verse-making. 'The Progress of Error' was written; 'Truth,' 'Table-Talk,' and 'Expostulation,' followed it; and these with other poems made up a volume, which was published in 1782, receiving the approbation of Johnson and other critics, but meeting little attention from the public. The poet's fame, however, was decisively established by his next volume, which appearing in 1785, contained 'The Task' and other poems. The publication of 'The Task,' indeed, was an era in the history of English poetry. It was the point of transition from the eighteenth century to the nineteenth. Natural language was substituted for artificial; themes of universal interest were handled, instead of such as told only on a few cultivated minds; even the seriousness and solemnity of the leading tone had a striking attraction, while it was relieved both by strains of pathos and touches of satiric humor. More novel and original than anything else were those minute and faithful delineations of external scenery, to which no parallel had been seen since the 'Seasons.' Perhaps, also, the didactic form of Cowper's poems, giving them an equivocal character which hovers continually between poetry and argumentation, was an additional recommendation to readers who had long been unaccustomed to the finer and higher kinds of poetical invention.—Cowper now spent six years on his translation of Homer, which appeared in 1791. The neglect which it has experienced is certainly undeserved, at least by his 'Odyssey.' His mental alienation, which had repeatedly threatened him with a return, overcame him completely in 1794; and the last six years of his life produced hardly any literary fruits except the pathetic 'Castaway.' The death of his dear friend Mrs. Unwin, in 1796, threw him into a gloom which was hardly ever again dispelled, and he died in 1800. [W.S.]

[Birth-place of Crabbe.]

CRABBE, GEORGE, a poet whose truth to nature and strength of homely pathos atone for deficiency in ideal elevation, was born in 1754, at Aldborough in Suffolk, where his father was collector of salt duties. He went through an apprenticeship to a surgeon, and for a short while attempted practice; but, always attached to letters rather than business, he had little success, and came to London in 1780 to seek his fortune. When the failure of his first poem, 'The Candidate,' had reduced him to great distress, and when no attention had been paid to his appeals to distinguished persons locally connected with his birth-place, he boldly laid his case before Edmund Burke. This great man read his manuscripts, received him into his house at Beaconsfield, and introduced him to his friends; and the poem of 'The Library,' published on his recommendation, was received with great applause. His reputation was increased by 'The Village,' which appeared in 1783; and the publication of 'The Newspaper' in 1785, closed the first series of his works. In the mean-time, orders having been obtained for him, he became chaplain to the duke of Rutland, married happily, and received in succession several moderate preferments. In 1807 he published 'The Parish Register,' to which were added 'Sir Eustace Grey,' and other small poems; and 'The Borough,' the most various and energetic of his works, made its appearance in 1810. In 1813, soon after the death of his wife, he was presented to the living of Trowbridge in Wiltshire, where he spent the remainder of his quiet and honorable life. His 'Tales of the Hall' were published in 1819. His death took place in 1832.

CRANE, JAMES C., one of the secretaries of the American Bible Society, born in Morristown, N. J., 1794. Died shortly after a visit to the Indians of New York and Ohio, in 1826.

CRANFIELD, EDWARD, president of New Hampshire from 1682 to 1685. He was very unpopular and tyrannical, and tried, but in vain, to enforce taxation without the consent of the people. He was compelled to leave the colony, and went to Barbadoes as collector, where he died about A.D. 1700.

CRANMER, THOMAS, was born at Aslacton, in the county of Nottingham, on the 2d July, 1489. He entered Jesus College in 1503, became a fellow in 1510-11, and a doctor of divinity in 1523. His opinions on the first marriage of Henry VIII. with his brother's widow introduced him to the king. The favorite's multifarious efforts were in vain to procure a divorce from the papal authorities, but as a reward for his services, though he had been twice married, he was raised by royal favor to the see of Canterbury. On 23d May, 1543, the archbishop declared the king's marriage to be null and void, and five days afterwards he married Henry to Anna Boleyn. Cranmer now became occupied with more meritorious work, the translation of the Bible, and the great work of the English reformation. At Henry's death, he was one of the council of regency to Edward VI., and a liturgy, homilies, and articles were composed under royal patronage. When the young monarch died, and Mary at length ascended the throne, Cranmer, who had been drawn into the plot on behalf of the Lady Jane, was summoned before the council, then committed to the Tower, and finally sent to the prison of Bocardo at Oxford. He was at length, by Pope Paul IV., declared guilty of heresy, &c. On the 20th of March, the night before his martyrdom, he was entrapped into a written recantation. On the next day, in St. Mary's church, he solemnly declared 'that his hand had offended in writing contrary to his heart.' 'My hand,' said he, 'shall first be punished. For if I may come to the fire, it shall first be burned.' When he was brought

to the stake, erected opposite Baliol College, he fulfilled this resolution with a marvellous and unexpected intrepidity, still crying 'this unworthy hand!' But there was a sad infirmity in Cranmer's nature, and his great faults were an apparent vacillation and a want of decision and firmness. Yet he was honored to do a great work in his time. 'He was at once,' says Macaulay, a divine and a courtier,' and the attempted combination of the two characters created inconsistencies which soiled the purity of his life, and detracted from the merit of his actions. [Oliver Cromwell.]

CROMWELL, OLIVER, the Protector, was born in the town of Huntingdon, on the 25th of April, 1599. His father was Robert Cromwell, a cadet, of a family possessed of a baronetcy, and his mother being a daughter of Sir Richard Stewart, efforts have often been made to show that he was connected with the royal family. He spent a dissolute and extrava-

gant youth, interrupted by serious misgivings, which brought him at last to stern self-condemnation.—When twenty-one years old he married Elizabeth, the daughter of Sir Thomas Bouchier, and thus, both by descent and alliance, he was a member of the higher country gentleman class, or of the nobility as it would be termed in other European countries. In that age, however, refinement was only kept up by attendance in court, and Cromwell, who lived away from town and followed country pursuits, be-

[Mask of Cromwell taken after death.]

came a man of clownish deportment. Though he had been elected to the brief parliament of 1628, it was not till 1640 that he was known in the House of Commons, and Sir Philip Warwick, who observed his rise, has left a curious notice of his personal appearance. His apparel, he said, was very ordinary, 'for it was a plain cloth suit, which seemed to have been made by an ill country tailor. His linen was plain, and not very clean, and I remember a speck or two of blood upon his little band, which was not much larger than his collar. His hat was without a hat-band. His stature was of good size; his sword stuck close to his side; his countenance swollen and reddish, his voice sharp and untunable, and his eloquence full of fervor. He had been for some years establishing an influence with the puritan party, who frequented his house and bowed to his strong judgment. He showed his great business capacities in the struggle of the long parliament, but it was not until the parliament raised a military force, to which he brought a troop of horse, that his powers of organization and command were fully developed. He speedily rose to authority as lieutenant-general of the horse, and when he was specially exempted from the self-denying ordinance, so that he could both deliberate in parliament and hold command, he became the most powerful man in the country. He showed his eminent sagacity in reconstructing the army, and infusing into it high spirit along with stern discipline. At the battle of Naseby in 1645, it was seen, in the signal destruction brought on the well-officered royal army, how effectively he could strike with the weapon he had constructed. His military policy throughout was to despise secondary means and ends, but to invest himself with overwhelming power and crush his enemy. He saw the large share which artillery must bear in warfare, and anticipated modern generals in fostering that destructive arm. His repeated victories over the royalists, his establishment of the predominance of the army over parliament, and of the independents over the presbyterians, his relentless exertions to bring Charles I. to the block, and his dismissal of the parliament, are all great events in the history of the day, which cannot be narrated with sufficient distinctness without much detail. In 1649

he conducted an exterminating war in Ireland, instigated by the ferocious principle that whatever human being opposed him should be put to death. In Scotland, where he saw there were more suitable materials for the sort of government he desired, he was rather a pacificator than an oppressor. It was on the 16th of December, 1653, that he took the title of Lord Protector, and became virtually king of Britain, and a king who submitted to very little constitutional restraint. How far he was sincere in the religious convictions by which he professed to be led, has been matter of endless debate, and as a secret buried with him who alone possessed it, it may occupy controversy to the end of time. That he was under powerful religious impulses cannot be doubted—the question arises as to the extent to which he really believed that by their power alone, and by no promptings of worldliness, he was driven on in his ambitious career. He was an enlightened internal reformer, and established many ministerial improvements which subsequent governments were compelled unwillingly to follow. His latter days were spent in anxiety and depression, if not remorse, and he died on the 3d September, 1659. [J.H.B.]

CROMWELL, THOS., a statesman and admiral of Wolsey, and afterw. of Henry VIII., beheaded 1540.

CRONSTED, A. F., a Swed. miner., 1722–1765.

CROPPER, JOHN, General, a distinguished American officer during the Revolution, in Virginia. He did eminent service at the battles of Brandywine, Germantown and Monmouth Court House. Died in 1821, aged 65.

CROSS, M., an English painter, time of Ch. I.

CROSWELL, WM., an American episc. divine and poet, 1804–1851.

CROWE, WM., an English poet, 1756–1829.

CROWNINSHIELD, BENJAMIN W., an American statesman of Boston; Secretary of the Navy during the administration of President Madison, d. 1851, aged 77.

CROWNE, JOHN, a dramatic writer and poet, of the reign of Charles II., by birth an American.

CROXALL, S., a Whig wr. and divine, d. 1752.

CRUDELI, TH., a poet of Tuscany, 1703–1745.

CRUDEN, ALEXANDER, author of the well known Concordance of the Holy Scriptures, was born in Aberdeen on the 31st May, 1701, and graduated at Mareschal College, with the design of entering the ministry, but aberration of mind, originating in disappointed affection, cast a cloud over his prospects. His piety, literary skill and habits of unwearied industry never deserted him. For some years he was employed as a classical tutor and corrector of the press in London, and the Isle of Man. He was appointed Bookseller to the Queen, to whom in 1737 he dedicated his Concordance. Pecuniary difficulties growing out of the publication of this work now increased his insanity, and led to his temporary confinement, but he escaped from Bethnal Green, and brought an action against the proprietor and physician of the Asylum, who of course obtained a verdict in their favor. For the rest of his life he was permitted to remain at liberty, and he returned with zeal to his learned and severe labors, manifesting his strange eccentricity in a thousand forms, soliciting Knighthood from the King, a seat in parliament from the people of London, and courting the daughter of the Lord Mayor, but preserving unchanged his piety and benevolence. He made a verbal index to Milton's poems, a Scripture Dictionary, and several religious works, continuing to the last the emendation of his Concordance. On the 1st Nov., 1770, he was found dead in his chamber in the attitude of prayer.

CRUIKSHANK, W., an Eng. anat. 1746–1800.

CRUSIUS, M., a German schol., 1526–1607.

CRUSIUS, T. L., a Saxon engrav., 1730–1769.

CRYM-GUERAL, khan of Tartary, 1758–1770.

CUBA, J., a German botanist, 15th century.

CUBERO, P., a Spanish miss., 17th century.

CUDWORTH, RALPH, principal of Christ College, Cambridge; a philosopher of considerable eminence, and prodigious learning. Born in Somerset in 1617, and died in 1688. Cudworth's life was an unceasing protest against Hobbes; and the theme he proposed to himself was, very suitably, a defence of Human Liberty. He recognized three kinds of Fatalism—equally destructive of responsibility, and of the foundations of Morals: *first*, Fatalism purely materialistic, suppressing, with the notion of human Liberty, the idea of God, and the reality of a spiritual existence—explaining all phenomena, mental and physical, by concourses of atoms: *second*, that theological Fatalism, common enough in all ages, which resolves good and evil, justice and injustice, into the simple and arbitrary will of God: *third*, the fatalism of the Stoics, which confounds Providence with the laws of Necessity,—regarding everything as inflexibly pre-ordained. Cudworth's protest against the first description of Fatalism, or his refutation of materialistic Atheism, occupies his ponderous 'Intellectual System of the Universe;' and his effort to rescue the foundations of Right and Wrong from arbitrariness, constitutes the 'Immutable Morality.' He did not live to complete his task by a similar attack on the Stoical, or ultra-Calvanistic form of hostility to human spontaneity. The 'Intellectual System' especially, is a very storehouse of information concerning cosmogonic speculation; nor will the reader fail to detect throughout, marks of independent, and even original thought. It contains, for instance, the germ of the modifications afterwards proposed by Leibnitz, on the argument of Des Cartes, for the being of a God. (See article DES CARTES.) The fault of all the writings of Cudworth, is their too much learning; his positions are overlaid. His works were at first published in folio: an edition of the 'Intellectual System' in 4 vols. 8vo, has been recently edited by Birch.—Cudworth merits a high place in that class of English divines in which we find the names of Gale, Thomas Burnet, and Henry More. CUFAELER, ABR., a Ger. phil., 17th century.

CUFF, HEN., an Eng. schol., execut. for alleged complicity in the treason of the Earl of Essex, 1601.

CUTT, GEORGE, an English artist, remarkable for his etchings, d. 1854, aged 75.

CULLEN, WILLIAM, M. D., 1712–1790, was one of the most remarkable physicians which Scotland has produced, and took a principal share in elevating the mere art of the practitioner into a science. He was born at Hamilton, Lanarkshire, where his father was chief magistrate. Serving an apprenticeship with a surgeon in Glasgow, after the manner of Roderick Random, young Cullen made several voyages to the West Indies as surgeon in a London trader; but tiring of the monotony of such employment, he settled as a country practitioner at Shotts, in his native county. There he made the acquaintance, and entered into partnership with Dr. William Hunter, who afterwards became so distinguished in London, and here he likewise drew towards him the attention of the duke of Hamilton, to whom he was indebted for being placed in a position which enabled him to exhibit his natural powers. By the terms of agreement between Cullen and Hunter, it was stipulated that each alternately should be allowed to study dur-

ing the winter session at some college; Cullen chose Edinburgh, and Hunter London; an arrangement which soon terminated their association, as the latter having obtained employment from Dr. Douglas, never returned. Cullen, who had graduated, was appointed lecturer on chemistry in the university of Glasgow, in 1746, and was afterwards placed in the chair of medicine. But, if we are not mistaken, he also occasionally lectured on chemistry, as we have seen a letter from him to the faculty of the college offering to lecture on chemistry if £30 were given to pay the expenses of the course, and ill-advised parsimony was not the characteristic of that learned body, and Dr. Cullen, on his removal thither, first occupied the chair of chemistry, and subsequently that of medicine. His views of medicine, his enthusiastic love of his profession, his kindness of heart, and his remarkable talents, soon gave an impetus to the scientific study of medicine, which is still felt at the present day.—His students not merely respected him as a man of science, but they loved him as one who saw into their hearts, and who, sympathizing with their defects, smoothed their path of study. The important works of Cullen were his 'Nosology,' and his work on medicine, both of which are characterized by admirable arrangement, careful selection, and well-considered deduction—truly wonderful when we consider the limited field of the medical sciences when Cullen wrote.

CULLUM, SIR J., an Engl. antiq., 1733–1785.

CULPEPER, SIR T., a miscel. writer, 17th ct.

CULPEPPER, NICH., an apothecary and astrologer, au. of the well-known 'Herbal,' 1616–1654.

CULPEPPER, THOMAS, governor of Virginia from 1680 to 1683. He was an extensive proprietor in the province, and his estates descended to his daughter, wife of Lord Fairfax. He died in 1719.

CUMANUS, governor of Judæa, mid. of 1st ct.

CUMBERLAND, the name of an Engl. dukedom, reserved for the younger members of the royal family. The most noted of this title is WILLIAM AUGUSTUS, son of George II., cel. as commander at the victory of Culloden, 1721–1765.

CUMBERLAND, RICHARD, an Engl. prelate of great learning, au. of 'De Legibus Naturæ,' written in opposition to Hobbes, to prove that there is a natural code of morals, 1632–1718.

CUMBERLAND, RICHARD, was the great-grandson of Bishop Cumberland, the author of the treatise 'De Legibus Naturæ.' His mother was a daughter of the celebrated Richard Bentley, and the heroine of Byron's pretty pastoral, 'My time, O ye Muses.' His father, a respectable English clergyman, was, for some years before his death, an Irish bishop. Richard Cumberland was born in his grandfather's house at Cambridge in 1732. He was educated at that university, took his degree as tenth wrangler, and held for some years one of the two lay fellowships of Trinity College. His family withdrew him from his clerical studies to become private secretary to Lord Halifax, then at the head of the board of trade; and after having spent a long time in official duties, he was appointed secretary to the board, and held that place till the abolition of the board in 1782, when he retired on a pension. In 1780 he was sent on a confidential mission to the court of Madrid, where he spent about a year; but the negotiations having failed, and Cumberland's expenditure having much exceeded the scanty advance made to him by the ministry on his departure, he was left, apparently with much injustice, to bear a loss of four or five thousand pounds, which exhausted almost wholly his slender patrimony.—During

his official life he had written many occasional and other pieces, and had given to the stage more than one successful comedy. Soon after his return from Spain he settled at Tunbridge Wells, where he resided for many years afterwards, occupied wholly with literary pursuits, and writing with indefatigable industry. He died in 1811. He was an honorable and amiable man: but his literary vanity was excessive: and his irritable susceptibility to criticism, which made Garrick call him 'the man without a skin,' exposed him to be unmercifully caricatured by Sheridan in the character of Sir Fretful Plagiary.—There is hardly any kind of composition, whether in prose or verse, that Cumberland did not attempt. But the most of his efforts were of little value; and in the best of them he was hardly more than fluent and agreeable. His epic poem of 'Calvary' was an utter failure. His series of periodical essays, called 'The Observer,' has much merit in an easy kind of criticism; the best papers are those on the Greek dramatists, the erudition of which he avowed having gleaned from Bentley's papers, but which he embellished by spirited metrical translations of his own. His dramatic pieces, embracing every thing from tragedy to opera and farce, amounted to more than fifty, of which the larger number were printed. Among them were several comedies that are still remembered:—'The Brothers,' 'The West Indian,' 'The Jew,' and 'The Wheel of Fortune.'

CUTLER, TIMO., D.D., President of Yale College, was graduated at Harvard in 1701—was ordained at Stratford in 1709, and elected to the presidency of Yale in 1719. He was a man of great eloquence and profound learning. In 1722 he renounced the Congregational ministry, and signified his conversion to the principles of the Church of England, upon which he was requested to withdraw from the Rectorship of Yale College. He was ordained to the diaconate and priesthood in England in 1723, and the University of Oxford conferred on him the degree of D.D. After his return to America he became rector of Christ Church, Boston. He died in 1765, aged 82.

CUVIER, GEORGES LEOPOLD CHRETIEN FREDERIC DAGOBERT, one of the greatest naturalists the world has produced, was born at Montbéliard in 1769. He died in 1832. After finishing his education at Stuttgart, the young Cuvier accepted the situation of tutor in a protestant family in Normandy. Living for some years in that part of France, part of the time on the sea coast, he was enabled to follow up the love for natural history which he had exhibited from his earliest years. The Abbé Tessier, whom the troubles of the times had driven into exile from the capital, introduced him by letter to MM. Jussieu and Geoffroy. Several memoirs written about that time and transmitted to the latter, established his reputation, and procured his admission to two or three of the learned societies in Paris. In 1799 he was appointed successor to Daubenton as professor of natural history at the college of France, and in 1802 he succeeded Mertrud in the chair of comparative anatomy at the Garden of Plants. From that time he devoted himself steadily to the studies which have immortalized his name. His 'Leçons d'Anatomie Comparée,' and the 'Regne Animal,' in which the whole animal kingdom is arranged according to the organization of the beings of which it consists, have raised him to the pinnacle of scientific fame, and established him as perhaps the first naturalist in the world after Linnæus. His numerous memoirs and works upon these subjects show a master mind in the study of zoology; and extending the principles laid down in his comparative anatomy to the study of paleontology, he has been enabled to render immense service to geology. Starting from the law that there is a correlation of forms in organized beings—that all the parts of each individual have mutual relations with each other, tending to produce one end, that of the existence of the being—that each living being has in its nature its own proper functions, and ought therefore to have forms appropriated for those functions; and that consequently the analogous parts of all animals have received modifications of form which enable them to be recognized, he was able to ascertain from the inspection of a single fossil bone, not only the family to which it ought to belong, but the genus to which it must be referred. Even the very species of animal was thus to be made out, and the restoration of its external form as it might have lived and died, became in his hands an object of certainty and precision. His 'Regne Animal' has been frequently translated, and forms the basis of all arrangements followed at the present time. Cuvier filled many offices of great importance in the state, particularly connected with educational institutions. Napoleon treated him with much consideration, Louis XVIII. and Charles X. advanced him to honor, and Louis Philippe raised him to the rank of a peer of the realm. [W.B.]

There are three saints of this name—the *first*, a father of the Greek church, patriarch of Jerusalem, 315-386; the *second*, patriarch of Alexandria, and author of works against the Nestorians and other enemies of the faith, 5th century; the *third*, called the apostle of the Slavi, the converter of the Chasars, 9th century.

CYRIL-LUCAR, patriarch of Constantinople, 1572-1638.

CYRUS I., or the ELDER, the founder of the Persian empire, was the grandson of Astyages, the last king of Media. Even in the time of Herodotus the story of Cyrus was so much mixed up with fable that it was impossible to separate truth from fiction. Astyages had a daughter named Mandane; and, in consequence of a dream which portended that her offspring should be the master of Asia, he married her to Cambyses, a Persian of good family, but of a quiet and unambitious temper. On the birth of Cyrus, Astyages ordered the infant to be exposed, and intrusted the execution of his cruel order to Harpagus, one of his most faithful attendants. But the herdsman in whose hands the infant was placed for destruction was induced by the entreaties of his wife to rear it as his own son, under the name of Agradates. As is usual in such fabulous narratives, the royal youth gave evidence of his descent by superior talents and noble bearing; and being brought before his grandfather at the age of ten to answer for his severe treatment of the son of a noble Median at play, was discovered by the king to be the son of his daughter. The circumstances of his preservation were then stated, and the boy was sent to his real parents. Astyages forgave the herdsman, but wreaked his vengeance on Harpagus, by murdering his son, and causing his mangled limbs to be served up to his father at a banquet. Harpagus submitted quietly to his fate; but thenceforward meditating revenge, he succeeded not long after in organizing a conspiracy against Astyages, and easily prevailed

[Tomb of Cyrus.]

upon Cyrus to become the leader. Cyrus induced the Persians to join in the revolt; and, after defeating Astyages, took possession of his throne B.C. 559. Croesus, the rich king of Lydia, and brother-in-law of Astyages, was the first to endeavor to check the usurper, but Cyrus anticipated his design, and took possession of his capital in B.C. 546. The extensive dominions of Croesus, along

with the whole of Upper Asia, soon came under his sway. The most noted event connected with the acquisition of this vast country was the taking of Babylon, the capital of Assyria, of which Labynetus, the Belshazzar of Daniel, was king. Cyrus entered the city by diverting the course of the Euphrates, and introducing his army along the dry bed of the river B.C. 538. Cyrus next directed his efforts against the Massagetæ, a nation of Northern Asia, and offered to marry Tomyris, their queen, who was then a widow. His suit was rejected; and in a battle which ensued he was defeated and slain in B.C. 529, after a reign of twenty-nine years. Such is the narrative of Herodotus. The *Cyropædia* of Xenophon is an historical romance. The life of Cyrus is of great importance, as being the epoch which forms the chronological link between sacred and profane history. [G.F.]

CYRUS II., or the YOUNGER, was the second son of Darius Nothus, king of Persia, and was appointed by his father satrap of Lydia, Phrygia, and Cappadocia, in Asia Minor, in B.C. 407. On the death of his father, B.C. 404, and the accession of his elder brother Artaxerxes, Cyrus disputed the right of succession, founding his claim on the fact that he was the first-born after his father ascended the throne. For this act of treason he was condemned to death; but his life was preserved through the intercession of his mother, Parysatis, whose favorite son he was, and who had secretly encouraged him in his attempt on the sovereignty. On returning to his province he continued to cherish his ambitious views, and immediately began to make preparations for the execution of his design. By various means he succeeded in quieting the suspicions of his brother, while he endeavored to bribe the Persians who passed between himself and the court, and raised a body of 13,000 Greeks, on whose assistance he chiefly rested his hopes of success. In the spring of B.C. 401, Cyrus set out from Sardis, and, marching through Asia Minor and Syria, reached the plain of Cunaxa, 500 stadia from Babylon. Here he found Artaxerxes ready to oppose him with an immense army. In the battle which took place, the Greek troops routed the Asiatics who were opposed to them; and Cyrus, rushing into the centre to attack his brother, was slain. The king caused his head and hands to be cut off, and wished it to be believed that he had fallen by his hand. The retreat of the Greeks, as described by Xenophon, who was himself present, forms one of the most interesting chapters in the history of ancient warfare. [G.F.]

CZERNI-GEORGE, the surname of GEORGE PETROVITZ, a native of Servia, who maintained a long struggle for his country's independence, and was acknowledged by the Porte as prince of Servia in 1806. Being deprived in the year following of a part of his possessions, he took up arms again, and retired to Russia in 1813. In 1817, having returned to Turkey, he was captured and executed.

DAHLBERG, ERIC, Count, a Swedish marshal, antiquarian author, and designer, 1625-1703.

DAIGNAN, WM., a Fr. med. wr., 1732-1812.

DAILLE, JEAN, minister of the French Reformed church at Charenton, A.D. 1639, and one of the most eloquent preachers of his age. His published works amply justify the high celebrity he enjoyed. He combined the acute argumentative powers of a logician with the exercise of a lively imagination, that enabled him to draw illustrations of his subject from every field of nature; and to these intellectual qualities he added a fervor and pathos that stirred the depths of the human soul. His discourses are characterized by a heart-stirring eloquence, and it has been remarked of him, that he had all the eloquence of Saurin, without any approach to his turgid and bombastic style. The work by which the name of Daillé has long been honorably known in this country is his treatise 'De usu Patrum,' a work designed to check or moderate the excessive reverence

which is felt in many quarters for the writers of ecclesiastical antiquity. It rendered an important service to the protestant cause in his own country and times, and may still be consulted with advantage in exposing the semi-popery of our own day. It was published in French in 1632, in Latin in 1656, and a translation of it into English in 1651, under the title of 'A Treatise concerning the Right Use of the Fathers in the Decision of Controversies that are at this Day in Religion.' Daillé was also the author of several expository works on books of Scripture—the most esteemed, if not the most valuable, of which have appeared in an English dress. His 'Discourses on the Epistle to the Colossians' were translated in 1672, with a preface by Dr. Owen, and of those on the Philippians an elegant English version was given to the world in 1841, by the Rev. James Sherman, minister of Surrey chapel, London.

DALAYRAC, N., a Fr. opera comp. 1753-1809.

DALBERG, CHAS. THEODORE ANTHONY MARIE, Baron De, prince primate of the Catholic Church of Germany, president of the confederation of the Rhine, and grand duke of Constance under Napoleon, 1745-1817. DALE, RICHARD, commodore in the U. S. navy, was a native of Virginia, and born in 1757. He was thrice captured by the British, in 1776, 1777, and 1781. The first time he retook his vessel the same night, the second time he effected his escape, and served under Paul Jones in the *Bon Homme Richard*, and the third he was exchanged. He commanded the U. S. squadron in the Mediterranean from April 1801 to Dec. 1802, when he resigned his commission, and retired into private life. He died at Philadelphia in 1826.

DALE, SIR THOMAS, High Marshal of Virginia in 1609 and 1611, when he was superseded by Sir Thomas Gates, on whose return to England in 1614 he again assumed the chief command in the colony. He was an energetic but rigorous governor, and

founded the town of Henrico on James river. He died in the East Indies, to which he went after his return to England in 1616.

DALECHAMPS, J., a Fr. botanist, 1513–1586.

[J. D'Alembert.]

D'ALEMBERT, JEAN LE ROND, one of the most celebrated mathematicians and astronomers of the last century, was born at Paris on the 17th November, 1717. Having been exposed by his mother near the church of St. Jean Le Rond, from which he derived his name, he was taken care of by a glazier's wife, and afterwards provided for by his father, when he had learned the fate of his child. He was educated at the Jansenist college of the Four Nations, and so premature was his intellect, that at the age of ten he had acquired all the knowledge that his masters could convey to him. He was regarded by the Jansenists as a second Pascal, and in order to make the comparison perfect, he was initiated into the mathematical sciences. With a passionate devotion to science, he left the college and took up his residence in the house of his nurse, where he remained for forty years, concealing from her his fame, and generously adding to the little comforts of her lot. Having, like all other men of original genius, found himself anticipated in his earliest discoveries, he despaired of doing any thing that had not been previously done; and abandoning his mathematical studies in despair, he resolved upon following one of the learned professions. The income of 1,200 livres a year which his father, M. Destouches, had left him, being insufficient to maintain him in the position which he now occupied, he pursued in succession the studies of law and medicine, and so ardently did he devote himself to the latter, that he banished his mathematical library to the house of a friend. It was in vain, however, that he tried to overcome the earliest and strongest of his passions. His mathematical works gradually found their way back to his house, the profession of medicine was abandoned, and his affections irrevocably fixed on the study of geometry. At the early age of twenty-four D'Alembert was admitted a member of the Academy of Sciences, and in 1741 he published his 'Treatise on Dynamics,' founded on a new principle of mechanics, which he applied to the resolution of several beautiful problems. In his 'Reflections on the General Course of Winds,' which was crowned by the Academy of Berlin in 1746, he gave the first details of the calculus of partial differences, of which

he was the discoverer. In 1752 he published his 'New Theory of the Action of Fluids,' and also his 'Elements of the Theory and Practice of Music.'—About this time he undertook, in conjunction with Diderot, the 'Encyclopædie,' to which he communicated many articles of great interest, and also the preliminary 'Discourse' which was prefixed to that immortal work. These writings were followed by several literary works which we have not room to enumerate, and by his 'Researches on Different Important Points of the System of the World,' which appeared in 1754 and 1756, and in which he greatly improved the solution of the problem of three bodies, which had occupied the attention both of Euler and Clairaut. In 1756 D'Alembert, who had previously received a pension from the king, was made a supernumerary pensioner by the Academy of Science; and in 1759 he published his 'Elements of Philosophy,' a work of distinguished merit. After the peace of 1763 D'Alembert was invited by Frederick the Great to fill the office of president of the Academy of Berlin, and the empress of Russia had also solicited him to superintend the education of her family. Having refused, however, both these appointments, he was in 1772 nominated perpetual secretary to the French Academy, a position in which he wrote no fewer than seventy eulogies of its deceased members. Besides the works which we have mentioned, D'Alembert published a treatise 'On the Destruction of the Jesuits,' and a collection of his memoirs under the title of 'Opuscules Mathématiques.' In the latter part of his life he was attacked with a disease in the bladder, and he died of the stone on the 29th October, 1783, in the sixty-sixth year of his age. For a full account of his life, and of the romantic incidents of his attachment to Mademoiselle L'Espinasse, we must refer our readers to the 'Edinburgh Encyclopædia,' vol. i. p. 400, art. *Alembert*. [D.B.]

DALIBARD, TH. F., a French botanist. d. 1774.

DALIN, OLAUS VON, a Swedish poet and historian of considerable eminence, successively chancellor and councillor of state, 1708–1763.

DALLAS, ALEXANDER JAMES, an eminent American statesman, born in Jamaica in 1759. He left the West Indies at an early age, and was educated at Edinburgh and Westminster. In 1783 he came to America, and combined the study of law with literary pursuits. As editor of the *Columbian Magazine* and other popular periodicals, he gained such distinction that in 1791 he was appointed Secretary of State for Pennsylvania, and again in 1793 and 1796. As U. S. Attorney in Pennsylvania, he recovered against Fenno in 1801 a large fine for libel. He was Secretary of the U. S. Treasury in 1814, and also Secretary of war in 1815. He resigned these offices in Nov., 1816, and died the following January, aged 57. He published 4 vols. of *Law Reports* in 1806–7, a review of the war of 1812, and the laws of Pennsylvania with notes. He also began a history of Pennsylvania, but did not live to finish it.

DALTON, JO., an Engl. div. and poet, 1709–63.

DALTON, JOHN, D.C.L., born 1767, at Eaglesfield, Cumberland; died 1844, at Manchester. Dr. Dalton labored under great disadvantages in reference to his early education, as he had only the benefit of the instructions of the village school till his eleventh year, and with the modicum of knowledge there acquired, he himself taught the school in his twelfth and thirteenth years. He was afterwards engaged in husbandry, and in his fifteenth year became assistant in a school at Kendal, to the rectorship of which he succeeded about his nineteenth year. After remaining there for eight years, he went, in 1793, to Manchester, where he ever afterwards resided, and taught mathematics. The unobtrusive manner of life of a scientific member of the Society of Friends can present few incidents of interest, and except the views with which he enriched science, we shall find the life of Dr. Dalton barren—but these are of first-rate value. His first investigations were in 1801, when he sought to determine the amount of increase in the bulk of gases by the application of heat—a subject of great importance, and which led him to the conclusion that their expansion is the same for equal degrees of heat. His theory of mixed gases was his next publication, and soon afterwards followed his meteorological views, all of which have thrown much light on the subjects of which he treated. But his most valuable contribution to chemistry was the discovery of the atomic theory, communicated to Dr. Thomas Thompson in 1804. It is true that indications of this theory are contained in Higgins' and Richter's works, published several years anteriorly, but it is certain that Dalton was ignorant of these chemists' views, and that no one had been able to appreciate the importance of the subject from their publications until after Dalton wrote; and the writer has in his possession a statement from a distinguished foreign chemist, who within the last thirty years had read Richter's work most carefully, but had failed to discover in it the atomic theory. See *Atomic Theory* in 'Thompson's Cyclopædia of Chemistry.' [R.D.T.]

[Dampier.]

DAMPIER, WILLIAM, the son of a farmer near Yeovil, was born in 1652. He went early to sea, and performed many voyages. He then became under-manager of a Jamaica plantation; made an engagement in the coasting trade, and on its close joined a party of the freebooting logwood-cutters at Campeachy; and next, the privateers upon the coast, in an eleven months' cruise. Returning to the wood-cutting, he was very successful; and the year following visited England. Here he married and remained six months, when he returned to Jamaica, and took out goods for which he knew there was a market. At this time he purchased a property in Dorsetshire; but wishing to realize a little more money before settling upon it, and meeting a number of the leading buccaneers, who were Englishmen, near Port Royal, he joined their company. Having sacked Portobello, and crossed the isthmus, they waged a merciless war for four years in the Pacific; when disagreeing, a portion of them crossed to the Atlantic again, and finally sailed from Virginia on a buccaneering voyage round the globe, going west, and returning through the Indian seas. At the Nicobar isles Dampier left the ship, and came on alone, reaching home in 1691. Soon after, he published his '*New Voyage round the World*,' which excited great interest, being well written, and full of new and interesting matter relating to botany and zoology, as well as to geography and ethnology. Thus brought into notice, he was employed (14th January, 1699) by government on a voyage of discovery to New Holland and New Guinea, in which he made many important additions to geographical knowledge. At Ascension, on the homeward voyage, the ship '*foundered through perfect age*,' as he expressed it; but though the crew and part of his collections were saved, and he was no way to blame, he was not again employed by government. In 1703 a company of merchants, however, gave him command of one of two ships, sent out to the South Seas on a privateering cruise. This proved singularly unfortunate—he took no rich prizes—his commission was stolen by a petty officer, and he was imprisoned in India by the Dutch. We find him again in England in 1708, and employed in the privateer voyage of Woodes Rogers, fitted out by merchants of Bristol; but on this, his third circumnavigation, in the humble capacity of pilot. The expedition was very successful, and returned to the Thames 14th December, 1711—from which time nothing whatever is known of Dampier. His merits as a navigator, an accurate surveyor, and a naturalist, are of the very highest order; and his moral character seems to

have been but little contaminated by the lawless company with which he so long associated. [J.B.]

DAMPIERRE, A. H. M. PICOT DE, a Fr. general, distinguished at Valmy and Jemappes, succeeded to Dumouriez, 1756-1793.

DAMPIERRE, H. DU VAL, Count De, a captain of the 6th century, dis. against the Turks, died before Presburg, 1620.

DAMPIERRE, J., a Latin poet, died 1550.

DAMPIERRE, WM. DE, count of Flanders and father-in-law of Edward I., k. of Eng., d. 1305.

DAMP MARTIN, ANNE HENRI, Viscount, captain of dragoons at the outbreak of the French revolution, but chiefly memorable for his literary works, was b. at Uzéz, 1750, and died 1823. His early education was intended to qualify him for the church; but he disappointed the expectation of his friends, and choosing the profession of arms, devoted his leisure to literary studies. He was a friend of constitutional reform, and the subjects of his pen demonstrate the interest that he felt in education and national progress. The principal event in his military career was the assistance he rendered at Avignon, November, 1791, in suppressing the brigands and murderers commanded by Jourdan Coupe-tête. In 1792 he abandoned his regiment and retired to Holland. His work, entitled 'Événements qui se sont passés sous mes yeux pendant la Révolution Française,' is valuable for its authenticity, minuteness of detail, and simple sincerity. It appeared at Berlin 1799, and now forms the first part of a work in two vols., entitled 'Mémoires sur les divers événements de la révolution et de l'émigration,' published at Paris, 1825. [E.R.]

DAMP MARTIN, P., a biog. wr., 16th century.

DAN, the fifth son of JACOB. (Gen. xxx., 4, 5, 6.)

DANA, FRANCIS, L.L.D., a distinguished American statesman, born in Charlestown, Mass., in 1742, and was graduated at Harvard College, in 1762. He visited England in 1775 to visit his brother, and the next year was elected to Congress. In 1779 he went to Paris, as secretary of legation, and in 1781 proceeded as ambassador to Russia. He was not publicly received, but continued in that country till the close of 1783. Returning to America he was, in 1784, again chosen to Congress. His sentiments agreed with those of Hamilton and the federalists. In 1792 he was appointed chief justice of Massachusetts, which office he resigned in 1806. He died, aged 68, in 1811.

DANA, JAMES FREEMAN, M.D., professor of chemistry and mineralogy at Dartmouth College, in 1820, and professor of chemistry in the College of Physicians, New York, in 1826, was born at Amherst, N. H., 1793, graduated at Harvard in 1813, and d. in New York, in April, 1827. He was author of a Manual of Chemic Philosophy in 1825, and, in conjunction with his brother, of a work on the geology and mineralogy of Boston.

DANA, JAMES, D.D., a New England minister, b. in Massachusetts, and graduated at Harvard College. He was accused of heterodoxy, and his settlement at Wallingford, in 1758, occasioned much difficulty. In 1789 he was called to New Haven, where he died in 1812, aged 77. He was much opposed to the theology of Edwards, and regarded man as having a controlling power over his actions.

DANDINI, H. F., an Italian priest, 1695-1747.

DANDINI, J., a Jesuit missionary, 1554-1624.

DANDOLO, a patrician family of Venice, the most celebrated members of which are—HENRY, elected doge 1192, leader of the first crusade against Constantinople, 1204, died 1205. JOHN, distinguished by a long war against the patriarch of Aquilea, doge 1280-1289. FRANCIS, surnamed *the Dog*, for basely humbling the republic to Clement V., doge 1328-1339. ANDRE, who sustained a long war with Hungary, and wrote 'Chronicles of Venice,' doge 1342-1354. FAUSTIN, son of Andre, an ambas. and man of letters, died 1449.

DANDOLO, A., a Ven. jurisconsult, 1431-1472.

DANDOLO, MARK, a Ven. politic., 1458-1535.

DANDOLO, VINCENT, a cel. Ven. chemist, proveditor of Dalmatia, dis. for his share in the overthrow of the Ven. repub. by the Fr., 1758-1819.

DANDRE-BARDON, M. F., a French painter, founder of the Academy of Marseilles, 1700-1783.

DANE, NATHAN, an eminent American lawyer and statesman, founder of the Dane Professorship of Law in Harvard College; was born at Ipswich, Mass., in 1752. The ordinance of Congress passed in 1787, excluding slavery from the territory northwest of the Ohio, was framed by him, and he was author of an able abridgment and digest of American law. He died in 1834, aged 82.

DANET, P., a French lexicographer, 1640-1709.

DANFORTH, SAMUEL, M.D., president of the Boston Medical Society from 1795 to 1798. He was b. in 1740, graduated in 1758, and died in 1827. He was eminent and successful in his practice, though remarkable for the simplicity of his treatment.

DANFORTH, SAMUEL, brother of President Danforth, was born in England, in 1626, and emigrated to America in 1634. He was graduated at Harvard College in 1634, ordained at Roxbury in 1650, and died in 1674. He published several almanacs, and also a description of the comet of 1664.

DANFORTH, THOMAS, born in England 1622, emigrated to America, and was assistant-governor of Maine from 1659 to 1678; deputy-governor in 1679, and president of the district from thence to 1686. He was opposed to the witchcraft persecution in 1692, and died in 1693, aged 77.

DANIELL, EDMUND, an English barrister and au. of a work on the Practice of Chancery, &c., d. 1854.

DANIELL, F., an It. *savant* and hist., 1740-1812.

DANIELL, JOHN FREDERICK, born 1790, died 1845. Mr. Daniell was originally intended for business, and for some time devoted himself to the refining of sugar; but afterwards he became engrossed with meteorological, and subsequently with electrical science, to both of which he made some important contributions. His work on meteorology was a standard work during his time; being characterized rather, however, as embodying a clear statement of the views of the author, than as affording a practical work for reference. His constant battery was a valuable invention, which contributed much to the convenience of electrical experimenters, and to the development of the science, especially in the depart-

ment of electrotpe, which may be said to have originated from this invention. Mr. Daniell was a man of amiable disposition, and was universally respected for his social as well as scientific qualifications.

DANIELL, the name of several artists, disting. in African and oriental scenery. SAMUEL, author of drawings illust. the island of Ceylon, d. 1811. [Dante.]

DANTE, or DURANTE, ALIGHIERI, born at Florence in 1265, holds, in Italian literature, a place corresponding to that which belongs to Chaucer in our own. But his fame is wider, his genius more vigorous and tragic; and his name has been honored by his countrymen in all subsequent generations, while the father of English poetry was for ages neglected and forgotten. Dante lived in a time when the language of Italy was beginning to be used in prose literature, and had been considerably developed in metrical composition; when the classical models as yet exercised but little influence, the purer Roman poetry being studied very seldom, and Greek literature quite unknown; and when the troubadours of Provence were still the only poets that had become famous in Christian Europe. His life was spent in the midst of those storms which raged throughout the middle ages, and of which the Italian republics were noted scenes. He was born of a distinguished family, belonging to the party of the Guefts, which stood opposed to the Ghibellines or Imperialists, and was oftenest ranged on the side of the Popes. A youthful attachment to Beatrice Portinari, who died when the poet was in his twenty-fifth year, was ever afterwards hallowed in his imagination, and was not destroyed either by an unhappy marriage, or by the activity with which the Florentine citizen threw himself into the turmoil of political dissension. He served the republic as a soldier, and at the age of thirty-five was one of the priors or chief magistrates of Florence. A quarrel between two factions into which the Guefts were split, caused him, in 1302, to be banished; and during the remaining twenty years of his life he wandered through Italy, seeking refuge in those Ghibelline states whose principles he had long combatted.

His party in vain attempted, more than once, to reconquer Florence; petitions for a reversal of the sentence of banishment were equally unsuccessful; the poet's stern and haughty disposition made him unhappy, and probably unacceptable, at the courts of the Italian princes; and, dejected and hopeless, he died at Ravenna in 1321.—He wrote both in prose and in verse, and used both the Latin and the living tongues. In the former, he left a Ghibelline treatise 'De Monarchia,' and an essay 'De Vulgari Eloquentia,' in which he describes the rise of the Italian language and some of the works that had been written in it. His own great poem, also, was begun to be written in Latin hexameters. Among his Italian writings are noble Sonnets and Canzoni, and a work called 'Vita Nuova,' in which he connects, by a prose narrative, verses in honor of the dead Beatrice.—He is immortal in virtue of the celebrated poem, which, although in a narrative form, was called, in conformity to a common mediæval usage, the 'Divina Commedia.' The action is describe as taking place in the year 1300; so that the whole may be understood to have been produced during his weary years of exile. It has three parts, and a hundred cantos, and describes a Vision of Hell, Purgatory, and Paradise. Dante is conducted through the worlds of the Dead by the poet Virgil. The first of the parts, containing the 'Inferno,' is by far the most interesting and vigorous. It is here that we encounter those terrible pictures, which make Dante one of the most sublime among poets; pictures conceived with an irregular force of imagination, which is at once singularly original, and strongly characteristic of the spirit of thinking and action in the times in which he lived; pictures, also, which are conveyed with a pregnant brevity and impressiveness of diction, easily perceptible even to foreigners, and producing an extraordinary effect on the poet's countrymen. The imagery of Dante has peculiarities which defy analysis. It unites, beyond any other, seeming clearness and sensuousness, with great power of calling up shadowy suggestions. The tone of sentiment is oftenest gloomy, despondent, or savagely sarcastic: and the celebrated personages of Italian history are portrayed at once with striking verisimilitude, and with malicious ingenuity of invention. Yet there are many brief intervals, and some long stretches, of deep and fender pathos. The harrowing scene in which the condemned spirit of Count Ugolino describes the sufferings of the Tower of Famine, is not more characteristic than the melancholic sweetness that breathes through the story of Francesca of Rimini. From the strange horrors of the 'Inferno,' the poet and his guide pass to the milder objects of the 'Purgatorio,' which are described with much poetic richness, and with a few personal and historical episodes, reminding us of the awfulness with which the first part had made us familiar. At the close of the second part the spirit of Beatrice, descending from a cloud of flowers which angels strew around her, appears, to conduct her lover to the bowers described in the 'Paradiso.' In this, the third part, Dante and his sainted conductress pass from planet to planet, beholding the seats of the blessed, and discussing deep questions of the theology. [W.S.]

DANTE DI MAJANO, an Ital. poet, 13th cen.

D'ANTINE, FRANCIS, a Fr. scholar, editor of the 'French Historians,' the 'Art of Verifying Dates,' &c., 1688-1746.

DANTON, GEORGES JACQUES. This man, who united in his own person the contradictory characters of a demagogue and a statesman, and who con-

trolled the movement of the French revolution in its most stormy periods, till the time of Robespierre's ascendancy, was born at Arcis-sur-Aube, October 28, 1759. His parents were farmers, of an ancient and respectable family, such as usually prepare their children for the liberal professions by a good education; and though he lost his father when young, he found a careful guardian in his step-father, M. Ricordin, who was the owner of a cotton mill on the banks of the Aube. He was at Paris, practising, or looking for practice, as an advocate, when the revolution broke out; and, commencing his political career out of doors, he soon acquired that prodigious ascendancy over the population of the Faubourgs for which his commanding figure, his voice of thunder, his passionate temperament, his frankness, his good nature, and his genius, so admirably qualified him. In 1789, after the States-General had been convoked, when blood had already been shed in the streets of Paris, and the city was divided into electoral districts, the young advocate, already noted for his audacious oratory, obtained the presidency of the Cordeliers, which soon after gave its name to the club founded by Danton to unite those who held the same opinions, rather than persons living in the same locality. These clubbists were the avowed enemies of royalty, of aristocratic institutions, and of the clergy; and for five years afterwards acted as the advanced guard in the revolutionary combats, ever giving birth to fresh swarms of Marats and Héberts, until Danton himself grew heart-sick of turbulence, and was willing, as he said himself, to be guillotined rather than to guillotine any longer.—Danton and his party were the first to perceive the utter impossibility of forming an alliance between monarchy and the new institutions, and at the same time to accept the terrible consequences of their foresight, and march in the straight course of the revolution. His voice sent the people to combat at the Bastille, and directed the attack on Versailles, preceded by the insurrection of the women when the king and the royal family were forced to Paris; and he was among the last to yield the 'altar of the country' to the Constituent Assembly when the famous petition was signed in the Champ de Mars, praying for the deposition of the king after his arrest at Varennes. This was the middle of 1791; soon after which the constitution was solemnly accepted (30th September), and the Legislative Assembly, or first Parliament, convened, under the Roland administration. Towards the end of the year the country was threatened with the invasion of the emigrant nobles; and the king's veto, which brought the Assembly to a stand-still, commenced the last struggle between the people and the crown. At this crisis, it is said, Danton accepted presents from the Court, but the writers of the *Biographie des Contemporains* deny the fact, while admitting his want of integrity in after years, when he could supply his necessities from funds placed at his disposal without bartering away his country. In June, 1792, the Roland ministry was dismissed by the king, and the Marseilles' band invited to Paris by the patriots. Danton, who had gone to his native fields to snatch a short period of repose, now suddenly returned, reviewed the organization of the people, lodged the Marseillaise, and prepared the struggle of the 10th of August—the day which saw the throne overturned, the patriots recalled to the administration, and Danton associated with them as minister of justice. The duke of Brunswick was known to be marching upon Paris, and the civil war had commenced in La Vendée. The Ministry and the Legislative Assembly were terror-stricken, and proposed

to retire beyond the Loire, but Danton arrested them with that thrilling appeal, heard above the sound of the générale, and the report of the alarm-gun, which has often since been quoted:—'Legislators!' he exclaimed, 'It is not the alarm-cannon that you hear, but the *pas-de-charge* upon our enemies. To conquer them, to hurl them back, what do we require? De l'audace, encore de l'audace, et toujours de l'audace! (To dare, and again to dare, and without end to dare!)' From this time his supremacy in the commune of Paris was complete, but he purchased it at the price of the September massacres, in which he refused to interfere, and for which, in the heat and terror of those perilous days, he iniquitously thanked the assassins, 'not as minister of justice,' for so he expressed himself, 'but as minister of the revolution!' The atrocious casuistry of such a speech is too horrible to contemplate. It must be remembered, however, that Marat, and a crowd of bloodhounds who followed him, were proposing the most frightful resolutions to be accomplished under a dictatorial power, and that the preternatural excitement and suspicion of the people had risen almost to insanity, and that Danton himself on many occasions afterwards both regretted his fearful stoicism, and justified it by his position. Space will not permit us to follow his career from this period to the events which hastened the fall of the Girondins, and were soon followed by his own rupture with Robespierre; but we may notice briefly that he was anxious to save the followers of Brissot, who repulsed his overtures with scorn, and finally, in the person of Gaudet, declared that they preferred war to any peace that he could make with them. While the struggle with the deputies of the Gironde was pending, Danton was sent on two missions to Belgium, and it is understood to be proved that he supported his extravagances, though he did not grow rich, at the public expense; in addition to which he had refused to account for the money disbursed by him as minister, except in the gross. He returned from his first mission in time to vote for the king's death, laughing to scorn the delicacy of the Convention, which hesitated about deciding the question by a simple majority, though it had decided the fate of an entire nation without scruple. On returning from his second mission at the beginning of March, 1793, he found that his wife had expired two days before, and was even buried; and giving way to a passion as rare as it is affecting, he had the corpse disinterred in the night, and snatched a last embrace from the cold body, which, it is said, he held for a long time locked in his arms. The time was now drawing near when the death of Marat, and the condemnation of many of his scoundrel imitators on the one hand, and the fall of the Girondins on the other, seemed to prepare the field for the last combatants; and Danton and Robespierre were every day thrown into stronger relief against each other, until the former stood forth as the acknowledged head of a party of clemency, and the latter continued the remorseless career in which they had embarked together. Danton prepared his measures by procuring a decree which erected the Committee of Public Safety into a provisional government, and at the same time refused to take any part in it, alleging for reasons, his need of repose and his recent marriage; but, really, it is presumable, that he might separate himself from the odium and responsibility of the rigor still necessary in the opinion of Robespierre. It was so the latter understood it. The hatred which divided these men was displayed on the part of Robespierre with a cool, logical propriety, which only provoked the more

Danton's impassioned and defiant utterance of what he felt towards him. He was, like Mars, entangled in the meshes of an almost invisible web while in the embrace of the queen of love, and, giant as he was, fell an easy prey into the hands of his rival. He was informed of a secret nocturnal meeting convened by Robespierre to deliberate upon his death, but he refused to fly. 'They will deliberate,' he said, 'a long time before striking a man like me; and it is I who will surprise them.' The manner of his arrest, the crowd of charges heaped upon him, and the scene at the revolutionary tribunal, all betray the dread of his accusers lest his voice should once more reach the ear of the multitude. His address at the bar was a lengthened defiance of his enemies, and when recognized in prison he endeavored to conceal his bitterness by a burst of laughter. Danton was undeniably a man of pleasure, for his whole life was a changing scene of passion; but we have the most affecting proofs that the spring of the domestic virtues welled up fresh in his heart, even to the last hour of his stormy career. To follow him from the thunders of the tribune, and the flash of the cruel weapons which he wielded in the political strife, to his wife and children, is like looking upon the face of a smiling landscape after the storm-cloud has passed over it. He was a true Frenchman, capable of pouring out his whole soul, and with the same deadly effect, as a lightning flash; capable, too, of melting into tenderness the next instant, and of spreading the kindly virtues around him as soft, as lucent, and as penetrating as the light of morning. He has been called the colossus of the revolution, 'head of gold, bosom of flesh, loins of brass, feet of clay,' and with much truth. Nature seemed to pervade him in all her forms from the woman's heart sleeping in his bosom, to the electric fire of genius which played like a glory around his head, and, downwards, to the corruption which made a ruin of all the virtues belonging to him. The closing scene of his life presents us with an epitome of the whole man. He was the last of his party to ascend the scaffold, and stood there for a moment glancing with a defiant and pitying air around him, more like a monument of himself in the tribune, than a victim of the executioner. The next moment the vision of his family and his pleasant fields at Arcis-sur-Aube completely subdued him—'Oh my wife, my best beloved!' he murmured,—'Oh my children, I shall never see you more!' Then suddenly recollecting himself, he proudly exclaimed, 'Come, Danton, no weakness!' and turning to the headsman uttered his last words, 'Thou wilt show my head to the people; it is worth showing.' The next moment his head fell, and the executioner, catching it from the basket, carried it round the scaffold: it was the 5th of April, 1794. Danton, therefore, was in his thirty-fifth year when he passed 'like a gigantic mass of valor, ostentation, fury, affection, and wild revolutionary force and manhood, to his unknown home.' In him the revolution lost the only man, perhaps, who had really mastered its principle, and taken the stain of its horrors, without sacrificing his humanity; who had bowed to its Moloch throne with the enraged multitude of which he was chief, and having once swept by, to adopt a striking figure of the old Hebrew prophet, 'with confused noise and garments rolled in blood,' preferred to return as *the victim*, rather than the slave and worshipper of that altar. [E.R.]

D'ANTONELLE, PIERRE ANTOINE, Marquis, one of the most sincere actors in the French revolution, was born at Arles of an ancient and rich family,

1747, and having joined the army when young, quitted its ranks in 1782, and devoted himself to the study of moral and political philosophy. The year 1789 found him a worshipper of the rising sun of French liberty, and the year following he was named mayor of Arles. Being selected to aid in the pacification of Avignon and Marseilles, he acquired fresh popularity by the satisfactory manner in which he fulfilled his commission, and was deputed to the Legislative Assembly by the department of the Bouches-du-Rhone. On the establishment of the republic he was sent with two colleagues to announce the change to the army of Lafayette, who gave orders for their arrest, and it was not until the general abandoned his command that they regained their liberty. He was a member of the revolutionary tribunal when the queen was condemned, and also when the twenty-two Girondins were brought up for judgment; but he pronounced against his colleagues on the latter occasion, and was confined in the Luxembourg till the fall of Robespierre. He appears to have acted on all occasions as a man of independent principle, and even refused the editorship of the *Moniteur* under the Directory, that he might speak his own language in the *Journal des Hommes Libres*. The Directory endeavored to establish a charge against him on the occasion of Babeuf's conspiracy, but they failed to obtain a conviction. He was ordered to leave France by the first consul, and having returned when the empire was established, was compelled to abandon Paris for refusing to address Napoleon as his sovereign. He ended his days at Arles in 1819, and left behind him numerous political works, which testify to his steady love of liberty through the whole period of the revolution. [E.R.]

D'ARGONNE, NOEL, a French historian of literature, a monk of the Carthusian order, 1634-1704.

D'ARGOTA, J. C., a Portuguese antiquarian, 1676-1749.

DARIUS, the name of three sovereigns of Persia. The *first*, commonly called DARIUS HYSTASPES, succeeded 522 B.C., was the conqueror of Babylon and restorer of the Jews, defeated at Marathon 490, and died 485. The *second*, called DARIUS OCHUS, or NOTHUS, reigned 423-404 B.C. The *third*, sometimes called CODOMANNUS, in whose defeat by Alexander the Great the Persian empire was consummated, suc. 336, and was killed 330 B.C.

DARKE, WILLIAM, an officer in the American army. He accompanied General Braddock in 1755—served throughout the war of the Revolution—and was colonel of a regiment at the defeat of St. Clair in 1791. Toward the close of his life he was appointed by the State of Virginia Major-General of Militia. He died in 1801.

DARLUC, M., a French naturalist, 1707-1783.

DARMSTADT, WILLIAM, prince of, lieutenant of the imperial armies under Prince Eugene, 1660-1705.

DARNLEY, HENRY STUART, earl of, the husband of Mary, queen of Scots, perished by the connivance of Bothwell, and perhaps of the queen, when his house was blown up with gunpowder, 1567.

DARQUIER, A., a Fr. astronomer, 1718-1802.

DARRIGOL, THE ABBE J. P., a French philologist, author of a prize essay on the Basque language, 1790-1829.

DARU, PIERRE ANTOINE, NOEL BRUNO, Count, a French statesman, historian, and literary *savant*. Napoleon describes him as uniting the laborious zeal of the ox with the courage of the lion, 1767-1829.

DARWIN, ERASMUS, an English physician, known to fame as a poet and botanist, was born at Elton, near Newark, in 1731, and after taking his degree at Edinburgh, pursued his professional career at Lichfield, from whence, in 1781, he removed to Derby, having contracted a second marriage, and died in the latter place 1802. Dr. Darwin was an original thinker, a great adept in analogies, and a respectable versifier. The best known of his works is his 'Botanic Garden,' the first part of which is entitled 'The Economy of Vegetation,' and the second 'The Loves of the Plants.' His other works are 'Zoonomia, or the laws of Organic Life,' and 'Physiologia, or the Philosophy of Agriculture and Gardening,' besides which he published a tract on female education, and several papers in the 'Philosophical Transactions.' The personal character of Darwin was amiable, and his conversation generally pleasing. His appearance was athletic, he was much pitted with the small-pox, and had an impediment in his speech. His son, CHARLES DARWIN, after taking a prize medal at Edinburgh, and writing a pathological treatise, died at the early age of twenty, 1778. [E.R.]

DASCHKOWA, KATHARINA ROMANOWNA, Princess, a Russian heroine, who marched with a body of troops to the assistance of Catharine II. when the latter deposed her husband, and as a student of the sciences and *Belles-Lettres*, was one of the most extraordinary women of the age, 1744-1810.

DASSIER, JOHN, a French medallist, 1677-1763. His son, JACOB ANTHONY, distinguished in the same line of art, 1715-1759.

DATI, GEORGE, a translator of 'Tacitus,' 1563.

DATI, GREGORY, an Italian hist., 1363-1436.

D'ATTAIGNANT, G. C., a Fr. poet, 1697-1779.

DAUBASSE, AMAND, a Gasc. poet, 1660-1720.

DAUBENTON, LOUIS-JEAN-MARIE, a celebrated anatomist and naturalist, was born at Montbard, in Burgundy, 1716. He died in 1799. After taking his degree in medicine, he retired to his native town to practise his profession. At that time Buffon, who had been a schoolfellow of Daubenton's, had conceived the plan of his celebrated work, the 'Histoire Naturelle.' He felt, however, that it was necessary to associate with himself some one who was capable of taking the labor of many of the details off his hand, and such a man he found in Daubenton. In 1742 he induced him to come to Paris, and obtained for him the appointment of curator and demonstrator of the cabinet of natural history at the Garden of Plants. Daubenton commenced his labors with zeal and enthusiasm, and soon succeeded in making the collection at the museum the first in Europe. While engaged in this task, he was at the same time collecting materials for assisting Buffon in that part of his 'Histoire Naturelle,' the history of quadrupeds. To Daubenton is due the merit of supplying all the anatomical details and descriptions, both external and internal, which rendered that part of Buffon's work so much esteemed amongst the naturalists of other countries. Daubenton wrote many papers and memoirs on theological subjects. He has described several animals new to science; and was the first to apply the study of comparative anatomy to the determination of extinct animals from an examination of their fossil remains. In vegetable physiology he has made some valuable additions to our knowledge; and in his enlightened endeavors to improve the breed of sheep, and to bring nearer to perfection the texture of their wool, he has merited the gratitude of his country. He was interred in the Garden of Plants. [W.B.]

DAUDIN, F. M., a Fr. naturalist, 1774-1804.

DAULLE, J., a French engraver, 1703-1763.

D'AULNAY-DE-CHARNISE, Governor of Acadia, whose history is detailed by Charlevoix. From 1643 he carried on for some years a conflict with one of the provincial governors named La Tour, whose claims came in collision with his own. The sequel of the struggle is curious. The wife of La Tour died of vexation at the loss of her jewels and plate, by the capture of a fortress by D'Aulnay, and the latter dying some time after, La Tour married his widow.

DAUMESNIL, P., Baron, a general of the empire, especially celebrated for his def. of Vincennes, 1777-1832.

DAUN, L. J. M., Count, an Austrian field-mar-

shal under Maria Theresa, distinguished against the Turks, and in the seven years' war, 1705-1766.

DAUNOU, P. C. F., a statesman, historian, and literary *savant* of the period of the revolution, 1761-1840.

DAURAT, JOHN, a French poet, 1507-1588.

DAVAUX, J. B., an opera composer, last cent.

DAVENANT, J., a member of the Synod of Dort, and bishop of Salisbury, eminent as a theologian, 1576-1641.

DAVENANT, SIR WM., a celebrated dramatic writer, successor to Ben Jonson in the laureateship, and author of several masques and other plays, moral pieces for recitation, &c., 1606-1668. CHAS., his eldest son, author of 'Circe,' a tragedy, and a work in 5 vols., entitled 'Essays on Trade,' 1656-1714. WILLIAM, fourth son of the poet, translator of La Mothe Le Vayer, accidentally drowned, 1681.

DAVENPORT, JOHN, one of the founders of the Colony of New Haven, where he was the first minister. Leaving Oxford after several years study, without a degree, he became a Puritan preacher in London. He returned to Oxford, was graduated in 1625, and took orders in the Church of England, but retired to Holland in 1633. He was ill-suited with the change and found his way back, but emigrated to Boston in 1637. He founded the Colony of New Haven in March 1638, but returned to Boston in 1668, and died in 1670. He had high reputation as a preacher.

DAVENPORT, ADDINGTON, an eminent lawyer of Massachusetts—was graduated at Harvard College in 1689. He travelled for some years in England, Spain, and the West Indies. After his return to America he obtained distinction, and filled many offices of public trust. He was appointed Judge of the Supreme Court of Massachusetts in 1715. He died in 1736, aged 66.

DAVENPORT, CHRISTOPHER, an English theologian, 1598-1680.

DAVENPORTE, RICHARD ALFRED, a miscellaneous English writer and editor, 1780-1852.

DAVESNE, FRANCOIS, a mystic writer, disciple of Simon Morin, author of 'Harmonie de l'Amour et de la Justice de Dieu,' 'Tragedie Sainte,' &c., died about 1652-1653.

DAVEZAC, AUGUSTE, late Chargé to Holland from the government of the United States—was a native of St. Domingo, and of French extraction. He received a military education in France. On the expulsion of the French from Hayti he emigrated with his family to the United States, and settled first in North Carolina, and then in Virginia. Having practised for some time as a physician, he began the study of the law in New Orleans, and soon established a high reputation. During the war with England his familiarity at once with law and military science, gained him the esteem of General Jackson, under whom he served as aide-de-camp and judge-advocate. At the battle of New Orleans, he behaved with skill and gallantry. On the elevation of General Jackson to the Presidency, he received an appointment to the Court of the Netherlands, as secretary of legation, and in 1831 became chargé d'affaires. On his return to the United States he resided in New York, by which city he was elected to the state legislature in 1841 and 1843. His last public employment was in the capacity of chargé d'affaires to Holland during the administration of President Polk. He died in 1850.

DAVID, J. P., a French surgeon, 1737-1784.

DAVID, JACQUES LOUIS, the most distinguished painter of France of modern times, was born at Paris, in 1748, and died an exile at Brussels, December 29, 1825. David was the pupil of Vien, the regenerator of painting in France, who revived the study at once, both of nature and the antique, in the place of the affected mannerism of Vanloo and Boucher, the painters of Louis XV. He accompanied Vien, in 1775, as pensioner to Rome, when the latter was made director of the French Academy there.—David was a diligent student of the antique, perhaps few artists so assiduously so. He returned to Paris in 1780, and in 1783 was elected a member of the French Academy of Painting; his presentation picture was Andromache deploring the death of Hector. David now revisited Rome, and painted his celebrated picture there, 'The Oath of the Horatii.' He then returned to France, and executed some great works for Louis XVI.; but this did not prevent his voting for the death of the king, as a member of the National Convention, 1792. His strong republican spirit was further shown in the representation of two exciting political subjects at this time, 'The Death of Lepelletier, the Deputy,' and 'The Death of Marat;' but personal dangers, and other party difficulties, finally induced David to give up politics entirely for the arts, to which, during his short political influence, he had been of considerable service. He became in a few years the favorite painter of the Emperor Napoleon, and his principal works have direct reference to Napoleon's eventful career; the picture of his coronation was especially agreeable to Napoleon. At the restoration of the Bourbons, however, in 1815, David was banished, and retired to Brussels, where he survived his exile ten years. David was an excellent draftsman, after the ideal taste of the Greeks, but his imitation amounted to the servile; and the majority of his naked figures are of such rigid uniformity of character, that they appear to be painted rather from ancient marbles than from nature. He completed the revolution in taste commenced by Vien, and *antique-mannerism* was carried to excess by Guérin, and some other of his principal scholars.—(Gabet, *Dictionnaire des Artistes, &c., au dixieme siecle.*—1.)

DAVIDSON, WILLIAM, brigadier-general, born in Pennsylvania in 1746, but removed at an early age to North Carolina. He entered the army at the beginning of the Revolution, and by his valor rose to

the rank of brigadier-general. He was killed in a severe action on the 1st of Feb., 1781, in which Cornwallis had a horse shot under him, and Lieut. Col. Hall of the British army fell. Congress provided for his family, and erected a monument to his memory.

DAVIDSON, LUCRETIA MARIA, a young American poetess of extraordinary genius, born at Plattsburg in 1808, and died in 1825, in her 17th year. Her mind developed at a very early age, and she wrote verses descriptive of her drawings when only four years old. When most children are only beginning their education, she had ranged over the wide field of English literature, was a deep thinker, and an accomplished and rapid writer. Her poetry has a charm and power seldom attained by youthful authors,—but the glow which characterizes her earlier productions, and the sadness stamped on the latter, mark the change in health which her fatal devotion to study occasioned. Her parents were in poor circumstances, and unable to afford her the facilities of improvement she required, but a gentleman who saw some of her writings, and heard her history in 1824, determined to give her the highest education, and sent her to Miss Willard's academy at Troy. But the increased impetus thus given to a mind already too active for the body, broke down her feeble constitution, and she died in August, 1825. She was exceedingly beautiful.

[Wm. R. Davie.]

DAVIE, WILLIAM RICHARD, Governor of North Carolina, was born in England, in 1756, emigrated to America in 1763, and was graduated at Princeton in 1776. Of a daring and chivalric disposition, he entered a cavalry regiment under Count Pulaski, and distinguished himself by his valor. He was soon made Colonel, and though severely wounded at Hanging Rock and Rocky Mount, recovered, and served throughout the war. On the return of peace he devoted himself to the study of law, and in 1799 was elected Governor of North Carolina, and soon after sent as envoy to France. He died in 1820, aged 64.

DAVIES, ED., a Welch archæologist, 1756–1831.

DAVIES, JNO., a Welch div. and scho., au. of a Welch Gram., a Welch and Latin Dic., &c., 17th c.

DAVIES, JOHN, a classical editor, 1679–1732.

DAVIES, SIR J., an Engl. judge, kn. as a poet and polit. wr., au. of an account of Ireland, derived from his official visit to that country, 1570–1626.

DAVIES, MILES, a Welch divine and adherent of George I., known by a work of research, 1715.

DAVIES, SAMUEL, president of Princeton College, was born at New Castle, on the Delaware, in 1724. When 23 years old he was ordained, and sent into

Virginia, where he soon after settled at Hanover.—In 1753, he went with Gilbert Tennent to England, to solicit benefactions for Princeton College, and was very successful. Being remarkable for his studious habits, energy and eloquence, he was elected president of Princeton in 1759, and retained the office till his death, caused by a severe cold, in 1761, at the early age of 36. It is deserving of record, that in a discourse on the occasion of Braddock's defeat, he made the following prophetic remark of Washington: 'I may point out to the public that heroic youth, Col. Washington, whom I cannot but hope Providence has hitherto preserved in so signal a manner, for some important service to his country.'

DAVIS, H. E., one of Gibbon's critics, 1756–1784.

DAVIS, JOHN, an Engl. poet, d. about 1618.

DAVIS, JOHN, a distinguished navigator, was a native of Sandridge, near Dartmouth, Devon. Between the years 1585–1605, he performed three voyages in search of a north-west passage, in the service of some London merchants, discovering the strait which bears his name, Hudson's Strait, &c., and penetrating northwards as far as 72°, 12'; and five voyages to the East Indies in the service of the Dutch. He published an account of one of each series. He was killed in the straits of Malacca by some Japanese pirates in 1605. [J.B.]

DAVIS, JOHN A. G., a professor of law in the University of Va., and author of a 'Treatise on Criminal Laws, and a Guide to Justices of the Peace,' was killed by a pistol-shot from a disguised student in 1840, aged 39.

DAVIS, ROWLAND, an Irish contr. div., 17th c.

DAVIS, SYLVANUS, commander of Fort Royal in Falmouth, Maine, in 1690, against the French and Indians. He was taken prisoner and carried to Canada, but exchanged the same year. He d. in 1703.

DAVIDSON, Wm., a Scotch diplomatist, secry. of state to Queen Elizabeth, and the instrument of the court in the condemnation of Mary Stuart, for which

he afterwards suffered fine and imprisonment; date of his death unknown.

DAVOUST, LOUIS NICH., duke of Auerstadt, prince of Eikmuhl, and marshal of France, dis. as one of Napoleon's most faithful generals, 1770-1823.

DAVOUST, LOUIS ALEX. ED. FR., Baron, bro. of the preceding, and a Fr. officer, 1773-1823.

DAVY, SIR HUMPHRY, Bart., born 1778, at Penzance; died 1829, at Geneva. This distinguished chemical philosopher was brought up at Penzance, principally under the care of his mother, a woman of talent and strong moral sense. He was apprenticed to a surgeon, and at the age of twenty he became assistant at the Clifton institution, which had been established by Dr. Beddoes to determine the influence of different gases in the treatment of diseases. It was here that he discovered the remarkable action of nitrous oxide, or laughing gas, on the system, and thus paved the way to the application of those means now in use for alleviating pain in severe operations. In 1801, he was appointed assistant lecturer at the Royal Institution, where he speedily acquired great popularity and fame. In 1806, he made the important discovery that the combinations and decompositions by electricity are referable to the law of electrical attractions and repulsions, and thus demonstrated the intimate connection between electricity and chemistry. His most brilliant discovery was, however, that of, in 1807, the composition of the alkalies, which he proved to be combinations of oxygen with metals. In 1810, he found chlorine to be a simple body, in accordance with the view of Scheele announced in the previous century. His other discoveries were that of the Safety Lamp, exhibiting a fine example of inductive reasoning; and his mode of preventing the corrosion of copper sheathing by the protecting influence of zinc. Sir Humphry Davy was distinguished by a poetical imagination, which would undoubtedly have made him a poet if his time had not been absorbed by science; and, as evidence of his descriptive powers, he has left behind him two works, 'Salmonia,' and 'The Last Days of a Philosopher,' which are not surpassed in their peculiar department by any compositions in the English language.

DAVY, JOHN, an English composer, d. 1824.

DAVY, WM., an Engl. div., author and printer of a religious work in 26 vols., limited to 14 copies, which he also bound with his own hands, d. 1826.

DE-ANDRADA, ANTONIO, a Portug. missionary, first discov. of Cathay and Thibet, 1580-1634.

DE-ANDRADA, DIEGO PAYVA, a Portuguese theologian and controversialist, distinguished at the Council of Trent, 1528-1575. FRANCISCO, brother of the preceding, historiographer royal under Philip III. TOMÁS, another brother, belonging to the Franciscan order of friars, died in an African prison, where he wrote 'The Sufferings of Jesus,' 1582.—DIEGO, son of Francisco, a poet, d. 1660.

DE-ANDRADA, J. F., a Latin wr., 1597-1657.

DEANE, SILAS, commissioner of the United States to the court of France. He was sent out in 1776 to fathom the designs of the cabinet and obtain military supplies, and was soon associated with Franklin and Lee. He gave little satisfaction and was recalled.—He was accused of misappropriating the public money, but avoided a scrutiny, and after a brief stay in the United States returned to Europe, and died at Deal in England in 1789, in great destitution.

DEARBORN, BENJAMIN, an Amer. mechanician, inventor of the patent balance, d. in Boston, 1838 aged 83.

[General Henry Dearborn.]

DEARBORN, HENRY, major-general in the United States army, was born at Hampton, N. H., in 1751. He fought at Lexington and Breed's Hill, and accompanied Arnold in the expedition against Quebec. He was taken prisoner in the assault upon the city the morning that Montgomery fell, but was soon after permitted to return upon parole, and exchanged the following year. In 1778, he highly distinguished himself in the sight of Washington at the battle of Monmouth, who sent to inquire what troops he commanded; 'Full-blooded Yankees from New Hampshire,' was the reply. He took part in Sullivan's Indian expedition, and the operations in New Jersey, and was present at the surrender of Cornwallis.—In 1801, he was appointed secretary of war, in which office he continued till 1809, when he became collector in Boston. As senior major-general he commanded the army from Feb., 1812, to July, 1813, but was then recalled without cause by Madison, on the plea of ill-health, greatly to the regret of the officers and men. He was then ordered to the command of New York. In 1822, he was appointed by Monroe, plenipotentiary to Lisbon, but returned to America in 1824. Having a large estate in Maine,

he took great pleasure in agricultural pursuits. He died in 1829, of bilious fever caught by exposure.

DEARBORN, H. A. S., a Massachusetts lawyer, and author of various works, 'Commerce of the Black Sea,' 'Biography of Com. Bainbridge,' &c., d. 1851, aged 68.

DEBAST, M. J., a Fr. antiquarian, 1753-1825.

DEBRAUX, P. E., a Fr. song-wr., 1798-1831.

DECATUR, STEPHEN, commodore in the U. S. Navy, was born in Maryland in 1759. He entered the navy in 1798, and served under Barry, Dale, Morris and Preble. He was promoted to the rank of post captain in 1804, for the gallant exploit of capturing and setting on fire, under the guns of the principal battery in the harbor of Tripoli, the frigate Philadelphia, which having run ashore had been seized by the Turks. At the attack of Tripoli on the 3d of August, he exhibited the most devoted bravery, and slew, after a severe personal encounter, a Turkish commander, who just before had treacherously murdered his brother, Lient. James Decatur, after surrendering to him. In Oct., 1812, in command of the frigate United States he captured, after an action of an hour and a half, the British frigate Macedonian. He was, however, himself compelled to surrender the frigate President to a superior force in Jan. 7, 1815, but was released the next month. His next exploit was the capture of an Algerine frigate in the Mediterranean, after a severe action, in which the Admiral Rais Hammida was killed. This victory was followed by another over the brig Algerine. Arriving with his squadron before Algiers, he dictated terms of peace to the Dey, by which all Americans were to be released, no tribute in future demanded of Americans, and no Americans enslaved. This brave and skilful officer died in March, 1820, at the age of 40, from a wound received in a duel with Commodore Barron, growing out of a correspondence concerning the surrender by the latter of the Chesapeake.

DEE, JOHN, LL.D., an English divine and astrol-  
oguer of great learning, celebrated in the history of  
necromancy, chancellor of St. Paul's, and warden of  
Manchester college in the reign of Elizabeth. He is  
the author of several published works, and some un-  
published, which are preserved in the Cottonian  
library, and elsewhere; born in London, 1527, d.  
1608. His eldest son, ARTHUR, became physician  
to Charles I., and is the author of 'a faithful rela-  
tion' of what passed between his father and some  
spirits, 1579-1651.

DEERING, C., a physie. and naturalist, author of  
the 'History of Nottinghamshire,' 1690-1749.

Hall and other metropolitan buildings, 1780-1850.

DEFAUCONPRET, A. J. B. DE, a French trans-  
lator, 1767-1843.

DE FOE, DANIEL, the son of a butcher in Lon-  
don, was born there in 1661. Four years in a dissen-  
ting academy seem to have furnished the only regular  
education he received. Engaging in trade, first as a  
wool merchant, and afterwards as a brick and tile-  
maker, he became bankrupt after some years, but  
afterwards paid his creditors in full. His attention  
had been diverted from business both by literature  
and by politics. He enlisted under the duke of Mon-  
mouth, and narrowly escaped after the rebellion was  
crushed; and he published a little earlier, a pamphlet  
on the war between the Turks and the Austrians. His  
literary career, however, did not fairly begin till he  
was thirty-nine years old, when he abandoned trade,  
and became an author by profession. The first pe-  
riod of his authorship was devoted entirely to politics,  
in which he was one of the ablest and most popular  
among the advocates of Whiggism. He gained the  
notice of King William by his 'True-born English-  
man,' published in 1700; but the influence of Tory-  
ism in the ministries of Queen Anne, exposed the  
coarse and energetic adversary of the Stuarts and  
the Church of England to an almost uninterrupted  
series of discouragements and persecutions. In the  
midst of these, however, he wrote with unbroken  
courage and unwearied industry. Besides publishing  
innumerable pamphlets, he carried on a periodical  
paper called the *Review*, without assistance, during  
the greater part of the queen's reign. In 1703, an  
attack on the high church party, in his pamphlet  
ironically called 'the Shortest Way with the Dis-  
senter,' was punished by the pillory, a heavy fine,  
and imprisonment for more than a year. In 1706,  
the ministry of Godolphin employed him as an agent  
for the union of Scotland with England; and in this  
character he resided a considerable time in Edin-  
burgh, and found materials for a 'History of the  
Union.' Under the last administration of the reign  
he was again committed to prison for vehemently  
arguing in favor of the Hanoverian succession. Af-  
ter the accession of George I., he seems to have re-  
ceived no countenance from those whose interests he  
had so keenly espoused; and, abandoning politics al-  
together, he devoted himself to fictitious composition.  
This stage of his career, which gave birth to the

[Daniel De Foe.]

only works by which he is now remembered, did not begin till he was between fifty and sixty years of age, had fallen into bad health, and had even had a stroke of apoplexy. These were the circumstances in which, in 1719, he published the first part of 'Robinson Crusoe,' one of the best and most popular of all romances. Of a similar kind, though incomparably inferior, were several subsequent tales, such as 'Colonel Jack,' and 'Captain Singleton.' In his 'History of the Plague' and 'Memoirs of a Cavalier,' he engrafted historical facts on invented incidents and characters, with a curious force and earnestness of impression. De Foe d. in Lon. in 1731.

DELAMBRE, M., born 1749, died in 1822, an eminent French cultivator of Astronomy, an excellent observer, and a very voluminous writer. Delambre drew up and published several valuable Astronomical tables; but his chief labors related to the measure of the Arc of the meridian through Spain, and the History of Astronomy. The latter has the accuracy which Bailey's wants; nevertheless one sometimes misses the spirit of the philosophic Historian. He also wrote a valuable treatise on Astronomy.

DE LANCEY, JAMES, lieut.-gov. of New York, was born of French parents who emigrated to Amer. to escape religious persecution at home. He was educated in England at the University of Cambridge, and after four years stay there, returned to New York in 1729. He was immediately raised to the bench of the Supreme Court, and in 1733 was made justice. From 1743 to 1753 he was the leader of the popular party in opposition to Governor Clinton, and lieut.-governor from 1753 to 1755, and from 1757 to 1760, when he died in his 57th year. His daughter married Sir William Draper. He was a man of great natural abilities, intuitive perception, and studious habits; the best proof of which is the fact, that he began the study of law after his appointment as judge of the Supreme Court, and attained the profoundest knowledge of his profession. He, however, had little principle, and employed his rare talents as an intriguer and a demagogue.

DEMOCEDES, a Gr. physician, time of Darius.

DEMOCRITUS, the sage of Abdera; he lived about four hundred years before Christ, at the period of Socrates; 460 or 470 B.C. is reckoned the date of his birth, and he is said to have survived a full century. Nothing of the writings of Democritus remain save a few fragments; but with two exceptions, there is no great man of antiquity whose renown fills a larger space, or who seems, alike by his genius and his acquirements, to have better deserved a hold on the world's memories. Urged by thirst

for knowledge, he travelled, during his youth and manhood, through India, Ethiopia, Chaldæa, and Persia; he spent several years in Egypt, and seems to have visited the schools of Pythagoras and Zeno. It is said, also, that he heard Socrates, and communed with Anaxagoras concerning the phenomena of Astronomy, and the physical structure of Nature. Cicero tells us that in style Democritus might be the rival of Plato—he wrote so clearly, and so adorned what he wrote. The titles of his works relate to Logic, Ethics, Physics, Mathematics, Astronomy, Medicine, Poetry, Music, Grammar, and even Strategy. The Abderites are recorded to have paid loftiest honors to the sage. They confided to him the care of their state; and there must have been ground for another pleasing tradition. It is said that Democritus had spent all his substance in travelling, but a law of Abdera refused the rites of burial to any one who wasted his patrimony. To escape the penalty, the philosopher read in public his chief treatise, entitled *μεγας διακοδμος*; and, charmed by his eloquence, the people voted him the sum of five hundred talents, or £125,000 sterling. It is not often that a philosophical treatise reaps such a reward!—The fame of Democritus in modern times, rests on his extraordinary *prevision* of the *Atomic*, or modern physical theory of the Universe. Rising above the confined idea of the Ionian school, that all things are modifications of one element or principle, he broached the conception that bodies are made up of ultimate atoms, and that in the character of these atoms must be sought the explanation of the qualities of what we call *body*. He went off at once from all barren logomachies about the *plenum*, and, indeed, more than any other thinker of antiquity, achieved the privilege of laying down the ground of just speculation in physics. His doctrines prevailed widely, and were afterwards enshrined in noble verse by Lucretius. Democritus was certainly a materialist: the mind, he thought, like fire, consisted of the finer atoms. He had no notion of life apart from body: and the gods he deemed delusion. He had grand views of the universe: in the milky way, first of all, he saw the light of innumerable worlds; but he had a correspondingly mean opinion of the nature and destiny of Man. Nay, he treated Man, his evanescent works, and feeble struggles, so lightly, that we find his effigies always with a jeer on the lip, and himself with the appellation of the laughing philosopher. Democritus is not the only thinker who, in the intensity of his contemplation of material nature, has overlooked a Force infinitely more enduring and grand. The loss of his writings is that, perhaps, among all calamities to ancient monuments, which we ought the most to deplore. [J.P.N.]

DEMOIVRE, an English mathematician, born in France 1667, died 1754. He contributed greatly to our knowledge of *Series*; he was the author of important theorems in trigonometry; but his principal labors concerned the doctrine of Chances. He had considerable analytic genius.

DEMONAX, a philos. of Cyprus, 2d cent. B.C.

DEMONAX, a Greek philosopher, cotemp. with Adrian.

DEMOSTHENES, the greatest of the Greek orators, was the son of an Athenian citizen of the same name who carried on the trades of a cutler and cabinet-maker, and was born about the year B.C. 382. Having lost his father at the age of seven, the care of his youth, as well as the management of his property, amounting to fifteen talents, devolved upon three guardians appointed by his father. At

[Demosthenes—From an Ancient Bust.]

the end of his minority of ten years he commenced a prosecution against his guardians to recover his property, which they had squandered, and after a litigation of two years, obtained a verdict against one of them, who was condemned to pay a fine of ten talents. The prosecution was conducted by himself; and the speeches which he delivered in support of his cause excited the admiration and applause of the judges. Encouraged by this successful beginning, he ventured to speak before the people, but his feeble and stammering voice, his interrupted respiration, his ungraceful gestures, and his ill-arranged periods, brought upon him general ridicule. His failure, however, only roused the energies of his unconquerable will; he resolved to correct the deficiencies of his youth, and overcame them with a zeal and perseverance which have passed into a proverb. After a course of the most rigorous discipline, he reappeared in public (B.C. 355), and pronounced two orations against Leptines and Androtion, the former of which is considered as one of his happiest efforts. His fame as an orator 'whose resistless eloquence wielded at will that fierce democracy,' now secured for him the general esteem, and entitled him, as one of the leading statesmen of Athens, to take an active part in all public affairs. In B.C. 354 he opposed, though without success, the projected expedition to Eubœa, and dissuaded his countrymen from undertaking a war against Persia. From this time the history of his life is closely mixed up with that of his country; every measure calculated to promote the public good received his powerful support, and every encroachment on public freedom found in him an uncompromising opponent. Philip, king of Macedonia, had begun in B.C. 358 his encroachments on the Athenian possessions in the northern part of the Ægean, without meeting with any active opposition on the part of the parent country; and it was to rouse his countrymen against the crafty invader that Demosthenes pronounced his *Philippics*, a series of the most splendid and spirited orations. The first was delivered in B.C. 352. Another series equally celebrated (the *Olynthiacs*), were designed to prevail upon the Athenians to aid the inhabitants of Olynthus, a maritime town near the Isthmus of Palline, which had been besieged by Philip, and which, notwithstanding the exertions of the orator, was taken in the spring of B.C. 347. In the following year Demosthenes, along with nine others, went on an embassy to Philip, and succeeded in concluding a peace, which continued till B.C. 339. But he did not the less attentively watch the proceedings of Philip; and when hostilities again broke out, he took part in the disastrous battle of Chaeronea, the result of which left Philip master of the destinies of Greece.

Though he fled along with many others, his grateful countrymen decreed to him a golden crown. On the accession of Alexander, B.C. 336, Demosthenes still cherished the same feelings towards the Macedonians; but the sudden appearance of the youthful conqueror overawed opposition. (See ALEXANDER.) But even his great services could not protect him against an outburst of popular feeling. Harpalus, one of Alexander's generals whom he had left at Babylon, absconded with the treasure intrusted to his care, and arriving in Athens, purchased the protection of the city by distributing his gold among the popular leaders. Demosthenes was one of the suspected recipients; and being declared guilty, and fined in 50 talents, he retired to Ægina and Trozene, where he remained till the death of Alexander, B.C. 323. Returning to Athens for a short time, he was forced again to withdraw in B.C. 322; and retiring to Calauria, a small island opposite to Trozene, took refuge in the temple of Neptune, where he suddenly died. The orations of Demosthenes, on which his character as a statesman chiefly rests, have been often published both in mass and in detached portions. 'His manner,' as Hume well observes, 'is rapid harmony exactly adjusted to the sense: it is vehement reasoning without any appearance of art: it is disdain, anger, boldness, freedom, involved in a continued stream of argument: and of all human productions, the orations of Demosthenes present to us the models which approach the nearest to perfection.' DEMOURS, P., a French physician and oculist, 1702–1795. His son ANTH., also an oculist, 1762–1836.

DEMOUSHER, C. A. a French poet and mythologist, 1760–1801. His son P. ANTH., an architect, 1735–1803.

DEMPSTER, GEO., a Scotch gentleman, disting. as an M.P. and as a wr. on agriculture, &c., 1736–1818.

DEMPSTER, THOS., a Scotch hist. and antiqua. wr., professor of theology at Pisa, 1579–1625.

DENHAM, MAJOR DIXON, born in 1786, in London, accompanied Clapperton and Oudney to Central Africa, 1822–25, and afterwards receiving an appointment at Sierra Leone, was carried off by fever at Accra, on that coast, in 1828.

DENHAM, SIR J., an English writer of verse, au. of 'The Sophy,' &c., 1615–1668.

DENINA, G. C., an It. hist., 1731–1813.

DENIS, JACQUES, a Fr. comedian, 17th cent.

DENIS, J. B., a curious Fr. wr., 17th cent.

DENIS, LOUIS, a Fr. geographer, last century.

DENIS, MICHAEL, a French miscellaneous writer, 1729–1800.

DENIS, NICHOLAS, a topographical wr., 17th c.

DENIS, a pope of Rome, 259–269.

DENISON, DANIEL, speaker of the House of Representatives in Massachusetts, in 1649 and 1651, and afterwards appointed major-general, was a native of England. He died in 1682, aged 69. He published a treatise called 'Irenicon.'

DENMAN, THOS., M. D., a dis. medical writer, father of the late chief justice of the Court of King's Bench, 1783–1815.

DENMAN, THOMAS, Lord, an English judge, was born in London, 1779. His father was the eminent physician, Thomas Denman. He was educated at Stowe and Cambridge. After leaving college he pursued his legal studies at the Temple, and was admitted to the bar in 1806. He soon earned by his industry, legal knowledge, and his eloquence, a high position as a barrister. In 1818 he was elected a

member of parliament, and assumed at once an independent position as a reformer of abuses, and a friend of progress. In 1820 he was appointed solicitor-general to Queen Caroline, and manfully sustained, in conjunction with Brougham, the cause of that unfortunate princess against George IV., and a powerful court-influence. His popular sympathies made him a favorite with the friends of the people, and he was employed to defend the popular champions, Major Cartwright, in 1820, and Sir Francis Burdett, in 1823, when prosecuted by the government. He continued to serve in parliament, and remained a consistent advocate of progressive reform, and took an active part in support of Lord John Russell's famous Reform bill. In 1828 he was appointed king's counsel, an honor which was only deferred so long in consequence of his opposition to the court in his defence of Queen Caroline. He was appointed attorney-general, under Lord Grey, and in 1832, was raised to the chief-justiceship of the King's bench, which office he held until March 1st, 1850, when he was obliged to resign in consequence of an attack of paralysis. In 1834 he was created a peer of the realm, and took his seat in the House of Lords. He died 22d September, 1854, of an attack of apoplexy. He was a learned and skilful lawyer, an upright judge, and a liberal statesman. He was the author of various treatises upon social and political questions, in all of which he proves himself a friend of liberty and humanity. He was an uncompromising opponent of negro slavery, and a warm advocate of its emancipation.

DENNER, B., a Dutch painter, 1685-1747.

DENNIE, JOSEPH, an able Am. writer, of indiscreet and indolent habits, born in 1768, and was graduated at Harvard in 1790. He was editor successively of the 'Boston Tablet,' 'The Farmers' Museum,' and the 'Portfolio,' and evinced genius and extensive acquirements, but died of a broken constitution, in 1812, aged 43.

DENNIS, JOHN, an Eng. dram., 1657-1733.

DENON, DOMINIQUE-VIVANT, Baron, author of 'Travels in Upper and Lower Egypt during the Campaign of General Bonaparte,' and director-general of the museums, and superintendent of the mint under the empire, dis. as a promoter of art in France, 1747-1825.

DENYS, P., a cel. French carver, 17th century.

DENYS, JAMES, a Flem. painter, 17th cent.

D'EON, or EON DE BEAUMONT, the chevalier, a French adventurer and diplomatist between Louis XV. and the court of London, whose name has been rendered notorious by the curious doubts which prevailed concerning his sex, author of 'Loisirs du Chevalier D'Eon,' a work in 13 vols., 8vo, containing numerous historical and political treatises, 1728-1810.

DEPARCIEUX, ANTH., a Fr. wr. on trigonometry and logarithms, 1703-1768. His nephew of the same name, an economist, &c., 1753-99.

DEPPING, GEORGE BERNARD, a Fr. antiq. and historical writer, died 1853, aged 70.

DERBY, JAMES STANLEY, earl of, a royalist, dis. in the civil wars, beheaded after the battle of Worcester, 1651. His wife CHARLOTTE, celebra. for her brave defence of Latham House, d. 1664.

DERHAM, WILLIAM, an able divine and phil., canon of Windsor, and rector of Upminster, Essex, 1657-1735.

DERHODE, N., a painter on glass, 16th cent.

DERJAVINE, G., ROM., a Rus. poet and statesman, dis. as one of the first men of his age, 1743-1816.

DEROSSI, J. G., an Ital. poet, 1754-1827.

DERRICK, S., an Irish playwright, 1724-1769.

DERWENTWATER, J., Earl of, an adherent of the Pretender, beheaded after the battle of Preston, 1716.

DESAGULIERS, J. T., an exp. phil., 1683-1743.

DESAIX DE VOYGOUX, L. CH. AN., one of the

most celebrated generals of the French republic. He was appointed general of division of the army of the Rhine, in 1796, and accompanied Napoleon in his expedition to Egypt, where he behaved with so much moderation that the Mussulmans named him the 'Just sultan.' On his return to France he joined the army of Italy, and was killed at Marengo, 1768-1800.

DESAUGIERS, M. A., a compos. of music, 1742-1793. His son of the same name, a cel. ballet composer, &c., 1772-1827.

DESAUSSURE, HENRY W., an eminent lawyer of South Carolina, born in 1764. He was for twenty years chancellor of his native state, and for some time director of the mint. His 'Equity Reports,' in four volumes, are exceedingly valuable. He died in 1839.

[Birth-place of Descartes.]

DESCARTES, RENE, born in La Haye, Touraine in 1596; died in Stockholm in 1650: in elevation and amplitude, his influence approaches that of Plato and Aristotle; he is the unquestioned compeer of Bacon and Newton. Descartes fell on one of those recurring periods when philosophy is in decrepitude, representing neither knowledge, nor liberty, nor wisdom; and he regenerated it. We can speak but briefly either of what he did or what he was.—1. In an epoch of dogma

and ignorance and intolerance, an original Thinker appears, as if inevitably, to strike always into the same course. Turning from the disorder of the received Physical Sciences, Lord Bacon prepared for his 'Instauratio,' by research concerning true METHOD in Physical Inquiry: Des Cartes, repelled by corresponding disgust, from the moral and psychological logomachies of his time, demanded—what is fitting METHOD in Speculative Philosophy; and what the basis and criterion of *certainly*? The reply was not a new one, but only a reproduction of the method of Socrates, of Plato, of Aristotle, and its adjustment to the condition and culture of his time. The primal and sufficient ground of certainty in Speculative Philosophy, is the content of our human Consciousness. *Cogito ergo sum* is not a syllogism, but a statement of the manner in which the fact of existence becomes revealed. The phenomena of mind are not provable; they are FIRST FACTS. The right sifting and analysis of these primary mental phenomena, is the sole work of Reflection—the single legitimate aim of Philosophy. Inquiry evolves their true signification, determines their reach, disengages them from foreign elements, and ascertains their metaphysical import and value; but with *this*, inquiry ends; it cannot logically affect one of them with doubt. Two great achievements were solicited in modern times, from this reassertion of the power and functions of rational psychology. *First*, to put down all theoretic scepticisms after the fashion of Bayle's. Doubt may and ought to affect particular opinions or conclusions, but to erect Doubt into a principle, is, according to Des Cartes, a sheer paralogism. Doubt in this sense is virtually an act of *Belief*; it is a confidence in *one* state of mind, or *one* intellectual process; but why among *all* states of mind *select this one* for confidence? Pyrrhonism in every form—whether as scepticism or dogmatism—is irreconcilable with true method. *Secondly*, Cartesianism refused to estimate the value or reality of our primary intuitions by their accordance or non-accordance with any *system*. Every logical process rests on *some* of our intuitions; so that here too is a paralogism. One such paralogism was developed in the Physiological and French Sensational schools: a form of error recently revived by M. Comte. Another is the attempt of powerful Churches to repudiate Philosophy in the name of Revelation. The Gallican Church in its Augustan era, did not commit this error; neither has it ever been the position of our English Hierarchy: no church so conducting itself can long endure. A Religion without a Philosophy, must ever evolve in the long run, a dogma without creed, and a clergy without a people.—2. Something more definite regarding the method of Des Cartes may be gathered from his treatment of the argument regarding the Being of a God; his proof is not an *à priori* one; it rests on *facts*, as directly as the argument from external design—the fact, viz., that our human consciousness reveals Ideas having the attributes of Universality and Necessity. Ideas of this kind, said Des Cartes, cannot be the product or reflection of man's finite and imperfect nature: therefore, a Being exists, whose essential character enables him to communicate to us the ideas of Infinity, Eternity, Self-existence, &c. The special proof given by ANSELM, also occurred to Des Cartes, and was expanded by him. The logic of these arguments—to which, indeed, all *à priori* proofs may be reduced—is open to only two exceptions. *First*, it may be denied that Ideas exist having the characters of Universality and Necessity; *Secondly*, it may be questioned whether it is legiti-

mate to pass from a phenomenon in Psychology to a reality in Ontology;—it does not follow, says the philosopher of Königsberg, from the existence of an Idea, that there is any externality corresponding to it. As to the former objection see articles CONDILLAC, GASSENDI, LOCKE, PLATO, &c.: the latter is noticed at length in articles KANT and REID.—3. The student must look for no completed Psychology, or even an approach to it, in the writings of Des Cartes. Owing to the absence of every attempt at system, the cursory reader is apt to miss those traces of earnest searching insight which are strewn broadcast over his pages; and the rapid critic easily makes out a case against one of the hardest and most original thinkers in Europe:—the extravagant misapprehension contained in the first three chapters of Locke's Essay, may be taken as a type of such criticisms. One fatal error of the great Frenchman requires to be explained because of its influence on subsequent speculation. He overlooked the essential *activity* of the thinking principle, regarding it rather as the *subject* of certain peculiar changes; and this led him to a profounder misapprehension of the Idea of Substance. LEIBNITZ corrected him, by restoring to it the attribute of CAUSE or FORCE; but not before the error had led to the ingulfing fatalism of SPINOZA.—4. The intellectual vigor of Des Cartes left its marks on many various departments of knowledge. He was fond of Physiology. His hypothesis of *Vortices* prepared for the mechanical theory of planetary Motions. He founded Dioptrics—first impressing on it a geometrical character. But that by which he will longest live in Mathematics, is his most fertile idea of representing the properties of curves by equations. Measured by its influence this discovery takes rank with the infinitesimal calculus; nor has its empire been disputed until in the most recent times by the remarkable scheme of Quaternions.—5. The life of Des Cartes was given mostly to solitude and thought: nevertheless, on occasions, and with characteristic ardor, he took part in active pursuits. A soldier, he spent several years in camps; he travelled much, and carried on an extensive correspondence. Whenever Philosophy falls off, and the throne of Truth is usurped by Scepticism or Dogmatism, regeneration will invariably come in one way—through restoration of the method and fundamental principle of Des Cartes. DESMOULINS, BENEDICT CAMILLE, born at Guise in Picardy, 1762, and educated for the law at the college of Louis-le-Grand, was known as a wild young student of jurisprudence and *Belles-Lettres* at the commencement of the French revolution, and is supposed to have been early acquainted with Robespierre, if, indeed, he was not his college friend. He made the first of those stirring harangues by which the people were excited to the revolutionary combat, from a table on which he mounted in the garden of the Palais Royal, when the Swiss and German troops had been ordered under arms, previous to the dismissal of Necker. It was a moment of intense excitement, for the police were eyeing the young orator, who, with a loaded pistol in each hand, swore he would not be taken alive. This was on Sunday the 12th of July, 1789, and two days afterwards Camille fought with the future republicans at the storming of the Bastille. Before the end of the month the 'Rights of Man' had been promulgated by the Constituent Assembly, and was succeeded by that flood of journalism and club-eloquence on which so many obscure men were suddenly borne to the height of popularity. Camille made his first profession of the republican faith in a work which he entitled '*La France Libre*,' in which he declared that a democracy was the only form of government suited to a people who were 'worthy of the name of men.' This was followed by his '*Discours de la Lanterne aux Parisiens*,' subsequently called '*Les Révolutions de France et de Brabant*,' a weekly paper, edited, as he styled himself, by the 'Attorney-General of the Lamp-Iron.' This atrocious style was chosen by Camille rather as his password to the Faubourgs than the echo of his own sentiments, and he abandoned it as a *jeu d'esprit*, too cruel to be taken in earnest. Towards the end of the year he united with Danton in the establishment of the Cordeliers' Club, the fiery element into which these two cast themselves to work out their own destiny, and to accomplish their part in the revolution. About this time he married the beautiful and accomplished Mademoiselle Duplessis, the devoted wife who afterwards hovered about his prison, and rested not till she arrived at the same cruel term of her existence as him she loved. It is related that the curé refused to marry him because he had written that there was as much evidence for the religion of Mahomet as for that of Christianity, and the dispute between them was referred to Mirabeau, who decided that a man's religion could only be judged by his exterior profession. Camille declared himself a good catholic, promised to amend his ways, and was thereupon married, the priest laughing at the idea of a Mirabeau acting as a father of the church. It is painful to read the words of the bridegroom when on his defence five years later:—'A marked fatality has ordained,' he said, 'that of sixty persons who signed my marriage contract, there should remain to me only two living friends, Robespierre and Danton! All the others have fled or are guillotined!' After the 10th of August, 1792, when Danton acquired the supremacy as minister of justice, Camille Desmoulins acted as his secretary, and though it is a disputed point whether he took any active part in the execrable massacres of September, it cannot be supposed that the 'attorney-general of the Lamp-

iron' was the man to shrink from his share of the responsibility. The incident which marked the return of the friends to moderate counsels soon after the fall of the Girondins is related by Lamartine. It was one of the last evenings in the month of January, when Danton, Souberbielle, one of the jury of the revolutionary tribunal, and Camille Desmoulins came away together from the Palais de Justice, and spoke sorrowfully of the bloodshed of that day, when fifteen victims had fallen on the scaffold, and twenty-seven more had been condemned to suffer. The friends separated at Danton's door, and next day Camille Desmoulins had written the first number of the '*Vieux Cordelier*,' in which the system of proscription was denounced, and a 'Committee of Clemency' demanded as a preliminary to clearing the prisons of the 'Suspect.' In the daring burst of eloquence and passion which marked the pages of this journal, the system of Robespierre was attacked under cover of an assault on the cruel atheists Hébert and Chaumette. The quarrel broke out in the Convention as a personal squabble, on the 8th of January, 1794; and Danton supported his friend, thinking it high time, as he expressed himself, that they should make work for the guillotine of public opinion by enlightening the people. Two days afterwards the quarrel was resumed, and Robespierre spoke of Camille as a wayward child whose person it was not necessary to injure, but demanded that his writings might be burned. 'To burn them,' exclaimed Camille starting up, 'is not to answer them!' and then, reckless of consequences, he complained that he had first submitted his copy to Robespierre, but that he had since refused to read his journal because he would not compromise himself by espousing either side of the quarrel. Danton acted as peacemaker on this occasion; but the harvest of death was ripening for this new party of mercy as for the Girondins; and Danton himself, together with his friends Camille Desmoulins, Philippeaux, and Lacroix, were arrested on the night of the 30th March, as Héault de Séchelles had been only a little earlier. His wife, Lucile, addressed an affecting appeal to Robespierre, which, it is believed, never reached him, and Camille found the means of opening a secret correspondence with her. These letters have been preserved, and they are filled with expressions of the most passionate attachment and despair. At the bar of Tinville the prisoners were asked their age, name, and residence; 'My age,' said Camille, 'is that of the sansculotte Jesu—I am thirty-three; an age fatal to revolutionists!' He had prepared a written defence, but was not allowed to read it, and in a fit of indignation tore the paper to fragments, which, however, were afterwards collected by a friend, and their contents handed down to posterity. The commotion of the people was feared by Robespierre; and the wife of Camille was arrested the following night, that her beauty and the eloquence of her grief might not be the means of snatching away a victory which he had only obtained by surprise and subtlety. She was guillotined a few days after her husband. On his way to the scaffold, Camille Desmoulins forgot all his philosophy, and became almost frantic, struggling with his bonds, and appealing to the people whom he had called to arms on the 14th of July—to whom, as he reminded them, he had given the national cockade. At the guillotine he recovered his *sang froid*, and, looking on the axe, said to the populace, 'Behold, then, the recompense reserved for the first apostle of liberty!' The date of his execution is the 5th of April, 1794, that of his wife's the 10th. He was a man of rare genius, light, sparkling,

and sarcastic, but of a most undecided temperament, and headlong in his impulses. His dazzling eloquence rained words like fire; his epigrams flew like polished arrows, and, careless of results, he launched them against men of all parties, from Lafayette 'the liberator of two worlds,' and 'constellation of the white horse,' to St. Just who 'carried his head with the air of a saint-sacrament.' His ridicule of the Girondists in a 'History of the *Brissotins*,' published 1793, contributed to bring contempt upon that body by its very title; yet it must be remembered, to the honor of Camille and the Dantonists, that their attempt to save their enemies from the guillotine was the first step to their own ruin. in 1808. He died in 1819, aged 45, at quarantine ground, which he had visited as health-officer during the yellow fever.

DE-WITT, JOHN, D.D., born at Catskill, New York, was professor of Biblical History in the Dutch Reformed Theological Seminary at New Brunswick, and also professor in Rutgers College. He died in 1831, aged 42.

DE-WITT, SUSAN, Mrs., author of a poem, entitled 'The Pleasures of Religion.' Died at Philadelphia in 1824.

DEXTER, SAMUEL, a Boston merchant, who exhibited great zeal in the patriot cause during the political struggles which preceded the American Revolution, and who, at his death, left a handsome legacy to Harvard College. He died at Mendon in 1810, aged 84.

DEXTER, SAMUEL, Secretary at War of the U. S., born in Boston, 1761, and was graduated at Harvard in 1781. He was for some time member of Congress, first in the House of Representatives and then in the Senate. In 1800 he was appointed Secretary of War, and the next year Secretary of the Treasury. The department of State was also committed to him for a short time. At first a federalist, he became in 1812 an advocate of the war with Great Britain. He was more than once invited to undertake a foreign mission, but declined. He died in 1816, aged 54. He was an able writer and eloquent speaker. The Answer of the Senate to President Adams addressed on the death of Washington, proceeded from his pen.

DIAS-GOMEZ, F., a Portug. poet, 1745-1795.

DIAS, P., a Portuguese Jesuit mis., 1621-1700.

DIAZ, BARTHOLOMEW, a knight of the royal household, was sent by the king of Portugal in Aug. 1486, in quest of the dominions of the imaginary Christian prince, Prester John, supposed to lie in India or Eastern Africa, while Covilhma and Payva went by land through Egypt. Diaz had two caravels of fifty tons each, and a small store-ship. Having touched at the African coast in lat. 26° S., 400 miles farther than any previous navigator had reached, he steered boldly south and lost sight of land. Storms which arose soon after bore him far E. of the Cape of Good Hope, which he was thus the first to double without knowing it. He had advanced to the mouth of the Great Fish River, making frequent inquiry after Prester John, when the crews insisted on his return. He now visited the Cape, determined its position with accuracy, and called it the Stormy Cape, a name which for better augury the king, John II., changed to the present designation. Diaz reached Lisbon in 1487. He perished at sea in 1500, in one of Cabral's ships commanded by him.—MICHAEL DIAZ of Arragon, was one of the companions of Columbus. He became governor of Porto Rico, and died in 1512.

DIAZ, M., a Spanish navigator, died 1512.

DIAZ, P., a Spanish Jesuit and mis., 1546-1602.

DIBDIN, CHARLES, was born at Southampton in the year 1745, and was educated at Winchester. His father, who was a silversmith, first meant that his son should enter the church, but his early and devoted attachment to music soon frustrated the paternal intentions. He received some lessons in music from Mr. Kent (whose anthems are well known), and commenced his career as poet and musician at sixteen years of age, and produced at Covent Garden Theatre an opera named 'The Shepherd's Artifice.' About this time he made his *debut* as an actor, and was well received. In 1768 he was the original Mungo in his own 'Padlock.' In 1772 he produced the music to 'The Deserter;' in 1774 the words and music of 'The Waterman;' and in 1775 'The Quaker.' In 1778 he became composer to the Covent Garden Theatre, with a salary of £10 per annum. About the year 1782 he built the Circus Theatre, afterwards known as the Surrey, and continued to manage it with indifferent success for nearly four years. In 1778 he published his musical tour, and in 1789 he gave the first of his entertainments, under the title of 'The Whim of the Moment,' which soon became very popular. These entertainments, of which he was performer, poet, and musician, furnished his sole means of livelihood until the year 1805, when he retired from public life with a government pension of £200. In 1813 Dibdin was attacked with paralysis, and he died in July, 1814. Besides the operas named, Dibdin wrote two novels, and a few smaller literary works, and wrote and composed the enormous number of nine hundred songs! To him is due whatever merit there is of having originated that kind of musical entertainment which has been followed by so many vocalists, from Incedon to Wilson, Templeton, and John Parry. [J.M.]

DIBDIN, THOS., eldest son of the preceding, a distinguished dramatic author and song-writer, 1771-1841.

DIBDIN, THOS. FROGNALL, D.D., a celebrated bibliographer and antiquarian writer, 1775-1847.

DIBIL-AL-KHOSSAI, an Arab. poet, 765-860.

DICEARCHUS, a Greek philosopher, historian, and geographer, disciple of Aristotle, 4th cent. B.C.

DICETO, RAOUL DE, an English historian, 13th century.

DICK, SIR ALEX., a Scotch physician, remembered for introducing the culture of rhubarb, 1703-1785.

DICK, MAJOR-GEN. SIR ROBERT HENRY, a Scotch peninsular and medical officer, killed at the battle of Sobraon, 1846.

DICKENSON, PHILEMON, General, an officer in the American army during the Revolution, who exhibited distinguished bravery at the battle of Monmouth. After the war he was a member of Congress, and occupied many offices of civil and military trust. He died at Trenton, N. J., in 1809, aged 68.

DICKINSON, JONATHAN, first President of the College of New Jersey, was a native of Hatfield, Mass., and born in 1688. He was graduated at Yale College in 1706, and shortly after became minister of the first Presbyterian Church in Elizabethtown, N. J., in which office he continued for forty years.

On the enlargement of the charter of the College by Governor Belcher in 1746, he was appointed president, but had no occasion to remove from Elizabethtown, as the institution was then located there. He died in 1747, aged 59. He published many sermons and pamphlets on religious subjects, and his writings display ability and erudition.

DICKINSON, JOHN, President of Delaware and Pennsylvania, was a native of Maryland. Having studied law, first in Philadelphia and then in London, he returned and attained eminence in his profession. He was chosen member of Assembly in 1764, and represented Pennsylvania in Congress in 1765. He now began to write against the aggressions of the British government, and his letters on colonial taxation in 1767 attracted great attention, and roused the spirit of resistance. In 1774 and for several subsequent years he was member of the Revolutionary Congress. Many of the ablest political papers of the period were from his pen; but from motives of expediency and distrust of the strength of the colonies to sustain themselves in war with Great Britain, he was opposed to the declaration of independence in 1776, which he deemed premature. When war was, however, declared, he took the field first as a private soldier, but he received, in October, 1777, a brigadier-general's commission. In 1781 he was elected president of Delaware, and in 1782 president of Pennsylvania. In this office he was succeeded by Franklin in 1785. He advocated, in 1788, under the signature of Fabius, the adoption of the constitution; and in 1797 endeavored to promote a friendly feeling with France. His political writings were published in two volumes in 1801. He died at Wilmington, Delaware, in 1808, aged 75.

DICKINSON, E., an Eng., archæol., 1624-1707.

DICKSON, A., a Scotch writer on agriculture, died 1776.

DICKSON, D., a Scotch divine, 1591-1664.

DICKSON, J., a Scotch botanist, died 1822.

DIDEROT, DENYS, was born in 1713, at Langres in Champagne, where his father was a respectable tradesman. Educated for the church, but declining to take orders, he was next placed in the chambers of a legal practitioner in Paris; but, in like manner, he abandoned the law. Literature now became his profession; and, after a few years of obscure drudgery, he became one of the most famous among those literary and scientific men, whose attacks on the established order of things, religious and ecclesiastical as well as political, are alleged to have acted so powerfully in precipitating the French revolution. It was Diderot that projected the huge work which, receiving the contributions of these so-called philosophers in their several departments, gave them their usual title of 'Encyclopedists.' The 'Encyclopédie, ou Dictionnaire Raisonné des Sciences, des Arts, et des Métiers,' was designed, not merely to supersede the imperfect dictionaries of universal knowledge that already existed, but to teach, on every occasion which could admit the teaching, those social doctrines which were held by the writers. Among the contributors were Voltaire, Rousseau, and several very eminent men of science; the work was edited at first by Diderot and D'Alembert, and afterwards by the former alone; and, among its very unequal contents, his articles are distinguished both for good writing and for versatile ability. The publication continued, amidst many obstacles, from 1751 to 1769. In the course of it, and afterwards, Diderot wrote several didactic treatises, indecent and irreligious novels, and two sentimental comedies

and his published correspondence, especially with Voltaire and Grimm, throws much light on the gloomy picture which French society and morals then presented. He died at Paris in 1784. [W.S.]

DIDIER, St., a Christian bp. and martyr, 264.

DIDIER, last king of the Lombards, 757-773.

DIELHELM, J. H., a Ger. antiquarian, d. 1764.

DIEMEN, ANTHONY VAN, Governor-General of the Dutch establishment in the East Indies, was born at Kuilenberg 1595, and going to India became successively accountant to the government, and member of the supreme council. In 1631, or 1632, he returned to Holland as commander of the India fleet, and the year following was raised to the dignity which he enjoyed till his death, in 1645. While holding this office, namely, in 1642, he sent Tasman on a voyage to the south, when that part of New Holland was discovered which has since been called Van Diemen's Land.

DIEPENBEKE, A. VAN, a Fl. paint., 1607-1675.

DIEREVILLE, a French navigator, 17th cent.

DIES, GASPARD, a Portuguese painter, d. 1671.

DIESKAU, JOHN HARMAUD, Baron, Lieut.-General, commander of the French forces sent against Fort Edward in 1755. He defeated Col. Ephraim Williams on the 8th September, near the southern extremity of Lake George, but the same day encountered the forces of General Johnson, by whom he was defeated and made prisoner. He was conveyed to New York severely wounded, but survived the battle several years, and died at Surene, in France, in 1767.

DIETERICH, J. C., a Ger. *savant*, 1612-1669.

DIETRICH, C. G. E., a Ger. painter, 1712-1774.

DIOGENES OF APOLLONIA, a Greek philosopher of the Ionic or physical school of Anaximenes, 5th century B.C.

DIOGENES, the *Babylonian*, a Stoic philosopher, teacher of dialectics in Rome, 200 B.C.

DIOGENES, the celebrated Greek cynic, was a native of Sinope, in Pontus, where he was born 413 B.C. He was banished from his country for coining false money, and repaired to Athens, where he studied philosophy under Antisthenes, and surpassed his master in the rudeness of his manners, and his austere views of human nature. He walked about the streets with a tub on his head, in which it is said he lodged at night. He is the type of cynicism, and for his zeal as a moralist has been called the 'Mad Socrates.' Being on a voyage he was taken by pirates and sold into slavery at Corinth, where he became tutor to the sons of a rich citizen, but died in the greatest misery, B.C. 324. His reputation procured him a visit from Alexander the Great, who asked Diogenes if there was any thing in which he could gratify him. 'Only,' he answered, 'do not stand any longer between me and the sun.' Some moral 'sentences' are extant under his name, but they are thought to be apocryphal. The inhabitants of Sinope raised statues to his

memory, and the marble figure of a dog was placed on a high column erected on his tomb.

DIOGENES LAERTIUS, a Greek philosopher, supposed to be of the Epicurean school, celebrated as an historian for his very valuable 'Lives of the Philosophers,' 2d century B.C.

DIONYSIUS, an ancient geographer, surnamed *Periegetes*, from his poem containing a description of the world in Greek verse, 4th cent.

DIONYSIUS, THE AREOPAGITE, a bishop of Athens, to whom certain writings containing an application of Platonism to Christianity have been dubiously attributed, burned alive about 95.

DIONYSIUS OF HALICARNASSUS, author of an historical work entitled 'Roman Antiquities,' about 30 B.C.

DIOPHANTUS, a mathematician of Alexandria, who flourished about the year 480 A.D. He originated a peculiar department of Algebra, which still bears his name. It relates to questions about whole numbers, squares, cubes, primes, &c. The best edition of his work is by Fermat.

DIOSCORIDES, PEDANIUS, a celebrated Greek physician and botanist, was born at Anazarba, in Cilicia. The dates of his birth and death are not known; but it is generally believed that he lived in the reign of the emperor Nero. He is said to have been named *Phacas*, from his face being marked with spots like lentils. He was a soldier in his youth, and it is surmised he may have been attached to the army as a physician. He practised medicine, and he tells us himself that he travelled over Asia Minor, Greece, Italy, and part of ancient Gaul, in quest of plants. His works contain chiefly an account of the medicinal virtues of the plants he describes; and their principal value appears to consist in their having given rise to numerous learned disquisitions, and an immense deal of controversy, in after times, as to the identity of the species he mentions. This, no doubt, contributed much to advance the knowledge of botany amongst the medical men who succeeded him, and who in these times were almost the only persons who studied plants. The first printed edition of his works appeared at Venice, in the original Greek, in 1499; but since then many editions have been printed, and translations made into almost every language of Europe, except English. In late times, Tournefort made much use of his works, and still more lately they have given origin to the 'Flora Græca' of Sibthorp, which has been edited by Sir James Edward Smith. A genus of plants has been named after him by Plumier; the *discorea*, a genus which contains the yam. [W.B.]

DIPPEL, JOHN CONRAD, a German physician and chemist, remarkable for his pretensions in theology and alchemy. He is the disc. of Prussian blue, and of an oil which bears his name, 1672-1734.

DISNEY, JOHN, an English divine, distinguished for his activity and disinterestedness as a magistrate, 1677-1730. A descendant of the same name, chap-

lain to Bishop Law, and author of religious biographies, 1746-1816.

D'ISRAELI, ISAAC, the son of a Venetian merchant of Jewish extraction, who had settled in England, was born at Enfield, near London, in 1766. His education was chiefly received at Amsterdam and Leyden, and was completed by a tour in France and Italy. Coming, at an early age, into possession of an independent fortune, he was able to devote the whole of his long life to literary study and composition. In the first stage of his authorship, he contributed poems to the 'Gentleman's Magazine,' and other periodicals, and wrote some small novels, of which the satirical piece called 'Flim Flams' is said to have been one. But he soon began to confine himself to his favorite department of Literary History; commencing, when he was twenty-five years old, those miscellaneous collections and remarks, which, though pleasant and gossiping rather than philosophically critical, have preserved and disseminated a very large mass of curious and valuable knowledge. In 1791 appeared the first volume of his 'Curiosities of Literature,' which were extended to three volumes, gradually enlarged, and followed by a second series in 1823. In 1795 he published his 'Essay on the Literary Character,' and in 1796, his 'Literary Miscellanies.' The most interesting of his works, 'The Calamities of Authors,' and 'Quarrels of Authors,' appeared in 1812, 1813, and 1814; and these were followed, in 1816, by his 'Character of King James I.' A subsequent work, the 'Commentaries on the Life and Reign of Charles I.,' gained for him from Oxford the honorary degree of D.C.L. In 1839 he became blind, but was still able to complete his 'Amenities of Literature,' which had been designed to be a part in a survey of the 'Literary History of England.' Mr. D'Israeli died in the beginning of 1848, at his country-seat, Bradenham house, in Buckinghamshire. The late chancellor of the exchequer is his eldest son. [W.S.]

DITTON, HUMPH. an Eng. geomet., 1675-1715.

DOBSON, M., a physician and nat. philosopher, died 1784. His wife, SUSANNAH, a clever miscellaneous writer, close of the century.

DOBSON, WILLIAM, a distinguished English portrait and historical painter, of the reign of Charles I., was born in London in 1610, where he died in 1646, at the early age of thirty-six. Dobson's education consisted chiefly in copying pictures by Titian and Vandyck, which he met with at his master's, Sir Robert Peake's. He was recommended to the king by Vandyck, and succeeded him as Sergeant Painter to Charles I., who had a high opinion of Dobson, whom he called the English Tintoret.—(Walpole, *Anecdotes of Painting in England*, &c.) DODD, DR. WILLIAM, author of numerous religious and other works, born 1729, executed for forgery 1777.

DODDRIDGE, SIR J., an Eng. jurist, 1555-1628.

[Dr. Doddridge's Chapel, at Northampton.]

DODDRIDGE, PHILIP, D.D., the son of an oilman, was born in London on 26th June, 1702. Both parents being very pious, took extraordinary pains to rear their numerous family in the nurture and admonition of the Lord; and Philip, the youngest, was introduced by his mother to a knowledge of the characters and scenes of the Old and New Testament history through means of some Dutch tiles that lined a corner of their sitting-room. The associations of those primitive pictures, together with the remembrance of the sound and pious reflections his parent founded on them, made indelible impressions on his infant mind. In his childhood he was left an orphan; and the little patrimony bequeathed to him having been lost through the imprudent management of the trustee appointed by his father, young Doddridge was indebted to the kind liberality of Mr. Samuel Clarke, a dissenting minister, and master of a private school at St. Alban's, who took him into his house, and educated him gratuitously. Doddridge repaid the kindness of his disinterested and pious benefactor by not only making uncommon attainments in learning, but by strong and beautiful evidences of personal religion. His early wish was to devote his life to the ministry, but great difficulties lay in the way to the accomplishment of this object; and while he was anxiously pondering the matter in his mind, he received an offer from the duchess of Bedford, who lived in the neighborhood, and had heard of his character and circumstances, to send him to either of the two universities, on condition of his becoming a clergyman in the Church of England. So tempting an offer it required strong and conscientious principles to resist. But his dissent being the result of enlightened and matured conviction, he respectfully and gratefully declined the proposal of his noble patroness. His old and steady friend, Mr. Samuel Clarke, now undertook to bear the expense of his education; and Doddridge, regarding this offer as indicating the leading of Providence, gladly embraced it, by repairing to the academy of Kilworth, in Leicestershire, where, under the auspices of the learned and pious Dr. Jennings, he pursued the requisite studies with great ardor. On the 22d July, 1722, he was licensed to preach, and such was the fame of his pulpit ministrations that he soon found

himself settled over the congregation at Kilworth, as successor to Dr. Jennings. At the end of seven years he removed to Harborough, to be assistant to the venerable Mr. Some; but this situation, too, he ere long relinquished, to take the superintendence of a dissenting academy for the training of young ministers, an office to which his high celebrity as a scholar and divine procured his unanimous appointment by the electors. A very pressing invitation from the Independent congregation in Northampton, enforced by the advice of Dr. Watts and other friends to accept it, led him to a new sphere of labor; and from 24th December, 1729, he discharged in that town the double duty of pastor of a large congregation and tutor to the Theological seminary. Seldom has there been a more laborious—never was there a more conscientious life than that of Doddridge. To serve his Divine Master was the ruling principle of his heart; and to the advancement of the sacred cause he brought all the energies of an active mind, and all the stores of an almost boundless knowledge daily to bear. Many students repaired from all parts of the kingdom to enjoy the benefit of his prelections; and amongst these not a few who afterwards rose to distinction, not among the dissenters only, but in the established churches of England and Scotland, in America, and even in Holland. The university of Aberdeen conferred on him, in 1736, the honorary degree of Doctor in Divinity. He was a voluminous author. Amongst his works, all of which have long been well known and highly valued in the religious world, we may enumerate his 'Sermons on Regeneration,' his 'Sermons to Young People,' his 'Life of Colonel Gardner.' But the principal are the 'Rise and Progress of Religion in the Soul,' and the 'Family Expositor.' Dr. Doddridge's frame, never robust at any time, was enfeebled by his incessant labors, and severe cold having settled on his lungs, and been followed by symptoms of consumption, he was advised to try the effects of a sea voyage. On 30th September, 1751, he sailed from Falmouth in a vessel bound for Lisbon, where he landed on 13th October, and being completely exhausted he sank in a few days, expressing to Mrs. Doddridge, who accompanied him, his firm faith and joyful hope in Christ. DODINGTON, GEORGE BUBB, or according to his title, Lord Melcombe, an English statesman, best known as author of a 'Diary,' 1691-1762.

DODONÆUS, R., a Dutch botanist, 1517-1585.

DODSLEY, ROBERT, the well-known bookseller and miscellaneous writer, was born of poor parents, and though he commenced life as a footman, rose to considerable eminence as a dramatic author and essayist, and acquired a handsome fortune as a publisher. His literary connections and friendships include the first names of the last century. The most celebrated of his theatrical pieces is 'Cleone,' a tragedy, and the most useful of his speculations the 'Annual Register,' commenced 1758, in conjunction with Edmund Burke. 'He bore an excellent private character, was modest in his prosperity, grateful to his early friends and patrons, and disposed to bestow on others the same kind assistance which he himself had experienced.' Born at Mansfield, 1703, died 1764.

DOMENICHINO, the name by which DOMENICO ZAMPIERI is commonly known. He was born at Bologna in 1581, and studied some time under Denis Calvert, but afterwards entered the school of the Caracci. Domenichino painted a long time at Rome, and his picture of the Communion of St. Jerome there, in the Gallery of the Vatican, is considered one of the masterpieces of Italian painting, yet the painter received only ten guineas for it. Able in drawing, expression, and composition, Domenichino had many enemies, by whom he was much persecuted, both at Rome and Naples. He died in the latter city April 15, 1641, and it was supposed that he was poisoned by the agency of the notorious triumvirate Spagnuolo, Corenzio, and Giambattista Caracciolo, known as the 'Cabal of Naples.' Domenichino is generally considered the ablest of the pupils of the Caracci.—(Bellori, *Vite de' Pittori*, &c.; Passeri, *Vite de' Pittori*, &c.) [R.N.W.]

DONNINI, JEROME, an Ital. painter, 1681-1743.

DONNISSU, MARQUIS DE, a Ven. gen., ex. 1793.

DONIZETTI, GAETANO, was born at Bergamo in the year 1798. His father destined him for the law, but for which profession he himself had no liking. His first taste seems to have lain towards painting, but he ultimately devoted himself to the study of music, in which he achieved a very high and prominent position. His first master in music was the celebrated Simon Mayer, and he studied for three years at the conservatory of Bologna under Mattei. He composed in all sixty-three operas, the first of which, 'Enrico di Borgogna,' was performed at Venice in 1818, in which Madame Catalani sustained the principal character, and in which Signor Fioravanti also took a part. Up to the year 1827 he had composed no fewer than nineteen operas, of which the 'Zoraide' was the most successful. In 1828 he ceased to write in the style of Rossini; and his own great originality first developed itself in 'Esule di Roma,' which was performed at the San Carlo at Naples, and in which Lablache sustained the principal bass part. This was his earliest triumph, and the new style gave ample promise of the future career of 'Il Maestro.' In the same year he composed other three operas. In 1829 he produced 'Il Paria' and 'Il Castello di Kenilworth,' at the San Carlo.

In 1830 he wrote four operas for the same establishment, and an Oratorio, 'Il Diluvio Universale.' For the carnival of 1831 he composed his 'Anna Bolena,' which established his reputation, and after which every manager in Europe became desirous to have a work from the great composer. His next opera was 'Fausta.' In 1832 he composed 'Ugo Conte di Parigi,' the 'Elisir d'Amore,' and 'Sancia di Castiglia;' next year he wrote 'Il Furioso,' 'Parisina,' and 'Torquato Tasso.' 1834 gave to the world his other masterpiece, 'Lucrezia Borgia,' and 'Maria Stuarda.' In the same year he composed 'Rosmonda d'Inghilterra.' In 1835 he wrote 'Gemma di Vergi,' 'Marino Faliero,' which was first performed in London, and the world-renowned 'Lucia di Lammermoor,' which was brought out at San Carlo. In 1836 he composed 'Belisario' for the carnival of Venice, and produced 'Il Campanello,' 'Betly,' and 'L'Assedio di Calais.' In 1837 he wrote two operas, namely, 'Pia di Tolomei' and 'Roberto Devereux.' In 1838 he composed 'Maria di Rudenz;' in 1839 'Gianni di Parigi;' and in 1840 'La Fille du Regiment' for the Opera Comique of Paris. This year he also produced 'Les Martyrs' and 'La Favorita.' In 1841 he composed 'Adelia,' in 1842 'Maria Padilla' and 'Linda di Chamouni.' In 1843 he produced his 'Don Pasquale' for Grisi, Mario, Tamburini, and Lablache, which was brought out at the Italian Opera of Paris. In the same year he composed for Venice his lyric tragedy, 'Maria di Rohan,' and for the Academie Royale of Paris his 'Don Sebastian de Portugal.' At the carnival of Naples in 1844, his sixty-third and last opera 'Caterina Cornaro,' was produced, while two unfinished operas were amongst his manuscripts, and he was preparing another comic opera for Grisi, Mario, Ronconi, and Lablache. At this time his mind, which had been so severely tasked, utterly gave way, and he was first taken to a *Maison de Santé* at Vitry, near Paris: subsequently his nephew, who was then director of music to the sultan at Constantinople, had him removed to a house at the Champs Elysées. He was ultimately conveyed to Bergamo, where it was thought the scenes of his early life might assist his recovery; but all was of no avail. He died on the 8th of April, 1848, after five days' struggle, surrounded by his early friends and admirers. Donizetti was married to Virginia Vasseli, the daughter of an advocate in Rome, who died in Naples in 1835. Donizetti succeeded Zingarelli in the direction of the conservatory at Naples, and held office as chapel-master to the imperial court of Vienna. He composed, besides his operas, various detached vocal pieces, masses and vespers, a *Miserere*, some quartettes, overtures, variations for the piano-forte, a Monody for the death of Malibran, &c. Donizetti was an excellent poet as well as a musician, and wrote some of his own *libretti*. In rapidity of composition he rivalled Rossini, and has been known to score an opera in twenty-four hours, a period barely sufficient for the mere manual labor of writing down the notes. [J.M.]

DONUS, the *first* of the name, pope for about a year, 677; the *second*, elected 974-975.

DOW, ALEXANDER, a Scotch Orient., d. 1799.

DOW, GERARD, a celebrated Dutch *Genre* painter, was born at Leyden in 1613; his father, who was a glazier, brought him up as a glass-painter, but having placed him with Rembrandt, when in his sixteenth year only, the good use the young painter made of his opportunity enabled him to establish himself in the more independent profession of a painter. Few men have ever attained such wonderful mastery or delicacy of execution as Gerard Dow.—He died rich at Leyden in 1680. Schalken, Mieris,

and Metz, were his pupils. (Houbraken, *Groote Schouburg*, &c., 1.) [R.N.W.]

DOW, LORENZO, an eccentric Amer. Methodist preacher. He is supposed to have preached to more people than any holder forth of his day. He was an ever-moving itinerant, d. 1834.

DOWLAND, JOHN, a celebrated performer on the lute, was born in Oxford in the year 1562, and took his degree of Bachelor of Music in 1588. He composed a great deal of music, all of which, saving one or two madrigals, is forgotten, and was a great favorite with the public. The 'Passionate Pilgrim' has devoted a sonnet to Dowland, which, even were his beautiful madrigal, 'Awake, sweet Love,' irrecoverably lost, would render his name immortal.—He died, it is generally believed, in Denmark, in the year 1615. DRAGUT, an Ottoman corsair, killed 1565.

DRAKE, FRANCIS, an English antiq., d. 1770.

[Sir Francis Drake's Ship. The Golden Hind.]

DRAKE, FRANCIS DRAKE, the chief of the English Naval Worthies of the reign of Elizabeth, and the first man who circumnavigated the globe in a single voyage, was born in 1546, near Tavistock, in Devonshire. His father was a poor clergyman; and Francis was the eldest of twelve sons, nearly all of whom were bred to the sea. He was apprenticed while a lad to the master of a coasting bark, which sometimes made voyages to Holland and France.—In this humble employment Drake grew up to be a thorough seaman; and he also by his steadiness and good conduct so gained the esteem of his master, that when the old man died, he bequeathed his bark to the diligent and skilful young mariner.—Drake continued his old master's trade in her for some time; but his spirit of adventure caused him at last to sell her, and employ the proceeds in a trading voyage to the West Indies in 1565 and 1566, during which he suffered much ill usage and loss from the commander of some Spanish cruizers. On Drake's return, he joined Sir John Hawkins in an adventure to the Spanish Main, which proved calamitous at the time, but which must have done much in qualifying Drake for his subsequent achievements. The little squadron which Hawkins and Drake commanded, was

treacherously attacked by a Spanish fleet in the port of St. Juan de Ulloa, and four out of the six English ships were destroyed.—Drake returned to England with the loss of all his property; but with the gain of valuable experience, and with an increase to that keen antipathy to the Spaniards, which marked him throughout life, and which is best paralleled by that which Nelson afterwards felt to the French. In 1572, Drake succeeded in fitting out three small vessels, and sailed to the Spanish Main on a voyage of reprisals. He failed in an attack on the city of Nombre de Dios; but he landed on the isthmus of Panama, and captured a large treasure, which was being conveyed on mules to Nombre de Dios for exportation to Spain. It was in the course of this adventure that one of the native guides who led the English across part of the isthmus, showed Drake a lofty tree from whose summit might be discovered the Pacific ocean, along which no European flag, save that of Spain, had hitherto ever floated, and the coasts of which were believed to teem with treasure-cities of boundless magnificence. Drake climbed this 'goodlie and great high tree,' as he himself termed it, and gazing thence on the broad Pacific, he with great solemnity 'besought God to give him health and life once to sail an English ship in those seas.'—This was no barren vow of transient enthusiasm. On his return to England, Drake prepared a squadron for a voyage into the South Pacific through the straits of Magellan. It consisted of five vessels, the largest of which was only of 500 tons. Drake sailed on the 13th December, 1577, and on the 20th May, 1578, he anchored in the port St. Julian of Magellan. There one of the companions of Drake, named Thomas Doughty, was tried by Drake and the other officers of the fleet, and put to death on a charge of mutiny and conspiracy. This execution has long been made a subject of heavy imputation on Drake's character, but Sir John Barrow in his late work, 'The Naval Worthies of the Reign of Elizabeth,' has printed some contemporaneous records of Doughty's trial, which prove his sentence to have been just, and his death necessary. Drake emerged into the Pacific from the perilous straits of Magellan on the 6th of May, but his ship, the *Golden Hind*, struggled with difficulty through heavy gales; and all her consorts abandoned her or perished. With his one vessel Drake now began his attacks upon the Spanish treasure-ships that were sailing in fancied security along the coast of the Pacific; and the *Golden Hind* was soon deeply laden with Spanish gold and other valuables. Drake now thought of returning home; but an attempt to repass the straits would have thrown him within the reach of a large force, which the enraged Spaniards had collected to intercept him. He resolved, therefore, to seek a passage home round the north of America; and by unrivalled boldness and skill, worked his ship to a high latitude along the western coast of the Atlantic. Yielding at length to the increased severity of the winter season, and the natural obstacles which his crazy bark and worn-out crew encountered, Drake steered westward across the Pacific for the Philippine islands, and thence for the Cape of Good Hope. He doubled the Cape on the 15th of June, 1580; and on the 25th September in that year, the *Golden Hind* came safely to anchor in Plymouth harbor, having been two years and ten months at sea, during which time she had sailed round the whole world.—Drake's exploits, and the treasure which he had brought home, made all England ring with his renown. Queen Elizabeth knighted him, and dined in state with him on board the *Golden Hind*. The Spaniards were loud in their

protestations, and demanded that Drake should be given up to them as a pirate. There was at this time nominal peace between the two countries; but Spanish troops had often aided the rebels against Elizabeth in Ireland, and England, on the other hand, had sustained by men and money the revolt of the Netherlands against Spain. In the New World the arrogant claims of the Spaniards to exclude all other nations from the seas of Central and Southern America, and the cruelties which their officers practised, had created a system of reprisals; and 'no peace beyond the line,' was the rough and ready maxim of the English mariners. The nation adopted it.—Queen Elizabeth refused to give up or to punish Drake; and in the open war which soon broke out between her and Spain, Drake did noble service to his country and his queen. In 1585 he attacked and burnt the collected shipping in Cadiz harbor, and thereby delayed for a year the sailing of the Spanish Armada against England. And when in 1588, Spain sent that huge agglomeration of her fleets and armies against England, Sir Francis Drake was the boldest and the sagest among that bright band of naval heroes who baffled and beat the haughty Spaniards; and who forced the shattered remnants of their so-called Invincible Armada to flee in disaster and disgrace round the north of Britain and Ireland back to the harbors of the peninsula, which they had quitted in such confidence of vindictive success. In 1595, Drake sailed on his last voyage in conjunction with his old comrade Sir John Hawkins, on an expedition against the Spanish West Indies.—The English were unsuccessful in this enterprise. They suffered severely by the diseases of the climate, to which the brave Sir Francis fell a victim. Admiral Drake died on board his own ship off Portobello, on the 28th January, 1596. [E.S.C.]

DRAKE, JAMES, a political satirist, 1667–1707.

DRAKE, DR. NATHAN, a physician of Hadleigh in Suffolk, distinguished as an essayist on English literature, and especially on periodical literature from the time of Addison, 1766–1836.

DRAKE, JOSEPH RODMAN, M. D., a physician of New York, born in 1795, who attained early celebrity by his poetical writings, but died in 1820, aged 25. His amiable disposition and high intellectual promise have been beautifully commemorated in the celebrated lines of Fitz Greene Halleck.

"None knew thee but to love thee,  
None named thee but to praise."

His principal poem was the 'Culprit Fay.'

DRAKE, DANIEL, an Amer. physician and author of a work on the Diseases of the valley of North America. He practised medicine in Cincinnati, (Ohio,) where he died in 1852.

DRAN, H. P. LE, a Fr. surgical wr., 1685–1770.

DRAPARNAUD, J. P. R., a French naturalist, 1772–1805. His brother, VICTOR XAVIER, a dramatist, au. of the 'Prisoner of Newgate,' 1773–1833.

DRAPER, ELIZABETH, the friend of Sterne and Raynal, to whom the former addressed his letters, published under the name of Yorick, 1742–1775.

DRAPER, SIR WILLIAM, a military officer, known as a controversialist from his defence of the marquis of Granby, 1721–1787.

DRAYTON, MICHAEL, one of the most esteemed of the early English poets, and most admired for his pastorals and chivalrous subjects, born at Harshull in Warwickshire, 1563, buried in Westminster Abbey, 1631.

DRAYTON, WM., LL. D., Judge of the federal court for the district of South Carolina, was born in 1733. In 1768 he was appointed chief justice in East

Florida, but was suspended by the governor from political motives in 1775. He retired with his family to England in 1778, but returned to America, and was appointed judge of the admiralty court in South Carolina. In 1789, he was appointed judge under the federal government, and died in June, 1790.

DRAYTON, WILLIAM HENRY, an eminent political writer during the American Revolution, born in South Carolina in 1742. He was educated at Westminster and Oxford. After his return to America he was appointed judge in 1771, and was one of the king's justices when they made their last circuit in 1755. In this capacity he boldly inculcated the principles of liberty in his charge to the grand jury. He was elected president of the provincial Congress, and in 1776 was called by his country to the office of chief justice. He employed his pen unceasingly in the cause of the Revolution, and wrote a history of it to the end of 1778, which was published by his son in 1821. He died in Philadelphia in 1779, during the session of Congress, at the early age of 36.

DRAYTON, JOHN, the only son of chief justice Drayton. He was governor of South Carolina, from 1800 to 1802, and from 1808 to 1810. He published in 1821 his father's memoirs of the American Revolution, and died in Nov. of the following year, aged 60, at which time he was district judge of the United States.

DREBBEL, CORNELIUS VAN, a Dutch philoso. and chem., inv. of the thermometer, &c., 1572-1634.

DRELINCOURT, CHARLES, a French protestant, author of 'Consolations against the Fears of Death,' &c., 1595-1669. LAURENCE, his son, a learned divine and author, 1631-1681. CHARLES, his third son, a physician, died 1697.

DREW, SAMUEL, a methodist preacher, celeb. as a metaphysician for his 'Essay on the Immateriality and Immortality of the Soul,' 1765-1833.

DROLLINGER, C. F., a Ger. lyric, 1688-1742.

DRINKER, EDWARD, born on the site of Philadelphia, in 1680, and died in that city in 1782, aged 102. He was present when Penn ratified his first and last treaties with the Indians, and on the same spot witnessed the ratification of the treaty between France and the United States.

DROUAIS, J. G., a French painter, 1763-1788.

DROUET, JEAN BAPTISTE, master of the post in the village of Sainte-Menehould, and once a soldier of the dragoons, has obtained a remarkable name in the history of the French revolution by his arrest of Louis XVI., when he attempted to fly the kingdom, 20th June, 1791. His curiosity was awakened by the arrival of travellers under very unusual circumstances, curiosity ended in suspicion, and his suspicions were confirmed by a comparison of the king's portrait, engraved on the French assignats at that time, with the pretended Baron Korff in the Berline. With the zeal of a patriot, and the decision and boldness of a soldier, he galloped by a cross road to the town of Varennes, and prepared his measures so effectually, notwithstanding the near neighborhood of Choiseul and Bouille, that the carriages were stopped, and the king conducted to Paris. If Lafayette was justifiable in declaring the flight of the king 'infamous,' and the country had reason to tremble for its independence with Louis in the army of the coalition, it is impossible to deny that Drouet's arrest of the king was an act of patriotism; and, viewing it in this light, the National Assembly rewarded him with a gift of 30,000 francs, while the people, in 1792, returned him to the National Convention. In the capacity of deputy he voted for the most violent measures, and had the atro-

city to propose that all the English in France should be shot. In 1793, he accompanied the army of the North as commissary, and was shut up in Manbeuge, when that place was reduced to the last extremity by the Austrians, and was taken prisoner in a sortie which he headed. Being confined in the fortress of Spitzberg, situated on a rock some two hundred feet high, he attempted to escape by means of a parachute, but falling heavily to the ground, was captured again. He was subsequently exchanged with some of his comrades against the king's daughter, and sat in the council of 500. He joined the conspiracy of Babeuf against the order established after the 9th Thermidor, but was permitted to escape by the Directory, and, after an adventurous career abroad, became sub-prefect of Sainte-Menehould under the consulate. In 1815 he appeared as deputy of the Marne in the Chamber of Representatives during the hundred days, and the following year was banished from France with the regicides. In 1824, an old man who had been known some years past under the name of Merger, and was esteemed a good Christian, died at Maçon, when people were surprised to discover that he was no other than the 'bold dragoon' who arrested the king at Varennes. [E.R.]

DROUET, S. F., a Fr. savant, 1715-1779.

DRYANDER, F. E., a Flem. his., 16th century.

DRYANDER, JONAS, a Swed. natur., 1748-1810.

[Dryden's House in Fetter Lane.]

DRYDEN, JOHN, born in 1631, was the grandson of Sir Erasmus Dryden, or Driden, of Canons-Ashby, in Northamptonshire. From his father, the third son of the family, he inherited a small estate, yielding fifty or sixty pounds a-year. He was sent from Westminster School to Trinity College, Cambridge, where he resided till 1657. For the next three years he was engaged in public business in London, under his mother's cousin, Sir Gilbert Pickering, a puritan, and a partisan of Cromwell. His principal kinsman on the father's side, belonged to the same party. Thus trained and thus connected, he began his literary career by verses on the death of the Protector; but his disinclination to the principles in which he had been brought up, and the vacillation of opinions by which he was distinguished through life, showed themselves very speedily. The Restoration occurring when he was in his thirtieth year, excluded him for the time from government employment and patronage; and he at once devoted himself to literature as a profession. Having to rely on it for support, he did not long content himself with obscure drudgery in prose, or with verses, though he wrote many, on public events. Yet his 'Annus Mirabilis,' celebrating the eventful year 1666, presaged his eminence as a descriptive and didactic poet. But the stage, now restored, and becoming the fashionable amusement, offered itself as the only means through which his pen could furnish a livelihood; and, in the course of twenty-five years, he wrote twenty-seven dramas. The most remarkable of these were his Heroic Plays, pieces of a kind which, imported from France, were the favorites during the greater part of the reign of Charles II. These have aptly been described by Sir Walter Scott as being just metrical romances of chivalry thrown

into the form of dialogues. In this unnatural but seductive class of compositions Dryden was unsurpassed; and, amidst all their exaggeration and unreality, his Tragic Dramas are works of great genius. His Comedies, belonging to the Spanish school which had become so popular, and whose chief merit was sought in complex ingenuity of plot, have little literary value; and they are tainted, as deeply as any plays of their time, by the moral depravity which disgraced the restored English stage till after the close of the seventeenth century. Indeed, the pain which one feels in seeing the intellectual powers of Dryden wasted on his serious dramas, is aggravated when we contemplate the moral degradation displayed by his comic ones.—Hardly less mortifying is it to know, that the great poet was conscious of his own inaptitude for the writing of plays; and that he panted to display, on a field better adapted to his diffusive genius, the pomp of imagery, the strength of passion, and the magnificent skill of versification, which he felt to be but ill bestowed on his heroic and tragic pieces of theatrical declamation. It was the cherished dream of his life to give to the English language a national epic, whose theme would probably have been the exploits of the romantic King Arthur. There are, in fact, two circumstances only that can at all console us for the lamentable misapplication of Dryden's labor. In the first place, the writing of his heroic plays served as his apprenticeship to the art of versification and expression. Out of his rhymed dialogue arose that mastery of the English heroic couplet which he was the first to acquire, and in which no succeeding poet has nearly equalled him. Secondly, the prefaces, dedications, and essays, with which he accompanied his dramas, exhibited him at once as the earliest writer of regular and elegant English prose, and as the first who can be said to have aimed in our language at any thing like philosophical criticism. Those prose fragments of his are still instructive to the critic of poetry; and they contain some of the most felicitous specimens of style which our tongue has ever produced.—During the few years next after the Restoration, dramatic composition was almost his only employment. Of his heroic plays of this period, which were written in rhyme, the finest were the two parts of 'The Conquest of Granada.' He was under an engagement to write plays for the king's theatre, which gave him an income of more than three hundred a-year: in 1665 his circumstances were a little improved by his uncomfortable marriage with Lady Elizabeth Howard, daughter of the earl of Berkshire; and in 1670 he received with a salary (irregularly paid) of two hundred a-year and the famous butt of wine, the joint offices of historiographer-royal and poet-laureate. In the latter part of Charles's reign the fashion in dramatic matters began to change: and this, with jealousies of playwrights and courtiers, gave birth to the celebrated burlesque play called 'The Rehearsal,' of which Dryden, under the nick-name of Bays, was the principal victim. Politics now offered to the laureate a new kind of theme, of which he availed himself by publishing, in 1681, his 'Absalom and Achitophel,' the best of all poetical satires. 'The Medal' and 'Mac-Flecknoe,' works of the same kind, followed immediately. Now, likewise, he began to write tragedy in blank verse, 'All For Love' being his most successful experiment of the kind. In the 'Religio Laici,' also, he presented to the public, in 1682, his first elaborate attempt at didactic poetry. The tone of hesitation, and the character of the arguments, adopted in this defence of the Church of England,

[Dryden's Tomb in Westminster Abbey.]

betrayed a state of mind leading by an easy progress to the change of faith which the poet soon avowed. In 1685, soon after the accession of James II., Dryden was received into the Church of Rome. His conversion secured him in court favor, and was rewarded by an addition of a hundred pounds a-year to his pension. But it was probably sincere, and the new creed was unflinchingly adhered to when it had become unprofitable and dangerous. It produced rich poetical fruit in 'The Hind and the Panther,' in which the dryness of dissertation is enlivened by ingenious allegory.—The Revolution, taking place in the poet's fifty-seventh year, deprived him of his pensions, and of his royal and courtly patrons; but it neither lowered the place which he had held as the first poet of his time, nor damped the ardor of his literary exertions. The last twelve years of his life, though spent in hard toil and under heavy discouragements, produced some of his best works. In 1690 he gave to the stage his tragedy of 'Don Sebastian,' the best and most interesting of his serious plays. In 1697, amidst many other labors, he threw off at a heat his 'Alexander's Feast,' one of the most animated of all lyrical poems, though not conceived in the highest tone of lyrical inspiration. In the same year appeared his nobly spirited translation of Virgil, for which he had trained himself by previous versions from the classics published in the volumes he called 'Miscellanies.' Lastly, in the spring of 1700, were published his 'Fables,' in which, imitating in verse the prose of Boccaccio, and remodelling (not always for the better) the antique poetical pictures of Chaucer, he not only showed that his warm imagination burned as brightly as ever, but that his metrical skill had been increasing to the close of his life. That life was about to end. Gout and gravel had long disturbed him; and erysipelas in one of his legs, terminating in mortifica-

tion, destroyed him on May-day, 1700. He was buried in Westminster Abbey, between the grave of Chaucer and that of Cowley. [W.S.]

DUANE, JAMES, the first mayor of New York after its surrender by Great Britain. He died in Albany, 1797.

DUBOIS, P. G., a French translator, 1626–1694.

DUBOIS, WILLIAM, a French cardinal and statesman, justly branded in his. as infamous, 1656–1723.

DUBOIS-CRANCE, EDMUND LOUIS ALEXIS. Dubois-Crancé performed a part in the French revolution which may be related in a few words, but from which the most important consequences have resulted. He was the propounder of that formidable military engine known as the *conscription*, the first idea of which he submitted to the national convention in 1793 as reporter of the military commission. 'In a nation that would be free, when surrounded by powerful neighbors and rent by faction,' he remarks, 'it behoves every citizen to be a soldier and every soldier to be a citizen, and if there is no hope of this, France is near the term of her annihilation.'

. . . If you once tolerate exemptions and substitutes, all is lost.' The advice of this stern soldier and honest republican was responded to by a decree for the levy of 300,000 men, with promotion from the ranks, and shortly afterwards by Barrère's famous proclamation for a levy *en masse*. One other memorable service was performed for the republic by Dubois-Crancé, in the reduction of Lyons, and such was the esteem in which his military talents were held that he was appointed, in 1799, the successor of Bernadotte as minister of war. He was a stout opponent of the revolution by which Napoleon attained the supreme power, and ever after remained in the obscurity of private life. He is the author of several military and political memoirs published between 1789 and 1804, and of two pamphlets written against Barrère, 1795. Born at Charleville 1747, died at Rhétel, 1814. [E.R.]

**DUCHATEL, GASPARD**, a republican of the Fr. revolution and member of convention, memorable for his vote against the execution of the king, to register which he was carried from his sick bed wrapped up in blankets; born 1766, guillotined with a party of the Girondins, 31st October, 1793.

[Tablet in Memory of Dr. Duché, at St. Peter's Church, Philadelphia.]

**DUCHE, JACOB, DD.**, a clergyman of the Episcopal Church, born in Philadelphia, and graduated there in 1757, and after his ordination in England, returned and officiated in his native city for many years as assistant minister and rector. Though conscientiously opposed to the course pursued by the colonies, he yet while chaplain of Congress gave his salary to support the families of Americans killed in battle. He endeavored to convert Washington to his views, but that general deemed it his duty to send his letter to Congress, and Dr. Duché retired to England, where he became chaplain to an orphan asylum. He died in 1798, aged 60. He was a man of great eloquence and fine abilities, and author of several religious works.

**UCHER, GILBERT**, a Latin poet, 16th cent.

**DUCLOS, A. J.**, a Fr. engraver, last cent.

**DUCLOS, C. P.**, a Fr. hist., 1704–72.

**DUCOS, JEAN FRANÇOIS**, one of the clearest sighted, and most honest in accepting the consequences of his convictions, of the party of Girondists, was born at Bourdeaux, 1765, and was returned as deputy for his native city to the Constituent Assembly in 1791, and to the National Convention in 1792.

His name is not identified with any particular measures, but his oratory was brilliant, his advice listened to with respect, and his influence felt in the debates, in which he partook with indefatigable zeal. He was more tolerant than the other members of the Gironde, and labored to promote a fusion of republicans of every shade of opinion. He shared the fate of his party, though somewhat later, through the influence of Marat, and was guillotined at the early age of twenty-eight 1st November, 1794.

**DUCOS, ROGER**, like many other actors in the French revolution, was an advocate, and embracing extreme opinions at the commencement of that epoch, succeeded in talking his way to the National Convention in 1792. He was then thirty-eight years of age, having been born in 1754. There is nothing to show from the beginning to the end of his career, that he had any other talents than those of a respectable lawyer, or any principles but those which he could adopt with the greatest eclat for the time being. In this spirit he seems to have voted for the death of the king 'without delay,' and afterwards opposed himself to the Girondins. In January, 1794, he served the Jacobin's Club as president, and after a few ups and downs, had settled as a magistrate in a country village, when Barras drew him from his retirement, and he became a member of the directory and the council of elders. On the 18th Brumaire (9th October, 1799), he lent himself to the *coup d'état* of Napoleon, and was rewarded with the third place in the provisional consulate, as the Abbé Sieyès was with the second. On the 20th, Buonaparte, Sieyès, and Ducos, held their first sitting in the Luxembourg, and on Sieyès's suggesting that one of them should act as president, Ducos promptly replied,—'Vous voyez bien que c'est le général qui préside,' (the general presides of course!) Ducos seconded whatever Buonaparte proposed, and though Sieyès felt that he was reduced to a mere cipher, they proceeded to frame the new constitution, which was adopted by the votes of the people, and Buonaparte being confirmed in his office of first consul, replaced his former colleagues by Cambacères and Lebrun. From this period Ducos is known as a member of the senate, and of the upper chamber during the hundred days. He was proscribed by the Bourbons in 1816, and died the same year in consequence of being thrown out of his carriage. His brother **NICOLAS**, Baron Ducos, acquired distinction as one of Napoleon's generals, and survived him many years. [E.R.]

**DUDLEY, EDMUND**, a minister of state under Henry VII., executed with Empson at the commencement of the following reign, 1462–1510. His son **JOHN**, duke of Northumberland, and father of Lord Guildford Dudley, whom he married to Lady Jane Grey, executed for treason, 1502–1553. **AMBROSE**, another son of the duke, called the Good Earl of Warwick, 1530–1589. **ROBERT**, his fifth son, earl of Leicester, celebrated as the favorite of Elizabeth, 1532–1588. **SIR ROBERT**, son of the last named, and the Lady Douglas, celebrated for his skill in hydraulic engineering, 1573–1630.

**DUDLEY, SIR H. B.**, a noted journalist, politician, and dramatic writer, long known as a man of pleasure in London, and a magistrate, 1745–1824.

**DUDLEY, THE RIGHT HON. J. W. WARR**, earl of, foreign secretary under Canning, 1781–1833.

**DUDLEY, THOS.**, an Eng. engraver, 17th cent.

**DUDLEY, THOMAS**, governor of Massachusetts, was born in England in 1576, and after serving in the army and adopting Puritanical principles, came to the colony as dep. gov. in 1630. He was governor

in the years 1634, 1640, 1645 and 1650. He was opposed to all toleration. He died in 1652, aged 76.

DUDLEY, JOSEPH, governor of Massachusetts, son of Thomas Dudley, was born in 1647, and was graduated at Harvard in 1665. He served in the Indian war of 1675, went as agent to England in 1682, and was appointed president of Massachusetts and New Hampshire in 1686. After acting as chief justice of New York, he was eight years lieutenant-governor of the Isle of Wight. Queen Anne appointed him governor of Massachusetts in 1702, and he continued in that office till 1715. He died in 1720.

DUDLEY, PAUL, ch. jus. of Mass., the son of Jos. Dudley, was born in 1675, and was graduated at Harvard in 1690. After completing his study of the law in London he came back with the commission of attorney-general, which office he retained till 1718, when he was appointed judge. He published several articles on scientific subjects in the transactions of the Royal Society, relating particularly to productions of the colonies. In his will he left a legacy to Harvard college, for the support of lectures in defence of the peculiarities of New England theology, and against the doctrines of Rome. He died in 1751, aged 75.

DUMESNIL, M. F., a Fr. actress, 1713-1803.

DUMMER, JEREMIAH, an agent in England of the colony of Massachusetts, was born in Boston, and was graduated at Harvard college in 1699. Not content with the facilities for education he possessed in America, he pursued his studies for many years at the University of Utrecht, and became one of the most accomplished scholars of his time. After obtaining his doctor's degree, he returned to America, but did not remain long. He now went to England, and shortly afterwards was appointed the agent of his native colony, which office he retained from 1710 to 1721. Bolingbroke, who was then in power, was pleased with his society, made use of his talents, but corrupted his principles, and though he appears never to have abandoned his belief in revelation, he readily learned the language and profligacy of infidelity. He also disappointed the expectations of his countrymen, and sided with the Government against the Colonists. He was the author of a Latin dissertation on the descent of Christ into Hell, and another on the Jewish Sabbath, besides several religious and philosophical disquisitions in the same language, and several political tracts. He died in 1729, in great remorse for the corruption of his principles, and the abuse of his great abilities.

DUMMER, SHUBAEL, a congregational minister, settled at York, in Maine, who was killed during the attack of the French and Indians on that place, in February, 1692,—seventy-five of the inhabitants were slain, and as many taken captive.

DUMMER, WILLIAM, lieutenant-governor of Massachusetts, was commissioner, together with Governor Shute, in 1716, and presided over the province after his departure in 1723. He was also several times commander-in-chief. The Indian war was conducted by him with energy, and the affairs of the province administered with wisdom and impartiality. He died in 1761, aged 82.

DUMONT, J., a Fr. painter, 1700-1781.

DUMONT, P. S. L., born at Geneva, 1759, a friend and fellow-laborer with Mirabeau, and after, with Jeremy Bentham, whose works he translated into French, author of 'Souvenirs sur Mirabeau,' and 'Lettres sur Bentham;' died at Milan, 1829.

DUMONT D'URVILLE, JULES SEBASTIAN-CÆSAR, a celebrated French navigator, was born at Condé-sur-Noineau, 1791. In 1822 he went out with M. Duperry as second in command, and made the tour of the world in the corvette *La Coquille*. In 1826 he was appointed captain of the *Astrolabe* in a second voyage to the South Seas to discover, if possible, some traces of *La Perouse*. His voyages have enriched science with valuable collections of objects and discoveries, and France owes to him the *Venus of Milo*, besides the memoirs which illustrate his vast knowledge and intrepid seamanship. He had been named vice-admiral, when he perished with his wife and child by the accident on the Versailles railway, when the carriages were burnt on the 8th of May, 1842.

DUMOULIN, E., a Fr. journalist, 1776-1833.

DUMOULIN, P., a Fr. prot. theol., 1568-1658.

DUMOURIEZ, ANNE FRANÇOIS DUPERRIER, a commissary of the French army, author of a translation of 'Ricciardetto,' an Ital. poem, 1707-69.

DUMOURIEZ, CHARLES FRANÇOIS DUPERRIER, son of the preceding, a distinguished general of the French revolution, disgraced by his abortive attempt to act the part of a Monk, was born at Cambrai in 1739, and died in exile at Turville Park, near Henley-upon-Thames, 1823. He was educated both as a man of letters and a soldier, and at twenty-four years of age, had seen seven campaigns, and received twenty-two wounds in the cavalry service. Disappointed with the rank of captain, though graced with the Cross of St. Louis, and a pension of 600 liv., he endeavored to open a road to fortune by combining the characters of a military adventurer and a political spy; the scene of his intrigues being suc-

cessively the little island of Corsica, the kingdom of Portugal, Poland, and Sweden, and his reward for the last of these services a short sojourn in the Bastille, which favor was conferred upon him by Louis XV. On the accession of Louis XVI. he had the command of Cherbourg, with the title of colonel, but it was not until the revolution broke out that his ambition, his love of adventure, his dauntless courage, and his diplomatic talents, were brought into full play, or his condition elevated above obscurity. Having attached himself to the Girondins, he became, in 1792, minister for foreign affairs, and on their dismissal by the king, resumed his duties in the field, and at length found himself in command of the army opposed to the duke of Brunswick. His determined stand in the wood of Argonne gave the opportunity for Kellerman with his dragoons, and other divisions of the army, to defeat the Prussians at Valmy (20th September, 1792), after which, it appears, he negotiated with the king of Prussia, allowing him to withdraw the defeated army on condition of being permitted to pursue his ambitious designs for acquiring the sovereignty of Belgium. On the 12th of November he defeated the Austrians at the battle of Jemmappes, took Liege, Antwerp, and shortly afterwards Breda in Holland, but was beaten at Nerwinden, 18th March, 1793, by Prince Cobourg, with whom he entered into secret negotiations for restoring the constitutional monarchy; his plan being to march upon Paris with the Austrians, dissolve the Convention, and proclaim the duc de Chartres (Louis Philippe) king. Reports of his treasonable practices, however, had reached the ear of government, and a commission arrived at his quarters with power, if necessary, to order him under arrest. He succeeded, by surprise, in consigning the members of this commission to an Austrian prison: but it was too late to turn the course of events: his troops were already in revolt, and the next morning (3d April, 1793) he barely succeeded in escaping with his life across the border. A reward of 300,000 francs was offered for his head, but he evaded pursuit, and at length found a safe asylum in England, where he enjoyed the friendship of the duke of Kent, Mr. Canning, and many other distinguished persons. His career is illustrated by a great number of works from his own pen, the bare titles of which would almost occupy the space of this notice; his 'Memoirs of the Revolution' may be mentioned as the most interesting. DUNOIS, JOHN, a nat. son of Louis d'Orleans, distinguished in the expulsion of the English from France, 1407-1468.

DUNS SCOTUS, JOHN, 'the subtle doctor,' was born about A.D. 1265. The place of his birth has not been satisfactorily ascertained, Scotland, England, and Ireland laying claim to the honor. Some point to Dunse, in Berwickshire, as the spot of his nativity, and others contend for Dunstance, in Northumberland. The probability is that he was of

Scottish extraction. He received his earliest education at a Franciscan monastery in Newcastle, and afterwards studied at Merton College, Oxford, in which he became professor of theology in 1301. His prelections on the 'Sentences of Peter Lombard' are said to have been attended by a crowd of 30,000 students, then resident in Oxford. Though such a statement appears to be a romantic exaggeration, it certainly proves the prodigious fame of the lecturer. In 1307 the philosopher removed to Paris, by command of the general of his order. He had already gained great notoriety in the French capital by public disputation on behalf of the immaculate conception of the Virgin. Immense applause attended his lectures in Paris, and he was styled *Doctor subtilis*. In 1308 he was ordered to Cologne to found a new university there, and defend the same theological dogma. On arriving at that city, the inhabitants met him in a body, and he was drawn into the ancient town in a triumphal car. Soon after his arrival, however, he was seized with apoplexy, and died in November, 1308, at the early age of forty-three. Duns Scotus excelled in the knowledge of canon and civil law, in philosophy, mathematics, and theology. His mind was eminently fitted for abstruse discussion, and subtle dialectics, and was sharpened into a morbid acuteness and pertinacity by continued practice. He displayed keenness and versatility in detecting invisible distinctions; in multiplying hypotheses which differed from each other only in some verbal incidents; in untwisting every thought and proposition as by an intellectual prism; in speculating upon themes above the reach of human knowledge, and in the multiplication of ingenious theories without proof to sustain them, or utility to recommend them. Hypothesis supplanted investigation, and the interpretation of nature, or the question, what is? was superseded by previous conceptions of what might or should be. The Franciscans gloried in Duns Scotus, as their rivals the Dominicans extolled Thomas Aquinas. Aquinas was the more orthodox, and Scotus was at least semipelagian. Scotists and Thomists divided the mediæval schools, and the former, as being realists, were opposed to the Occamists who were nominalists, or held that universal terms were simply names, and not the signs of actual existences. The 'Opera Positiva' of Duns Scotus are very numerous, and have not been printed; but his 'Opera Speculativa' were published in 12 folio volumes at Lyons in 1639, the editor being an Irishman of the name of Luke Wadding. Six of these tomes are filled with the famed prelections on Peter Lombard, already referred to. The industry that could by its own composition amass such a huge collection of MSS. during so short a life, must certainly have been equal to the genius of the great schoolman. [J.E.]

He came to the United States as aid-de-camp to Baron Steuben, in 1776, and after the war, in which he served with distinction, settled at Philadelphia, and commenced the practice of law. He was a man of large scientific attainments, and contributed by various publications to the sciences of jurisprudence, philology, and ethnology. The investigation of the languages of the aboriginal inhabitants of America was a familiar study with him, and his observations have thrown much light upon the subject. Died 1844, aged 84.

DUPUIS, T. S., an Eng. musician, 1733-1796.

DUPUYTREN, WILLIAM, Baron, born at Pierre Buffière, 1777; died at Paris 1835. One of the most distinguished surgeons of modern times, and an eminent example of the beneficial results of the system of public competition established in France. By his industry and talents he became surgeon to the Hôtel Dieu at twenty-six, and professor of surgery at thirty-three. He visited the hospital morning and evening at six o'clock, and for twelve years was never once absent; each morning he attended to 300 patients, delivered a clinical lecture, performed several operations, gave advice to some hundreds of out-patients, and then walked home to breakfast at half-past ten. After this he saw his private patients, attended to the examination of medical students, performed his private operations, and at six in the evening again went the rounds of the hospital. His principal work is his memoir on artificial anus, which forms a happy application of the principles developed by John Hunter. Dupuytren possessed a remarkably fine person and strong constitution, so as to enable him to undergo im-

mense bodily fatigue. But he possessed an extremely irritable temper, which made him insupportably capricious and inconsistent, often impelled him to rash and wrong acts that he would fain have recalled in his cooler moments, and ultimately destroyed his nervous system. He was a most successful practitioner, having left £296,000 to his daughter, Madame de Beaumont, besides £8,000 to endow a professorship, and £12,000 for a benevolent institution for medical men. DURANTE, FR., a Neapol. comp., 1693-1755.

DURELL, JOHN, a learned divine, 1625-1683. DAVID, a supposed descendant of the preceding, distinguished as a biblical critic, 1728-1775.

DURER, ALBRECHT, the most celebrated German painter of the sixteenth century, was born at Nürnberg in 1471, and became the pupil of Michael Wolgemuth, the most eminent painter and engraver at Nürnberg at that time. Albert himself was not only distinguished as painter and engraver, but also as sculptor. The inscription on his tomb claims for him an unrivalled reputation in these matters—'light of the arts—sun of artists—painter, engraver, sculptor, without example.' He died at Nürnberg

[Albert Durer's House at Nürnberg.]

in 1528, worried to death, according to Pirkheimer, by his wife's temper. The enlarged mind of Albert Durer is shown in his persevering curiosity to travel into other countries, and personally ascertain what was there doing, as well as in the versatility of his accomplishments as an artist. He visited Italy in the year 1506, more especially Venice and Mantua, and his opinion that Giovanni Bellini was the best painter in Venice is preserved in one of his own letters to his friend Pirkheimer in Nürnberg. He also visited the Netherlands in the year 1521, and some interesting observations are preserved in his diary of this visit.) (*Reliquien von Albrecht Dürer, Nürnberg*, 1828. He was the author of several works relating to his art, as, 'Instructions in Measuring with the Level and Circle,' &c., 1525; 'Some Directions with regard to the Fortification of Cities, Castles, and Villages,' 1527; and 'Four Books on Human Proportions,' 1528; all of which have been reprinted and translated. Albert Dürer's reputation as a painter is great in Germany, but he is better known

as an engraver and designer out of his own country. His execution is exquisite as a copperplate engraver, but it is doubtful whether he actually executed many woodcuts; his most celebrated compositions are some series of woodcuts, but he is supposed to have drawn on the wood only. Of these remarkable series of designs the most valued are the Greater and Lesser Passion; the Revelations of John; the Life of the Virgin; the Triumphal Car of the Emperor Maximilian I; and the Triumphal Arch of the same emperor. The Great Passion appeared in twelve cuts in 1511; The Lesser Passion in thirty-seven cuts in quarto, also in 1511; the Revelations in sixteen cuts, folio, in 1498; the Life of the Virgin in twenty cuts, date of first edition uncertain. The two series relating to the emperor Maximilian appeared—the Arch in 1515, in ninety-two pieces, and the Car in 1522, in eight pieces. The works of Albert, paintings and cuts, have all a fine dramatic character of composition, abounding in sentiment and the highest order of expression, and though in form or design gothic in taste, correct and select in general proportions; but his draperies are hard and angular, and his costume is purely fanciful.—(Heller, *Das leben und die Werke Albrecht Dürers*, 1831; Nagler, *Kunstler Lexicon*; Kugler, *Handbuch der Geschichte der Malerei*, 1837.) DWIGHT, JOSEPH, Brigadier General, born in Mass. in 1703, and graduated at Harvard College in 1722. He was appointed Judge of common pleas in 1739. During the French wars he dist. himself on several occasions. He died in 1765, aged 62.

DWIGHT, THEODORE, brother of Timothy Dwight, a lawyer, politician and political writer, was born in Mass., 1765. He was secretary of the Hartford Convention, and wrote its history. In 1817 he established the N. Y. Daily Advertiser, and continued to edit it until 1836, when he retired to Hartford, Conn., and died there in 1846.

DWIGHT, SERENO E., an American divine and author of the life of his ancestor Jonathan Edwards, d. 1850.

DWIGHT, TIMOTHY, S.T.D., LL.D., was born 14th May, 1752, at Northampton, Massachusetts, tracing his descent to Puritan ancestors, who had emigrated from England. His father, who was a pious and intelligent merchant, maintained a strict profession of religion; and his mother, who was a daughter of Jonathan Edwards, whose intellectual vigor and acumen she inherited, used every endeavor to impress the infant mind of her son with the principles of genuine morality and true religion. Timothy, in his childhood, gave evidences of extraordinary quickness. But the judicious management of his parents averted the sad consequences which the early luxuriance of mental development too often produces in precocious youth. He was withdrawn from school, and, by the prudent direction of his mother, his education was conducted at home in such a manner as to develop the strength, and at the same time exercise the versatility, of her son's opening mind. At the age of thirteen he was considered fit for entering Yale College. During the third year of his attendance he devoted himself with indefatigable ardor to the pursuit of his studies, and his attainments in literature were as diversified as they were extensive. He acquired distinction especially by the well-known beauty of his penmanship, and by his skill in poetry and music. At the age of nineteen he was appointed tutor in Yale College; and the extent of his qualifications for this academic office will appear from the statement of the single circumstance, that he conducted his pupils during the first session through spherics and fluxions into the 'Principia of Newton.' With an ardent pursuit of the exact sciences he combined the rare talent of a passionate love of poetry; and he composed at this early age an epic poem on 'The Conquest of Canaan,' which is said to have contained many descriptive passages of great beauty. His first views were directed towards the law as a profession. But changing his thoughts, he determined to study for the ministry, and after completing the usual curriculum he was in June, 1777, licensed to preach the gospel in his native county of Hampshire, in the state of Massachusetts. Having accepted the office of chaplain to General Parsons' brigade, he joined the army at West Point in October, and he continued in this situation till his father's death obliged him to quit the army and return home to the assistance of his mother. With filial devotion he exerted himself to ensure the support and comfort of his surviving parent and her young family, by accepting various civil appointments, to which he was prompted more

by a sense of duty than by any congeniality of taste or inclination. In the midst of these occupations, however, his literary and theological pursuits were continued with unabated ardor. His talents and acquirements were widely known, and a vacancy having occurred in 1795 in the Presidency of Yale College, all eyes were directed towards Dwight as the best qualified to superintend the interests of that great literary institution. His administration ere long produced a happy revolution on the character of that seminary; by his mild and judicious management disorders were repressed, and the students, who had been deeply tinctured with infidel principles, and were consequently dissolute in their conduct, became distinguished for sober-mindedness, and the observances of Christian piety. Respect for the talents and acquirements of the president, as much perhaps as his discipline and lectures, led to this auspicious change. Dr. Dwight was indeed no ordinary man. He possessed a rare union of intellectual qualities, an independent tone of thinking, great originality of views, a masculine understanding, a playful fancy, and rich and lively powers of illustration. All these mental characteristics are advantageously displayed in his 'Theology,' a work

which, although originally composed in the form of sermons, contains a complete system of divinity, expounded on principles of scientific arrangement. Two other works came from his active pen, viz., 'Travels in New England,' in 4 volumes, and 'Posthumous Sermons,' in 2 volumes. In his sixty-third year Dr. Dwight's health began to decline, and after a severe and lingering illness his useful life was closed on the 11th January, 1818. [R.J.]

EDGEWORTH, MARIA, was born in Berkshire on New-Year's Day 1767. She was a daughter of the first marriage of Richard Lovell Edgeworth, of Edgeworth's-town, in the county of Longford; but she never was in Ireland, unless for a few months in childhood, till 1782. In that year her father, succeeding to the family estate, took up his residence on it; and there his daughter's life was chiefly spent. Indeed, the only exceptions were short visits to England, France, and Scotland, and two years passed at Clifton, on account of the delicate health of members of the family. The history both of Miss Edgeworth's authorship, and of her life, was closely dependent on her affectionate and respectful association with her father. He was a man of much miscellaneous knowledge, sanguine and speculative, who possessed great mechanical ingenuity and originality, and exhibited in other pursuits a singular mixture of benevolence, self-esteem, and eccentricity. He sat in the Irish parliament which was elected in 1798, and advocated the views of the party of which Lord Charlemont was considered as the head. But his favorite occupations, besides mechanical contrivances and experiments, were the improvement of his estate and of the condition of his tenantry, and the education of the many children who gathered round him in the course of four marriages. Mr. Edgeworth's experience, as a landlord and magistrate, placed at the disposal of his daughter that large

stock of incidents and characters which she used in her novels with so much shrewdness, humor, and kindly feeling; and though these works were written exclusively by herself, they were always submitted to his revision. His zeal in the training of his children, and his constant desire for improving the current methods of education, made the father and daughter joint authors in works intended for the use of youth. The most ambitious of those joint productions is the series of essays entitled 'Practical Education,' first published in 1798, and afterwards reprinted and altered more than once. The series of story-books, however, is really more valuable as well as better known. It had been begun in 1778, with the first part of 'Harry and Lucy,' written by Mr. Edgeworth and his second wife Honora Sneyd; but this story was not published for many years; while, in the meantime, it suggested 'Sandford and Merton' to Edgeworth's friend Mr. Day. It was at length inserted in Miss Edgeworth's 'Early Lessons,' which afterwards received a continuation from her father; while her 'Parent's Assistant,' like all other parts of the series that came from her pen, showed a striking superiority in all respects over the portions that were not hers. Another joint work was the 'Essay on Irish Bulls,' published in 1803; and, Mr. Edgeworth having died in 1817, there appeared, in 1820, his 'Memoirs,' of

[Edgeworth's Town.]

which the first volume was written by himself, and the second by his daughter.—The series of Miss Edgeworth's novels began in 1801 with 'Castle Rackrent,' which was followed by the 'Moral Tales,' 'Belinda,' 'Leonora,' 'The Modern Griselda,' 'Popular Tales,' the 'Tales of Fashionable Life,' and 'Patronage;' and 'Harrington and Ormond' appeared in 1817. The venerable authoress reappeared with 'Helen' in 1834, and closed her labors more recently with the child's story of 'Orlandino.' She died at Edgeworth's-town in May 1849. [W.S.]

EDWARDS, JON., an Engl. divine, 1629-1712.

EDWARDS, REV. JONATHAN, president of New Jersey College, was b. 5th October, 1703, at Windsor, Connecticut. His extraordinary acuteness of intellect, which developed itself in his early boyhood, was applied in his mature age chiefly to the prosecution of moral and theological researches. He became greatly distinguished as a metaphysical and speculative divine. At the same time he prepared himself with diligence for the active duties of the ministry, in which, after a few temporary engagements elsewhere, he was permanently employed at Northampton, Massachusetts, having been ordained colleague and successor to his grandfather, Mr. Stoddart, 15th February, 1727. His ministerial labors in that place were followed by remarkable results. A religious excitement, celebrated in the annals of American revivals, took place in 1735 among his people. Multitudes were deeply impressed, and evinced their cordial reception of the truth by its sanctifying effects on their characters and lives. His church was greatly enlarged, and his stated congregation immense. But it happened in this case, as in all great and sudden movements, whether in the religious or political world, that numbers who had joined were influenced by momentary feeling rather than by deep and lasting conviction; and accordingly, while not a few were devotedly attached to him as their spiritual father, and an eminent servant of Christ, others became disgusted with his high-toned purity of principles, and his impartial exercise of discipline. So strongly did the current of discontent set in, that this faithful minister seeing little prospect of doing further good in the place, contemplated resignation; but he was anticipated in this step by a few leaders of intemperate zeal and exasperated passions, who convened the congregation, and having secured the appointment of a council obsequious to their views, determined to vent their revenge on their faithful pastor by giving him a summary dismissal. This disgraceful proceeding was carried into effect 22d June, 1750. Mr. Edwards bore the trial with admirable equanimity, and evinced his Christian temper by agreeing more than once to supply the vacant pulpit before his successor was appointed. This generous conduct, instead of mollifying the popular feeling, was requited by a vote of the in-

habitants prohibiting his return. But he was amply compensated for this bitter hostility of a proud and worldly community, by the expressions of Christian sympathy that came from various parts of the church, and the liberal contributions that were sent from Britain, and particularly from Scotland to relieve his destitution. Mr. Edwards now directed his energies into other channels, and afterwards labored for six years as missionary to the Housatonic Indians at Stockbridge in Berkshire County, where he employed his summers during the absence of the tribes on their hunting excursions, in the composition of theological works, which spread his fame throughout the world. In January, 1758, he was reluctantly prevailed on to accept the presidency of the college of New Jersey; but before he had fully commenced his duties he was, owing to the prevalence of the small-pox in that place, advised to undergo inoculation; the experiment, however, at his age, being in his fifty-fourth year, proved too violent for his constitution; the remedy superinduced a most malignant form of the disease, and he was cut off on 22d March, 1758. He was a voluminous writer, his works comprising eight volumes. His essay on the 'Freedom of the Will,' his treatise on 'Original Sin,' and on the 'Affections,' and his 'History of Redemption,' are generally known and highly valued. [R.J.]

EDWARDS, JONATHAN, D.D., president of Union College at Schenectady, New York., was the son of the Rev. Jonathan Edwards, of Windsor, Conn., After graduating at the College of New Jersey, in 1765, he was ordained in New Haven, January 5, 1769, where he remained as pastor of the church of Whitehaven, until May, 1795, when he was dismissed at his own request. In 1796 he was chosen pastor at Colebrook, in Litchfield county, and in 1799 elected president of the recently established college at Schenectady. He died in 1801, aged 56.

Died November, 1788, aged 45.

ELDON, JOHN SCOTT, earl of, a distinguished judge, was born at Newcastle in 1751. He was the eleventh of fifteen children. His father, who was a coal-fitter, and who possessed some of the careful qualities of his distinguished son, gradually amassed a considerable fortune, which enabled him to bring up and educate his large family respectably. John became a remarkable instance of the high success which may be obtained in England by the honest devotion of talents, though not brilliant, to one absorbing occupation; for though he received an Oxford education, he was totally destitute of literary taste, and never could compose a good English sentence—a peculiarity in which he differed much from his accomplished brother, Lord Stowell. Sir Samuel Romilly mentions how painful he felt it to be obliged to confess to the Lord Chancellor his total inability to understand the meaning of some clauses of a bill drawn by his Lordship, on which his opinion was desired. On the 18th of November, 1772, he committed the sole rash act of his life in eloping with Elizabeth, the daughter of Mr. Aubone Surtees, the banker; and the young lady, contrary to the usual experience of such matches, found in him a constant, kind, and affectionate husband. He was called to the bar on 19th February, 1776. Some years elapsed before he had an opportunity of showing his abilities. It is a frequent anecdote about great barristers that they have owed their success to suddenly undertaking a case in which the originally retained counsel is taken ill or breaks his engagement, and such an incident in 1780 really was the foundation of Scott's business. In June, 1788, he was made solicitor-general, and in February, 1793, attorney-general. He was subject to much unpopularity as the adviser and conductor of the ineffective prosecutions for treason at that exciting juncture. In 1799 he was made chief justice of the Common Pleas, and became all the more admirable a common law judge that he could not give way to the doubting propensity which beset him on the woolsack. In 1801 he became lord chancellor, and with the short interval of the Fox and Grenville administration, in 1806-7, he held that office until the accession of Lord Lyndhurst in 1827. His hesitation and procrastination became proverbial; but it must ever be admitted that it arose from a conscientious desire never to leave the slightest particular of any of the complex cases before him unexamined and unweighed. He was a bigoted admirer of the law, of which he was so consummate a master. Projects of law reform cut him to the soul, and he has been represented as shedding tears on the abolition of the punishment of death for stealing five shillings in a dwelling-house. He died on 13th Jan., 1838.

ELIAS, M., a Flemish painter, 1658-1741.

ELIO, FRANCIS XAVIER, a general in the Spanish service, and distinguished for his gallantry in defence of his country against the French. He was made governor of Valencia on the restoration of Ferdinand the Seventh; but in 1820, on the breaking out of the revolution, he was imprisoned by the populace, and on a charge of tyranny was tried and executed in 1822.

ELIOT, ANDREW, D.D., minister of Boston, was born in 1719, graduated at Harvard College in 1737, and was ordained April 14, 1742. He gained high reputation during a long ministry. Died Sept. 13, 1778, aged 59.

ELIOT, JONATHAN, an American journalist, editor of the *Washington Gazette*, and author of the 'American Diplomatic Code;' 'Funding System of the United States,' and various financial and statistical works—was born in England 1784, died at Washington 1846.

ELIOT, JARED, minister of Killingworth, Conn., was born Nov. 7, 1685, and having graduated at Yale College in 1706, was ordained Oct. 26, 1709. He was a devout and useful preacher, as also an eminent physician of extensive practice. He was the friend of Dr. Franklin. He died April 22, 1763, aged 78.

ELIOT, JOHN, D.D., minister in Boston, was born in 1754, and graduated at Harvard College in 1772. In 1779 he was ordained at Boston. He was for some years a member of the corporation of Harvard College. By his writings he contributed much towards sustaining the Massachusetts Historical Society, and devoted much time to historical and biographical researches. Died 1813, aged 58.

ELIOT, JOHN, minister of Roxbury, Mass., commonly styled the apostle of the Indians, was born at Nasin, Essex, England, in 1604. He graduated at the University of Cambridge. Arriving in Boston in 1631, he joined the church in that town, and in the absence of Mr. Wilson, the minister, preached to the congregation on several occasions. Here he became master of the Indian language, with the view of converting the natives to Christianity, in which undertaking his endeavors were crowned with the greatest success. In 1649 Mr. Eliot published a work entitled, 'The Glorious Progress of the Gospel among the Indians;' in 1653, 'Tears of Repentance;' in 1655, 'A Further Manifestation of the

Progress of the Gospel among the Indians;' and in 1670, 'A Brief Narrative of the Progress of the Gospel.' He was one of the most useful preachers in New England. He died May 20, 1690, aged 86.

ELIOT, SAMUEL, was the son of Samuel Eliot, a bookseller of Boston. Having engaged in mercantile pursuits he realized extensive property. He was a great benefactor to Harvard College, having given twenty thousand dollars to found a professorship of Greek literature. Died January 18, 1820, aged 81.

ELISHA, successor of Elijah in the prophetic ministry, 9th century B.C. (2 Kings ii. 13).

ELIZABETH, the *first* of the name, queen consort of England, daughter of Sir R. Woodville and widow of Sir John Gray, mar. to Edward IV. 1464, died 1488; the *second* of the name, daughter of the preceding, wife of Henry VII., and mother of Henry VIII., 1466-1502; the *third* of the name,—

ELIZABETH, queen of England, was born at Greenwich on 7th September, 1533. She was the daughter of Henry VIII., by Anne Boleyn, and her position in reference to the descent of the throne was peculiar, since the accession of her sister, Mary, conveying the inference that Henry's marriage to Catharine of Arragon was valid, rendered the issue of the second marriage illegitimate. An act had, however, been passed in Henry's reign, which, fortunately perhaps, cut the knot by settling the crown on the two princesses successively. During the reign of her brother, King Edward, she spent a very happy life, following her natural disposition for hard study, and not only acquiring many accomplishments, but practically applying them to the acquisition of a profound knowledge of mankind. During the reign of her sister the scene changed, and she underwent five uneasy years of difficulty and danger. Her conduct was marked by extreme sagacity, courage, and caution. She proved that her adherence to the principles of the reformation was not so much in her mind a matter of essential belief as of preference between a good system and a bad system, for she submitted in some measure to the ritual of Rome. On the other hand, when we know the extreme rigidity of Mary's bigotry, it is necessary to believe that nothing but a considerable amount of sisterly affection could have prevented her from sacrificing one who was likely so far to undo all that she had herself done at the sacrifice of so many lives. Queen Elizabeth's accession to the throne dates from 17th November, 1558. Her glorious reign is matter of history. A contrast to that which followed, it was marked alike by prudence and decision. The ecclesiastical revolution, which every one saw must follow her accession, went on so gradually, and at the same time so distinctly, that the Romish hierarchy had abandoned their cause before it was finally decided against them. A main character of her reign is, that from the first she chose wise advisers, and through all her personal caprices kept them to the end. Another eminent feature of her policy was to watch the growth of discontents,

and appease them ere they became dangerous. Thus, when such complaints as shook the throne in the next reign, and overturned it in that of Charles, began faintly to appear, she stepped forward and redressed the grievances as from her own princely beneficence to her suppliant people, and hence she preserved her prerogative untarnished, while she appeased discontent. How far sovereigns of such ability are advantageous to a free country may be questioned. England certainly never came so near arbitrary power as in her reign. With all her political capacity, her personal feelings were signally preposterous. Her desire to be considered lovely and to be loved approached a monomania. She appears to have had a singularly unpleasing aspect for a woman—harsh features, a rough yellow skin, dim eyes, an irascible indented mouth, and sandy hair—yet no one could too grossly flatter her beauty, and it was impossible to make a portrait with the slightest degree of truth which she could tolerate. Sir Walter Raleigh speaks of 'the pictures of Queen Elizabeth, made by unskilful and common painters, which, by her own commandment, were knocked in pieces and cast into the fire.' On more than one occasion she was allowed, and allowed herself, to exult in the notion that she was the object of the despairing love of her servants—but she never permitted either vanity or affection to disturb the policy of her reign. To the jealousy arising out of her peculiar weakness we may attribute the great blot on her name—her harshness to Mary of Scotland. It has now been proved that she distinctly indicated how good a service she would count it secretly to put the captive out of the way; and it is creditable to the English public men of the day that none of them would take her hint as a warrant 'to break into the bloody house of life.' Elizabeth died on 24th March, 1603.

ELLA, a Saxon chief who made a descent upon Britain, and became king of Sussex 491, died 514.

ELLA, a king of Deira, Northum., 559-588.

ELLENBOROUGH, EDWARD LAW, Lord, an eminent English lawyer and judge, was born at Great Salkeld, in Cumberland, about the year 1748. As the son of the celebrated bishop of Carlisle, he began life with favorable prospects. He had not become conspicuously known to the public until the trial of Warren Hastings, in 1785, opened up for him a very great arena of exertion. His function of leading counsel for the accused in a matter involving so much variety and extent of new and perplexing matter was one which no man could perform in a satisfactory manner without great ability, and Law received for himself the high confidence of the public and his profession. He was made attorney-general in 1801, and lord chief justice of the King's Bench in 1802. He held the office for sixteen years, which covered a very trying period; and though he was a man of hasty temper, and sometimes deemed arbitrary, he obtained a character for fairness and independence. The last important business in which he was engaged was the trial of William Hone, charged with libel. The proceedings assumed an almost controversial character between the accused and the judge, and it was said that the mortification of the latter in being defeated by the verdict of a jury hastened his end. He died in December, 1818. [J.H.B.]

ELLERS, J., a Swedish miscellaneous writer, died 1790.

ELLERY, WILLIAM, a member of Congress, was born at Newport, Rhode Island, December 22, 1727. Having graduated at Harvard college in 1747, he commenced the study of law, and afterward became a successful practitioner at Newport for several years. He was a member of the Congress of 1776, and one of the signers of the Declaration of Independence. In 1786 he resigned his place in Congress, and was appointed commissioner of loans, and was also made chief justice of Rhode Island. In 1789 Washington appointed him collector of Newport under the new government. Died February 15, 1820, aged 92.

ELLEY, LIEUTENANT-GENERAL SIR JOHN, a brave horse soldier and officer, distinguished in the last war, died 1839.

ELLIOT, HENRY MIERS, SIR, Knt., an officer in the East India Company's service, and author of a supplement to the Glossary of India, and a bibliographical index to the historians of Mohammedan India, died 1853, aged 45.

ELLIOT, J., an English physician and chemist, 1747-1787.

ELLIOT, W., a designer and engraver, 1717-1766.

ELLIOTT, EBENEZER, the celebrated 'Corn Law Rhymers,' was born at Masborough, near Rotherham, 1781, of humble parentage, and died at his residence near Barnsley, 1849. He was possessed of an athletic genius, and of that love of nature which marks the genuine poet. It is well known that his 'Corn Law Rhymes,' assisted in exciting that revolt of the manufacturing population against a shameful impost, which produced the recent commercial changes; of England but the name of Elliott will be remembered as the teacher and friend of the poor, long after these circumstances have become matter of dry history. His 'Village Patriarch,' 'Ribbledin,' and other outpourings of his muse must always occupy a distinguished place in the popular poetry of England. Elliott possessed the happy talent of combining business with literature, and realized a competency in the iron trade.

ELLIOTT, JESSE DUNCAN, an American commodore, who was second in command to Commodore Perry on Lake Erie, where his conduct has been the subject of much controversy. He was a warm partisan of Jackson, and made himself conspicuous by having fixed the figure-head of the general to the man-of-war under his command, which resulted in a successful and secret attempt to remove it. Died 1845, aged 62.

ELLIOTT, STEPHEN, LL.D., a botanist, was a native of Beaufort, South Carolina, was graduated at Yale college in 1791, and for some time afterwards devoted his attention to agricultural pursuits. He was a member of the legislature, and president of the State Bank; he was also professor of natural history and botany in the medical college. Died at Charleston, March 28, 1830, aged 58.

ELLIS, CALEB, judge of the superior court of New Hampshire, was born at Walpole, Massachusetts, graduated at Harvard College in 1793, and afterwards practised law in Claremont, N. H. He was a member of Congress in 1804, and in 1813 a judge of the superior court. Died May 9, 1816, aged 49.

ELLIS, G. J. W. AGAR, Baron Dover, celeb. for investigations in historical subjects, 1797-1833.

ELLIS, H., an Eng. navigator, died 1806.

ELLIS, JOHN, celebrated as a naturalist, was born in London about the year 1710. He died in 1776. Ellis was a merchant in London, but it appears he was not successful in business. The study of natural history, which had been an amusement in his earlier years, became in his distresses a consolation to him, and a serious occupation; while a situation under government rendered him in the latter period of his life comfortable and independent. He is the author of several valuable papers on subjects connected with natural history, both botanical and zoological; but his chief claim to the great reputation he enjoys rests upon his works on coral-ines. A little previous to his time Peyssonell had made known to the French Academy his discovery of the animal origin of corals and madrepore, while Bernard de Jussieu had demonstrated the animal

nature of several corallines. Ellis, perhaps without knowing these discoveries, had his attention directed to the same subject, and succeeded in demonstrating clearly and satisfactorily the animality of an immense number of zoophytes, which, till his time, had been always classed among plants. His opinions were disputed, and the controversies arising therefrom gave Ellis further opportunities of more decidedly proving the truth of his discoveries. He is thus justly entitled to the credit of at least substantiating the fact that corallines are animals. His 'Essay Towards a Natural History of Corallines' was translated almost immediately into French and German, and procured for him the friendship and correspondence of Linnæus, who dedicated to him a genus of plants by the name of *Ellisia*. [W.B.]

ELLIS, JOHN, a fugitive wr. and versifier, an intimate acquaintance of Dr. Johnson, 1698-1791.

ELLIS, W., a writer on agriculture, 17th cent.

ELLISTON, ROBERT WILLIAM, one of the most versatile of British actors, was born in London, 1774, and was educated for the church, but disappointed his friends, and appeared on the stage in 1796. In 1803 he was appointed acting manager at the Haymarket, and his popularity was so great, that the performance was removed to the Opera House. His subsequent career as lessee and manager of various theatres, was marked by utter recklessness, not to say insanity on some occasions. His greatest character was that of Duke Aranza in 'The Honeymoon.' Died on the 7th July, 1831.

ELLMAKER, AMOS, an officer in the war of 1812, and subsequently a member of Congress, state judge, and attorney-general. In 1832 was a candidate for the vice-presidency of U. S.

ELLROD, G. A., a Bohem. philol., 1709-60.

[Residence of Judge Ellsworth, Windsor.]

ELLSWORTH, OLIVER, LL.D., chief justice of the United States, was born at Windsor, Connecticut, April 29, 1745. Shortly after graduating at the college of New Jersey in 1766, he engaged in the practice of the law, and soon rose to distinction. He was a delegate to the continental Congress in 1777; in 1780 one of the council of Connecticut; in 1784 was appointed judge of the superior court; in 1796, was nominated by General Washington chief justice of the supreme court of the United States; and towards the end of the year 1799 was appointed by President Adams envoy extraordinary to France. He died Nov. 26, 1807, aged 65.

ELLWOOD, THOMAS, author of a 'History of the

Old and New Testaments,' also editor of 'George Fox's Journal,' was born in Crowell, Oxfordshire, in 1639. Having abjured Protestantism, he joined the society of Quakers, and while undergoing imprisonment for his profession, he wrote several works. Died in 1713.

EMMERY, J. Z. CL., Count de Grozyenlx, a Fr. statesman, deputy to the states-gen., 1752-1823.

EMMETT, ROBERT EMMETT, the son of a physician at Cork, was born in 1780. While quite a lad he took an active part in the efforts made by the association called the United Irishmen, to separate Ireland from Great Britain, and establish her as an independent republic in 1798. When these attempts failed, Robert Emmett escaped to France, where he remained till the winter of 1802. He then returned to Dublin, and strove to reorganize the Irish malcontents, and renew the rebellion. On the 23d of July, 1803, a rising in Dublin took place at Emmett's directions; but the insurgent mob of the Irish capital proved as cowardly as they were furious; and Emmett, in disgust at the outrages which they committed, and finding himself utterly unable to rule the storm that he had raised, escaped from the rabble rout, and the troops, who, after some strange delay, appeared, and more easily put them down. Emmett remained for a short time concealed among the Wicklow mountains; but, returning to Dublin, he was tracked, apprehended, tried, and convicted of high treason. He was executed on the 20th September, 1803. He met his fate with manly courage and Christian resignation; and his whole demeanor, both at his trial and on the scaffold, gained for him the pitying admiration of many, who, while they condemned his erroneous theories, and his mischievously rash enthusiasm, felt compelled to pay homage to the purity of his motives, the fervor of his eloquence, and the excellence of his general character. His fate, and that of Miss Curran, the lady to whom he was engaged, form the subjects of two of the finest and most popular of Moore's Irish melodies. [E.S.C.]

EMMETT, THOMAS ADDIS, an eminent lawyer, was born in Ireland in 1764. Having graduated at Trinity College, Dublin, he studied medicine at the University of Edinburgh, where he obtained the degree of M.D. in 1784. Some time after, he studied law at the temple in London, and was admitted a member of the Irish bar in 1791. Political affairs obliging him to leave his native country, he emigrated to America in 1804, and soon rose to eminence in his profession in New York. In 1812, he

ENGEL, SAM., a Swiss geographer, 1702-84.

ENGELBERT, a theologian of Styria, d. 1331.

ENGELBRECHT, JOHN, a German visionary, was born at Brunswick 1599, and died in his native place, after wandering from city to city, in 1642. His father was a tailor, and John was apprenticed to the same business, but his health failed him, his malady being augmented by the severity of his religious practices, and he assumed the character of a prophet as early as 1622. There can be no doubt about the reality of his trances, and also that he possessed the extraordinary faculty of going without food or drink for many days together, and of sleeping for almost incredible periods. The 'Works, and Divine Visions, and Revelations, of John Engelbrecht,' were first published in German in 1625.—The 'Visions' were translated into English by the learned Francis Okeley, in 1780. The most striking of these is a vision of the three states, the ecclesiastical, the civil, and the economical: besides which

he describes a 'Vision of Heaven and Hell,' a Vision of the New Heaven and the New Earth,' and 'Of the Mountain of Salvation.' The vision of the 'Three States' is evidently symbolic, and more independent of Engelbrecht's idiosyncrasy than the others, which take their color from his preconceived notions. His appeals to the moral and religious sense of his readers are energetic, and carry along with them the fullest evidence of their sincerity. His grand mistake is that into which Quakers and enthusiasts of all classes have betrayed themselves—the supposition that their glimpses of spiritual things are necessarily an inspiration of the Holy Spirit.—Okeley's edition of Engelbrecht contains a notice of John William Francis Petersen, and his wife Joanna Eleanora de Merlan, both famous visionaries, and a specification of Engelbrecht's works in the complete German edition of 1761. ENTRECASTEAUX, Jo. ANT. BRUNE, D', admiral of the French fleets in the East Indies, was born at Aix, in Provence, 1740. In 1791 he was sent out by France in search of La Perouse; and the nature of the inquiry leading him to keep near shore, he ascertained with great exactness the outlines of many coasts. New Holland, W. and S. W. coasts, Tasmania, New Caledonia, &c., have been accurately delineated by him. He failed in detecting any trace of the celebrated navigator, and died before returning home, in the vicinity of Java, 1793. Rossel, who succeeded him in command, has written an account of the voyage, 2 vols. 4to, 1808.

EPAMINONDAS, the Theban statesman and general, was of noble descent, but was born and reared in poverty. Of his early life little is known beyond the fact that he was educated in, and adopted the doctrines of Pythagoras; his public life extends from the restoration of democracy by Pelopidas and the other Theban exiles in B.C. 379, to the battle of Mantinea in B.C. 362. In the conspiracy which restored the independence of his native city he took no part, refusing to stain his hands with the blood of his countrymen; but no sooner were the usurpers expelled than he became the prime mover in the Theban state, and claimed for Thebes the right of controlling the other cities of Bœotia. Impressed with these opinions he went to Sparta as ambassador in B.C. 371, to negotiate peace; and his claim being rejected by the Spartans, Cleombrotus was sent to invade Bœotia. The contending parties met at Leuctra, B.C. 371, when the total defeat of the Spartans not only established the supremacy of the Thebans, but put to an end the superiority in arms which had been conceded to their opponents. Having thus

[Epaminondas.]

succeeded in the first object of his ambition, he next conceived the design of substituting Thebes for Sparta as the ruling democratical state in Greece, and for this purpose marched an army into the Peloponnesus in the winter of B.C. 369, when he inflicted a serious blow on the power of Sparta. A second expedition into the Peloponnesus in B.C. 368 proving unsuccessful, Epaminondas was disgraced; and for some time his name does not appear in connection with any public measure. In a third expedition which he conducted in B.C. 366, he greatly extended the influence of Thebes, gaining over to her interests, without bloodshed, the whole democratic confederation in the Peloponnesus. Our limits prevent us from entering into the reasons which led to the downfall

of the Theban influence. Achaia, Elis, and great part of Arcadia, returned to the alliance with Sparta; and it was to check this defection that Epaminondas invaded the Peloponnesus for the fourth and last time in B.C. 362. The Spartans, along with the disaffected states, and aided by the Athenians, were prepared for the contest. The two armies met near Mantinea, a city of Arcadia; and in the battle which ensued, Epaminondas displayed with consummate skill the peculiar tactics to which he owed his celebrity; but when in the full career of victory, he received a mortal wound, and was carried from the field. His army was thereby paralyzed, and no further attempt was made to follow up the victory.—His private life was free from reproach; and his public conduct was regulated by a sincere love of his country. Before Epaminondas was born, says Nepos, and after his death, Thebes was always subject to some foreign power; on the contrary, while he presided over her councils, she was at the head of Greece.

EPICHRMUS, a Pythagorean philosopher and poet, au. of treatises on philosophy and medicine, and the supposed inventor of comedy, 5th ct. B.C.

EPICETUS, lived about 90 years after Christ. He is essentially the moralist of Rome—a Stoic; for Stoicism is simply the Roman character and genius represented in theory. The original monuments of his doctrine have mostly perished.

EPICURUS, born at Athens 341 B.C.: he flourished after the decline of Speculative Philosophy, and when the irretrievable disruption of national affairs in Greece had repressed the Heroic in Action. At such a time, he taught with acceptance that pleasure is the sole good, and that other aims are only the disturbances of humanity. The theoretical opinions of Epicurus were identical with those of all modern sensational Schools. We do not refer to his physical or cosmogonic speculations, which in the main he borrowed from Democritus; but to his conception of the origin and ground of human knowledge and thought. Human knowledge, he said, flows from our sensations, which *alone* do not deceive: beyond the immediate results of sensation, we are conscious of what he termed 'anticipations,' meaning thereby simple generalizations, or classifications of our sensible experience:—to such, add our 'passions,' or desire of pleasure and aversion from pain; and the contents of the human mind are summed up. From a philosophy of this character, no other system of practical morals than that inculcated by Epicurus ever can arise. If the existence of universal and necessary Ideas be ignored, an *imperative* in morals cannot be conceived of, nor will the name Duty have any meaning. *Right* denied, as an independent reality or a Law by itself, there is nothing for it as a rule of action, save the estimate of *consequences*; and the only criterion by which we can value or measure consequences is their tendency to produce pleasure or pain. The fundamental problem in Morals thus corresponds with the speculative problem whether the human mind is capable of apprehending the Absolute and Imperative, or whether knowledge is simply empirical: nevertheless among empirical systems there is also a great variety. Granting that

pleasure is the aim of action, it remains to determine wherein man's true pleasure consists? The actual scheme of Epicurus is certainly not the lowest of which we have record; but it would be wrong to pretend that it is a very elevated one. His maxims may be thus rendered:—Accept and aim at any pleasure which will not be followed by any pain. Avoid pain that brings no pleasure. Avoid every pleasure that would deprive you of a greater pleasure, or cause a pain greater than the pleasure. Accept any pain that might free you from a greater pain, or that must be followed by a pleasure more intense than the pain. The 'virtue' *par excellence* in such a system is *prudence*; but it admits of others; and Epicurus inculcated temperance, courage, energy to resist superstition and imaginary terrors, and justice—on the ground that honesty is the best policy. He was himself temperate and benevolent; disinterestedness seemed one of his necessities; he lived on water and crust, and in the midst of a fearful famine, he divided with his disciples his mite. He renounced what is ordinarily called pleasure, because its enjoyments could not last; not like Zeno, who repudiated it as evil, and incompatible with the freedom of the sage. We have only a few fragments of the writings of Epicurus; but his system is explained by Cicero, Seneca, Plutarch, and many others: Diogenes Laertius discourses concerning it very copiously. Like Democritus, Epicurus owes much to the immortal song of Lucretius. [J.P.N.]

EPIMENIDES, a philosopher and poet of the 6th century B.C., supposed to be the first who introduced the consecration of temples, the purification of countries, cities, and private houses, into Greece, where he was held for an infallible prophet.

EPINAY, MADAME DE LA LIVE D', or by her maiden name, LOUISE FLORENCE PETRONILLE, a French lady, celebrated for her attachment to Rousseau, and as the authoress of 'Les Conversations d'Emilie,' &c., 1725–1783.

EPIPHANIUS, one of the Greek fathers d. 403.

EPIPHANIUS, surnamed 'The Scholastic,' Latin translator of Socrates, Sozomen, and Theodoret, 6th century.

EPISCOPIUS, SIMON, whose surname in his own tongue was Bisschop, was born at Amsterdam, in 1583. Sent to the university of Leyden in 1600, his inquisitive and ardent mind soon involved him in the raging controversies of the time. Ordained a pastor at Bleswyck in 1610, he was in a very short time chosen to be the advocate of the Arminian party, at a conference which was held at the Hague, and was at length raised to the chair of theology at Leyden,

on the deposition of Vorstius. At the synod of Dort he was the accredited champion of the Remonstrants, or Arminians. The victorious Calvinist, or Gomarist party, disgraced their cause by inflicting civil pains and penalties on their opponents. Episcopus was deposed and banished. The exile spent a short time in France, then returning to Holland he became pastor of the church of the Remonstrants at Rotterdam, and removed finally to the rectorship of the Arminian gymnasium at Amsterdam, where he died in 1643. Episcopus was the divine of the Arminian party; reducing to a system the scattered views and unadjusted conceptions of his master Arminius. His writings display no common shrewdness, versatility, and eloquence; the product of an adventurous and active spirit, that had a special relish in questioning ancient dogmas and unsettling common belief. His power lay, however, more in assault than in defence; he could sap and mine with far more dexterity than he could erect a new and symmetrical edifice. His life was written by Limborch, a relative, and his theological works were collected by Curcellæus and Poellenberg, in two folios, and published at Amsterdam, 1650-65, and reprinted at London, 1678.

ERASISTRATUS, a Gr. physician, 4th c. B.C.

ERASMUS, an illegitimate son of Gerard, a citizen of Tergou, was b. at Rotterdam 28th Oct., 1467. His paternal name he changed into Désiré, '*amiable*,' and afterwards prolonged into Desiderius Erasmus—the first a Latin, and the second a Greek appellation, both with the same meaning as the Dutch Gerard. He usually signed himself Erasmus Roterdamus. He received his first education at Davenport, where the future pope Adrian VI. was his school-fellow. But Erasmus was only thirteen years of age when both his parents died, and the three guardians to whose care the orphan was left, squandered his property, and to gain the whole of his patrimony, as well as to conceal their villany, forced him into a monastery at Baldue, in Brabant. Thence he was taken to another religious house near Delft, and he assumed the vows at Stein in 1486, having entered among the regular canons. Luckily for the young scholar he was not buried in a convent, as his Latin scholarship gained him the notice of Henry à Bergues, bishop of Cambray, who kept him for a time as his private secretary, and then sent him to Paris to prosecute his studies. In the French capital the young literary Dutchman was in abject poverty, teaching a few pupils for hire, nay for years he wandered about the continent and in England, subsisting on the precarious bounty of admirers. He visited England for the first time in 1497, at the invitation of Lord Mountjoy, and won the esteem of its most illustrious men, such as Sir Thomas More, Dean Colet, Linacre, Grocyn, and others, and published his *Morie Encomium*—*Praise of folly*. In 1506 he travelled into Italy, took a doctor's degree at Turin, obtained from Pope Julian II. a final release from his monastic vows, and joyfully put on the black tunic of the seculars. He spent some time in Bologna, and resided for a short season at Venice with the renowned printer Baldus Manutius, and published

[Erasmus.]

his *Adagia*. At the invitation of Henry VIII., in 1510, he revisited England, and taught in Cambridge as a lecturer on Greek, and as Lady Margaret professor of theology. But his itinerations were not over, for in 1514 he returned to the continent; and at the archducal request of him who was afterwards Charles V., he repaired as counsellor to Brabant. After several changes he removed to Basle in 1521, the scene of his highest literary labors, in conjunction with the printer Froben. In 1529, when the reformation triumphed in Basle, the timid satirist of monks and popish ceremonies took refuge in Frieburg; but in 1535 he returned. His health was now declining; gout and gravel had for some years severely tormented him; his feeble frame was seized with dysentery, and he died at Basle on the 12th of July, 1536.—The literary toils of Erasmus were incessant. Besides his invaluable labors in connection with the revival of learning, his most popular efforts were his satirical assaults on the monastic orders, in his famous '*Colloquies*,' and other productions. But his great work was the publication of the Greek Testament, out of various manuscripts, in 1516, folio, accompanied with a new Latin translation. The Testament was reprinted in 1519, 1522, 1527, and 1531. In the first year mentioned he also published the works of Jerome. He composed likewise a series of paraphrases on the New Testament, many of which display an admirable talent for exegesis. In his various prefaces and dedications, he nobly, eloquently, and repeatedly vindicated the open circulation of the inspired volume in the vernacular languages of Europe. These publications raised up hosts of enemies to him, who called him heresiarch and forger, and he shrunk from suffering on account of protestant truth and freedom. With Luther, whom he at first eulogized, he maintained a bitter and protracted controversy about the '*Freedom of the Will*.' That his writings largely contributed to the success of the reformation there is not a doubt, though he himself wanted the faith and courage to be a thorough reformer. His scholarship was extensive and elegant, his industry was unceasing, his Latinity is generally pure, his wit was ever sparkling in pleasant variety, his company was a scene of refined enjoyment, his fund of anecdote was inexhaustible, and the love of literature was the passion of his nature. Latin was more familiar to him than his mother tongue. Among his works not already referred to, are his learned dissertation, *De recta Latina Græcique Sermonis pronuntiatione*, his '*Letters*,' full of interesting information; his treatise, *De Copia Verborum et*

*Rerum*, in which he insists on diversity of illustration and style; his *Ciceronianus*, in which he heartily ridicules such pedants as would not use a Latin term unless it had the sanction of the great Roman orator; his *Christian Soldier's Manual*; and his *Ecclesiastes*, or the Art of Preaching, published not long before his death. The best edition of his collected works is in 11 volumes folio, Leyden, 1703-6. The first edition, in 9 volumes, Basle, 1540, was condemned to the flames by Pope Paul IV.

ERASTUS, THOMAS, a physician of Baden, better known in ecclesiastical history for his opinions in theology and church government, the fundamental principle of which is, that the church should exercise no coercive power except through the arm of the civil magistrate. The Erastians in the Long Parliament were opposed to the presbyterians; and in the Church of England, Bishop Parker may be considered the chief of this school. Erastus was b. in 1524, and died in Basle, 1583.

ERIC. The Swedish kings of this name of whom anything is known are—ERIC EDMUNDSON, Upsala king, died 885. ERIC THE VICTORIOUS, son of the preceding, and joint successor with his brother Olave; celebrated for his victory over Styrbjorn, son of the latter, who claimed the inheritance on his

father's death; died 993, or soon after. Two kings, both bearing the name of ERIC, contended for the throne in the civil war which broke out about 1066, and in this war both the kings and all the chief Swedes are said to have fallen. Besides these, four other Erics must have been known traditionally—ST. ERIC, who reigned 1155-1160, being called ERIC IX. After him comes ERIC CANUTESON, or ERIC X., grandson of the preceding, called the good-harvest king, reigned 1210-1216. ERIC ERICSON, or ERIC XI., a grave and righteous prince, in whom the race of St. Eric expired, reigned 1222-1250. ERIC XII., of the house of Folkungers, who rose to power during the reign of the preceding; king during the lifetime of his father, Magnus Ladislas, and at length poisoned by his mother, Blanche of Namur, 1350-1359. ERIC XIII. of Sweden, and VII. of Denmark, before his election, duke of Pomerania, chosen in Sweden 1396; co-regent with Margaret of Waldemar to his dethronement by Engelbrecht-Engelbrechtson in 1434, and after that, having been again acknowledged, dethroned in all the three kingdoms of Sweden, Norway, and Denmark, at the death of that princess, 1439. ERIC XIV., son of Gustavus Vasa, born 1533, succeeded 1560, compelled to abdicate by his brothers 1569, poisoned in prison 1577.

ERIC. The kings of Denmark of this name are nine in number—two unknown in the 9th century, and then ERIC I., called 'the Good,' reigned 1095-1105. ERIC II., reigned 1134-1137. ERIC III., called 'the Lamb,' succeeded the preceding, and abdicated 1147. ERIC IV., appointed by his brother, Abel, reigned 1242-1250. ERIC V., succeeded. 1259, assassinated 1286. ERIC VI., reigned 1286-1319. ERIC VII., same as ERIC XIII. of Sweden.

ERIC AXELSON, adminis. of Sweden, 1466-7.

ERICEIRA, FERDINAND DE MENEZES, Count De, a soldier, statesman, and historian of Portugal, 1614-1699. His grandson, FRANCIS XAVIER, distinguished by his military talents and his learning, author of 'The Henriqueida,' a poem, 1673-1743.—The mother of the preceding, JANE JOSEPHINE DE MENEZES, dis. for her literary works, died 1709.

ERIGENA, JOHN SCOTUS, who seems from his surname to have been a native of Ireland and not of Scotland, was born about the beginning of the 9th century. He is often confounded with a Saxon monk whom King Alfred invited to England, and placed over his college at Oxford. Erigena spent the most of his time in France, and at the court of Charles the Bold. About the year 850 he wrote against Gottschalk on predestination; and he also published a work on the Lord's Supper, *de Corpore et Sanguine Domini*, in which he combated the doctrine of transubstantiation. His theological writings were condemned by the council of Valence in 855, and that of Tangres in 859. But the great work of this schoolman is that named *de Divisione Naturæ*, &c., printed at Oxford by Thomas Gale in 1681. It is divided into five books, and is composed in the form of a dialogue. This vast and amazing essay treats of a great variety of subjects—of God, and the knowledge of God—of being, and its kinds and modes—of the world, of sin and its nature, &c.—in which abstruse and subtle discussions a species of mystical pantheism may be easily discovered. Erigena was well versed in Greek, and was deeply imbued with Neoplatonism,—with those ideas and modes of thought which are associated with the names of Plotinus and Proclus. Hebrew and Arabic he had also acquired in his travels. Few, if any of his contemporaries, could match this remarkable man either in genius or acquire-

ments, in dialectics, or sentiment, in intellectual acumen or in stores of erudition. His popularity was greater two centuries after his death, than during his life. The pseudo-Dionysian writings were translated by him, and these contributed also to mould the literature of these mediæval times. Various portions of his works have been discovered and published at different times by Ducange, Mabillon, Angelo Mai, and MM. Ravaisson and Cousin. The influence which 'this meteor of the 9th century' exercised on his own and succeeding ages by his profound and daring speculations in philosophy and theology was immense. He is supposed to have died in France about the year 875. [J.E.]

ERSKINE, THOMAS, Baron, a lawyer and distinguished orator, the youngest son of David, earl of Buchan, was born about the year 1748. He belonged to a family of which some members were remarkable for their genius, others for their folly, and he seemed in himself to be a union of these qualities. He studied at the High School of Edinburgh, and the University of St. Andrew's, entering successively the navy and army, before, from some influence not explained, he began to study law. In his earlier years he acquired a meteoric reputation as a brilliant and fascinating master of convivial conversation. He was called to the bar in 1778. One of his earliest cases involved an exposure in that fertile field of political abuses, the admiralty, when it was shown that landmen were rated to sea-

men's pensions for electioneering purposes. He at once rushed into full practice, and was employed in every case where a brilliant denunciatory oratory—of which he was an unrivalled master—was desired. In 1783 he entered the House of Commons in Fox's interest, but the florid style of his oratory—so captivating to a jury or on the hustings—failed to please that fastidious audience. He was counsel in many historical cases, and performed heroically that duty of the advocate which prompts him to shrink from nothing, which, however much it may compromise his own taste, interest, or safety, appears likely to benefit the cause intrusted to him. His eminence as an advocate made it necessary that he should be appointed Lord Chancellor in the short accession in 1806 of the Fox and Grenville ministry. The prudence of the selection was much doubted; and it was not fortunate for its object, since he had accumulated no wealth to support his position as a peer. The strange eccentricities of his latter years, entering deeply into his domestic affairs, and making them matter of unpleasant notoriety, would have rendered his claims embarrassing had he seen his friends again in power. He died on the 17th of November, 1823. [J.H.B.]

ESSEX, JAS., an English architect, 1723-1784.

ESTAING, CH. HECTOR, Count D', a French officer, distinguished in India and in the American war against the English, executed as a counter-revolutionist, 1794.

ESTAMPES, ANNE DE PISSELUE, Duchess D', a celebrated court intrigante, mistress of Francis I., 1508-1576.

ESTE, an illustrious house of Italy, from which the house of Brunswick is derived, and which owes its origin to the Carolingian era, at the beginning of the 9th century. The most celebrated names are—ALBERT AZZO D'ESTE, the first who possessed the city of the name, 1020-1117. OBIZZO, first marquis of Este, lord of Padua in 1182, and afterwards marquis of Milan and Genoa. His son, Azzo V., who by his marriage acquired the sovereignty of Ferrara, and became chief of the Guelfs of Venice, died 1192. Azzo VI., son of the preceding, lord of Ferrara and Verona, died 1264. HERCULES I., lord of Ferrara and Modena, whose court was graced by Ariosto, Boiardo, the Strozzi, &c., 1471-1505. His son, ALPHONSO, married to Lucretia Borgia, 1502, a party

to the league of Cambria, reigned 1505-1534. HIPOLYTUS, brother of Alphonso, and cardinal of Este, a patron of letters, partisan of Louis XII., and historian of the war of the French against the Venetians, 1479-1520. ALPHONSO II., grandson of the first of that name, duke of Ferrara and Modena, distinguished as a patron of arts and letters, 1533-1597. CÆSAR, an illegitimate descendant of Alphonso I., reigned at Modena 1597-1628. RENAUD, a partisan of Austria in the war of succession, and duke of Modena, 1655-1737. HERCULES III., grandson of Renaud, and, like him, duke of Modena, was the last of this house in Italy, and his estates passed to Austria, by the marriage of his daughter with the archduke of Ferdinand, 1727-1797.

ESTERHAZY, a noble family of Hungary, the best known of whom are—PAUL IV., ESTERHAZY DE GALANTHA, a general and literary *savant*, 1635-1713. His grandson, NICHOLAS JOSEPH, a great patron of arts and music, founder of the school in which Haydn and Pleyel, among others, were formed, 1714-1790. NICHOLAS PRINCE D'ESTERHAZY DE GALANTHA, dist. as a field-marshal and foreign ambassador, 1765-1833.

ESTHER, queen of Persia, 6th century B.C.

ESTIUS, W., a Dutch theologian, 1542-1613.

ESTRADES, GODFREY, Count, a general in the French service and a diplomatist, was born in 1607. He served under Prince Maurice in the Netherlands. Died in 1661.

ESTREES, an ancient and noble house of France, the best known of which are—JEAN D'ESTREES, an artillery officer, distinguished at the taking of Calais, 1480-1571. His son, ANTHONY, the defender of Noyon, and governor of the Isle of France, 1593. GABRIELLE, the daughter of Anthony, duchess of Beaufort, and mistress of Henry IV., supposed to have been poisoned, 1571-1599. Her brother, F. ANNIBAL, duke and marshal, author of the 'Memoirs of the Regency of Marie De Medicis,' 1573-1670. His son, JEAN, vice-admiral and Comte D'Estrees, appointed viceroy of America, 1624-1707. CÆSAR, brother of Jean, a cardinal and negotiator, 1628-1714. JEAN, nephew of the preceding, foreign ambassador, 1666-1718. VICTOR MARIE, Duc D'Estrees, son of the vice-admiral Jean, a distinguished naval commander, 1660-1737. LOUIS CÆSAR LETELLIER, Comte D'Estrees, a commander of the German army, when he defeated Cumberland, and marshal of France, 1695-1771.

ETHELBERT, a k. of Kent, reigned 560-616.

ETHELBERT, the fourth Saxon k. of England, son of Ethelwolf and brother of Ethelbald, 860-866.

ETHELFLEDA, or ELFLEDA, daughter of Alfred the Great, and wife of Etheldred, count of Mercia, died 922.

ETHELFRID, or ADELFRID, king of Northumberland, killed in battle, 593-617.

ETHELRED I., fifth Saxon king of England, predecessor of Alfred the Great, 866-871.

ETHELRED II., son of Edgar and Elfrida, succeeded Edward the Martyr as king of England, 978, died 1016.

ETHELWOLF, the second Saxon king of England, son of Egbert, whom he succeeded in 838, and father of Ethelbald, died 857.

ETHERIDGE, SIR GEORGE, an English dramatist and song-writer, 17th century.

ETOILE, PIERRE DE L', a French chancery

officer, whose journal has supplied much curious matter to the historian, under the reigns of Henry III. and Henry IV., 1540-1631. His son, CLAUDE, a dramatic writer, 1597-1652.

ETTMULLER, MICH., a Ger. phys., 1644-83.

ETTMULLER, M. ERNEST, son of the preceding, author of various memoirs, and editor of his father's writings, 1673-1732.

[William Etty.]

ETTY, WILLIAM, R.A., was born at York, March 10, 1787. His father was a miller. In 1798 he was apprenticed to a letterpress printer at Hull, but having served his time, forsook the mechanical art of printing for the more exciting profession of a painter. Etty commenced this hazardous enterprise in London, in 1805, when he entered as a student of the Royal Academy, and became also, through the liberality of an uncle, a private pupil of Sir Thomas Lawrence's for twelve months, but received very little attention from him. For long his pictures were rejected both at the Royal Academy and the British Gallery, but after about fifteen years' toil his fortunes changed, he received gradually more of the public attention, and in 1822 was enabled to visit Italy, where he found in Venice the chief attractions; he returned with many studies to London in 1824, and exhibited his picture of Pandora in 1825, for which he was chosen an associate of the academy, and he was elected an academician in 1827. Etty died at his native place, November 13, 1849, in his sixty-third year, leaving a considerable fortune. He was in every respect one of the most distinguished painters of the English school, but especially excellent as a colorist; some of his pictures rival Titian's, or any of the great Venetians, as gorgeous displays of color. His great powers were well displayed in the comprehensive exhibition of his works at the Society of Arts, Adelphi, in 1849, the summer only before his death. In this exhibition were many admirable pictures, including the nine great works, the triumph of Etty's life and ambition, as admitted by himself in his autobiography, published in the 'Art Journal' of 1849. He explains these pictures as follows:—'My aim in all my great pictures has been to paint some great moral on the heart.' 'The Combat,' *the beauty of mercy*; the three 'Judith' pictures, *patriotism*, and self-devotion to country, people, and God; 'Benaiah, David's chief captain,' *valor*; 'Ulysses and the Syrens, the importance of resisting *sensual delights*—or an Homeric paraphrase on 'The Wages of Sin is Death'; the three pictures of 'Joan of Arc,' *religion, loyalty, and*

*patriotism*, like the modern Judith. In all nine great pictures, 'As it was my desire to paint three times three.' [R.N.W.]

EUBULIDES, a philosopher of Miletus, best known for the captious arguments and insoluble questions with which he endeavored to embarrass the empirics, but especially Aristotle; he was the disciple and successor of Euclid, and is said to have instructed Demosthenes; born about 360 B.C.

EUCLID, a Greek comic poet, 370 B.C.

EUCLID, a mathematician of Alexandria, who flourished 300 B.C. No name of antiquity is better known. His digest of geometrical propositions is a schoolbook still. His works have been often edited and republished. Barrow's edition is very valuable; but the best known in this country is that by Robert Simson.

EUCLIDES, the first archon of Athens, B.C. 403.

EUCLIDES, a disciple of Socrates, and founder of the philosophic sect of Megara, by which the art of dialectic was carried to high perfection, was living about 390 B.C.

EUDEMON, J. A., a learned Greek, d. 1625.

EUDES, duke of Aquitaine, reigned 688-735.

EUDES, duke of Burgundy; the *first* of the name reigned 1074-1103; the *second*, 1142-1162; the *third*, 1191-1218; the *fourth*, 1315-1349.

EUDES, or ODON, king of France, 887-898.

EUDES, JOHN, a mystic writer, born 1601.

EUDOCIA, the name adopted on her conversion to Christianity by Athenais, the daughter of Leon-tius, a philosopher of Athens, and wife of the emperor Theodosius the younger; she was celebrated for her learning and magnificence, and was divorced in consequence of aspiring to the government; died in religious retirement at Jerusalem about 460.

EUDOXIA, daughter of the preceding, and wife of the emperor Valentinian III., and of Maximus.

EUDOXIUS, an heretical writer of the 4th cent.

EUDOXUS, a Gr. astronomer, lived abt. 370 B.C.

EUGENE, FRANCIS, of Savoy-Carignan, commonly called Prince Eugene, grandson of Ch. Emmanuel I., duke of Savoy, and son of Eugene Maurice, count of Soissons, distinguished as generalissimo of the imperial armies, and as a companion-in-arms of Marlborough, 1663-1736.

EUGENIUS, originally a grammarian, was proclaimed emperor in Dauphine, in succession to Valentinian the younger, in 392, and in 394 he was slain by the Emperor Theodosius.

EUGENIUS, St., a bp. of Carthage, 481, d. 505.

EUGENIUS, the *first* of the name pope of Rome 654-657; the *second*, 824-827; the *third*, 1145-1153; the *fourth*, 1431-1447.

EUGENIUS, the *first* of the name king of Scotland, date unknown; the *second*, 427-449; the *third*, reigned 535-557; the *fourth*, 605-620; the *fifth*, died 692; the *sixth*, reigned 692-694; the *seventh*, 704-721; the *eighth*, 761-764.

EUGENIUS, an astronomer and bishop of Toledo, died 636; another of the same name, distinguished as 'the younger,' known as a theological writer and poet, and bp. of Toledo, died 660.

EUGENIUS-BULGARIS, a Greek, prelate, dist. for his philos. and math. writings, 1716-1806.

EULER, LEONARD, born at Bâle 1707, d. at St. Petersburg 1783: one of the greatest analysts of the last century,—not indeed ranking with Des Cartes, Newton, or Leibnitz, but by the unbroken accord of the world of science, claiming equality beside Daniel Bernouilli and D'Alembert. A bare catalogue of the immense labors and voluminous writings of this illustrious person would occupy all our space: it may,

indeed, he said of him, *nihil tetigit quod non ornavit*; and his eager genius, surpassing industry, and exhaustless resources, led him through all the sphere of mathematical and physical science. Living immediately after the discovery of the infinitesimal calculus, no man did so much to unfold its powers and simplify its methods; his great works on that subject are still models of composition: and amid what sprung from his abundant, his amazing fertility, the germs are found of the most important of subsequent advances: his work on 'Isoperimeters,' may be said to have provoked the calculus of Variations of *Lagrange*. With *Bernouilli*, Euler divided several prizes; these two great men ran a strikingly corresponding race. The work by which he is popularly known is his 'Letters to a German Princess,' a work instinct with acuteness, and evincing marvellous powers of exposition, but on the whole, perhaps, his only failure. He hopelessly tries in it to break a lance with *Leibnitz*—offering a refutation of the scheme of monads. He betrays, however, no sufficient comprehension of the meaning of this chief of German thinkers; nor in the case of Euler did destiny add to his ability as an analyst, the powers which constitute the metaphysician. [J.P.N.]

**EULER, JOHN ALBERT**, son of the preceding, was born at St. Petersburg in 1734. He was appointed secretary of the Imperial Academy of Sciences and a counsellor of state. He was the author of several works on astronomy, d. 1800.

**EULER, CHARLES**, brother to John Albert, was a member of the Imperial Academy of Sciences and physician to the court, was born in 1740, and died 1766. His brother Christopher was distinguished as an astronomer and mathematician, born in 1743 at Berlin.

**EUMENES**, one of Alexander's lieutenants, a sharer in the divided empire after his death, conquered and put to death by Antigonos, B.C. 316.

**EUMENES**, the first of the name king of Pergamos, 263–241 B.C.; the second, 198–157 B.C.; the third, an infant son of the preceding, d. 158.

**EUMENES**, a rhetorician of Gaul, 261–311.

**EUNAPIUS**, a celebrated sophist, historian, and physician of Sardis, in the 4th cent., au. of 'Lives of the Sophists,' and a history of his own times.

**EUPHORION**, a Gr. poet and hist., 3d c. B.C.

**EUPHRANOR**, a Greek painter and sculptor, 4th century B.C.

**EUPHRATES**, a Stoic philosopher, 2d century.

**EUPHRATES**, founder of the Ophites, 2d cent.

**EUPOLIO**, an Athenian poet, kn. abt. 435 B.C.

**EURIC** or **EVRIC**, k. of the Visigoths, 466–84.

**EURIPIDES**, the last of the three great Greek tragedians, was the son of Mnesarchus and Clito, and was born in Salamis, whither his parents had retired during the occupation of Attica by Xerxes, on the very day of the glorious victory near that island, B.C. 480. That his father was a man of property is proved by the expensive education which Euripides received; but it appears from the sarcastic insinuations of Aristophanes that his mother was of humble descent. Euripides listened to the lectures of the first philosophers of the day, studying physics under *Anaxagoras*, and rhetoric under *Prodicus*; and having on both occasions *Pericles* as his fellow-disciple. With *Socrates* he was on terms of the closest intimacy. Nor were the ornamental parts of his education neglected; he was so well versed in gymnastic exercises that he gained two victories in the Eleusinian and Thesean athletic games when only seventeen years old; and seems also to have cultivated a natural taste for painting. Some speci-

[Euripides.]

mens of his skill in the latter art were preserved for many years at Megara. He is said to have attempted dramatic composition at an early age, and brought out his first tragedy in B.C. 455, when he was in his twentieth-fifth year. On this occasion he gained the third prize; but fourteen years after, in B.C. 441, he gained the first prize, and also in B.C. 428. According to *Suidas* he gained five victories, one of which was with a posthumous play. His reputation now spread far and wide; and if the narrative of *Plutarch* is to be trusted, some of the Athenian soldiers who survived the disastrous termination of the expedition against Syracuse, were treated with kindness, and even set at liberty, for reciting such passages from his works as they happened to recollect, B.C. 413. Euripides continued to exhibit plays till B.C. 408, soon after which he retired into Magnesia, and thence into Macedonia, to the court of Archelaus, by whom he was received with distinguished honors. As in the case of *Æschylus*, the reasons for this self-imposed exile are obscure and uncertain. Report alleges that he was unhappy in his own family; and the envy and jealousy excited by his literary reputation drew upon him the taunts and sarcasms of his political enemy Aristophanes. His intimacy with *Socrates* and *Alcibiades* likewise contributed towards rendering him unpopular; and it may therefore be inferred that prudence dictated his withdrawal from a country where his avowed sentiments exposed him to danger. In Macedonia he continued to write some plays, one of which he inscribed with the name of his patrons. Euripides died B.C. 406, at the age of seventy-five, and was buried at Pella. His countrymen in vain entreated Archelaus to send his remains to Athens, where, however, they erected a cenotaph to his memory. In the estimation of the ancients, Euripides held a rank much inferior to *Æschylus* and *Sophocles*. With him the dignified simplicity of the ancient tragedy disappears, and its place is supplied by rhetorical declamation, subtle disputations, and appeals to the sympathetic feelings. His works were held in especial favor during the middle ages; and hence his remaining plays more than outnumber the extant dramas of both *Æschylus* and *Sophocles*. According to some authorities Euripides wrote 92 tragedies, according to others 75. Of these 19 are extant, besides numerous fragments of the plays which have been lost. [G.F.]

**EUSDEN, LAURENCE**, an obscure poetical wr. who in 1718 obtained the laureateship, d. 1730.

**EUSEBIUS**, a pope, elected and died 310.

EUSEBIUS, bishop of Dorylæum in Phrygia, celebrated for his opposition to the Eutychian heresy, 5th century.

EUSEBIUS OF NICOMEDIA, an Arian prelate, and determined enemy of Athanasius, died 342.

EUSEBIUS, PAMPHILI (that is, the friend of Pamphilus), was born at Cesarea, about the year 270. Pamphilus was his earliest friend in Cesarea, and gave the young student access to the large library which he had collected. Pamphilus was at length imprisoned, and Eusebius remained his attached and inseparable companion. And when the prisoner suffered martyrdom under Galerius, in 309, Eusebius fled first to Tyre, and then to Egypt. On his return, about 314, he was made bishop of his native city, and continued in that diocese till his death. In the year 325 he attended the council of Nice, and delivered a formal address to the emperor. The Nicene creed which condemned Arianism was in its earliest draught composed by him; but he scrupled at length to subscribe it, after several important verbal alterations had been made upon it. His caution and moderation afterwards subjected him to the charge of that very heresy which the Nicene council had been summoned to confute. His views on the Trinity approached those of Origen, and he seems to have held a species of subordination among the persons of the Godhead, which was incompatible with a consistent belief in the supreme deity of the Son. At the council of Tyre, in 335, he joined in deposing Athanasius on a charge of contumacy. Prior to this period, in 330, he was offered the patriarchate of Antioch, but refused it; and he died about the year 340. Eusebius was a divine of great learning, accomplishments, and industry. Not a few of his numerous works have been preserved, which have been of great service to theology, especially to church history. His *Præparatio Evangelica*, in fifteen books, was, as its title implies, intended to prepare the pagan mind for the reception of Christianity, by showing the vast inferiority of other religions; and his *Demonstratio Evangelica*, in twenty-books, of which ten have been preserved, was meant for the Jewish mind, and as a positive evidence for Christianity, especially in its connection with the oracles and prophecies of the Old Testament. His *Historia Ecclesiastica*, in ten books, reaches from the birth of Christ to the defeat of Licinius in 324, and is an important and valuable record. Besides his *Life of Constantine*, his *Oration* in praise of the same emperor, his *Onomasticon*, his tract against Hierocles, and his *Eloge* on the martyrs, we have his *Chronicon*, a Latin version of the second part of which by Jerome, has been long known. But an Armenian version of the whole work was found some years ago, and published at Venice, in 1818; other discoveries have been made by the famous Angelo Mai. The *Theophania*, another treatise of Eusebius, was discovered in a Syrian version, by Mr. Tattam in an Egyptian monastery, and has been translated into English, and published by the late learned Professor Lee of Cambridge. [J.E.]

EUSEBIUS OF SAMOSATA, a recusant from the party of Arius, kd. by a woman of the Arians, 379.

EUSEBIUS OF VERCELLI, a partisan of Athanasius, and determined enemy of the Arians, d. 372.

EUSTACE, JOHN SKEY, an officer of distinction in the American army during the revolution. After peace was established, he studied and practised law in Georgia. In 1794, he went to France, joined the French army, and rose to the rank of major-general. Died at Newburgh, 1805.

EUSTACE, WILLIAM, M.D., governor of Mass., was born at Cambridge, June 10, 1753, and gra-

duated at Harvard College in 1772. He afterwards studied medicine, and at the commencement of the war, was appointed an army surgeon. In 1809, he was appointed secretary of war; in 1815 ambassador to Holland, and in 1823, governor of Massachusetts. He died in Boston, Feb. 6, 1825, aged 71.

EUSTACHIUS, BARTHOLOMEW, a distinguished Italian anatomist who flourished in the sixteenth century, but of whose personal history very little is known. Neither the date nor the place of his birth have been accurately ascertained, but it is generally believed that he died in 1570, perhaps at Rome. He was the most eminent anatomist of his time, and Haller says of him that he enriched the science with more discoveries than any other person whom he knew. His anatomical plates, thirty-nine in number, were unpublished at his death, and were supposed to be lost, but they were discovered at Urbino in 1712, and were published in 1714, by Lancisi, physician to Pope Clement XI., and are still much esteemed. His name is preserved in that of the Eustachian tube which he discovered, and which runs between the inner ear and the upper part of the throat; and the Eustachian valve of the heart, which separates the right auricle from the inferior vena cava. [J.M.C.]

EUSTATHIUS, a native of Constantinople, distinguished for his commentaries on Homer, archbishop of Thessalonica, 12th century.

EUSTATHIUS, Sr., a bishop of Berea, distinguished for his eloquence at the council of Nice, as the enemy of Arius, deposed about 331.

EUTOCIUS, a Greek mathematician, 6th century.

EUTROPIUS, FLAVIUS, secretary to Constantine the Great, and author of an epitome of the history of Rome. Lived in the 4th century.

EUTYCHES, a celebrated Greek heresiarch of the 5th century, who maintained that only one nature, that of the Incarnate Word, existed in Christ; condemned at the council of Chalcedon, 451.

EUTYCHIUS, the name assumed by Said Ben Battrie, a learned Arabian Christian, on becoming patriarch of Alexandria; distinguished as a physician, theologian, and historian, 876-950.

EUTYCHUS, a Latin grammarian, 6th century.

EVAGORAS, a king of Salamis, killed B.C. 374.

EVAGRIUS, an ecclesiastical historian, 6th ct.

EVAGRIUS, a monk and theolog. wr., 4th cent.

EVANGELI, ANTONIO, an Ital. au. 1742-1805.

EVANS, ABEL, an Oxford schol. and wit, last c.

EVANS, C., a baptist minister, 1737-1791.

EVANS, EVAN, a Welch divine, au. of works on the poetry and litera. of his country, 1730-1790.

EVANS, JNO., a nonconf. preacher, 1680-1730.

EVANS, NATHANIEL, a minister in New Jersey, was also a poet, born in Philadelphia, 1742, and having graduated at that college in 1765, went to England, and was ordained by the bishop of London. Died at Philadelphia shortly after his return in 1767, aged 25.

EVANS, LEWIS, an eminent Amer. geographer, was a surveyor of Pennsylvania. In 1749 he published a map of the middle colonies and country of the Indians northward and westward. He died June, 1756.

EVANS, JOHN, author of a 'Sketch of Christian Denominations,' &c., a baptist minister and schoolmaster of London, died 1827.

EVANS, O., an Amer. mechanic, 1755-1811.

EVANS, RICE OR ARISE, a famous astrologer, tutor of Lilly in the occult sciences, 17th cent.

EVANS, THOS., a literary bookseller, 1742-84.

EVANSON, EDW., a Church of England divine, afterwards a unitarian writer, 1731-1805.

EVARTS, JEREMIAH, secretary of the American board of commissioners for foreign missions, was born in Sunderland, Vermont, February, 1781. In 1802, while studying at Yale college, he became a member of the college church; in 1806 he engaged in the practice of law at New Haven, and in 1810, having removed to Charlestown, Massachusetts, he became editor of the *Panoplist*, a monthly publication devoted to religious and literary matters; in 1820 he edited the *'Missionary Herald.'* He died May 10, 1831, aged 50.

EVEILLON, JAS., a Fr. ecclesiastical writer, dis. for his learning and benevolence, 1572-1651.

[Wotton Church, the Burial Place of Evelyn.]

EVELYN, JOHN, one of the finest examples that English history presents of the accomplished and well-principled English gentleman, was born in 1620, at his father's seat of Wotton, in Surrey. After having been educated at Oxford, he served as a volunteer in the Low Countries; and during the period of the civil wars he remained abroad, studying men and manners, statistics and science, the fine arts and polite literature. In 1652 he returned to England, and took up his residence at Sayes Court beside Deptford, which had recently come into his possession by marriage. His royalist opinions kept him in retirement till the restoration; after which he took an honorable but not a conspicuous part in public business, returning always to those quiet pursuits and speculations in which his happiness consisted. He died in 1706, a few years after having become owner of his paternal estate by the death of his elder brother. He was one of the original members of the Royal Society, and a frequent contributor to its transactions. He wrote separate treatises on engraving, architecture, and numismatics; but the most valuable work he published was his *'Sylva, or a discourse on Forest Trees,'* in which, and in smaller pieces, there is given, in an agreeable and lively style, much of curious information and of ingenious theory in regard to the writer's favorite pursuits, planting and gardening. His *'Diary,'* which was not published till 1818, is both interesting as a literary performance, and exceedingly useful for the knowledge it conveys of the times in which Evelyn lived. [W.S.]

EVERARD, ANGELO, a Flem. paint., 1647-78.

EVERARD, NICOLAS, a Dutch lawyer and magistrate, president of the Supreme Council, 1462-1532. Three of his sons are also celebrated,—NICHOLAS GRUDIUS, a Latin poet, councillor to Charles V. and Philip II., died 1517. ADRIAN MARIUS, a Jesuit and poet, chancellor of Guelderland, died 1568. Jo-

HANNES SECUNDUS, an elegant scholar and poet of licentious principles, Latin secretary to the cardinal archbishop of Toledo, and Charles V., 1511-1536.

EVERDINGEN, ALDEST VAN, a Flem. painter, excelled in romantic landscapes, &c., 1621-1675.

EVERDINGEN, CÆSAR VAN, a Flemish painter and architect, 1606-1679.

EVERETT, DAVID, editor of the *Boston Patriot*, was a native of Princeton, Massachusetts. Having graduated at Dartmouth college in 1795, he practised law in Boston. In 1809 he edited the *'Patriot,'* and in a few years after was editor of the *'Pilot.'* He died December 21, 1813, aged 44.

EVERETT, OLIVER, minister in Boston, was educated at Harvard college in 1779, and ordained in 1782. After a ministry of ten years, he was obliged to resign his charge in consequence of ill health. He was afterwards appointed a judge of the court of common pleas for the county of Norfolk. Died November 19, 1802. He was held in high estimation by his acquaintance.

EVERETT, ALEXANDER H., an eminent scholar, was born at Dorchester, Massachusetts, 1790. In 1809, he was appointed secretary of legation at St. Petersburg; in 1818, chargé d'affaires at Brussels, and in 1825, minister to Spain. On his return to his native country, he became editor of the *'North American Review.'* During the administration of President Polk, Mr. Everett was appointed commissioner to China, and in 1845, sailed for Canton, but in consequence of ill health, he was compelled to return before reaching his destination. After a delay of several months, he again sailed for China, and died shortly after his arrival, in 1847.

EXMOUTH. EDWARD PELLEW, afterwards Lord Exmouth, was born 19th April, 1757, at Dover. His father was captain of the Post Office Packet on that station, and died early, leaving young Edward and five other children almost without friends or support. Edward Pellew entered the royal navy, and soon attracted notice by his extraordinary activity and courage. He served on board the *Blonde* off the American coast in 1776 and 1777, and in the last mentioned year he was with a party of seamen attached to Burgoyne's expedition from Lake Champlain to Saratoga. Young Pellew distinguished himself amid the disasters of this campaign by his indomitable spirit and alacrity. He was promoted on his return to England; and when the war of the French revolution began, Captain Pellew was appointed to the *Nymphé* frigate. In command of this vessel he captured the French frigate *Cleopatra*,

after one of the best fought actions of the war. He commanded next the *Arethusa*, and in her he captured another French frigate, *La Pomone*, in 1794. He continued to do good service and to rise in rank during the war; and he frequently signalized his remarkable personal strength and activity in saving the lives of others at sea and in shipwreck. In 1816 he was an admiral in command of the Mediterranean squadron, and a peer by the title of Lord Exmouth. In the spring of this year he was ordered to repress the piracies of the Barbary states of the Mediterranean, to obtain the release of the numerous Christian slaves who were sold in captivity at Algiers, Tunis, and Tripoli, and to bind these powers by express treaty to discontinue for the future their practice of carrying off Christians into slavery. The deys of Tunis and Tripoli consented; but the Algerines, confident in the strength of their fortification, and proud of their old piratical renown, refused. Exmouth gave them a speedy repetition of the lesson which Blake had given their ancestors; and it was this time still more sternly taught. On the 27th of August, 1816, the English fleet of five sail of the line, five frigates, four bomb vessels, and five gun brigs, anchored off Algiers: aided by a Dutch squadron of five frigates and a corvette under Admiral Von Capelbar, which joined Lord Exmouth in the common cause of civilization and humanity against barbarian violence and cruelty. Terms were offered to the Algerines, but haughtily rejected. At half-past two the Christian fleet took its station close to the fortification; the batteries of the Mahometans then commenced their fire, which was promptly answered by the British broadsides. For upwards of six hours a cannonade raged from sea to shore, and from shore to sea, which for obstinacy and destructiveness can hardly be paralleled in naval warfare. Nearly 1,000 officers and men were killed and wounded on board the English and Dutch ships, and at least 7,000 of the Algerines were computed to have fallen. The seaward batteries of the town, the mole, and the harbor walls, and the arsenals were laid in ruins. Great numbers of the houses were destroyed; and nine Algerine frigates, and a whole flotilla of smaller piratical vessels, were burnt or sunk. On the morrow Lord Exmouth prepared to renew the attack, but the dey now accepted the terms which he had previously scoffed at; and peace was granted to Algiers on condition of her abolishing for ever the enslaving of Christians, the instant delivery of the slaves of all Christian nations, and ample reparation and apology for the outrages and insults which the dey had offered to British subjects and the British flag. In pursuance of this treaty Lord Exmouth had the truly noble happiness of receiving on board of his fleet, three days after the battle, 1,083 fellow-Christians who had been groaning in slavery under Algerine masters. They were safely conveyed by the British fleet to their respective homes, and diffused through Christendom the just renown of England and her victorious admiral.—Lord Exmouth died on 23d January, 1832. He was a good as well as a great man; and he gave on a deathbed of painful and lingering illness, even a brighter example of Christian heroism than he had displayed on the quarter-deck in the hour of his brightest earthly glory. EYCK, HUBERT and JOHN VAN, two celebrated painters of Bruges of great importance in the history of art in Europe, owing to their substitution of *varnish* painting with oil, in the place of the old ordinary *tempera* painting with water.—HUBERT VAN EYCK, so called, it has been supposed, from Eyck, (or Alden Eyck) the place of his birth on the Maas, was born in 1366, and appears to have been the real inventor of the new process of painting, which was discovered about 1410, when his brother John Van Eyck may have been about fifteen or twenty years of age only; they were then settled at Bruges, and they formed a great school there. The masterpiece of the Van Eycks is the altar-piece of the 'Adoration of the Lamb,' in the church of St. Bavon, Ghent; this celebrated picture was finished by John in 1432; Hubert, who had executed the large figures of the upper part, had died at Ghent six years before, on 18th September, 1426. On the inscription on the picture the chief merit is properly given to Hubert, 'the greatest in art;' John is merely mentioned as the completer of his brother's work: some portions of the picture are in the gallery at Berlin.—JOHN VAN EYCK was born about 1390–5, and died at Bruges in July 1441, as recently ascertained from documents by the Abbé Carton (*Les trois Frères Van Eyck, &c.*, Bruges, 1848). 1420 is the earliest date of any of his known pictures, and all the historic facts seem to show that John so far from being the founder of the school of Bruges, was the pupil of his brother in common with several other early Flemish masters, though John's services to art were so great in many respects that he may well be considered as the head of the school.—The invention of the Van Eycks is commonly called oil painting, but colors were mixed with oil long before this time, though pictures were not painted in this manner, but Vasari expressly explains that the Van Eyck method was *varnish* painting—oil with other mixtures, and it arose in the search for a good varnish for *tempera* pictures.—This method was carried into Italy by Antonello of Messina, who having seen a picture by John Van Eyck in the collection of Alphonso, king of Naples, about the year 1443, set off for Bruges in order to learn the new method; though he arrived some time after the death of Van Eyck, he contrived to acquire the method from some of his pupils, or the third brother, LAMBERT VAN EYCK, and was thus the cause of oil painting gradually superseding fresco painting some years afterwards in Italy, first in Venice, then in Florence.—MARGARET VAN EYCK, the sister of these three brothers, likewise painted. There are two pictures by John Van Eyck in the National Gallery. [R.N.W.]

FABRE D'EGLANTINE, PHILIPPE FRANCOIS NAZAIRE, the son of a burgess, born at Limoux, 1759, was a dramatic author and pamphleteer, and acquired a celebrated name in the course of the French revolution as a confederate of the Jacobins. With the advantage of fine talents, and a literary education received in the college of the doctrinaires, he united all the vices of a young man upon town, his conversational and musical abilities rendering

him a highly agreeable, if not a very edifying companion. His short political history is soon written. On the 10th August, 1792, his notoriety as a pamphleteer favored his nomination as a member of the provisional commune at Paris, and he was afterwards appointed secretary-general in the ministry of justice under Danton. He was one of the members for Paris in the national convention, where he voted for the king's death and other extreme measures, though he had the honor at last of suffering for his moderation under the ascendancy of Robespierre. He was arrested by the decree of St. Just, which included Camille Desmoulins, Herault, Danton, Philippeaux, and Lacroix, on a charge of complicity with D'Orleans and Dumouriez, to restore the monarchy, and was executed with Chabot and Bazire, 5th April, 1794. His real crime, like that of his companions in misfortune, was the desire to return to moderate counsels, for though he was weak, inconstant, and ambitious, he was neither treacherous nor cruel. Fabre D'Eglantine was accomplished in nearly all the fine arts, but only cultivated them for the sake of shining in society. He furnished the poetical nomenclature of the republican calendar, the mathematical portion of which was contrived by Romme. [E.R.]

FABRE DE L'AUDE, JEAN PIERRE, born 1755, and distinguished as an economist, was acting as advocate to the parliament of Toulouse when the French revolution broke out, the principles of which he adopted, so far as to secure his continuance in various government employs, until proscribed by the reign of terror. After the fall of Robespierre he was returned to the council of 500 (1796), and was successively a member of the tribunate (1801), president of the commission of finances (1804), senator (1807), and afterwards a count of the empire. His political alliances were purely circumstantial, for though he voted against the return of Napoleon to power in 1814, he appeared in the chamber of peers during the hundred days of the year following, and at length served the state under the Bourbons. He is author of some works of temporary interest, upon imposts and political questions. [E.R.]

FABRE DE L'HERAULT, DENIS, first an advocate of Montpellier, and afterwards a member of the French national convention, where he was rather useful than eloquent, has acquired a name in the history of the period by his career in the war of the republic against Spain. He was sent to the army of the eastern Pyrenees as commissary after the fall of the Girondins, and displayed great courage, but so little prudential conduct that the French forces were routed in action, and their discipline reduced to anarchy. Fabre de L'Herault was killed in an attempt to rally the troops at Port Vendres, 20th December, 1793, and had a place decreed to him in the pantheon of French worthies, while the generals Daoust and Delâtre, of the same force, were executed on the imputation of treason in the same series of events. FABRICIUS, JEAN CHRETIEN, a celebrated entomologist, was born at Tundern, in the duchy of Sleswick, in 1742. He died in 1807. He was sent to the university of Upsal, where he studied under Linnæus, and became one of his most attached and eminent pupils. Under such a teacher he obtained a very considerable knowledge in botany and most of the other branches of natural history. Having one day dissected the organs of the mouth of a cockchafer, he conceived the idea of using the organs of mastication as the means of producing a classification of insects. He was appointed soon after this professor of natural history at the university of Kiel, and from that time he devoted himself almost entirely to the study of entomology. In 1775 he published his 'Systema Entomologiæ,' in which he laid before the world his new mode of arrangement; and for the remainder of his life he continued in successive publications to evolve his system with much ability. His systematic arrangement has been followed by few, but his mode of distinguishing the genera is still retained by entomologists. Fabricius possessed a great knowledge of languages; and he travelled over most of the countries of Europe in search of new insects, and for the purpose of examining the museums of the different towns he visited. He made frequent journeys to England, where he made the acquaintance and friendship of Banks, John Hunter, Francillon, and most of the naturalists of repute living at that time. He was much esteemed for his amiability of disposition; and it is said, when he heard of the bombardment of Copenhagen by the English fleet a profound melancholy seized him, from which he never recovered. FAIRFAX, EDWARD, an English poet, and translator of Tasso, son of Sir Thomas Fairfax of Denton in Yorkshire, and brother of Lord Fairfax, the subject of the following notice, whom he assisted in the management of his affairs. Besides his 'Tasso' and his own poems, which consist of twelve eclogues, he is the author of a prose treatise on witchcraft, and a history of the Black Prince, but the latter perished in MS. at the fire of Whitehall. He died in 1632, with the reputation of a gentleman and a scholar. His son WILLIAM is known for his translation of 'The Lives and Opinions of the most celebrated Philosophers,' from the Greek of Diogenes Laertius. [E.R.]

FAIRFAX, FERDINAND, Lord, father of the celebrated general by Mary his wife, daughter of the earl of Musgrave, and himself a general in the parliamentary army, is memorable for his total rout by the earl of Newcastle, 30th June, 1643, and his subsequent successes in Yorkshire. His military history is closely connected with that of his son, who was for six years his companion-in-arms, and who succeeded to the title and estates, by the death of his father, in 1648. Lord Ferdinand Fairfax had received his commission as general of the parliamentary forces in the north, at the commencement of the civil war in 1642, when he found himself opposed to a confederacy of the neighboring counties, united in a league for the king by the politic earl of Newcastle. This circumstance must account for his early reverses, for though he never acquired the same importance as his son, he was a general of great valor. [E.R.]

**FAIRFAX, SIR THOMAS**, afterwards Lord Fairfax, born at Denton, near Leeds, in 1608, was the son of Ferdinand, Lord Fairfax. He was educated at St. John's College, Cambridge, and served while a very young man under Lord Vere in the English auxiliary army in the Low Countries. On his return to England he married, and lived for some years in the country, a silent but stern observer of the follies and oppressions of King Charles' government. The Fairfaxes were zealous presbyterians; and, when the troubles of the nation broke out into civil war, they were active in arming their tenantry and maintaining the cause of the parliament against the royalists in Yorkshire and the neighboring counties. Lord Ferdinand Fairfax was made general of the parliamentary armies in the north, and Sir Thomas was general of the horse under him. The Fairfaxes sustained several reverses in the beginning of the war; but Sir Thomas kept the field with indomitable spirit, and gradually raised the discipline and courage, as well as the numbers of his troops. In 1644 he was one of the commanders on the parliamentary side in the great battle of Marston Moor, which destroyed the royalist force in the north of England. When the parliamentary army was new-modelled, Fairfax was appointed generalissimo, with Cromwell for his lieutenant-general. On the 14th of June, 1645, they fought and won the decisive battle of Naseby. Fairfax then conquered the king's strongholds in the west of England, and before the close of 1646 the war was ended.—In the strange series of intrigues and *coup-de-mains* which now ensued, and which led to the trial and execution of the king, and the elevation of Cromwell to supreme power, Fairfax was a mere instrument in the hands of more subtle and resolute men. He was only fit for the field; and the readiness and steadiness for which he was pre-eminent as a soldier, utterly deserted him when he was required to act as a statesman. Clarendon says truly of him,—'Fairfax wished for nothing that Cromwell did, and yet contributed to bring it all to pass.' After the king's death Fairfax resigned his commission, and lived in retirement during the whole period of the commonwealth. He had inherited the family property and title on his father's death in 1647, and the management of his estate now became the whole employment of the late renowned generalissimo of the parliament's victorious armies. Cromwell treated him with contempt. After the great protector's death in 1658, it became speedily manifest how unequal Richard Cromwell was to the government which had been bequeathed to him; and men of all parties, except some of the more enthusiastic republicans, and a few of the army chiefs, looked to the recall of the old race of kings as the only means of securing peace and order. Fairfax took an important part in bringing about the restoration. While Monk was still in Scotland, Lord Fairfax collected forces in Yorkshire, and declared himself for a free parliament and the restoration of the monarchy. He refused, however, to take the chief command of the enterprise out of Monk's hands, and sought neither rank nor wealth for himself in doing what he believed to be his duty. He was one of the commissioners sent 18th May, 1660, to wait upon Charles II. at Breda, and he accompanied the restored sovereign at the ceremony of his coronation. He then retired again to his Yorkshire estates. Lord Fairfax died on the 2d November, 1671. [E.S.C.]

**FALK, J. D.**, a Ger. satiric poet, 1770–1826.

**FALKENSTEIN, J. H.**, a German antiquary, and compiler of historical documents, 1682–1760.

**FALKLAND, HENRY CARY**, *first* Viscount, was the son of Sir Edward Cary, and distinguished himself as a statesman in the reign of James I.; d. 1633. **LUCIUS CARY**, *second* Viscount Falkland, son of the preceding, well known to readers of history as one of the most perfect characters of his age, was born about 1610, and died of a wound which he received at the battle of Newberry, where he fought in the interest of the king, 1643. He was not only a gentleman, a scholar, and a soldier, but a sincere patriot. **HENRY LUCIUS CARY**, *third* Viscount Falkland, son of the preceding, died young, 1663.

**FALKNER, THOMAS**, an English Jesuit and missionary, author of a 'Description of Patagonia,' died 1780.

**FALLE, PHILIP**, a divine of Jersey, 1655–1742.

FANSHAWE, SIR RICHARD, an English poet and diplomatist in the interest of the crown at the period of the civil wars. He was a remarkable linguist, and was distinguished for his sincerity, both as a man and statesman; he negotiated the peace between Spain and Portugal in 1665, and is the author of 'Letters' during his embassy, 1607-1666.

FANTIN-DESODOARTS, ANTOINE ETIENNE NICOLAS, a voluminous author of history and jurisprudence, born in Dauphiné 1738, died in Paris 1820. M. Desodoarts made his debut as a Jesuit, and bore the title of Vicar-General of Embrun, but appears not to have exercised its functions. He became known at the dawn of the revolution as an advocate of the Jacobins, and has given his principles to the world, more especially, in his work entitled 'Histoire Philosophique de la Révolution de France depuis la Convocation des Notables jusqu'à la Séparation de la Convention.' The critical account of his works in the 'Biographie des Contemporains,' would lead to the conclusion that he was an ardent imaginative writer, clear and elegant in the style of his narrative, but wanting in virtuous principle, and not reliable as an authority for the facts of contemporary history. He is one of numerous examples supplied by the period, demonstrating that the education of the church and the bar at that time, was sufficient to pervert the noblest talents, and prepare men to accept the vilest expedients in politics and morals in place of principle. [E.R.]

FANTONI, an Italian historian of the last cent.

FANTONI, J., an Ital. anatomist, 1675-1758.

was born in 1644. He was the author of a satirical work, entitled 'Memoires sur le Règne de Louis XIV.'; died 1712.

FAREL, WILLIAM, a native of the French Alps, and one of the earliest converts of the reformed doctrines in Paris, is known as the pioneer of the reformation in Dauphiné and Switzerland. He was one of the most intrepid assailants of the Roman Catholic Church, and distinguished as a preacher rather than a writer. When addressing the agitated multitudes who listened to him, neither the clash of arms, the ringing of bells, nor the threats of his enemies, could stem the torrent of his eloquence. He was subject to much persecution, and escaped many dangers, dying in the seventy-sixth year of his age, in 1565.

FARIA, ANTH. DE, a Portuguese adventurer, dis. himself against the Indian corsairs, 1505-1550.

FARINACCI, P., an Italian jurist, 1554-1618.

FARINATO, P., an Italian painter, 1525-1606.

FARINELLI, named CARLO BROSCHI, one of the most extraordinary singers that ever lived, was born at Naples in 1705. In 1722 he was engaged at the Alberto Theatre of Rome, and while there contended with and overcame a famous performer on the trumpet. From Rome he went to Bologna, thence to Venice and Vienna, at which latter place he was received with especial honor by the emperor Charles VI. He came to England in 1734, and the effect of his singing is described as being something like enchantment. In 1737 he went to Spain, where he remained for twenty years, enjoying the friendship and confidence of two monarchs, Philip V. and Ferdinand VI., and having power almost equal to a prime minister. During his residence in Spain he had a pension for life settled upon him amounting to upwards of £2,000. There are many beautiful stories told of the goodness of heart and disinterestedness of Farinelli which it is impossible to introduce into this brief memoir. In 1759 Farinelli returned to Italy, and took up his final residence at Bologna. One of his biographers says, 'this extraordinary musician and blameless man died in the eightieth year of his age.' [J.M.]

FARINGTON, GEORGE, a distinguished painter, was born in 1754. He studied under West and obtained a gold medal from the Royal Academy for his painting of the incantation scene in Macbeth; died 1788.

**FAUCCI, C.**, a Florentine engraver, last cent.

**FAUCHE-BOREL, L.**, a Swiss adventurer, employed as a spy by the Bourbons, 1762–1829.

**FAUCHER, CÉSAR and CONSTANTINE**, twin brothers and soldiers, distinguished in the wars of the French revolution, born 1760, both shot 1815.

**FAUCHET, CL.**, a French hist., 1529–1621.

**FAUCHET, CLAUDE**, a French priest, alike remarkable for his physical courage, and moral and intellectual intrepidity, was borne at Dorne, in the department of the Nièvre, 1744, and was successively grand vicar of the archbishop of Bourges, preacher to the king, and 'abbé commandataire' of Montfort, before the revolution, and afterwards constitutional bishop of Calvados. He began his

political career as a chief of the *Illuminati*, and a reformer of the church, on the principles of philosophy and national independence advocated in his work 'De la Religion Nationale,' published 1789. Rendered famous by his eloquence and his writings, he headed the deputation to De Launay, when the Bastille was besieged, and advanced sword in hand in front of the combatants, whom, it is said, he rallied three times to the assault. It was Fauchet also who gave the sanction of a religious blessing to the national tricolor when first used, and advised the consolidation of the national guard under the command of Lafayette. As the Revolution proceeded, he established a kind of political reunion in the vicinity of the Palais Royal, and had Condorcet for one of his coadjutors, and a board of correspondence devoted to the propagation of the natural rights and duties of French citizens. As a member of the first parliament he opened the debate on religion by a bitter speech against the priesthood, and publicly stripped off the insignia of his order. Notwithstanding his share in scenes that were worthier of the Parisian demagogue than the minister of religion, he bitterly lamented the king's death; and as an ally, both on the score of humanity, and on philosophical principles, with the Girondins, he shared their fate, being guillotined with the twenty-two on the 31st of October, 1793. The particular accusation against the Abbé Fauchet was his complicity with Charlotte Corday, he having introduced her to the sitting of the convention, on the day of her arrival in Paris, but this was only a pretence to disguise the hatred of the terrorists. He is the author of numerous orations published between 1774 and 1792, the most remarkable of which is his 'Sermon sur l'accord de la Religion et de la Liberté,' 1791. [E.R.]

M. de Fellenberg, like every other practical benefactor of his fellow-creatures, had much envious and ignorant opposition to overcome before he was allowed to pursue his benevolent plans without molestation: a government commission was named to inquire into the working of his institute, the result of which was his recognition as a man of the highest talents and public virtue. He is the author of several works on agriculture, and of memoirs on the institution at Hoffwell, published at the beginning of the present century. [E. R.]

Afterward appointed governor with the powers of chief justice by the commissioners of parliament, in 1658. In 1680, a fine of forty thousand pounds of tobacco was imposed on him, and banishment from the province for acts of sedition.

FENELON, FRANCIS DE SALIGNAC DE LA MOTTE, an eminent and pious Frenchman, was born in 1651 at the castle of Fenelon in Perigord. His studies were pursued successively at the universities of Cahors and Paris, and having directed his views steadily toward the church, he became qualified to obtain orders at the age of twenty-four. His first appointment was Superior of the newly converted female catholics, and the extraordinary success with which he discharged the duties of this station brought him under the notice of Louis XIV., who employed him on a special mission to convert the protestants of Poitou. Fenelon stipulated that no means of conversion were to be used but those of persuasion, and having obtained the royal sanction to this express condition, he accepted the embassy. In 1689, he was intrusted with a still more delicate and responsible office, that of undertaking the education of the duke of Burgundy and his younger brothers. It was for the benefit of his royal pupils that he wrote his *Telemachus*, and to reward the assiduity and faithfulness with which he discharged his duties as preceptor to the royal children, he was elevated to the archbishopric of Cambray. He had not been long, however, installed in that see, when espousing the cause of Madame Guyon, the famous pietist, whose principles were embodied in her book, the *'Maxims of the Saints,'* he was rancorously attacked by Bossuet, his defence placed by the pope in the list of prohibited books, and he himself summoned on pain of excommunication to renounce the heresy. He read his recantation in the pulpit of his own cathedral. But this was not the end of his trials. Bossuet, who had become his bitter enemy, incensed the mind of Louis XIV. against him, by alleging that *'Telemachus,'* which had been published through the perfidy of a secretary who had been employed in transcribing it, was a covert attack on the character of his government, his personal ambition, his love of glory, and his passionate pursuit of war. Fenelon was in consequence banished from the court. But a high tribute was paid to his talents and worth by the foreign invaders, who by the express commands of the duke of Malborough, exempted his lands from pillage, while that general himself, and his allies, showed him every mark of courtesy. Fenelon, though he continued within the pale of the popish church, saw through its corruptions and gross superstitions. He was a very pious man, and his grand habitual aim was to form his own character in conformity with the mind of Jesus Christ. He was temperate almost to abstemiousness, ate little, slept little, took no recreation except a few hours daily in the exercises of walking or riding, while all the rest of his time was devoted to the discharge of his duties in social intercourse with his friends, in visiting the poor, in admonishing, reproving, or comforting his flock as circumstances demanded. The most of his revenues were devoted to benevolent purposes, to help in the education of poor clergymen, to assist indigent old gentlemen, and to extend the means of usefulness to the public hospitals. His death, which took place in the thirty-third year of his age, showed, by the universal regret it produced, how strong a hold he had taken

of the hearts of his countrymen, while his literary works have erected a monument which will transmit his name with honor to a distant posterity. [R.J.]

The former of these has been often reprinted, and translated, and adopted as a text-book in some foreign universities: its principle is the admission of a moral sense, 1724–1816.

FERGUSON, JAS, a self-taught experimen. philos., mechanician, and astron. of Scotland, 1724–1816.

FERGUSON, ROBT., an English divine, d. 1714.

FERGUSON, WM., a Scotch painter, d. 1690.

[Robert Ferguson's Tomb.]

FERGUSON, ROBERT, a Scotch poet, whose compositions in the lowland Scotch dialect entitle him to rank with Burns in descriptive power, though nothing that he has written can be compared with the lyrics of the bard of Ayr for tenderness, and intense love of nature, was born at Edinburgh, where his father was accountant to the British Linen Company, 17th October, 1750. His parents intended him for the ministry, but he wanted the power of steady application to the necessary studies, and his father dying when

he was seventeen years of age, he went to reside with an uncle near Aberdeen, who was at length tired of his poor relative, and allowed him to take the situation of copying-clerk at the office of the commissary-clerk, and afterwards in that of the sheriff's clerk, in his native city. His love of poetry, and his conversational powers, not only unfitted him for this drudgery, but the latter, by a natural reaction against his daily toils, involved him in habits of dissipation, which predisposed him to disease; and it is melancholy to relate that the last penalty which the violated laws of nature exacted from him was nothing less than his mental derangement. In 1774, when in the twenty-fourth year of his age, he was sent to a poor asylum for lunatics, where he was subject to rules which in all human probability hastened his death, which took place in about two months afterwards, on the 16th of October. Burns always acknowledged with affecting tenderness his obligations to Ferguson, whom he styles his 'elder brother in misfortune,' and to whose memory, in the year 1789, he erected a handsome monument in the Canongate churchyard, the place of his interment. It is impossible to read the Scottish poems of Ferguson without acknowledging how closely Burns has followed his model in some of his most admired descriptive pieces. We may instance in particular, 'The Daft Days,' 'The Rising of the Session,' 'Leith Races,' 'Elegy on John Hogg,' and 'Cauler Oysters,' in which the most striking parallels may be traced. Ferguson could sing his native melodies with effect, and was a little too fond perhaps of practical jests. It is said that he never made an enemy, but it is only too likely that he lost a friend in his rich uncle for lack of that ordinary 'prudence' which men of genius too often pride themselves in holding cheap. FERHAD-PACHA, a grand vizier and minister of war to Amurath III., died in disgrace, 1594.

FERISHTAH, MOH.-CASSIM, a Persian hist., au. of a 'Hist. of India under the Mussulmans,' 17th c.

FERMAT, PIERRE, an eminent French mathematician, born at Toulouse in 1595, died in 1667. Fermat was famed in his time as one of the most remarkable analysts in Europe; neither will any historian deny his genius, or his success; he is the author of much ingenious speculation; he discovered curious and recondite theorems regarding numbers; and invented a remarkable method for the solution of problems in *maxima* and *minima*. But a factitious interest has recently attached to him because of the singular claim instituted by La Place that Fermat be considered the true author of the Differential Calculus. It is not easy to conceive a stronger illustration of the sway of national vain-glory over the judgments even of great Frenchmen. The Differential Calculus, like most other new principles, especially demanded by the necessities of Science, was heralded by many partial and imperfect anticipations: anticipations always marked by one characteristic,—they effected the solution of particular problems by methods akin to those of the Differential Calculus; but of the generality, the true method of that remarkable branch of Analysis, they partook nothing. Fermat merely hit upon one such anticipation in his treatment of *maxima* and *minima*. The claim urged by La Place has led to a narrow scrutiny of the powers of this Geometrician, and they have not risen thereby in estimation. Many of his theorems regarding numbers seem lucky guesses on curious points, sought for systematically as such, rather than deductions by scientific procedures. [J.P.N.]

FEYNES, H. DE, a French traveller, 17th century.

FICHTE, JOHANN GOTTLIEB, born in Upper Lusatia, 19th May, 1762; died on 21st January, 1814. One of the most remarkable names in Philosophy since the death of Kant. The characteristics of his speculations are nearly the following. Recognizing that Kant had given a full *critique* of the action of the Mind, on the *substance* of its thoughts, Fichte demanded a *critique* of the act of thinking itself. What, he asked, is the content of the act of consciousness? It reveals something that is *Me*, and something which I call *Not Me*:—how are these related,—what is this thing or feeling which I call *Not Me*? It is a *feeling*, and can be nothing but a *feeling*: there is nothing of which we can be conscious except the *Me*,—the thinking principle and its modifications. What, then, is the *Not Me*? Why is it thrown by us into the form of an external or independent existence? The Mind alone, indeed, is the sphere of the mind's operations; but to its activity there are *limitations*;—it proceeds in the work of self-development by *effort*; we are finite, and struggle towards the infinite by steps or degrees. Now the consciousness of this *effort*, the feeling of *limitation*, seems like the presence of an external obstacle; at least we objectify it, and term it the *Not Me*.—Adequate space is not here allowed for criticism on this system; nevertheless, two characteristics of it must be remarked. (See articles HAMILTON, HEGEL, SCHELLING.) *First*, as a scheme of pure idealism it resembles Berkeley's; but the architecture of it is different. Berkeley supposed that the ideas we mistake for the external world, are visions of something *Not Us*—glimpses of the Divine Intelligence: Fichte, that they are nothing save the Mind's own efforts. Hence he spoke of our conceptions as *creations*; he deduced everything from the Mind's *activity*. *Secondly*, the assertion of the Mind's Freedom and independent Energy, is the corner-stone of Fichte's whole system. However false his speculative philosophy, the tenacity with which he clung to this prime element of Humanity, led to the best results in morals and politics. No man ever wrote whose pages burn more with whatever can stir up the highest in all of us. He was a very apostle of the Heroic: his morals are the purest Stoicism modified according to the acquisitions, the culture, and necessities of this Age. And he lived as he preached. His theoretic philosophy has already departed; but the Man Fichte, will ever be cherished as one of the noblest of his race. [J.P.N.]

[Birth-place of Fielding.]

FIELDING, HENRY, born in 1707, was the third son of General Fielding, and great-grandson of an earl of Denbigh. His classical education was received at Eaton; and he afterwards studied law at Leyden, which, however, he was obliged to leave in his twentieth year, on failing to receive supplies from home. His father had a large family, and appears to have been neither rich nor frugal. The son was fairly left to shift for himself; and, seeking his fortune in London, he found, as he says himself, that his choice lay between being a hackney writer and a hackney coachman. Composition for the stage was his first pursuit, by which he contrived to lead the life of a gay young man for about nine years, from 1727 to 1736. During this time he wrote eighteen plays of one sort or another, which, though admitted to be dramatic failures, show, in passages innumerable, the same vigorous sense and shrewdness, the same keenness of wit, and the same acuteness of critical discernment, which afterwards characterized his novels. His translated farce of 'The Miser,' and his 'Mock Doctor,' are now oftenest remembered; but neither these, nor his other comedies and farces, possess nearly so much originality or spirit as his burlesque parodies on the tragic drama, among which 'Tom Thumb' may be noted as being still by far the best thing of the kind in the English language. The audacity with which in his farces he satirized public characters, is said to have been the main provocation which led the government to establish a censorship of acted plays. In 1736 he married an amiable young lady, with whom he received about £1,500, succeeding, about the same time, to an estate of £200 a-year, in Derbyshire. He now retired to the country, where he lived with hospitable and careless extravagance, and found himself penniless in the course of three years. He returned to London, resumed his law studies, and was called to the bar. But he had no success in the practice of his profession, for which, besides other causes, he

was now disqualified by frequent attacks of gout. To the anxieties and distresses of a precarious and scanty livelihood, was soon added the deep grief caused by the death of his wife, to whom, and to his children, the good-hearted and improvident man of pleasure was warmly attached. For ten years he subsisted by miscellaneous literary drudgery. He made new attempts at dramatic writing; he published many fugitive essays and tracts, engaged in political controversy as an active Whig partisan, and was the conductor and chief writer of three successive periodical papers aimed at the Jacobites and their principles. About 1742 he wrote 'Joseph Andrews,' the first of those novels on which his fame depends. Notwithstanding its frequent seriousness, this piece was intended to be, and in many points really is, a parody on the sentimentalism of Richardson's 'Pamela.' It was followed by 'Jonathan Wild,' a singular specimen of very vigorous but overdrawn irony. In 1749 he received from the government a small pension, and an appointment as a justice of peace for Middlesex and Westminster. The office, as then regarded and administered, was decidedly one which a gentleman would not have accepted unless through necessity; and it undoubtedly helped to degrade both Fielding's character and his feelings. Its duties, however, were discharged not only zealously, but with an honorable integrity and disinterestedness altogether new in the occupants of such places. He published an 'Inquiry into the Increase of Thieves and Robbers,' besides other treatises bearing on law; he was a remarkably efficient police magistrate; and one of his last achievements was the extirpating of several gangs of ruffians by whom London was infested. 'The History of Tom Jones, a Foundling,' was written very soon after Fielding had been forced to embark in these ungenial and harassing employments; when his health was already quite broken; and when, by his own public acknowledgement, the honesty with which he filled his office left him so poor, that the benevolence of wealthy friends had been required for enabling him to subsist. It is not easy to understand the grounds on which 'Tom Jones' has been defended against the charge of immorality; but in point both of genius, and of skill in art, it is the best novel ever written. It was followed in 1751 by 'Amelia,' which is very much inferior. The heroine is said to have been designed as a portrait of the author's second wife. In 1752 he attempted a new periodical, which drew him into quarrels with Smollett and other men of letters. His life was fast ebbing away: dropsy had been followed by jaundice and asthma. Ordered by physicians to a southern climate, he sailed for Lisbon, and died there in October, 1754, in the forty-eighth year of his age. He left behind him, besides other works, a spiritedly written account of his 'Journey to Lisbon.'

[W.S.]

FIELDING, SIR JOHN, half brother to Henry, was knighted in 1761. He was a justice of the peace for Middlesex, and, though blind, discharged the duties of his office creditably, d. 1780.

FIELDING, SARAH, sister to Henry, was born in 1714. She was possessed of talent, and wrote a translation from the Greek of 'Xenophon's Memoirs of Socrates,' d. 1768.

FIENNES, WILLIAM, Lord Say and Sele, 'a grand rebel for twenty years' under Cromwell, afterwards lord privy seal and lord chancellor to Charles II., 1582-1662. His son, NATHANIEL, one of Cromwell's privy council, 1608-1669.

FIENNES, J. B. DE, a French Orientalist and negotiator, 1669-1744. His son, J. B. HELIN, an

Oriental scholar and interpreter to the king 1710-67.

FIESCHI, JOS. MARIE, the contriver of the infernal machine, exec. with his accomplices, 1836.

FIESCO, J. L., count of Lavagna, cel. for heading the conspiracy against Andrew Doria in 1547.

FIESOLE, FRA GIOVANNI DA, commonly called FRA ANGELICO, his family name was *Guido*, was born at Mugello in 1387; his surname of Fiesole he acquired from the order of predicants at that place, whom he joined in 1409. He died in 1455.—Fra Angelico was distinguished for his pious life, and the same sentiment pervaded all his works: he was remarkably methodic in his habits, he commenced every picture with prayer, and invariably carried out the first impression, looking upon it as a species of inspiration. His principal work are some frescoes in the convent of San Marco at Florence, and others in the chapel of San Lorenzo in the Vatican. Some accurate engravings from these works are in course of publication by the Arundel Society; their chief merit is their refined sentiment and high order of expression, in which qualities Fra Giovanni was as it were, the type of his successors, the model of the *quattrocento* school of painters; a school in some respects supposed to be revived in the recent miscalled *preraphaelite* innovation in our own school, but minute finish was an extremely rare characteristic of the genuine *quattrocento* masters of Italy.—(Vassari, *Vite de' Pittori*, &c.) [R.N.W.]

FIESOLE, named after the monastery he belonged to, but whose family name was Santi Tosini, was born in 1537. He was celebrated as a restorer of paintings, d. 1570.

FIGUEIRA, L., a Portuguese Jesuit and missionary to Brazil in 1606, murdered 1643.

FIGUEIRA, WM., a French troubador, 13th cent.

FIGUEROA, BARTH'W. CARASCOZA DE, a Spanish poet, was born at Logrono in 1510, and educated at the University of Salamanca, d. 1570.

FILICAJA, VINCENZO DA, a distinguished poet, was born in Florence in 1642, and educated at Pisa. He was appointed by the Duke of Tuscany a senator, also governor of Volterra, and afterwards of Pisa, as rewards for his great poetical work, "Cauzoni," commemorating the deliverance of Vienna by John Sobieski, d. 1707.

FILMER, SIR R., a wr. on governm., d. 1647.

FINCH, ANNE, an English poetess, died 1720.

FINCH, HENEAGE, first earl of Nottingham, solicitor-general in the time of Charles II., 1621-1682. His son, DANIEL, second earl of Nottingham, distinguished as a statesman, 1647-1730. EDWARD FINCH, brother of the first earl, was a clergyman, and died 1642.

FINCH, R., an English antiquarian, 1783-1830.

FINCK, JASPER, a German Lutheran, born 1578.

FINDEN, WM., a cel. Engl. engrav., 1787-1852.

FINELLI, CHEVALIER, Italian sculptor, d. 1853.

FINGAL, a chief of Morven, celebrated in the poem of Ossian, disting. against the Romans, 3d ct.

FINQUERRA, TOMMASO, a goldsmith of Florence, where he was born 1426, who by an accident became the inventor of metal plate printing. He was a niello engraver, and was in the habit of, says Vasari, taking sulphur impressions from his engravings, and printing with them on damp paper to see the effect of the design, when he discovered that though engraved he could take the same impressions from the metal itself. There is in the library at Paris a print representing the coronation of the Virgin, with the date 1452, or 1450 according to Gaye, from a silver *Pax* by Maso Finiquerra, still

preserved in the collection of the grand duke of Tuscany. This is supposed to be the oldest metal plate print extant: there are wood block prints much older. Finiquerra was already dead in 1464.—(Lanzi, *Storia Pittorica*, &c.; Bartsch, *Peintre Graveur*; Gaye, *Carteggio Inedito d'Artista*.) [R.N.W.]

FINKE, THOS., a Danish mathematic., 1561–1656.

FINLAY, JOHN, a Scotch poet, was born at Glasgow in 1782. He wrote the 'Life of Cervantes,' 'Wallace of Ellerslie,' &c., d. 1810.

FINLEY, ROBERT, D.D., president of Franklin College, Athens, Georgia, was a native of Princeton, and graduated at that college in 1787. In 1795, he was appointed pastor of Baskingridge, New Jersey, where he remained for several years. He became much interested in the welfare of the free negroes, and formed a plan for sending them to Africa. Died in 1817, aged 45.

FINLEY, SAMUEL, D.D., president of New Jersey College, was born in Ireland in 1715. Having emigrated to America in 1734, he studied for some years in Philadelphia, and was ordained at New Brunswick in 1740. In 1744 he was chosen pastor of Nottingham, Maryland, where he established an academy. Died in Philadelphia in 1766, aged 50.

FISCHER, J. E., a Germ. historian, 1697–1771.

FISCHER, J. F. a Germ. philologist, 1726–99.

FISCHER, THOMAS DE, a Russian botanist; died 1854, aged 73.

FISH, SIMON, a lawyer, was born in Kent. Having joined in the performance of a play got up for the purpose of ridiculing Cardinal Wolsey, he was compelled to leave England, and in his absence wrote a satirical work upon the Catholic clergy, under the title of 'The Supplication of the Beggars.' Died in 1531.

FISHER, EDW., an English Calvinist, 17th cent.

FISHER, JOHN, bishop of Rochester, distinguished for his opposition to the reformation under Henry VIII. and beheaded 1835.

FISHER, JOHN, bishop of Salisbury, tutor of the duke of Kent and Princess Charlotte, 1748–1825.

FISHER, PAYNE, an English poet and herald, poet-laureate under Cromwell, died 1693.

FISHER, ALEXANDER M., professor of mathematics in Yale College, born in Franklin, Mass., in 1794. Having graduated at Yale College in 1813, he studied theology at Andover, and in 1817 was chosen professor of mathematics. Having undertaken a

voyage to England, he was drowned on the coast of Ireland in 1822, aged 28. He was a distinguished mathematical scholar.

FISHER, MYERS, an eminent lawyer of Philadelphia, died March 12, 1819, aged 71.

FISHER, TH., a periodical writer, 1772–1836.

FISH, PLINY, a missionary, born at Shelbourne, Mass., 1792, was graduated at Middlebury College in 1814. In 1819 he sailed for Palestine in company with Mr. Parsons, where he studied the eastern languages. Having travelled through several parts of the east, he settled in Beyroot, and d. 1825, aged 33.

FISK, WILBUR, president of the Wesleyan University at Middletown, Connecticut, and author of 'Travels in Europe;' born 1793, died 1839.

FISKE, NATHAN, D.D., minister of Brookfield, Mass., born in Weston, 1733. Having graduated at Harvard College in 1754, he was ordained May 28, 1758. After a ministry of more than forty years, he died much regretted, November 1799, at the age of 66.

FISKE, JOHN, minister of Wenham and Chelmsford, Mass., was a native of England, graduated at Cambridge University, and emigrated to America in 1637. He was chosen minister of Wenham in 1644, where he remained for twelve years, when he became pastor of Chelmsford. He also practised physic successfully. Died January 14, 1677.

FITCH, JAMES, first minister of Saybrook and of Norwich, Conn., was born in Essex, England, December 22, 1622, and emigrated to America in 1638. In 1646 he was ordained pastor of Saybrook, and in 1660 was chosen minister of Norwich. He studied the Mohegan language and preached the gospel to the Indians. He was a distinguished divine. Died November 18, 1702, aged 79.

FITCH, JABEZ, minister of Portsmouth, New Hampshire, was the son of Rev. James Fitch, minister of Saybrook, Conn., was born at Norwich in 1672. After graduating at Harvard College in 1694, he was ordained at Ipswich in 1703. In 1725 he was chosen minister at Portsmouth, where he continued until his death in 1746, in his 74th year.

FITCH, JOHN, a clever, but very unsuccessful, inventor, was born at Windsor, Conn., in 1743. Having attended school for a few years, he was bound apprentice to a clock-maker, and in 1769 he carried on the trade of a silversmith in Trenton, New Jersey. Here he was plundered of his property by the British, and then joined the American army as lieutenant of a volunteer regiment. Afterwards moved to Kentucky, became the purchaser of a large tract of land, but was unfortunately taken prisoner by the Indians, and detained for some years. In 1782, having regained his liberty, he returned to the East, and earned a livelihood by arranging maps of the Western country, a region then little known. In 1787 he tried the experiment of applying steam-power to river boats, but the want of funds and other obstacles combined, obliged him to desist. Died 1798.

FITZ-GEFFREY, C., a div. and poet, 1575–1636.

FITZGERALD, EDW., Lord, son of the duke of Leinster, a political partisan and rebel of Ireland, born 1763, shot in the struggle for his arrest 1798. His wife, LADY EDWARD FITZGERALD, commonly called PAMELA, was supposed to be the daughter of Madame de Genlis, by Philip Egalite father of the late king of the French, with whom she was educated at the Palais Royal. She died in indigent circumstances at Paris, 1831.

**FLAHERTY, R. O'**, an Irish histor., 1630-1718.

**FLAMINIO, GIOV. ANT.**, an Italian teacher of the *Belles Lettres*, 1464-1536. His son, **MARC ANTONIO**, a Latin poet, 1498-1550.

**FLAMINIUS, NEPOS**, Roman consul, 222 B.C.

**FLAMINIUS, TITUS**, Roman consul, 197 B.C.

**FLAMSTEED, JOHN**, born at Denby, near Derby, August 19, 1646, died in 1719. A most laborious and admirable observer, the founder of practical Astronomy in England: he was the first Astronomer Royal. Previous to his public appointment, Flamsteed had shown great zeal and talent; but his re-

cessor, Tycho Brahe, the instruments as well as the work were mainly his own; drawn, however, out of the scanty funds of a poor clergyman instead of the coffers of a noble: nor was the illustrious Dane ever more conscientious, or more laborious; few have excelled him in sagacity, or that theoretic faculty which is one pillar of strength to every first-class observer—the power to know what to observe—to make all work available for some permanent and important purpose. The *Historia Celestis Britannica* contains our first trustworthy catalogue of the fixed stars—the first at least which is available for modern objects; and the mass of lunar observations made by Flamsteed, furnished Newton the means of carrying out and verifying his immortal discovery of Gravitation. The life of Flamsteed contains only one thing, which in one who contemplates it can give rise to pain. The revelations lately made by Mr. Baily, place beyond doubt the fact of the very unworthy treatment of this excellent observer by Newton and Halley. They outraged his feelings and sported with his rights; nor can the nature of the aim before them be at all accepted as their apology. [J.P.N.]

**FLATMAN, TH.**, an English poet, 1633-1688.

**FLAVEL, J.**, an Eng. Calvinistic divine, d. 1691.

**FLAVIEN**, patriarch of Antioch, 381-404.

**FLAVIEN**, patriarch of Constantinople, 447-449.

**FLAVIUS, CAIUS**, a Roman ædile, 305 B.C.

[John Flaxman.]

**FLAXMAN, JOHN**. This celebrated English sculptor, was born at York, 6th July, 1755, but he settled early in London with his father, who sold plaster casts, &c. The occupation of the father gave Flaxman many opportunities which he might otherwise not have had, and as early as his twelfth year he gained the silver pallet of the Society of Arts for a model. Among his earlier efforts were the various designs which he made for Wedgwood, which had a great share in elevating the general taste of the country, and which now promise a second time to exercise a beneficial influence upon it. In 1782, Flaxman married, and in 1787 took his wife with him to Italy, where he remained at Rome for seven years. During this time he executed his admirable designs in outline from Homer, Æschylus, and Dante, and his great group in marble, for Lord Bristol, of 'The Fury of Athamas;' and 'Cephalus and Aurora' for Mr. Hope.—He returned to London in 1794, where his first work was the monument to Lord Mansfield in Westminster Abbey; this was followed by several others there and in St. Paul's, as that to Lord Nelson, the figure of Sir Joshua Reynolds, and

[Observatory of John Flamsteed.]

pute rests on the work he achieved after the establishment of the Observatory. Like his great prede-

others. He executed also many private monuments, of which that to the family of Sir Francis Baring in Micheldever church is one of the most celebrated. He produced also some works of a more purely poetic character, as the colossal group of Satan and the archangel Michael for Lord Egremont, the original model of which, with a great number of others, is now placed in a permanent gallery beneath the dome of University College, London, the munificent gift of Miss Denman, the sculptor's sister-in-law. The 'Shield of Achilles,' modelled for Messrs. Rundell & Bridge, is a remarkable work of another class, and completing the whole category of art to which sculpture is applicable:—showing Flaxman working for the social refinement of the potter and the silversmith, for national glory, and domestic piety and affection, for the classic taste of the scholar, and the exquisite sentiment of the poet; in all skilful and great. He was elected an academician in 1800, and professor of sculpture in 1810: he died 7th December, 1826, in his seventy-second year. His 'Lectures on Sculpture' are published in one volume, octavo, with fifty-two plates, second edition, Bohn, 1838; they are—1. *English Sculpture*; 2. *Egyptian Sculpture*; 3. *Grecian Sculpture*; 4. *Science*; 5. *Beauty*; 6. *Composition*; 7. *Style*; 8. *Drapery*; 9. *Ancient Art*; and 10. *Modern Art*. These lectures, though his remarks on ancient art want the exactness and precision of modern scholarship, are compositions of great interest, and much practical instruction. [R.N.W.]

FLECHIER, ESPRIT, one of the most celebrated orators of the French church, born 1632, d. shortly after his promotion to the see of Nismes, 1710; author of a 'History of Theodosius the Great.'

FLEMING, CAL., a Socinian minis., 1698-1779.

FLEMING, CL., a constable of Sweden, d. 1597.

FLEMING, PATRICK, a Roman Catholic divine, born 1599.

FLEMING, ROBERT, son of a Scottish divine of the same name, who lived 1630-1694, is the author of a remarkable 'Discourse on the Rise and Fall of the Papacy,' the predictions of which have received a singular fulfilment. In this sermon, published 1701, Fleming ventures his opinion that the French monarchy would be humbled in 1794, that the period of the fifth vial extended from 1794 to 1848, and that in the last mentioned year the papacy would receive its most signal blow, and that it would be followed by the destruction of the Turk.—'An Attempt to Prove the Calculations of Fleming Incorrect,' was published soon after the recent flight of the pope, the writer arguing that the papacy had then irretrievably fallen, while Fleming had expressly stated that it would continue longer! The date of Fleming's birth is unknown, but he died in 1716.

FLEMING, ROBERT, son of the preceding, was a member of the Universities of Leyden and Utrecht, and became pastor of the Scotch church at Lothbury, London. Died 1716.

FLEMMING, HEINO H., Count De, a Prussian field-marshal and gov. of Berlin, 1632-1706.

FLEMMING, or FLEMMYNGE, RICHARD, an English prelate, founder of Lincoln college, d. 1430.

FLETCHER, A., a Scotch political writer, son of Sir R. Fletcher, of Saltoun, 1653-1716.

FLETCHER, JAMES, an historical writer, 1811-1832.

FLETCHER, JOHN, and FRANCIS BEAUMONT, formed one of those partnerships which, though rare in all sections of literature except the drama, have in it been very common, both in England and elsewhere.—Beaumont, the younger son of a judge, was born at his father's seat of Gracedieu, in Leicestershire, about the year 1585. By him poetry seems to have been prosecuted for its own sake. Fletcher, whose father died bishop of London, had been born in 1579 at Rye, where his father was then clergyman; and, left an orphan and penniless when he was a mere youth, he had to fight his way for himself, and earned his bread by writing. Both of the poets were academically educated, Beaumont at Oxford, Fletcher at Cambridge. Sir John Beaumont, author of the poem of 'Bosworth Field,' was the elder brother of the one; the religious poets, Giles and Phineas Fletcher, were cousins of the other.—About the beginning of the seventeenth century, the drama was by far the most flourishing department in the literature which then adorned England. All the poetical minds of the nation turned to play-writing; not a few men of genius, who are now remembered only for their works of other kinds, Drayton and Daniel being instances, owed their contemporary fame in a great degree to their plays; and several, such as Ford, whom we know only as dramatists, would probably have gained higher success had they cultivated other walks of poetry.—The names of Beaumont and Fletcher appear together for the first time in 1607, when the latter was in his twenty-eighth year, and the former in his twenty-second. Beaumont had already published some miscellaneous poems: Fletcher's previous training in authorship cannot be traced. The English drama, which soon after 1590 had risen to its greatest glory under Shakspeare, was now not far from the end of its brightest period. The labors of its most illustrious master were about to close; and most of those which were afterwards performed by Ben Jonson were fallings off from the vigor of his prime. The two new poets stood, both in time and in spirit, between the era which was made glorious by Shakspeare, and that which terminated, in the middle of the century, the history of the Old English Drama.—The two are said to have lived in the same house in London till 1613, when Beaumont married. They continued to write, sometimes separately but oftener together, till 1616, when Beaumont died, in his thirty-first year or earlier. Fletcher survived him for nine years, writing actively the whole time; and he died in London, of the plague, in 1625. Fifty-three plays are included in the collection of works which we possess as the fruits of those nineteen years. The beautiful pastoral of 'The Faithful Shepherdess' is known to have been Fletcher's; and seventeen other plays of the series were written after Beaumont's death; other writers, however, such as Massinger and Middleton, having perhaps assisted Fletcher in some of them. As to no one of the other thirty-five plays can we assert at all positively, that it was written by Beaumont alone, by Fletcher alone, or by both together. We possess no authentic information in regard to the circumstances in which any of these were produced; nor can we trace anywhere internal dissimilarities, sufficient to prove even plausible conjectures as to the

several shares of the two dramatists. We discover, it is true, in the later works of Fletcher, evidence both of careless taste and of increasing moral depravation; but the ethical faults had begun to show themselves in the very earliest pieces of the joint series.—In virtue of the works thus uncertainly apportioned, Beaumont and Fletcher are acknowledged, all but universally, to stand, among our old dramatists, second to none but Shakspeare. If their title to this honor is at all disputed, it can be in favor of Ben Jonson only. Their dramas are more truly and finely poetical than any others which their brilliant age produced, except only the noblest masterpiece of the great master; in the pathetic and romantic they often vie with almost every thing that even he imagined; and they abound in scattered passages of the most beautiful and touching poetry. They wanted, however, not only Shakspeare's unrivalled success in conceiving a drama as a whole, but also such skill and care in construction as that which is so admirable in Jonson. Those who would easily apprehend both the strength and the weakness of these exquisite poets, may learn both from a very few of the dramas which belong to the earliest years of their career. Such are Fletcher's pastoral already named; the romantically beautiful play of 'Philaster;' the harrowing but deeply moving 'Maid's Tragedy;' the spirited though repulsive 'King and No King;' and the lively burlesque, 'The Knight of the Burning Pestle,' which parodies at once the chivalrous romances, and the popular plays founded on them by Heywood and others. More poetical, perhaps, than any of these, is 'The two noble Kinsmen,' the authorship of which is the most desperate of the unsolved riddles arising out of these works: Fletcher is allowed to have written part of it, and many are convinced that Shakspeare wrote the rest. Among the later plays, belonging to Fletcher alone, were several Comedies of Intrigue, which, partly by reason of their theatrical liveliness, partly, no doubt, because of their moral grossness, were the greatest favorites on the corrupt stage after the Restoration. One of these, 'Rule a Wife, and Have a Wife,' still keeps its place with a few necessary mutilations. [W.S.]

FLETCHER, RICHARD, bishop of London, and father of the celebrated dramatic writer, died 1596. PHINEAS, son of Giles the elder, author of an allegorical poem, &c., d. 1650.

FLETCHER, GILES, a poet, was born in Kent, and completed his education at Cambridge. In 1588, he was appointed ambassador to Russia, and on his return published an account of that country. He died 1610.

FLETCHER, GILES, son of the preceding, was born at Alderton, Suffolk, in 1588. He wrote a poem, entitled 'Christ's Victory and Triumph in Heaven and Earth, over and after Death.' Died 1623.

FLEURANGES, R. DE LAMARK, Lord of, a Fr. marshal, dist. in the Italian wars, 1490–1557.

FLEUREAU, BASIL, a French historian, 1620–1680.

FLEURIEU, C. P., CLARET, Count De, a French officer and hydrographer, minister of marine under Louis XVI., and distinguished as the inventor of the sea chronometer, 1738–1810.

FLEURY, A. H. DE, a French cardinal, 1653–1743.

FLEURY, CL., a French historian, author of an 'Ecclesiastical History,' in 20 volumes 4to, 'Manners of the Israelites,' &c., 1640–1723.

FLEURY, W. F., Joly De, attorney-general to the parliament of Paris, distinguished for his collections of the parliament registers, &c., 1675–1756.

FLINDERS, MATTHEW, was born at Donington in Lincolnshire, about the year 1760. He was early sent to sea in the merchant service, but joined the royal navy afterwards, and in 1795 went to New Holland as midshipman in the same vessel in which George Bass was surgeon. His adventurous voyages with Bass have been noticed already. On returning to England he was promoted; and in 1801, as captain of the Investigator, 334 tons, sailed from England with a crew of 88 men, circumnavigated New Holland, and made accurate surveys in almost every part, contributing more than any other discoverer to our knowledge of this and the adjoining islands. He was accompanied by Mr. Robert Brown, one of the most distinguished naturalists of modern times, an astronomer, two painters, and a miner. His own ship being condemned, he left for England as passenger in a store ship, the Porpoise, and was wrecked on the N.E. coast, August 17, 1803. The Bridgewater, Capt. Palmer, and Cato of London, were in company; the latter also struck on the reef; but the former got over safely, and her captain pursued his course without rendering any assistance to the other ships' companies. Flinders, by his admirable arrangements, got the men landed upon a sandbank, a little raised above high tide. On the 26th, he left for Port Jackson, a distance of 750 miles, in a small open boat; reached in safety September 6th; and returned October 7th to the rescue of the crews, with a schooner of 29 tons, which was in very bad condition, but the only vessel he could procure. Two other vessels came with him, one for China, the other to return to Port Jackson. A part of the men sailed for England with Flinders in the small vessel, which reached Mauritius in safety, but was so ill conditioned as to be able to proceed no farther. Here the French authorities seized him, and detained him for six years, treating him with cruel severity. His health was so much undermined when he reached England in 1810, that he only survived four years; having succeeded, however, in completing an account of his voyages, in 2 vols. with maps. He died July, 1814, on the same day on which his work made its appearance. During his captivity, a French expedition, under Baudin, with whom he had before fallen in, had been sent out to survey the coast of New Holland, and it was generally believed that Flinders was kept a prisoner in order to enable Baudin to publish before him. This at least he did, and re-named all the points before named by Flinders and others—preceding observers were ignored, and the whole put forth as of Baudin's finding, though he discovered only about 50 leagues instead of nearly 1,000;—an instance of dishonest meanness happily of rare occurrence in any nation. [J.B.]

FLINT, HENRY, graduated at Harvard college, where he obtained the degree of bachelor of arts in 1693. He became a fellow of the college in 1700, and was appointed tutor in 1705. He was a distinguished preacher. Died Feb., 1760, aged 84.

FLINT, TIMOTHY, a preacher at Luneberg, Massachusetts, was also a missionary in Mississippi; was born at Reading, Pennsylvania, in 1779, and graduated at Harvard college, in 1800. He was an author of some reputation. He wrote 'History and Geography of Mississippi Valley,' 'Recollections of the Mississippi,' &c. Died 1839, aged 60.

FLIPART, J. J., a French engraver, 1723–1782.

FLODOARD, a French annalist, 894–966.

FLOGEL, C. FRED., a German au., 1729–88.

FLOOD, HY., an Irish orator, died 1791.

FLOOD, WILLIAM, a general in the American army, was born on Long Island in 1734. In 1774, he

was sent as delegate to Congress, and again in 1778. He was also a member of the State Legislature at different times. Died in Oneida county, Aug. 4, 1821, aged 86. He was one of the signers of the declaration of independence.

FLOWER, BENJ., an Engl. politician, d. 1829.

FLOYER, SIR J., an English medical writer, au. of 'The Touchstone of Medicines,' 1649-1734.

FLUDD, ROBERT, an English physician and Rosicrucian philosopher, was the son of Sir Thomas Fludd, treasurer of war to Queen Elizabeth in France and the Low Countries, and lived 1574-1637. It is usual with biographers to style his works a farrago of nonsense, without considering that natural philosophy, as cultivated at the present day, had no existence in his time. Kepler and Gassendi, however, thought it worth while to write against him, and, what is curious, the former condemns the 'chemists, Hermetics, and Paracelsites,' in one breath, complaining that they speak in enigmas, and receive for philosophy the fables of poets, while it is the endeavor of the *mathematician* to bring things to light. It is amusing to read in Fludd's 'Monochordium Mundi Symphoniacum,' or reply to Kepler, how he turns the tables by proving that mathematics themselves come from the soul, and are concealed under fables with all the wisdom of antiquity. Fludd was a genuine brother of the Rosy Cross, and a man of enthusiastic piety. The principle of his system is the recognition of two worlds in the universe, and the comprehension of all things in a grand harmony like that of the soul in the body. His works indeed are not likely to be read with patience by the scientific inquirers of the present day, but they will always be interesting as a study in the history of speculative philosophy. It is to be noted also that the Theosophists kept alive the spirit of free inquiry when the church and the metaphysical schools were alike intolerant of it.

FOLEY, SIR THOMAS, an English vice-admiral, distinguished at Cape St. Vincent, the battle of the Nile (where he led the British fleet into action), at Copenhagen, and late commander-in-chief at Portsmouth, 1757-1833.

FOLGER, PETER, a native of England, born in 1618, emigrated to America, and settled in Martha's Vineyard in 1635, and in 1662 changed his residence to Nantucket. He devoted his time to teaching.—His daughter was the mother of Benjamin Franklin. The date of his death is unknown.

FOLIGNO, F. FREZZI DU, an It. poet, d. 1416.

FOLKES, MARTIN, an English antiquary and philosopher, born 1690, successor of Sir Hans Sloane as president of the Royal Society 1741, vice-president of the Society of Antiquaries 1750, contributor to the Philosophical Transactions, and author of numismatic tables, died 1754.

FOLLEN, CHARLES, professor of the German language and literature at Harvard college, was born in Hesse Darmstadt in 1796. Suspected to be accessory to the murder of Kotzebue by Sand, he was compelled to leave his native country. He settled at Basle in Switzerland, and was appointed professor of civil law, but was soon obliged to seek another refuge. He accordingly fled to America. In 1830, he got the appointment of professor at Cambridge, and afterward qualified himself for the ministry. Some of his productions have been published by his widow. He lost his life on board the ill-fated steamboat Lexington, when burned in Long Island Sound, in 1840.

FOLLETT, SIR WILLIAM WEBB, an eminent lawyer, was born at Thopsam, near Exeter, on 2d December, 1798. He exhibited an early feebleness of constitution so extreme, that it is said his friends could hardly anticipate the feasibility of his achieving eminence in any pursuit. As he grew up, however, he showed how vigorously the intellectual capacities may rise and flourish in association with physical weakness. He studied at Trinity College, Cambridge, where he took the degree of M.A. in 1821. In the same year he commenced practice as a special pleader, and he was called to the bar in 1824, attaching himself to the western circuit. Severe attacks of illness rendered necessary a careful economy of his strength, and a nice adjustment of the sedentary and active employments of the profession. His innate capacity, however, and careful husbanding of his resources, led him by gradual and sure steps to professional leadership. He attached himself to the Conservative party, as represented by Sir Robert Peel, and entered parliament as a member

for Exeter in 1835. He seldom spoke except in matters in which he was carefully prepared; and it has been rare for a practising lawyer so readily to obtain the ear of the House. When Sir Robert Peel took office in 1841, he became solicitor-general, and in 1844 he succeeded Sir Frederick Pollock as attorney-general. The consumptive symptoms, to which he had long been liable, alarmingly increasing, he died on 28th June, 1845. [J.H.B.]

FOLSOM, NATHANIEL, a general of the militia of America, was a member of the first Congress in 1774. He distinguished himself at the taking of Dieskau, during the French war of 1755. Died in New Hampshire, 1790.

FONBLANQUE, JOHN, an eminent lawyer and advocate of the Whigs, author of a 'Treatise on Equity,' originally published in 1793, 1759-1837.

FONSECA, ANT. DE, a Port. theol., 1517-88.

FONSECA, ELEANORA, Marchioness De, a lady of Naples, distinguished for her beauty and rare mental endowments, born 1768, executed for having espoused the republican cause, 1799.

FONSECA, J. R. DE, a Sp. prelate, 1452-1530.

FONSECA, PETER DE, a Portuguese Jesuit, professor of philosophy at Coimbra, and afterwards professor of theology at Evora, au. of 'Com. upon the Metaphysics of Aristotle,' &c., 1528-1599.

FONTAINE, C., a French poet, 1515-1589.

FONTAINE, JEAN DE LA, one of the classics of French literature, was born in 1621, at Chateau-Thierry in Champagne, where his father was superintendent of the royal forest. His characteristic indolence showed itself from childhood; and his education was very imperfect. He was about twenty-two years old when his literary ambition was awakened by the odes of Malherbe, from whose seriousness and dignity, however, he was soon diverted by the more congenial writings of such men as Rabelais. Succeeding to his father's office, he married, neglected his wife and child, and allowed his property to waste away before his eyes. One of Cardinal Mazarin's nieces, being banished to Chateau-Thierry, admired his verses, and carried him to Paris; and there, speedily welcomed into the best literary and aristocratic circles, he spent the last thirty-five years of his life. The first volume of his 'Contes' appeared in 1664; a second was added in 1671. These tales, though full of the fine touches of his genius, are grossly and unpardonably indecent. The twelve books of his 'Fables' were published in equal halves in 1668 and 1678. It is through them that La Fontaine is universally known. With no originality of invention, very little depth of reflection, and a total incapacity of consecutive thinking, he is yet one of the most interesting and attractive of writers. He is an inimitable teller of small stories. His short flights of fancy, his minute strokes of observation, his transitions from brief moods of pathetic seriousness to flashes of the gayest wit, are all set off by a diction the most gracefully and delicately refined, and breaking out incessantly into felicitous turns of novel expression.—La Fontaine's personal character made him at once the pet and the laughing-stock of his friends and patrons. To him might be applied, with little injustice, the epithet wrongly thrown on Goldsmith, of 'an inspired idiot.' He was not only absent in mind, indolent to excess, and ignorant alike of the world and of the most ordinary business: he displayed a want of interest in important things, and a dreamy absorption in trifles, which are hardly to be understood or excused, unless they are accepted as tokens of strange intellectual weakness. Even from literature,

the only thing of which he had any knowledge, he caught no ideas but such as lay within his own narrow sphere. Reading Plato in translations, and hearing passages of the philosopher read by Racine, he admired him enthusiastically as the most amusing of all writers; and once, while dozing in the midst of an animated theological discussion, he awoke up to ask the company whether they thought Saint Augustine had as much wit as Rabelais. After it had become clear that he was unfit to take charge of himself or his affairs, he was received as an inmate, and treated like an indulged child, in the house of Madame De La Sablière, a lady of rank. His patroness spoke of her three animals, the dog, the cat, and La Fontaine. After this lady's death another friend cared for him in a similar fashion. In 1692, during a dangerous illness, his confessor prevailed on him to make a public declaration of repentance for having published the 'Contes;' and he was also induced, though not till after long resistance, to burn a comedy which he had written, and as to which we do not know whether it was or was not morally bad. After this his chief literary employment was the versifying of the Latin hymns of the church. He died in 1695. [W.S.]

FONTAINE, N., a French historian, 1625-1709.

FONTAINE, LOUIS, a French architect, died 1853, aged 90.

FONTENELLE, BERNARD LE BOIVIER DE, a distinguished literary *savant* and mathematician, called by Voltaire the most universal genius of of the age of Louis XIV., was born at Rouen, 1657, and died in 1757, on the eve of completing his centenary. He is best known in this country by his 'Conversations on a Plurality of Worlds,' and his 'Dialogues of the

Dead;' while in France, his 'History of the Academy of Science' is regarded as a masterpiece. His works form 5 vols. in 8vo., published 1825. The mother of Fontenelle was sister of the celebrated Corneille.

FONTENU, L. F. DE, a French archæologist, au. of memoirs on pneumismatics, &c., 1667-1759.

FONTI, B., an Italian philologist, 1445-1513.

FOOT, JESSE, an English surgeon, author of the 'Life of John Hunter,' &c., 1744-1827.

FOOTE, SIR E. J., a naval officer, 1767-1833.

[Hay Market Theatre.]

FOOTE, SAMUEL, born about 1721 at Truro in Cornwall of an ancient family, was educated at Worcester College, Oxford. His father was member for Tiverton, Devonshire; his mother heiress of the Dinely and Goodere families. Young Foote was designed for the law, and had chambers in the Temple, but soon relinquished the study; married, entered fashionable life, and lost his fortune by gambling. Driven by necessity to the stage, he ventured upon the characters of 'Othello' and 'Fondlewife,' in the latter gaining some reputation. In 1747 he became manager of the Haymarket theatre, performing there the joint part of actor and author. The first piece he produced was called 'Divisions of the Morning,' and exhibited well-known characters in real life, of whose peculiarities he proved himself to be an admirable mimic. Notwithstanding legal objections to this kind of stage caricature, Foote contrived to continue his performances for many years, and even obtained, through the duke of York, a patent of the theatre for life, running from the 15th May to the 15th September in every year. On a party of pleasure with the duke and his friends he had previously the misfortune to break his leg, an accident which necessitated its amputation. On the decline of his health, he disposed of his patent to Mr. Colman, on the understanding that he was to receive £1,600 per annum, and a stipulated sum whenever he chose to perform. A paralytic stroke prevented him from availing himself of this privilege more than two or three times. He afterwards resided at Brighton, and died at Dover, with an attack of palsy, 21st of October, 1777. He wrote, besides his various mimetic entertainments, twenty dramas of small literary merit, but full of vivid sketches of character. His style he seems to have borrowed from Molière; but his humor was undoubtedly original, and indeed peculiar. [J.A.H.]

FOPPA, W., an Italian painter, died 1492.

FOPPINS, JOHN FRANCIS, a Flemish critic and divine. He was the author of several works, and compiled the 'Bibliotheca Belgica.' He was professor of divinity at Louvain, and canon of Molines. Born in 1689; died 1761.

FORBES, EDWARD, an English naturalist, professor of Natural History in the University of Edinburgh, died 1854, at the age of 39.

FORCELLINI, ÆGIDIO, an Italian lexicographer, the pupil and fellow-laborer of Facciolati in the great Latin dictionary, 1688-1768.

FORD, JOHN, one of the best of our old English dramatists, was a contemporary of Beaumont and Fletcher, having been born in 1586. He was the second son of a country gentleman in Devonshire, and became nominally a barrister. In regard to the details of his life hardly any thing certain has been discovered; and as to the date of his death it is only conjectured that it did not happen before 1640. Ford is an exquisite master of rhythmic melody, and abounds in touches of sweet description. While, likewise, he has an insatiable fondness for representing incidents profoundly terrible, his success in the filling up, lies, not in the strength which was required for fitly embodying such scenes, but in a melancholy and wailing pathos, in which he is more effective than any other play-writer of his age. His genius, truly poetical, is lyric rather than dramatic. His earliest piece, acted in 1629, was the romantic play 'The Lover's Melancholy,' which contains his famous description of the nightingale. His manner, both of feeling and of expression, may be well gathered from that work and his 'Broken Heart;' and some of the most touching passages in our poetry may be read in his revolting play, 'Tis Pity She's a Whore.' [W.S.]

 FORTUNATUS, a French prelate, died 609.  
 FORWARD, WALTER, an American lawyer and statesman, was born in Connecticut, but subsequently removed to Pennsylvania, and studied and practised law there. He edited a democratic paper, the *Tree of Liberty*, in 1805. From a distinguished position at the bar, he was elected member of Congress, and identified himself with the whig party as a supporter of Adams in his contest for the presidency with Jackson. In 1837 he was a member of

the Pennsylvania Convention for the reform of the constitution of that State. President Harrison gave him the appointment of First Comptroller of the Treasury in 1841, which office he held until his election by Tyler to the secretaryship of that department. On General Taylor's accession he was appointed chargé d'affaires to the court of Denmark. On being elected by the people of Pennsylvania, president judge of the District Court of Alleghany county, he returned home and entered upon the duties of that office, which he continued to fulfill with distinguished ability and integrity, until his sudden death on the bench in 1842.

FOSS, P. TH. DU, a Fr. hist., 1634-98.

FOSTER, BENJAMIN, D.D., a minister of the first baptist church of New York, was born in Danvers, Massachusetts, June 12, 1750, graduated at Yale college, and was ordained minister of Leicester in 1776. In 1785 he was appointed minister of Newport, and in 1788, removed to New York. He was an eminent Greek and Hebrew scholar. He died of yellow fever contracted in the discharge of his duties, 1798, aged 48. He was the author of several controversial works, and of a dissertation on the Prophecies of Daniel.

FOSTER, H. an Eng. nav., 1797-1831.

FOSTER, JAMES, D.D., a minister of the independents, celebrated for his eloquence and popularity as a preacher, and for his theological and religious writings, especially his 'Defence of Revelation' in answer to Tindal, 1697-1753.

FOSTER, JEDEDIAH, justice of the Superior Court of Massachusetts, was born at Andover, 1726. After graduating at Harvard college in 1744, he settled in Brookfield, and in 1766 was appointed judge. Died Oct. 17, 1779, aged 53.

FOSTER, JOHN, a dis. classical scholar and churchman, author of an 'Essay on the Nature of Accents and Quantity,' 1731-1773.

FOSTER, JOHN, was born 17th September, 1770, in the parish of Halifax, England. His father, who rented a small farm, endeavored to add to his scanty means by employing the intervals of agricultural

labor in weaving. John was early trained to the same employment, and till the age of fourteen he was occupied in spinning wool to a thread by the hand wheel. At that period he entered into the regular service of a master manufacturer, but he always entertained a strong distaste to manual labor. An inveterate habit of mental abstraction led him constantly to live in an ideal world of his own; and as his weaving, in consequence of his mind being engrossed with a different train of thoughts, was too often executed in a slovenly and unworkman-like style, his employer was dissatisfied, and discharged him from the service. His friends, who knew the piety, the great intellectual endowments, and literary taste of the youth, urged him to direct his views towards the ministry. His parents, who were a very religious couple, and connected with a small baptist church at Wainsgate, had instructed him carefully in the fundamental principles of the gospel, as well as in the denominational peculiarities of their own sect, and he had, in accordance with his own ardent wish, been admitted a member of the baptist church at the age of seventeen. In resolving now to devote his life to ministerial work, he of course contemplated exercising his gifts within the pale of the baptist communion, and accordingly finished his course of preparatory study at the Baptist College, Bristol. During the whole of his college curriculum he exhibited the same mental qualities by which he was so much distinguished in after life—an irrepressible curiosity to examine every thing, great decision of character, an ambition of intellectual superiority, and a morbid desire to impart an air of novelty and freshness to old and familiar subjects, by striking out into original paths of illustration, or clothing them in the garb of an unwonted phraseology. He commenced his career as a preacher at Newcastle-upon-Tyne on 5th August, 1792, whence, after a brief engagement of three months, he went on invitation to undertake the pastorate of a baptist meeting in Swift's Alley, Dublin. In that place he continued to minister for three years, and at the expiry of that term he returned to England, being elected minister of the general baptist church of Chichester. But, unfortunately, his style of preaching, though powerful, and to an intellectual audience a great treat, was little fitted to make an impression on the popular mind. The congregation, small at first, gradually diminished under his superintendence, and at length became extinct. Through the kindly offices of his friend Mr. Hughes, secretary to the British and Foreign Bible Society, Foster was employed for a while on a local mission, and at length was intrusted with the board and education of twenty Africans who had been carried to England to be trained as future missionaries in preaching the gospel in their own benighted country. This engagement having terminated, Mr. Foster resumed his pastoral duties by settling in 1800 at Downend, a country village in the neighborhood of Bristol, where there was a small baptist community, and where he was introduced to Miss Maria Snooke, the 'friend' to whom he addressed his 'Essays,' and who at a subsequent period became his wife. At the end of five years he accepted an invitation from a congregation in Frome, Somersetshire, the members of which, though few, were for the most part educated persons, and prepared to appreciate the talented and philosophical discourses of Foster, although many of them through the influence of their former pastor, had become unfortunately tinged with Arian principles. It was during his ministry in this place that Foster pub-

lished his celebrated 'Essays,' and became the principal contributor to the *Eclectic Review*, the articles for which formed his staple or rather exclusive composition for thirteen years. A glandular affection of the neck, which increased to an enormous size, obliged him to discontinue his public labors in the pulpit. He thenceforth employed himself chiefly in preparing works for the press, the chief of which were his 'Discourse on Missions,' and his 'Essay on the Evils of Popular Ignorance.' Mr. Foster, having greatly improved in his health, acceded in 1822 to the pressing invitation of some friends to deliver a fortnightly lecture at Broadmeadow chapel, Bristol, and this office he performed till Mr. Hall's settlement in town led to its cessation. Mr. Foster was a man of rather extreme views both in civil and religious politics. But he was eminently a man of God, and died on the 14th October, 1839, in the peace and joy of believing. [R.J.]

FOSTER, MARK, a writer on trigonometry, 17th century.

FOSTER, MICHAEL, SIR, a distinguished lawyer, was born at Marlborough, in Wilts. On his appointment in 1745, as one of the justices of the King's Bench, he received the honor of knighthood. He published a 'Report of the Trials of the Rebels in 1746,' also a tract against Bishop Gibson's 'Codex' on church power.

FOUCHER, P., a French archæologist, author of 'Researches in the Persian Religion,' 1704-1778.

FOUCHIER, BERT., a Dutch painter, 1609-74.

FOUGEROUX DE BONDAROY, A. D., a Fr. archæologist and naturalist, 1732-1798.

FOULIS, R. and A., Scotch printers, celebrated for the beauty of their classics, died 1774 and 1776.

FOULON, J. F., one of the first victims of the French revolution; he was named minister of finance in place of Necker, 12th July, 1789, and having fled on the taking of the Bastille, he was captured and hung by the people a few days after.

FOUNTAIN, A., an English numismatist, died 1753.

FOUQUET, H. a French physician, 1727-1806.

FOUQUET, J. F., a Fr. missionary. 1690-1720.

FOUQUET, N., finance minister to Louis XIV., died after nineteen years' captivity, 1615-1680.

FOUQUIER-TINVILLE, ANT. QUENTIN, the public accuser of the revolutionary tribunal of Paris, remarkable for the atrocious cruelty with which he exercised the terrible power confided to him against all parties, born in Picardy, 1747, executed after the fall of Robespierre, 1794.

FOUQUIERS, J., a Flem. painter, 1580-1659.

FOURCROY, ANTOINE FRANÇOIS DE, born at Paris 1752, died 1809. The descendant of a once wealthy family, Fourcroy was the son of a poor apothecary, and after many vicissitudes was enabled to engage in the study of the medical profession under the auspices of the distinguished anatomist

Vic. d'Azyr. Under Bucquet he studied chemistry, and ultimately succeeded Macquer in the chair of chemistry at the Jardin du Roi, which he held for twenty-five years with increasing popularity. During the heat of the French revolution, Fourcroy possessed considerable power, which he exercised in promoting improvements in the systems of scientific education. He took an active part in the institution of the polytechnic and normal schools, the museum of natural history, the central schools, and in the re-establishment of the universities and colleges, which had been destroyed by the convention. His most celebrated work was his *System of Chemistry*, which at one time had a great reputation, and was translated into English. In most of his experiments he had associated with him his pupil Vauquelin, whom he had the merit of training and patronizing. He was twice married, and left a son and daughter; but he left no fortune, and his two sisters were afterwards supported by the faithful Vauquelin. [R.D.T.]

FOURCROY-DE-RAMECOURT, CHARLES RENE DE, a French officer and engineer, 1718–1791.

FOURIER, CHARLES, born at Besançon in 1772, died in Paris, 1837. In recent times a new order of political speculations has obtained a hearing, and been confessed important,—speculations affecting the fundamental principles on which modern societies are constructed. Struck by the evil inherent in the fact that the multitudes are mere ‘hewers of wood and drawers of water,’ ST. SIMON, ROBERT OWEN, and others, have sought for new organizations, and declared war against the principle of competition, or ‘selfishness,’ as the basis of a right social fabric. Of these remarkable inquirers, Charles Fourier is the most original and profound; practical by nature, and eminently sagacious, he took a more complete view of our human springs of action; and proposed a scheme that might be tried and corrected by experiments on a scale of sufficient moderation to carry no menace of revolution. We cannot describe here either the arrangements or the philosophy of the *Phalange*; but justice demands the avowal that Fourier’s theoretic views are not in conflict with our highest conceptions concerning the order of the Moral Universe. The Phalanx has been put partially to proof—chiefly in America. The experiment has never succeeded in the fullest sense; nevertheless, its projectors have read the lesson involved in the failure, and resolved to try again. The *Fourierists* were one of the schools in France, because of whose existence the cry of Socialism was recently raised, with the aim to overthrow the Republic; very unwarrantably in so far as they were concerned, for they neither desired nor threatened confusion. [J.P.N.]

FOURIER, J. B. G., a French mathematician and physician, distinguished for his scientific memoirs and historical preface, contributed to the famous ‘Description of Egypt,’ where he accompanied the expedition of Napoleon, 1768–1830.

FOURIER, P., a religious reformer, 1565–1640.

FOURNEL, J. F., a French jurist, 1745–1820.

FOWLE, DANIEL, a printer in Boston. In 1754, he was arrested and thrown into prison by order of the House of Representatives, on a charge of having printed a pamphlet exposing the conduct of some of its members. After a few days confinement, he was liberated. Having subsequently removed to Portsmouth, he became printer of the *New Hampshire Gazette* in 1756. Died in 1787, aged 72.

FOWLER, CHR., an Eng. puritan, 1611–1676.

FOWLER, EDW., bish. of Gloucester, 1632–1714.

FOWLER, JOHN, an English printer, died 1578.

FOWLER, TH., a medical author, 1736–1801.

FOX, CHARLES, an English artist, 1749–1809.

FOX, CHARLES JAMES, was born at No. 9, Conduit Street, London, on 24th January, 1749. He was the third son of the Right Honorable Henry Fox, created Lord Holland in 1763. Charles was a frank, lively, popular child, became a family oracle in his infancy, and was supremely indulged. He obtained the rudiments of his education at a prepar-

[Statue of Fox in Bloomsbury Square.]

atory school at Wandsworth, kept by a Frenchman, which he entered in 1756, passing to Eton two years afterwards. In 1763, when he was but fourteen years old, his father indulged him with a gay tour on the continent, which not only interrupted his education, but is said to have fostered the dissipated habits which stained his early career. On his return, he studied at Hertford College, Oxford. Again he travelled abroad; and on his return, in 1768, when not twenty years old, he found himself member of parliament for Medhurst. In 1770 he became a junior lord of the admiralty, under Lord North. He remained, with an interval of two years, in connection with the North ministry until 1773, when he was removed somewhat contemptuously, and the ground of his dismissal has been attributed to rash and presumptuous ministerial acts, committing his colleagues to a policy the reverse of what he himself afterwards held. Of course it was a political necessity that he should join the opposition, and in the prosecution of the measures leading to the American war, he found a ground of hostility congenial to the sentiments then ripening in his mind. Following out these principles he joined the Rockingham administration, but resigned when the death of its leader made way for Lord Shelburne. Lord North and he finding each other side by side in opposition, thought they might work together in office, and in 1783 that coalition was made which has given just occasion for so much censure; not because it was a coalition, but because instead of uniting together those who were near each other in sentiment by the bond of a common harmony of purpose, it was an attempt to unite those who were opposite by the tie of common hostility to the defeated party. Fox’s connection with the ministry, nominally under the duke of Portland, and the defeat of his India bill, suggested by the growing jealousy of the prerogative of the crown, with the triumph of Fox’s rival, young Pitt, are conspicuous and well-known historical events, which can only receive a passing reference. In the regency question he was evidently led by personal predilections to maintain that the office be-

longed to the heir apparent, and was not at the disposal of parliament. Since the commencement of the French revolution, we must date a great change in Fox's nature, arising from the serious reflections produced by events so momentous. He had been leading such a life of thoughtless dissipation as generally deadens the moral qualities as well as the intellectual perceptions. But he was one among the few who could preserve through such orgies 'the whiteness of his soul.' His mind was justly characterized by Grattan's reference to its 'careless grandeur,' and there never lived a statesman whose character is so free of sordid motives, narrow views, or paltry objects. His hearty rebuff of Napoleon's insinuation that his rival had countenanced assassina-tive plots, was characteristic of his candid, honest nature. It is strange that of one who was so much revered by his party and his personal friends, there should be no good biography, for the collection lately edited by Lord John Russell, though it passed through the competent hands both of Lord Holland and Mr. Allen, professes only to afford materials for a life of the great leader. The reason may, perhaps, be, because while we know Fox to have foreseen that the general good of the community, and not personal aggrandizement, or the triumph of a party, should be the object of a minister, yet his own place in history is that of the champion of a party rather than of a policy. In 1797 he formally seceded from parliamentary action, and lived a life of literary retirement, in which he wrote his historical fragment on the reign of James II. He returned to public life in 1801. In 1806 he formed the real leader of that Whig ministry nominally headed by Lord Grenville; but the ministerial career, of which so many high hopes were formed, was doomed to be brief, and he died on the 13th of September, 1806. [J.H.B.]

FOX, EDWARD, a diplomatist in the service of Cardinal Wolsey, made bp. of Hereford, d. 1536.

FOX, FRANCIS, an English divine, died 1738.

FOX, GEORGE, founder of the Society of Friends, first saw the light at Drayton, Leicestershire, in the year 1624. His father was a weaver, who bestowed the greatest pains to instruct his son in the principles of revealed truth, and to imbue his youthful mind with impressions of piety. Having entered the service of a grazier, young Fox was for several years employed in tending sheep, an occupation which both gratified his natural love of solitude and nursed his contemplative enthusiastic turn of mind. When sixteen years of age he conceived that he was honored with a special commission from heaven; and accordingly, in preparing for the work to which he was thus miraculously called, he abandoned business for five years, lived entirely in the woods on such wild plants and vegetables as he found there, but practising long and frequent fastings, with many other austerities; his days devoted to religious meditation and his nights passed in sleepless excitement. In 1648, Fox emerged from this wild and solitary life to enter on the active discharge of his mission. His first appearances were made in Manchester, where taking his station in the public streets, he attracted vast crowds of the people around him, and was several times imprisoned as a disturber of the public peace. Most of the large towns of England he visited to propagate his doctrines. Great patience, self-denial, and at the same time confidence in the truth of his principles, distinguished him,—for every where he was exposed to the rude and boisterous assaults of the populace; and in London he was arrested and carried into the presence of Cromwell, who, however, on due examina-

tion dismissed him, being fully satisfied of the harmless tendency of his principles and conduct. Nay, the Protector frequently interposed to rescue him from the county magistrates. In the course of his itinerant ministry through England, he was successful in gaining numbers of proselytes, particularly at Derby, where his followers first received the name of Quakers, from the tremulous tones in which they loved to speak, and from their calling on all to 'tremble at the name of the Lord.' After marrying the widow of Judge Fell, who had hospitably entertained him during his journey through Wales, Fox meditated a voyage of proselytizing in America and the West Indies. After two years' absence he returned to England, where he was subjected to renewed trials, was imprisoned, tried by jury, and condemned for refusing the oaths of supremacy and abjuration. His sentence was indefinite imprisonment. But after a year's confinement he was released by the unanimous decision of the King's Bench. On recovering his liberty he travelled through Holland and various parts of Europe, diffusing his principles, and at length worn out by a life of incessant toil and austerities, he returned to England to spend the remainder of his days in retirement. With all his peculiarities he was a pious man, well versed in the Scriptures, and had an extraordinary gift in prayer. He died in 1690. [R.J.]

FOX, HEN., the first Lord Holland, and father of the celebrated statesman, born 1705; member of parliament for Hendon, 1735; secretary at war, 1746–1756; raised to the peerage, 1763, d. 1774.

FOX, JOHN, author of the 'Martyrology,' was a native of Boston, Lincolnshire, where he was born 1517. Early distinguished by his classical acquirements, he was elected fellow of Magdalene College, and directed his studies for entering the church. But having evinced a predilection for the reformed opinions, he was, on a charge of heresy being preferred against him, expelled from the university, and deprived of his fellowship. His character for learning, however, procured him the patronage of several noble families, and amongst others the duchess of Richmond engaged him as tutor to the children of her brother, the earl of Surrey, then a state prisoner in the Tower. Edward VI. also befriended him, and restored him to his fellowship. On the accession of Mary, Fox, like a number of other reformers, sought an asylum on the continent, and after many wanderings he settled at Basle, as corrector of the press in an extensive printing office in that city. When Elizabeth ascended the throne, Fox hastened to return to his own country, and through the powerful influence of Cecil, who was his friend, he was appointed to a prebend in the cathedral of Salisbury, and might have obtained preferment, but for his conscientious scruples about some matters of ceremony. His celebrated 'Book of Martyrs' attests his hatred of popery, and his intense admiration of the principles of the reformation. He died in 1587, at the age of sixty-nine, leaving behind him a high reputation for piety and learning. [R.J.]

FOX, LUKE, an English navigator, 17th cent.

FOX, MURILLO, a Spanish *savant*, 16th cent.

FOX, RICHARD, a statesman and favorite of Henry VII., successively bishop of Exeter, Bath and Wells, Durham and Winchester, distinguished in the latter years of his life as a patron of learning, born about 1466, died 1528.

FOX, STEPHEN, a minister of state after the restoration, first projector of Chelsea Hospital as a home for retired soldiers, 1627–1716.

FOY, L. S. DE, a learned Fr. ecclesias., d. 1788.

FOY, MAXIMILIAN SEBASTIAN, a French statesman and soldier, one of the most celebrated orators of the opposition under the restoration; author of MSS. from which a 'History of the Peninsular War' has been compiled, 1775-1825.

FRA-BARTOLOMEO, an It. paint., 1469-1517.

FRACASTOR, J., an Ital. astronom., 1483-1553.

FRA-DIAVOLO, the pseudonym of Michael Pozzo, a leader of outlaws in Calabria, exec. 1806.

FRA-GIOVANNI, an Ital. painter, 1387-1455.

FRAMERY, NICH. STEPH., a French composer of the operas-comiques, and dram. writer, 1746-1810.

FRANC, M. L., a French poet, died 1460.

FRANCES, ST., fndr. of the Collatines, d. 1440.

FRANCESCA, P. DELLA, an Italian painter, the supposed teacher of Bramante, 1397-1484.

FRANCHI, J., an Italian sculptor, 1730-1806.

FRANCIA. FRANCESCO RAIBOLINI, commonly called FRANCIA, from the name of his master, was born at Bologna, about 1450. He was brought up a goldsmith, and did not take up painting until he was nearly forty years of age, but at this time he executed some important works. He carried on both professions, and made a species of parade of his accomplishments by signing himself *Aurifer*, jeweler, on his pictures, and *Pictor*, painter, on his jewelry. —Francia was a great painter, indeed a consummate master in the style of art prevailing in his own day; in that exact and rigid manner in which nature is scrupulously copied without any license of generalization: he is perhaps the highest representative in a technical view of the *quattrocento* school, that properly signified by the modern misnomer *preraphaelite*. Francia's large picture in the National Gallery is a capital example of this early style, the second or Florentine manner of Raphael himself, which Francia had some share in forming. He died at Bologna, 6th January, 1518. —(Vasari, *Vite dei Pittori*, &c.; Calvi, *Memorie della Vita de di Francescoa Raibolini*, &c. Bologna, 1812) [R.N.W.]

FRANCIA, DON GASPAR RODRIGUEZ DE, commonly called DR. FRANCIA, and known as the dictator of Paraguay, was born at Assomçion, in that province, 1757, and began his career as a barrister. —In 1810, when the Spanish provinces of the River Plate rebelled against the authority of the viceroy, Francia was already known for his inflexible honesty and rare talents, in a country where the judges themselves were openly corrupt, and the policy of the Spanish government had kept the people in the grossest barbarism and political ignorance. The Buenos Ayreans having erected a new central government (which only declared its absolute independence of the Spanish crown in 1816), made an attack on Paraguay, and the latter, repelling its invaders, proceeded to debate the question of allegiance to Spain in any form whatever. The influence of Francia prevailing, the province declared its absolute independence, and appointed him secretary of a triumvirate; from which post, by the year 1815, he had risen to the sole dictatorship, which he retained till his death in 1840. His marked policy in refusing all intercourse with his neighbors during this period, and the complication of circumstances in the River Plate, has given his name as much notoriety in Europe, as the heartless tyranny which he is accused of having exercised in domestic affairs. In regard to the former, it would be easy to show that his views were dictated by sound statesmanship; for by all evidence, down to the fall of Rosas, a more fickle and profligate class of people does not exist than those ambitious of dominion in the province of Buenos Ayres; and the dream of Francia's life, a

political and commercial treaty with England, as the preliminary of any intercourse with the neighboring states, was the only means of saving his people from the same anarchy. As to the latter of these charges, Sir Woodbine Parish, who accuses Francia of 'systematic selfishness,' and declares his belief that 'a more bloody and unscrupulous tyrant never existed,' himself writes:—'It had been supposed that when Francia died, Paraguay would have again joined the confederation of the provinces of the Rio de la Plata, but as yet (1852), that is not the case; and it would appear that there is a party not only ambitious of maintaining their independence, but, what is still more extraordinary, disposed to continue a system of isolation and tyranny little short of that established by Francia.' The fact is, with all their ignorance, the Paraguayans understand results, and there are circumstances in which mercy itself must seem cruel. Francia with his own head and hands preserved order in Paraguay for twenty-five years, in which period the neighboring state of Buenos Ayres had changed its government, amid scenes of turbulence and bloodshed, nearly forty times!

FRANCIS, PHILIP, a classical translator, tragedian, and political writer; rector of Barrow, and chaplain of Chelsea College, died 1773. His son SIR PHILIP FRANCIS, a political writer, distinguished by his opposition to Warren Hastings, and his Whig principles, also as one of the reputed authors of the Letters of Junius, 1740-1818.

FRANCIS, PHÆBUS, kg. of Navarre, 1479-83.

FRANCIS, ROMAIN, a Flem. architect, d. 1735.

**FRANCIS, SAINT.** The Roman Calendar contains five saints of this name.—1. **JEAN BERNARDON**, commonly called **FRANCIS OF ASSISE**, founder of the order of mendicant friars named after him, was born 1182, and relinquishing the commercial pursuits to which he was brought up, devoted himself to poverty and self-mortification, and to the preaching of the gospel.

[Franciscan Friar.]

His reputation for sanctity drew a great number of disciples around him, to whom he gave the first rules of their order in 1209, engaging them to vows of poverty and submission. Between this period and his death, which took place at Assise, in 1226, he founded many monasteries on the continent, and even travelled into Egypt to convert the Sultan Meleddin. In consequence of his habits of abstraction, he had several visions of spiritual symbols. He was canonized by Gregory IX. in 1230.—2. The next in order of time is an illiterate ascetic named **FRANCIS OF PAULO**, founder of the Minims, or lowest religious order, born in Calabria, 1416, died at the convent of Plessis-du-Parc, 1507. Little is related of him except his solitary life and abstinence, and if he rivalled Francis of Assise in austerity, he was certainly far below him in usefulness.—3. **FRANCIS OF BORGIA**, a Spanish nobleman and courtier of the reign of Charles V., turned to a religious life by the solemn circumstances attending the funeral of the Empress Isabella, after which he became a disciple of Ignatius Loyola, and was appointed by him to preach the gospel in Spain and Portugal, and finally succeeded him as chief of the Order. He is the author of many ascetic writings, and contributed much to the perfection of the organization of the Jesuits. Francis of Borgia died at Rome in 1572, and was canonized by Clement IX. 1671.—4. **FRANCIS OF SALES**, born of a noble family in the neighborhood of Geneva, 1567, and first distinguished by the reclamation of the protestants in the neighboring valleys. On the death of the bishop of Geneva, Francis of Sales succeeded him, and redoubled his zeal for the reform of the diocese and the monasteries. To further his benevolent designs, he instituted, in connection with Madam de Chantal, the Order of the Visitation at Annecy, in 1610. He died in 1622, after a life devoted to works of charity, and was canonized 1665. His religious works are highly esteemed, especially his 'Treatise on the Love of God,' and 'Introduction to a Devout Life.'—5. **FRANCIS XAVIER**, surnamed the 'Apostle of the Indies,' born at the castle of Xavier, in Navarre,

1506, began his mission at Goa 1542, and died in one of the Chinese islands, 1552. He was the intimate friend and disciple of Loyola, and was for some time professor of philosophy at the college of Beauvais. He was canonized 1622, and his 'Letters' published at Paris in 1631.—Each of these 'Saints' exhibit the spirit of enthusiasm in a different form, and the most pleasing to contemplate is that of Francis of Sales. In Francis of Assise it affected a species of insanity, and aimed at dominion. The friars of his order were at last a voluptuous and lazy body. In the disciples of Loyola there was more of the spirit of worldly wisdom, and the greatest of them, St. Francis Xavier, was characterized by extreme subtlety. [E.R.]

**FRANCISCO, HENRY**, a native of England, was present at the coronation of Queen Anne; was a soldier in the French and revolutionary wars in America: died in New York State in 1820, at the extraordinary age of 134.

**FRANCK, J. M.**, a German writer, 1717–1775.

**FRANCK, SIMON**, a Latin poet, 1741–1772.

**FRANCK, SOL.**, a German numismatist, 17th c.

**FRANCKE, J. C.**, a German jurist, 17th cent.

**FRANCKE, J. V.**, a Danish philos., d. 1830.

**FRANCKLIN, DR. THOMAS**, a classical translator and divine, author of the 'Earl of Warwick,' and other dramas, a 'Dissertation on Ancient Tragedy,' and some miscel. writings, 1721–1784.

**FRANCŒUR, F.**, a Fr. composer, 1698–1787.

**FRANCKS**, or **FRANKEN**, **FRANCIS**, father and son, both celeb. Dutch painters, died in 1616 and 1642.

**FRANCOIS DE NEUFCHATEAU, N. L.**, a Fr. statesman and man of letters, member of the directory in 1797, and for two years president of the senate under Napoleon, 1750–1828.

**FRANCOLIN, J. DE**, a French herald, 16th cent.

**FRANK, G.**, a German physician, 1643–1704.

His son, **G. F. FRANK**, a physician and au., d. 1732.

**FRANK, J. P.**, a German physician, author of 'Système de Police Medicale,' 1745–1821.

**FRANKE, A. H.**, a Ger. philanth., 1663–1727.

**FRANKLAND, TH.**, an Engl. hist., 1633–1690.

[B. Franklin.]

**FRANKLIN, BENJAMIN**, born in Boston, Massachusetts, 6th January, 1706; died on 17th April,

1790. The name of Dr. Franklin has long been a household word in America,—he was her moralist, statesman, and philosopher: his discoveries in Electricity have given him a permanent place in scientific history: and he deserves highest honor from all mankind, because of his services to the cause of rational Liberty and the independence of Nations.—We must omit all details concerning Franklin's early life: however, if any one would sustain hope amid unpromising labor—discern the inestimable value of small portions of time economized and put scrupulously to uses—or learn how cheerfulness, patience, and fortitude, guided by good sense and integrity, must ever command success,—he will find nowhere better instruction than in that graphic narrative of the events and struggles of his opening manhood, by which Franklin has let us into the innermost being of the journeyman printer of Philadelphia. Distinguished no less by practical benevolence, than by an almost intuitive appreciation of the wants and character of early American society, Franklin could not fail to rise into authority among his countrymen: accordingly we find him their favorite counsellor in most of the grave difficulties belonging to that epoch of American history. Commencing public life in the struggle between the assembly of Pennsylvania and the old proprietary Governors,—we again meet him proposing to the different States a project of union, which afterwards became the basis of the confederacy: then, on a mission to England regarding the American Stamp Act: afterwards—driven from his loyalty—Ambassador to France on the part of his countrymen; the observed of all observers in Paris, soliciting aid in arms from the court of Versailles: finally Minister to England, signing the treaty by which the mother country, in due humiliation, bowed her head before the independence of her former Colonies. It has been said that Franklin represented the practical genius, the moral and political spirit of the eighteenth century, as Voltaire represented its metaphysical and religious scepticism: this, at least, is certain,—no man saw more clearly, or felt more profoundly in his own person, the political and moral ideas which necessarily bear sway in a strictly industrial community like the one emerging from infancy in the New World. Unconnected with England by birth or close association, he looked only with astonishment on those pretensions to prerogative, which certainly could find no natural soil, where all men were socially equal: and his system of morals included every sanction and precept, likely to recommend themselves to a people, who could never reach prosperity unless through patient industry, and the exercise of the prudential virtues. His code was 'The Way to Wealth:' and the wisdom of 'Poor Richard,' instructed every man, how by the strength of his arm, and dominion over his passions, wealth might be attained and made secure. Since Franklin's time a new element has arisen in America; powerful tendencies are developing with higher aims than mere wealth, and which demand a larger code than the utilitarian. Franklin did not recognize, or rather had not foreseen, the necessary advent of that speculative habit now very rapidly becoming dominant over American thought: but in his treatment of the equally powerful tendency of which he saw the influence, and whereof he himself so largely partook, his 'Poor Richard' is complete:—he threw off all prerogative and tradition, and looked at things as they are. Temperance, Silence, Order, Resolution, Frugality, Activity, Sincerity, Justice, Moderation, Cleanliness, Tranquillity, Chastity, Humility,—these are his virtues: and Franklin teaches how to ac-

quire them, by precepts, which in earlier times, would have ranked as *golden verses*; they are as valuable as anything that has descended from Pythagoras.—It is rare that a single mind establishes claims so various as those of Franklin:—he ranks also among the foremost as a Physical Inquirer and Discoverer. Attracted by the opening subject of *Electricity*, he was the first who reduced it to order: and that grand step is owing to him which identified the attraction and repulsion of rubbed glass and amber, with the energy that produces lightning, and causes the most imposing of meteorological phenomena. His memoirs on Electricity and other physical subjects, still astonish one by their clearness and chastity, and the precision and elegance of their method; their style and manner are as worthy of admiration as their doctrines. They gained for the author immediate admission to the highest scientific societies in Europe. In his personal bearing Franklin was sedate and weighty. He had no striking eloquence; he spoke sententiously; but men instinctively felt his worth, and submitted themselves to his wisdom. Except Washington, whom in many qualities he much resembled, the New World yet ranks among her dead, nowhere so great a man. An edition of his works in ten volumes has recently been published by *Jared Sparks*, the excellent editor of the writings of Washington. [J.P.N.]

FRANKLIN, ELEANOR ANNE, an English poetess, best known by her maiden name of Porden, wife of Captain Franklin, the well-known Arctic adventurer, 1795-1825.

FRANKLIN, WILLIAM, the last British governor of New Jersey, was born in 1731; was an officer in the British army during the French war in America. After peace was established he went to England, and was appointed governor of New Jersey in 1763, by Lord Halifax. Some years after he returned to England, where he died Nov. 17, 1813, aged 82.

FRANKLIN, SIR JOHN, the celebrated English Arctic navigator, in whose fate the sympathy of the world has been so deeply interested for many years, was born at Spilsby, Lincolnshire, 1786. As a boy he had a fondness for the sea, and resolved to be a sailor. His father, with the hope of weaning him from a nautical life, sent him on a voyage to Lisbon in a merchant vessel. The lad came back, however, contrary to his father's expectation with his taste for a sailor's life strengthened by his first rude experience, and, accordingly, he entered the British navy as a midshipman at the age of fourteen. He was in this capacity, on board the *Polyphemus*, at the attack on Copenhagen. In 1803 he went with Capt. Flanders, who was a relative, on a voyage of discovery to the South Seas, and was wrecked on the coast of New Holland. He was flag lieutenant on board the *Bellerophon* at the battle of Trafalgar, and served as lieutenant on the *Bedford*, which conveyed the allied sovereigns to England in 1814. In 1815 he was at the attack on New Orleans by the British, and won some renown by the capture of a gun boat. In 1818 he was appointed to the command of the brig *Trent*, which joined the Arctic Expedition under Capt. Buchan. He subsequently was one of the officers in the expedition of Ross and Parry, and succeeded in reaching a point as far north as Cape Turnagain, 68° 30' north latitude, and returned to England in 1822. He was promoted in 1825 to the rank of post captain, and appointed to a command, conjointly with Ross and Parry, in the Arctic Expedition, which set out in the course of that year. His explorations having extended to 70° 30' north latitude and 150° west longitude, he returned to England in 1827, and was

knighted for his services. In 1830 he was promoted to the command of a ship of the line, when after a cruise in the Mediterranean he was appointed governor of Van Diemen's Land, whence he was recalled in 1843. In 1845, the command of the Arctic Expedition, which has resulted so fatally, was bestowed upon him. The *Erebus* and *Terror*, the same ships with which Ross in 1839 had made his celebrated voyage to the South Polar Seas, having been fitted up, under the superintendence of Franklin, and the two officers, Capt. Crozier and Fitzjames, having been selected by himself, and joined with him in command, set sail on the 19th May, 1845. The ships were spoken on the 4th July, and for the last time, on the 26th, in Melville Bay, latitude  $77^{\circ}$  north, longitude  $66^{\circ} 13'$  west from Greenwich. His fate, after a long expectation which has moved the deepest sympathies of the whole civilized world, is now tragically settled. Dr. Rae of the Hudson's Bay Company, in a letter dated York Factory, 28th of August, 1854, addressed to the Governor, Sir George Simpson, states that he learned the following from the Esquimaux:—"In the spring of 1850 a party of white men, amounting to about forty, were seen travelling southward over the ice, and dragging boats with them, by some Esquimaux Indians who were killing seals on the north shore of King William's Land, which is a large island named "Keliktak" by the Esquimaux. None of the party could speak the native language intelligibly, but by signs the natives were made to understand that their ships had been crushed by ice, and that the whites were now going to where they expected to find deer to shoot. From the appearance of the men, all of whom, except one chief officer, looked thin, they were supposed to be getting short of provisions, and they purchased a seal from the natives. At a later date during the same season, but previous to the disruption of the ice, the bodies of about thirty white persons were discovered on the Continent, and five more on an island near it, about a long day's journey, say thirty-five or forty miles to north-west of a large stream, which can be no other than Back's Great Fish River, as its description, and that of the low shore in the neighborhood of Point Ogle, and Montreal Island, agree exactly with that of Sir George Back's. Some of the bodies had been buried, some were in tents, others under a boat that had been turned over to form a shelter, and several lay scattered about in different directions. Of those found on the Island, one was supposed to have been an officer, as he had a telescope strapped over his shoulder, and his double-barrelled gun lay underneath him. From the mutilated state of many of the corpses, and the contents of the kettles, it is supposed that the party had been driven to the last resource—"Cannibalism"—as a means of prolonging life. There appears to have been an abundant stock of ammunition, as the powder was emptied in a heap on the ground by the natives out of the kegs or cases containing it, and a quantity of ball and shot was found below high-water mark, having been left on the ice close to the beach." Dr. Rae states that there must have been a number of watches, telescopes, compasses, guns, &c., all of which appear to have been broken up, as he saw pieces of these different articles with the Esquimaux, together with some silver spoons and forks—as many of which as could be obtained were purchased, and a list of the most important of the relics found, with the drawings of others, were forwarded to London. The silver was marked with the crests and initials of Sir John Franklin and of other officers.

called 'The Great,' (see next article.) **FREDERICK WILLIAM II.**, nephew of Frederick the Great, born 1744, succeeded 1786, united with Austria and Russia in the division of Poland, and died the same year, 1797. **FREDERICK WILLIAM III.**, son of the preceding, born 1770; succeeded 1797; died and succeeded by his son, **FREDERICK WILLIAM IV.**, 1840.

[Tomb of Frederick the Great.]

**FREDERICK II.**, king of Prussia, commonly called Frederick the Great, was born 24th January, 1712, and began to reign in 1740. He found himself in possession of a full treasury and a powerful army, which he soon employed in attacking Austria, and conquering from her the province of Silesia (1740–1742). In 1744 he engaged in a second war with Austria, which was terminated in 1745, and left him in possession of Silesia, but with no augmentation of power, though his military renown was raised through Europe. The great struggle of the seven years' war began in 1756. Prussia was now attacked by the Austrians, the Russians, the French, the Saxons, and the Swedes, and her destruction and dismemberment seemed inevitable. England was her only ally. Prussia went through the struggle, and came out triumphant. When the peace of Hubertsburg was concluded in 1763, Prussia did not cede an inch of land, or pay a dollar of money; and from that time forth she was recognized as one of the five great powers of Europe. For this glorious result she was indebted to her king. It is not merely the military genius of Frederick, as displayed during the sanguinary campaigns of the seven years' war, that demands our attention, but we cannot help admiring also his moral courage and his indomitable energy under reverses which would have crushed almost any other spirit. Though victorious at Prague, at Rossbach, and Lissa (1757), at Zordorf (1758), at Leignitz and Torgau (1760), he suffered heavy defeats at Collin (1757), at Hochkirk (1758), at Kunersdorff (1759); and his lieutenants, with the exception of Prince Ferdinand of Brunswick, were generally unsuccessful. But Frederick's firmness never failed him, even when all hope seemed lost. In a period of extreme danger, he wrote to Voltaire (who advised him to beg mercy from his enemies), 'I am a man, and therefore born to suffer. To the rigor of destiny I oppose my own constancy. Menaced with shipwreck, I will bear the storm; I will be a king in spirit; and I will die, as I have lived, a king.'—After the conclusion of the war, Frederick exerted himself earnestly in relieving the sufferings which so many years of carnage and devastation had brought upon Prussia. In 1772 he deeply disgraced himself, and permanently injured the cause

of Order as well as the cause of Freedom throughout the world, by promoting and participating in the first dismemberment of Poland. Frederick died 17th August, 1786. He was fond of the society of literary men, and was himself an author of many works of considerable merit. During his struggles against Austria and France, Frederick was regarded in England and America as the champion of protestantism, and he was called a second Gustavus Adolphus. He ill deserved the title. He had no religious faith whatever; and there are few princes of whom so many mean and selfish traits in private life are recorded as of the celebrated king of Prussia.

[E.S.C.]

**FREDERICK I.**, king of Sicily, was the same who became Frederick II., emperor of Germany. **FREDERICK II.** of Sicily reigned 1296–1337. **FREDERICK III.**, reigned 1355–1377. **FREDERICK IV.**, 1496–1504. The last three were of the house of Arragon, and Frederick IV. was before count of Altomaia, and died in France after losing his crown.

**FREDERICK I.**, elector of Saxony, reigned 1423–1428. **FREDERICK II.**, 1428–1464. **FREDERICK III.**, 1486–1525. **FREDERICK AUGUSTUS**, the first of the name as king, 1768–1827.

**FREDERICK I.**, as king of Wurtemberg, or **FREDERICK II.** as duke, reigned 1797–1816.

**FREEMANTILE**, SIR THOMAS, a celebrated English admiral, 1765–1820.

**FREGOSO**, the name of a Genoese family, of whom the following were doges of Genoa:—**DOMINIQUE**, reigned 1370–1378. **JOSEPH**, his son, elected 1390, and deposed the year following. **THOMAS**, son of Joseph, reigned 1415–1421, re-elected 1436,

and deposed 1443. JAMES, brother of Thomas, reigned about a year, 1447-1448. PIERRE, elected 1450, yielded his seignior to France 1458, and was killed in an endeavor to reconquer it, 1459. An archbishop, P. FREGOSO, was many times doge between 1462 and 1488, and died in retirement 1498. BATTISTA, his nephew, born 1440, elected 1479, deposed 1483. OCTAVIAN, elected 1513, yielded the sovereignty of Genoa to Francis I., king of France, 1515, and was continued in command as governor till 1522.

FREIND, JOHN, an eminent physician and writer, was born at Croton, England, in 1675. In 1704 he was appointed chemical professor at Oxford, and in the following year he went to Spain as physician to the expeditionary army under Lord Peterborough. In 1716 he was elected a fellow of the College of Physicians, and in 1722 was returned to parliament for Launceston. In 1723 he was sent to the Tower on suspicion of being an accomplice in Atterbury's plot. While in prison he planned his great literary work, which was afterwards published under the title of 'The History of Physic.' Died 1728.

FREINSHEM, JOHN, a German scholar, librarian to Queen Christina of Sweden, and professor of rhetoric at the university of Upsala, 1608-1660.

FROBENIUS, JOHN, a German printer, and the friend of Erasmus, was a native of Franconia, but carried on his business at Basle. Died in 1527.

[Frobisher.]

**FROBISHER, SIR MARTIN**, was born of humble parents at Doncaster, but the precise date is uncertain. He became early convinced of the possibility of a north-west passage to China, and in the hope of gaining undying fame by his discovery, continued for fifteen years urging in various quarters the equipment of an expedition. Dudley, earl of Warwick, at length patronized him in 1676. He left 8th of June with three small vessels, and returned 2d October, having reached no farther than Labrador and the coast of Greenland. Indications of gold were discovered, which led to the dispatch of a larger squadron the following year; and the quality of the ore brought home being more favorably reported upon, an important expedition, with miners, soldiers, &c., was sent out, 31st May, 1578; but the fleet was scattered by storms on the coast of Greenland, and obliged to return home early in winter without effecting any settlement. Frobisher afterwards went to the West Indies with Drake, and on the defeat of the Spanish Armada received the honor of knighthood, in acknowledgment of his services in the action. He died in the end of the year 1594, from the effects of a carelessly dressed wound received in an attack upon Brest. [J.B.]

**FROILA**, the name of three Spanish kings—the *first*, king of Oviedo, reigned 757–768; the *second*, king of Oviedo, and count of Galicia, a short time in 875; the *third*, king of Leon, 923–924.

**FROISSART, JOHN**, a celebrated French poet and historian, whose *Chronicles of France, England, Scotland, Spain, and Brittany*, constitute one of the most precious monuments of the middle ages. He was attached to the court of Philippe of Hainault, queen of Edward III., and mother of the Black Prince, and after her death to several continental sovereigns. He is supposed to have lived from 1326 to 1400. The best edition of his *Chronicles* is that of M. Buchoz, 15 vols., 8vo. 1824. There have been several English translations.

**FROMENTIN, ELIGIUS**, was chosen United States senator from Louisiana in 1813. In 1821 he was appointed judge of the criminal court of New Orleans, also judge of the western district of Florida, which office he resigned in consequence of a misunderstanding with General Jackson, who was then governor, and resumed the practice of law at New Orleans. Died of yellow fever, October 6, 1822.

**FRONTAN, JOHN**, a Fr. controver., 1614–62.

**FRONTENAC, LOUIS**, count, appointed governor-general of Canada in 1678. Built Fort Frontenac on Lake Ontario in the following year. Was recalled to England in 1682, but reinstated in office in 1689.

He contributed much, through his exertions, towards the prosperity of Canada. In disposition he was ambitious, haughty and revengeful. Died Nov. 28, 1698, aged 77.

**FRONTIN, CLAUDE**, a French poet, 16th cent.

**FRONTINUS, SEXTUS JULIUS**, a Roman statesman and soldier, commander of the armies in Britain, author of a work on tactics, &c., 40–106.

**FRONTO, MARCUS CORNELIUS**, a celebrated Roman orator and teacher of elocution, instructor of Marcus Aurelius and Lucius Verus, consul 161.

**FROST, EDMOND**, a missionary, was born at Brattleborough, Vermont, graduated at Middlebury College, and studied theology at Andover. After being ordained at Salem in 1823, he embarked as missionary for Calcutta. He died October 18, 1825.

**FROST, JOHN**, an officer of the Revolutionary army, was born in Kittery, Maine, May 5th, 1738. He served as captain in the campaign of 1759, in which the conquest of Canada was completed. In the campaign of 1775 he served as lieutenant-colonel at the siege of Boston. At the opening of the campaign of 1776, he was promoted to the rank of colonel, and distinguished himself in the hard-fought

[General Frost—From an original portrait by Brewster.]

battles which took place before the retreat of Washington to Philadelphia. Upon Burgoyne's invasion of New York, Colonel Frost's regiment was attached to the army under General Gates, and the colonel was one of those New England officers, who performed such effective service in the battles of Stillwater and Bemis Heights. After the surrender of Burgoyne Colonel Frost joined the central division of the army under General Washington, and was present at the battle of Monmouth and the subsequent actions of that campaign. During the remainder of the war Colonel Frost continued to serve in the Middle and Southern States; and at its close he had risen to the rank of brigadier-general. After his retirement from the army he resumed the cultivation of his fine estate in Kittery. But he was soon called to public duties, being appointed a judge of the Court of Sessions for York County, Maine, and a member of the council of the Governor of Massachusetts, which then included Maine. Towards the close of his life he relinquished all public employments. He died in Kittery, in July, 1810, at the advanced age of 72.

**FROWDE, PHILIP**, an English poet, died 1738.

**FRUGONI, CHARLES INNOCENT**, an eminent Italian poet, originally a monk, was born at Genoa, in 1692. Having quitted the monastic life, he settled at Parma, and was appointed court poet. Died 1768.

FRUITIERS, PH., a Flemish painter, 17th cent.  
FRUMENTIUS, Sr., the apostle of Ethiopia, consecrated a bishop by Athanasius 331, died 360.

[Mrs. Fry.]

FRY, MRS. ELIZABETH, whose maiden name was GURNEY, was born in 1780 at Earlham, Norfolk, an extensive estate which had been in the possession of her paternal ancestry for many centuries. The benevolence of her disposition displayed itself by her habit, while yet a girl, of visiting the poor on her father's property, and forming a school for the education of their children. With this natural benevolence, however, she united an ardent fondness for the gayeties and frivolities of fashionable life; till through the powerful ministrations of William Savery, an American Friend, she was brought to the knowledge and love of the truth as it is in Jesus. Her character from that day was entirely changed, and she became a genuine and consistent Christian. In 1800 she was married to Joseph Fry, Esq., of London, and consequently settled in the metropolis. There she resumed her early habit of visiting the poor; and although she became the mother of a large family, who were most tenderly loved and assiduously trained, she yet found leisure, by a rigid economy of time, and arrangement of domestic duties, to render her beneficent offices to her poor and suffering fellow-creatures. Every day was she found visiting charity schools, in the houses and lanes of the poor, and in the wards of sick hospitals, till at length by a providential train of circumstances, she was led to extend her benevolent attentions to the inmates of a prison and a lunatic asylum. The accents of Christian love found entrance into the hearts of those wretched outcasts, and she became the honored instrument of remodeling the discipline and improving the state of our national prisons. At the commencement of her career there was no classification of any sort, no separation between male and female prisoners; all criminals, parents and children, men and women, those who were comparatively innocent with the inveterately depraved, were indiscriminately huddled together, and in these circumstances many left the prison far more familiar with crime than when they entered it. It required no small resolution and faith to enter such a den of iniquity as a British jail at that period was; but Mrs. Fry attempted it and was successful. Her dignity, and at the same time her feminine gentleness, subdued their ferocity and won their attention; she told them that vice was the cause of all their misery, that if they would return to virtuous habits, they might again be

happy, and she proposed rules for their observance, of which they unanimously expressed their approval. Repeating her visit after a brief interval, and finding them equally tractable and submissive, she proceeded with her contemplated measures. She appointed a teacher to those children who had been committed for petty offences, and many of whom were under seven years of age. Even their profligate mothers took an interest in this infant school. Mrs. Fry next devised some employment for the women, by teaching them to sew, and supplying them with work. For the accomplishment of this arduous undertaking she formed a ladies' committee, some of whom made it a sacred duty to attend in the prison daily, so that there was not a moment when the females were not under the superintendence of some proper and efficient guide. A matron was at length appointed to live in the prison, and take the oversight of the female prisoners. But the ladies' committee still continued their attendance, one giving instruction in needlework, another in knitting, while a third read some good religious book, and spoke to them about the guilt and the wages of sin, the duty and superior happiness of a sober, chaste, and religious life. In a few weeks the most astonishing moral revolution was effected within the walls of the prison; not only the language of blasphemy, obscenity, and fiendish discord entirely disappeared, but women of the most abandoned characters were reclaimed to established habits of sobriety, industry, and piety. The public interest was greatly excited by the intelligence. Visitors of the highest official station and noble rank visited the schools, and the most undoubted testimonies were borne to the excellent principles and efficient working of these benevolent schemes. Mrs. Fry, while she continued her inspection of the prisons, extended her benevolent regards to other classes, such as making provision for female convicts, both during their voyage out, and at their allotted stations. She also visited all the principal jails in Scotland and Ireland, France, Holland, Denmark, and Prussia, and her last scheme of philanthropy was begun with a view to benefit British seamen, particularly to alleviate the miserable state of the coast guard; forming libraries and adopting means for circulating books and tracts in men-of-war ships. These anxious and multifarious labors made serious inroads on the health of this excellent lady. After trying the waters of Bath in the spring of 1844, she returned home no way improved, and gradually sank till she expired at Ramsgate, 11th October. Her death was lamented throughout Europe as a loss to humanity. She was, as she has often been called, 'the female Howard,' and like her prototype, her benevolent exertions were the fruit of a lively and established faith in the gospel of Christ. [R.J.]

[Fulton's Steam-Boat. The Clermont.]

FULTON, ROBERT, an American engineer, of Irish parentage. His highest distinction is that of having been the earliest to establish practically the propelling of vessels by steam. Millar's experiments, which proved the practicability of the principle, were made in 1787 in Scotland, but Fulton's boat, which began to navigate the Hudson in 1807, was certainly the first practical demonstration of this application of steam, being five years prior to the success of Henry Bell on the Clyde, and nearly ten years prior to the first attempts on the Thames under Brunel's di-

rection. Fulton was born 1765, in Pennsylvania.—He commenced life as a portrait painter in Philadelphia, in 1783, but in 1786 he embarked for England, where he worked under his distinguished countryman West, the historical painter, for several years. The fine arts were destined, however, with Fulton to give place to the mechanical, for in 1794 he had been engaged by the duke of Bridgewater in canal projects, had adopted and patented the system of inclined planes as a substitute for locks, had written a treatise on canals, and styled himself civil engineer. He also invented a mill for sawing marble, and patented methods of spinning flax and making ropes. He had little success as a civil engineer in Britain. In 1796 he went to Paris at the invitation of Mr. Barlow, United States minister, in whose house he resided during seven years. His attention was here chiefly turned to submarine boats as warlike instruments of destruction. The experiments, made first at the expense of the French government, and afterwards for the English government, proved failures. In the course of these experiments, in the year 1803, an experimental steamboat was built and tried on the Seine. The success was indifferent. But perseverance overcomes all difficulties. Mr. Livingston, the American ambassador in Paris in 1806, supplied Fulton with funds, who returned to America, and in New York launched a steam-boat, which began to navigate the Hudson in 1807. He afterwards built other steam-boats, one of them a frigate, which bore his name. His reputation became established, and his fortune was rapidly increasing, when his patent for steam vessels was disputed, and his opponents were in a considerable degree successful. Though an amiable, social, and liberal man, the anxiety and fretfulness occasioned by the lawsuits about his patent rights, together with his enthusiasm, which led him to expose himself too much while directing his workmen, impaired his constitution, and he died at the early age of forty-nine in 1815. His death occasioned extraordinary demonstrations of national mourning in the United States.
